FRIDAY
1 FEBRUARY 1985

SUMMARY
OF
BRITISH WEATHER

Orkney and Shetland were cloudy throughout with sleet and snow at times during the night and early morning. Sleet continued intermittently for the rest of the day in Shetland, but in Orkney it turned to rain soon after dawn.

Over the rest of Scotland and Northern Ireland a belt of rain moved quickly east during the early hours followed by clear spells and a few showers. During the day, there were bright or sunny intervals with fairly frequent showers in Scotland, while over Northern Ireland much of the day was dry and bright.

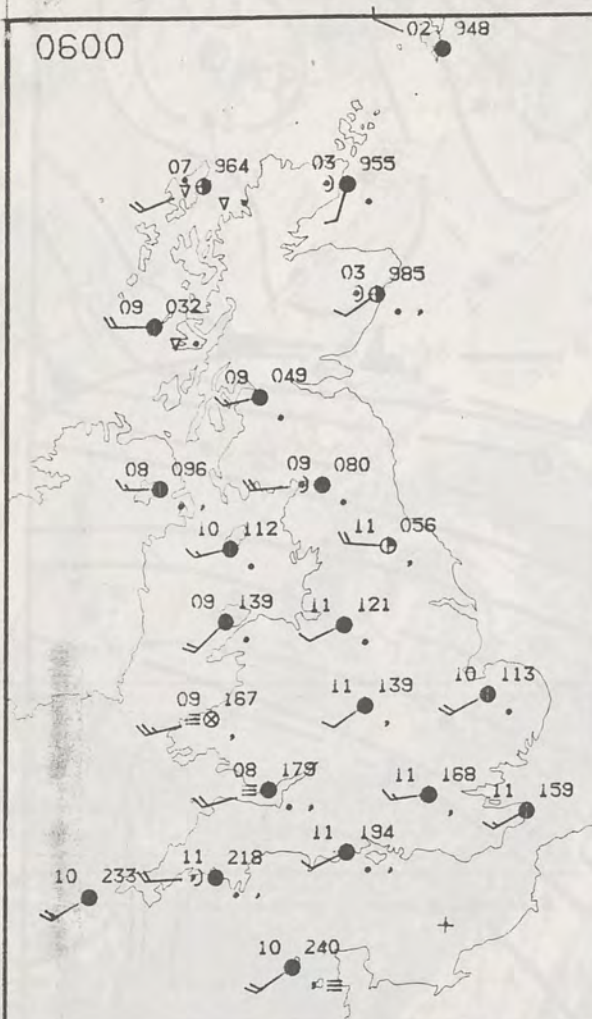

In England and Wales, there was a little rain or drizzle overnight, with mist and fog on west facing coasts and hills. Much of southwest England and the Channel Isles stayed dull and misty all day with light rain or drizzle in places, but elsewhere in England and Wales cloud cleared to give some bright or sunny spells, especially in the Midlands, East Anglia and southeast England.

It was very mild or exceptionally mild over much of England and Wales. Most of Scotland and Northern Ireland also had a mild day but in Shetland, it was rather cold.

SUMMARY OF BRITISH WEATHER

Overnight, there was widespread fog along the south coast of England, in the Channel Isles, in much of southwest England and in South Wales. In the remainder of England and Wales and in Northern Ireland, the night was dry and clear.

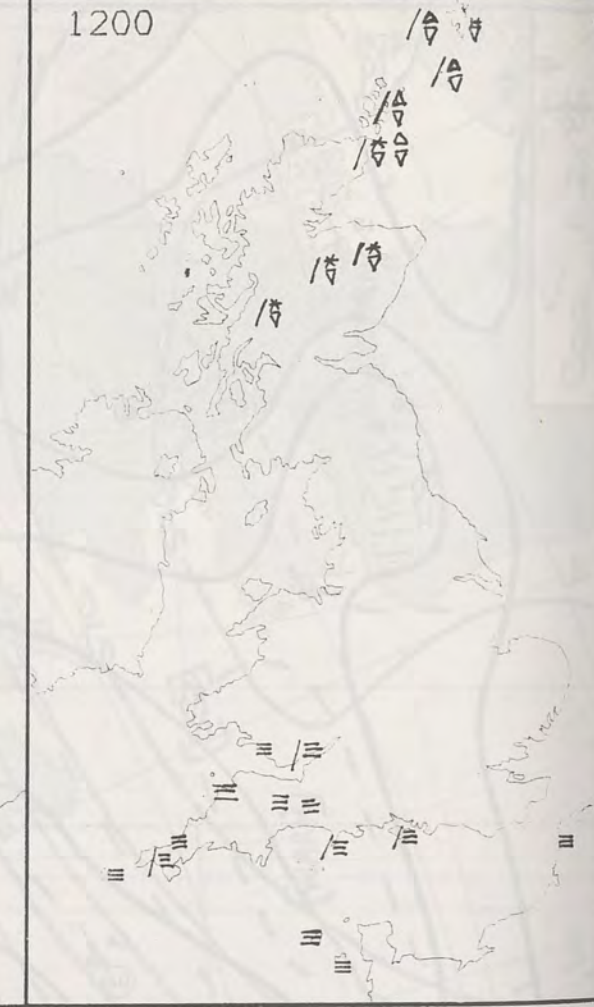

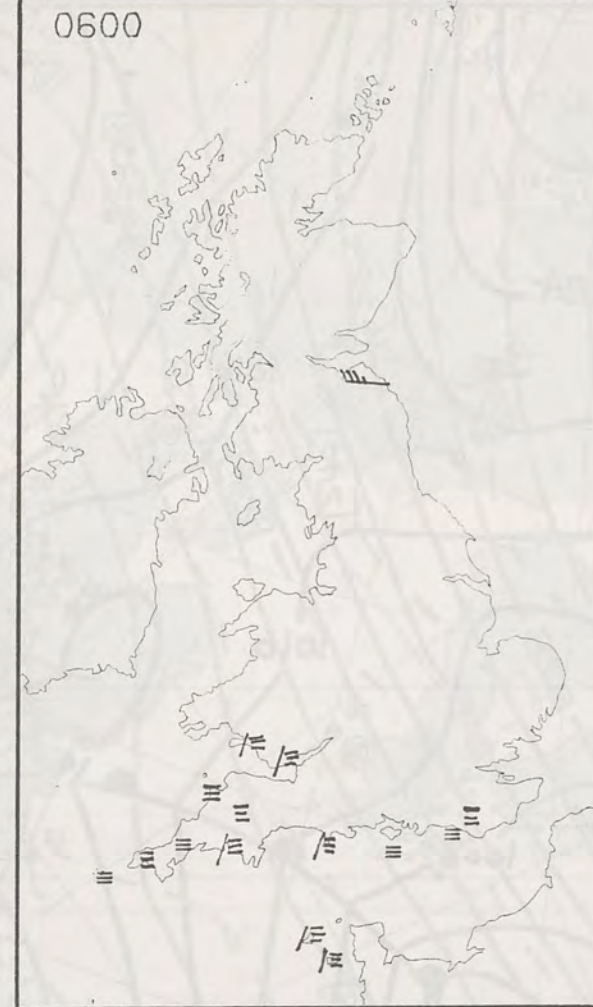

In Scotland, it was windy with frequent showers which turned to sleet and snow at times in the Northern Isles and the showers continued for much of the day.

During the day, much of England, Wales and Northern Ireland had bright or sunny spells, with a few showers in northeast England. Southwest England, the Channel Isles and South Wales stayed dull and misty with drizzle in places and widespread fog over coasts and hills. During the morning, the fog along the south coast of England cleared and there were some bright or sunny intervals in the afternoon.

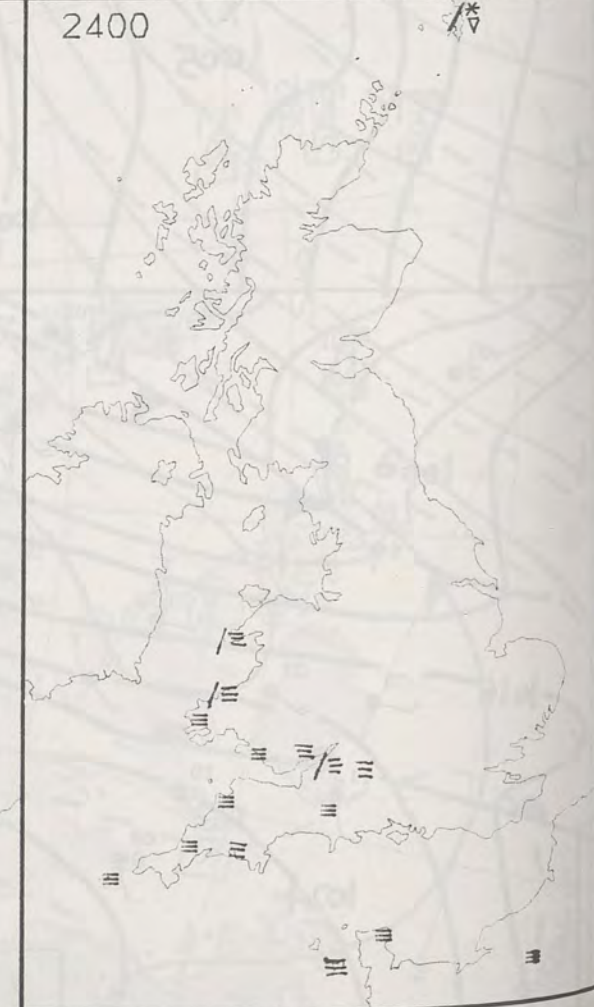

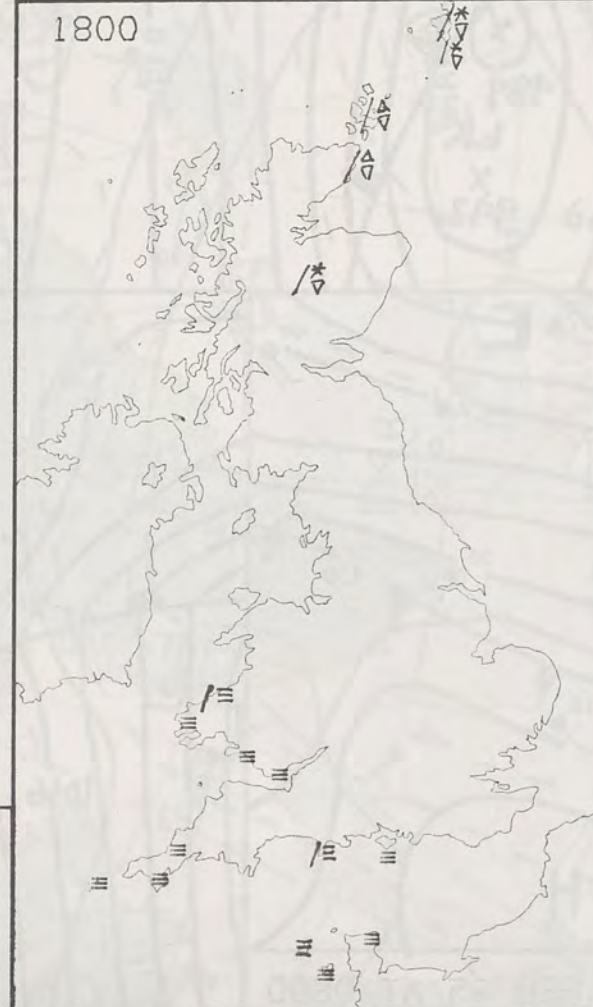

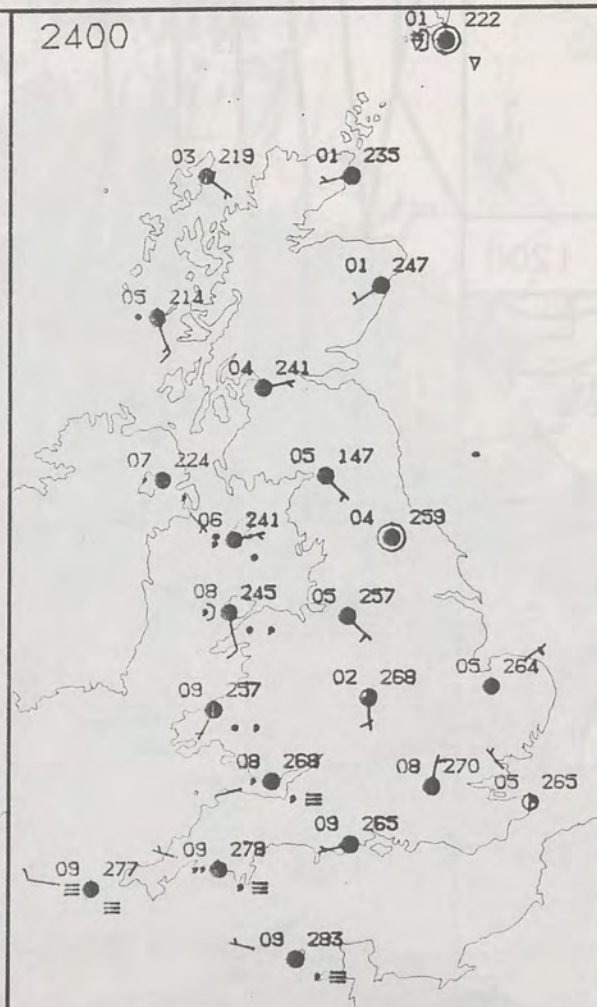

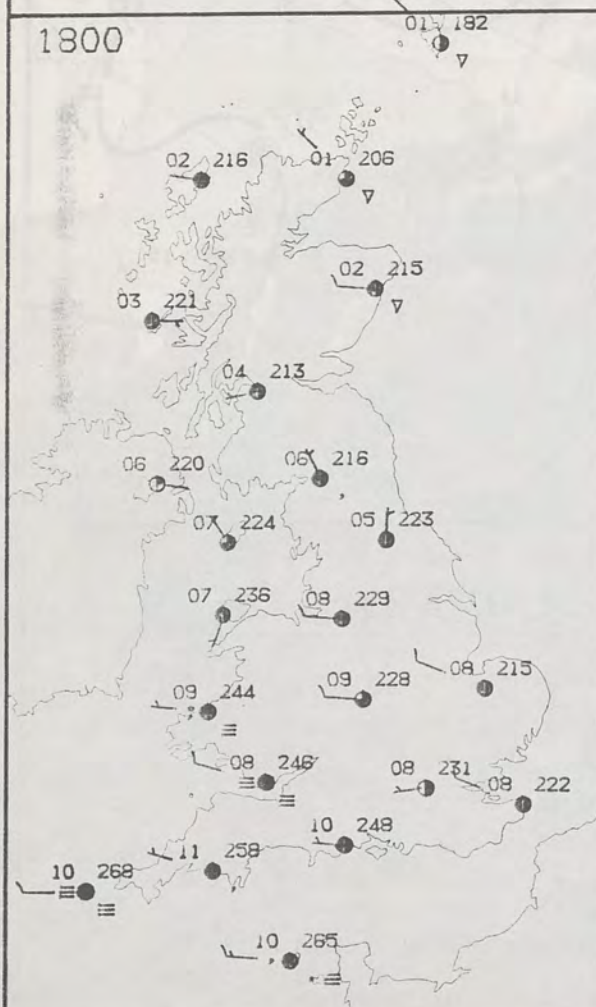

In northern Scotland it was rather cold but for the rest of Britain it was again a mild or very mild day.

SUNDAY
3 FEBRUARY 1985

SUMMARY
OF
BRITISH WEATHER

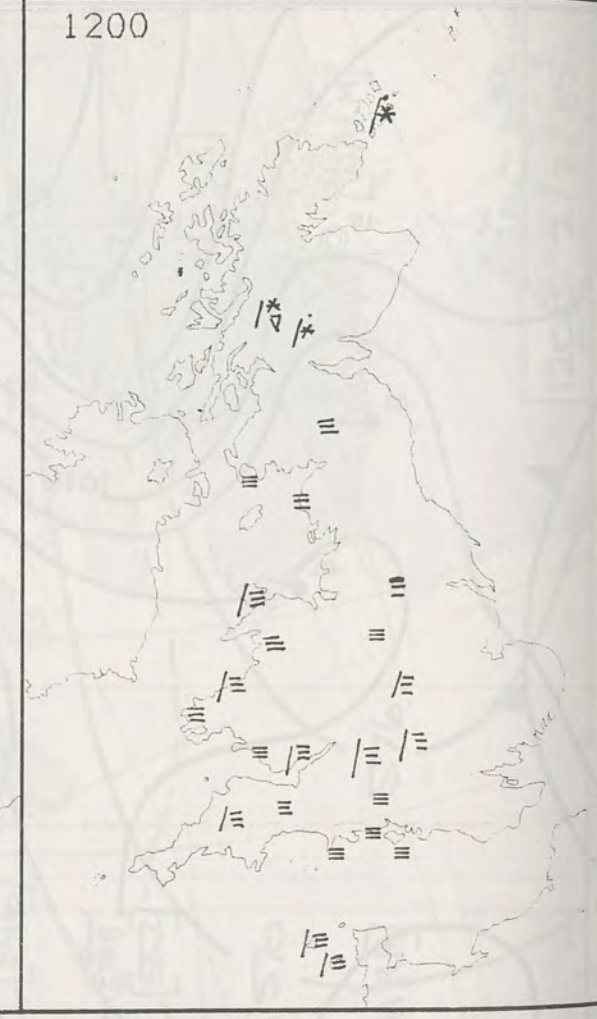

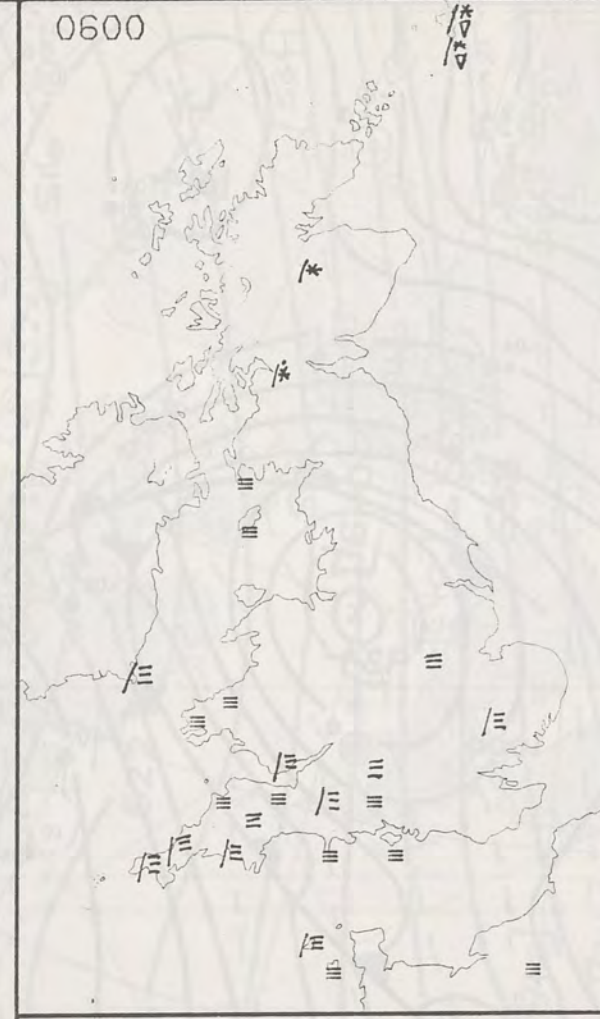

With the exception of one or two clear or sunny intervals in parts of south and east England, West Wales, west Scotland and Northern Ireland, it was a generally cloudy day everywhere. Most places had a little light rain or drizzle at times and a more persistent belt of precipitation crossed northern districts from the west. Fog affected many southern and western coasts and hills.

Most southern and western districts were mild or very mild and after a rather cold start to the day in parts of the north and east, it turned milder.

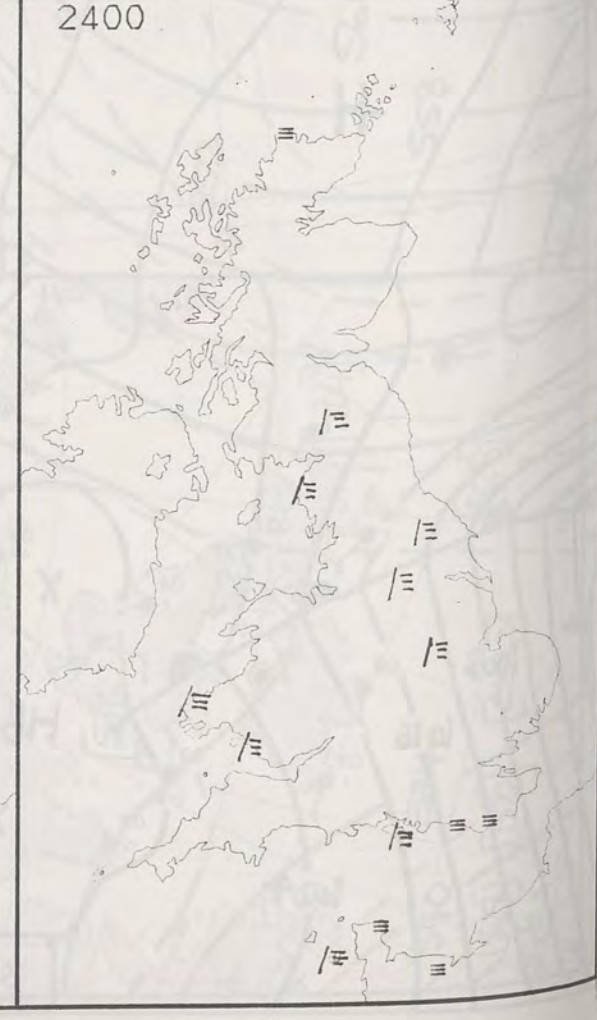

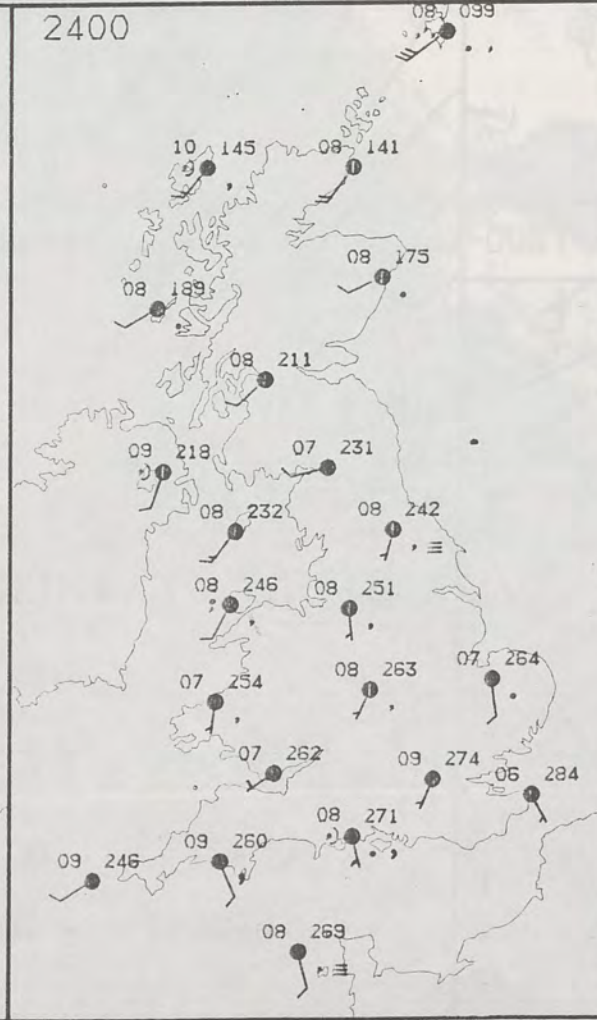

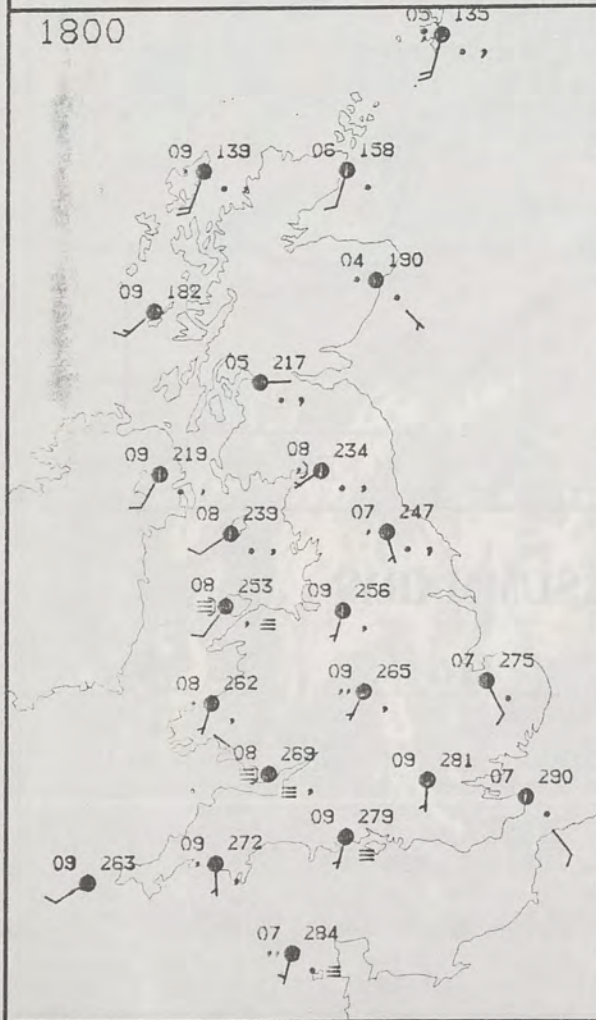

The mainly light winds strengthened over northern Scotland later in the day.

MONDAY
4 FEBRUARY 1985

SUMMARY
OF
BRITISH WEATHER

It was a predominantly cloudy day, the cloud being thick enough to give a little light rain or drizzle in most areas overnight and during the morning with the afternoon and evening being mostly dry. The Northern Isles, however, had more persistent rain or drizzle throughout.

Parts of southern England had some patchy fog overnight continuing into the morning and there was some hill and coastal fog in the west and north but most of this had cleared by mid-day.

Skies cleared near the Channel coast in the morning, and this clearer weather spread to most of southeast England, East Anglia and the southeast Midlands by evening. North Wales and eastern Scotland also had some clear periods.

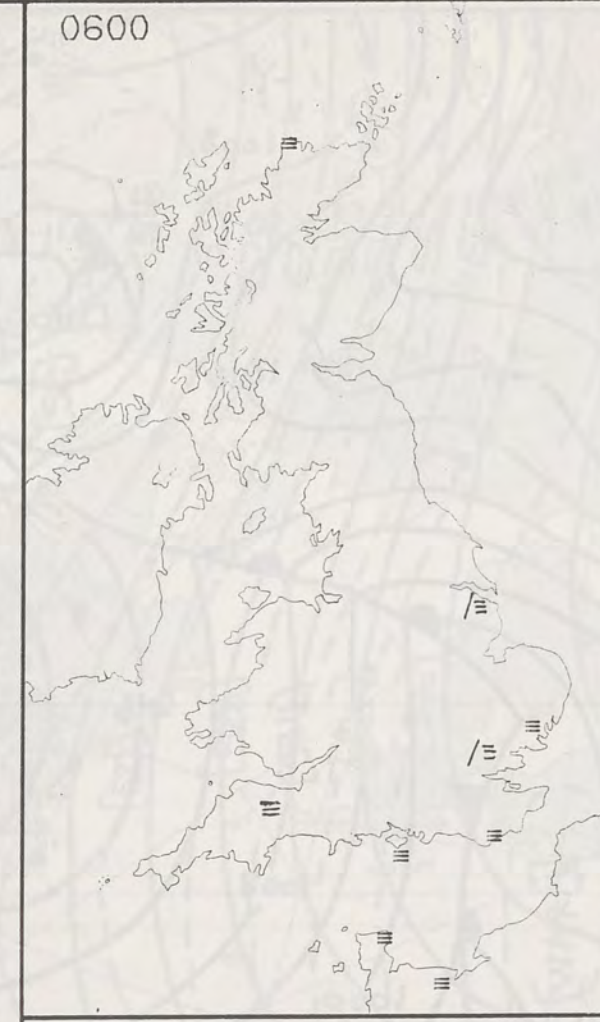

Temperatures generally were in the mild or very mild category throughout the country.

Strong westerly winds over northern Scotland slowly moderated, while near western Channel coasts easterly winds freshened late in the day.

TUESDAY
5 FEBRUARY 1985

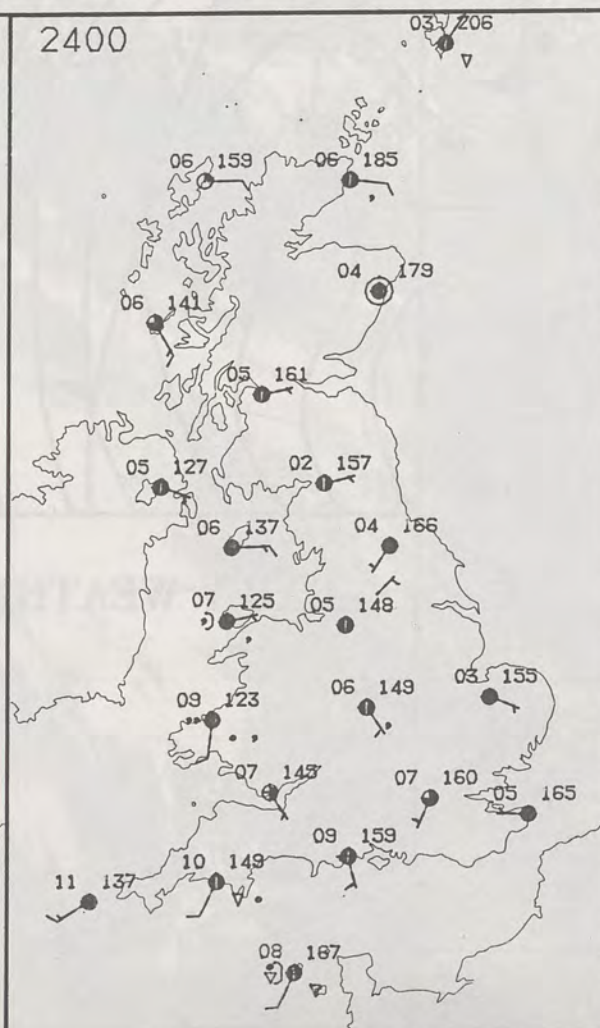

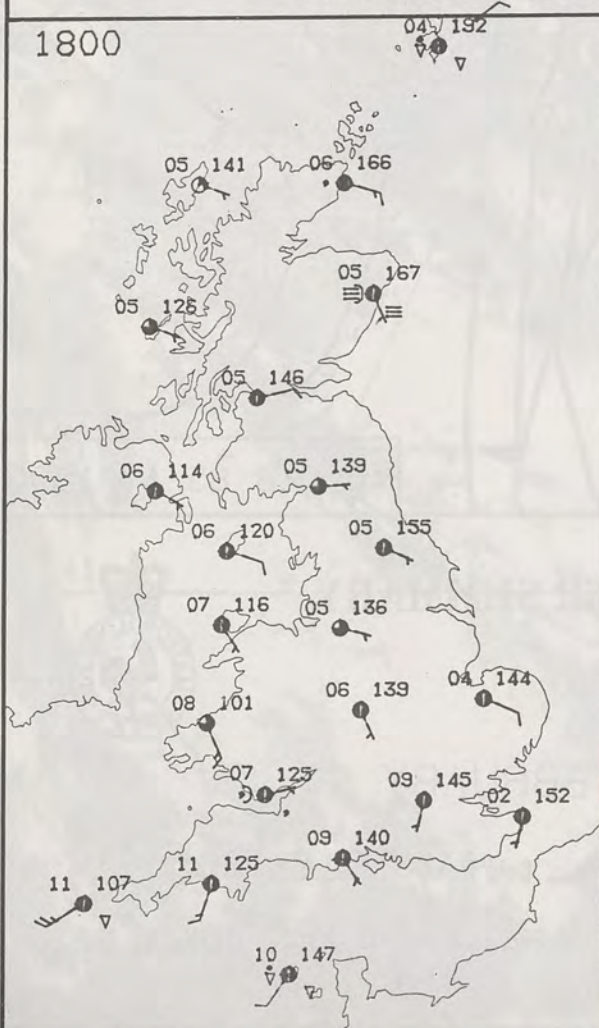

SUMMARY OF BRITISH WEATHER

It was dry overnight and many places in England and Wales and parts of central Scotland were frosty.

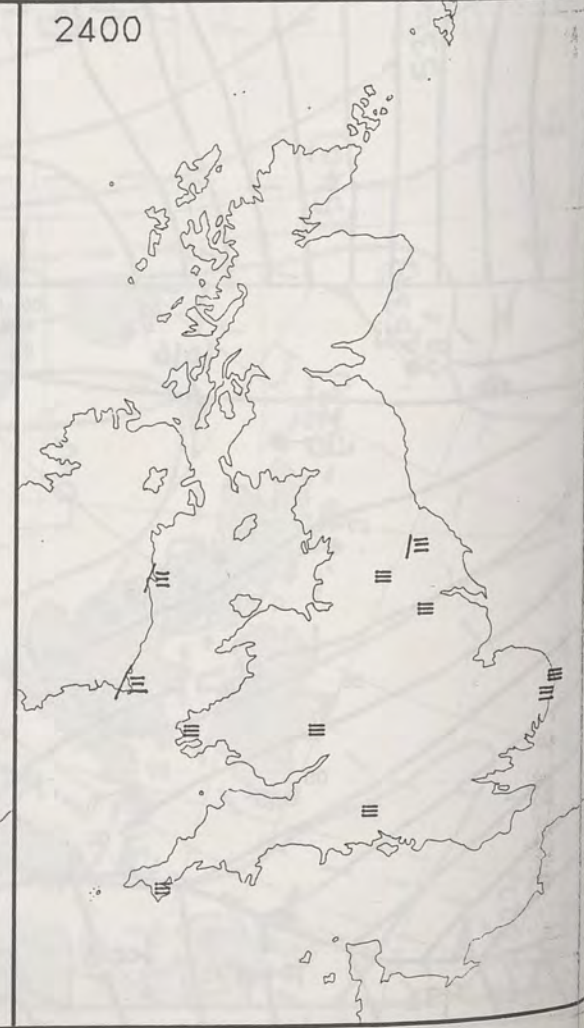

During the day much of Britain was dry and bright with some sunshine, but in northeast Scotland, the Northern Isles, parts of central southern and southwest England, the Channel Isles and West Wales, there was a little rain and drizzle in places.

WEDNESDAY
6 FEBRUARY 1985SUMMARY
OF
BRITISH WEATHER

There was a frost overnight in some northern and eastern areas, and patchy fog in various parts of the country. On the whole it was a cloudy night; there was some rain in northeast Scotland, and a little drizzle in southern Britain.

Much of the country had a cloudy, dry day, although there were some brighter areas. The best of the sunshine was in Scotland away from the east coast and parts of West and North Wales.

Damp, misty weather moved southwest from the North Sea into eastern and central England during the day, and rain also moved northeast into southwestern Britain during the afternoon and evening.

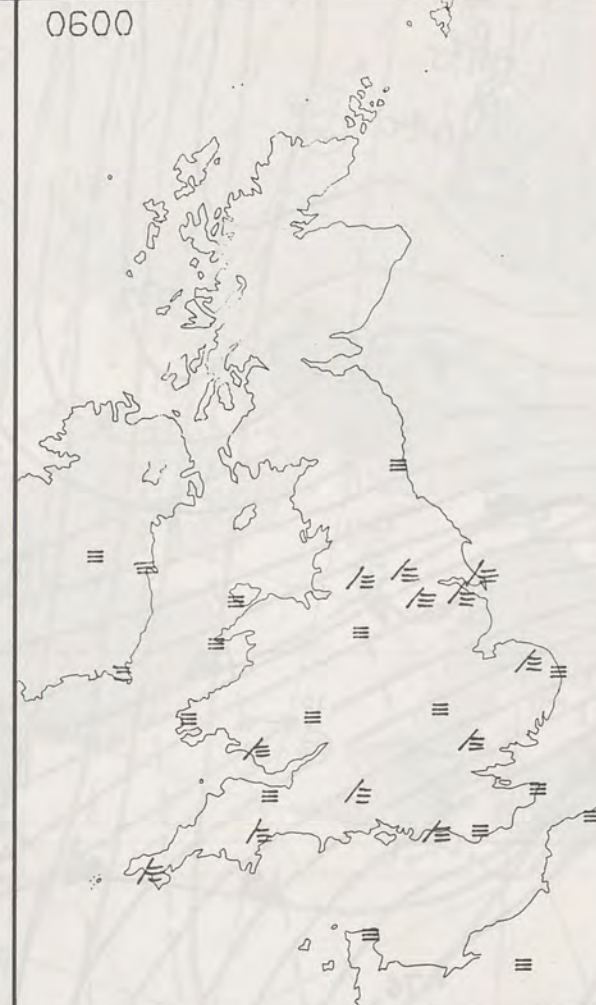

The variety of weather across the British Isles reflected the increasing contrast between cold air to the north and east and mild air to the south and west.

Much of southern England and Wales had a very mild day, but temperatures were not far from normal elsewhere in the UK.

PLOTTED SURFACE OBSERVATIONS

THURSDAY
7 FEBRUARY 1985

SUMMARY OF BRITISH WEATHER

Cold air continued to push south-westwards across the country during the early hours. Skies were fairly clear over the northern half of Scotland with a frost in many places, but most other areas were cloudy with a little rain here and there.

In the early morning more persistent rain in the southwest gradually moved northeast. The rain reached all of Northern Ireland, the extreme southwest of Scotland, all of Wales and most southern and western counties of England by day-break. The rain was heavy at times in the southwest.

During the day the rain moved a little further north and east, but also gradually eased off. On the northern and eastern edge of the rain area there was some snow, mostly over the higher ground of central and northwest England, North Wales and southern Scotland. Much of the northern half of Scotland and eastern Britain stayed dry, with some sunshine in northeast Scotland, but there was a little sleet or snow in places. Drier weather also pushed northeast into south-western Britain during the day, with a little sunshine in Cornwall. Here it was mild, but most of the British Isles had a rather cold day.

2400

FRIDAY
8 FEBRUARY 1985SUMMARY
OF
BRITISH WEATHER

Northeast England and southeast Scotland had fairly frequent sleet and snow showers overnight. Elsewhere over Britain the night started mostly dry but rain soon reached southwest England and the Channel Isles.

During the morning the rain moved steadily northeast to Wales, East Anglia, the Midlands, northwest England and Northern Ireland, turning to snow in most of these places by mid afternoon. By evening in North Wales, the Midlands and East Anglia there were moderate accumulations of snow in many places with drifting in the strong easterly winds.

Drier weather followed into southwest England by late morning with a few bright spells and it also became drier for a time in southern England and South Wales during the late afternoon and evening.

Northeast England and Scotland had some more wintry showers, mainly near North Sea coasts and there were some bright or sunny spells, especially in the west and north of Scotland.

It was a cold and windy day almost everywhere, the exceptions being Devon, Cornwall and the Channel Isles where they had another mild day. Fort William (Lochaber) reported a gust of 70 knots during the afternoon.

SATURDAY
9 FEBRUARY 1985

SUMMARY OF BRITISH WEATHER

Over much of England, the Isle of Man and Wales, there was snow overnight, heavy in places with drifting in the strong winds. Northeast England and most places in Scotland were mainly dry, although there were some snow showers. In southwest England, the south coast and the Channel Islands, there was rain.

Many places in Scotland had a bright day. Northern England and Norfolk had a mostly dry day, although cloudy, but there were some snow showers in all these areas.

Over much of England and Wales, the Isle of Man and Northern Ireland there was snow during most of the day. The snow was heavy in places in the morning and again there was drifting in the strong winds, the heaviest snow being in the Midlands and Wales.

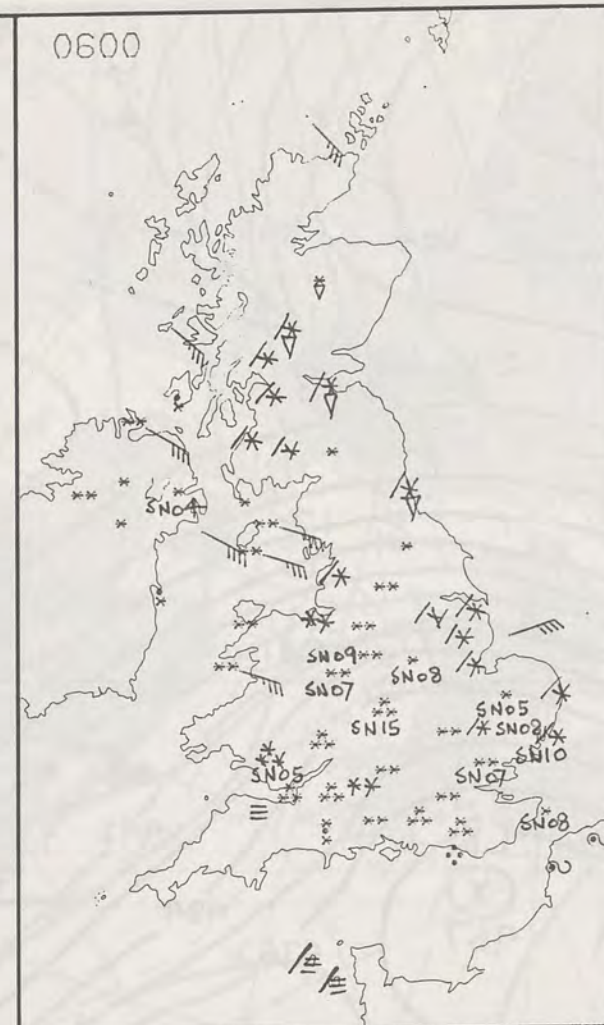

Devon and Cornwall, southwest Wales and the Channel Islands had a mainly dry day.

Most of England, Wales and eastern Scotland had a very cold day with temperatures staying below freezing point. The Northern Isles, western Scotland and Northern Ireland had a cold day and only the Channel Islands and extreme southwest Cornwall had near normal temperatures.

SUMMARY
OF
BRITISH WEATHER

In most regions it remained dry with small amounts of cloud. In parts of Devon and Cornwall, there was light sleet or snow and in the Isles of Scilly some light rain. In the Northern Isles there were several light snow showers. Northern Ireland and parts of South Wales had a mainly cloudy morning and in southwest England it was cloudy most of the day. Elsewhere in the UK, there were long sunny periods.

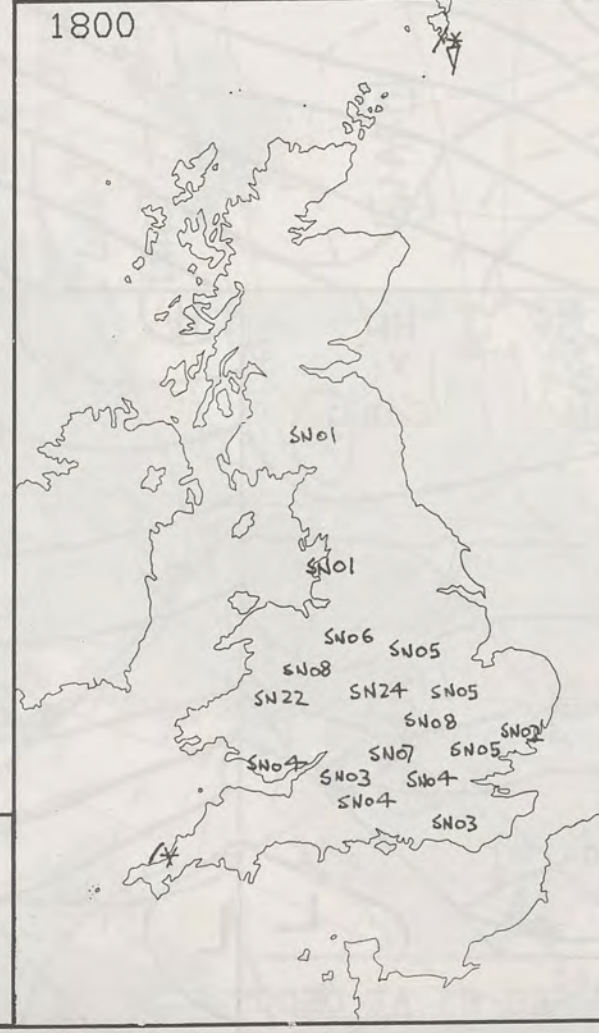

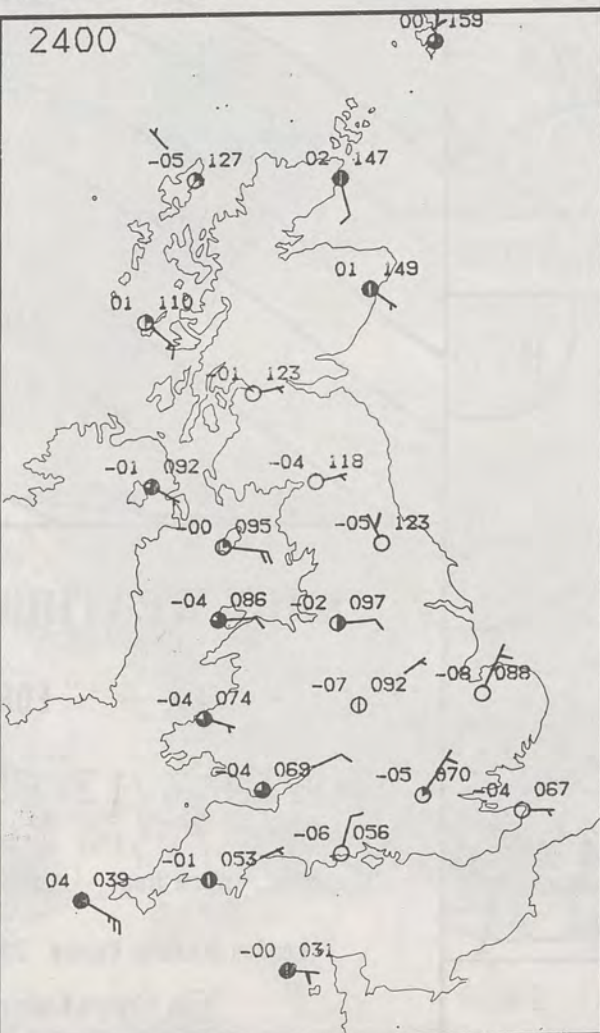

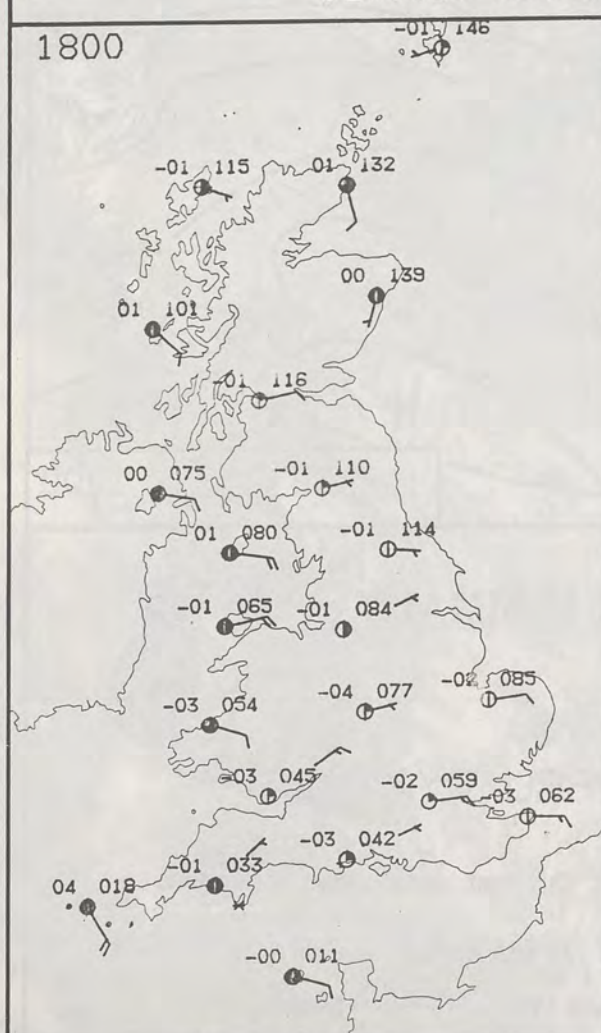

There was severe frost in most regions overnight, the exceptions being the Isles of Scilly and Shetland. During the day, frost persisted over much of England and Wales making it another very cold day. In the far southwest and in most northern regions, although temperatures were a degree or two above freezing, it was still cold or very cold.

WEDNESDAY
13 FEBRUARY 1985

SUMMARY OF BRITISH WEATHER

Most areas remained dry throughout the period with long sunny periods in many places.

Snow showers in the Northern Isles spread southward to other parts of northeast Scotland in the morning and as far south as northeast England during the afternoon. In Cornwall and Devon there was light snow and sleet during the afternoon and evening, the snow turning to rain in the extreme southwest.

Elsewhere it remained dry but there were areas of cloud, particularly in the South Midlands, Greater London and Essex.

There was a widespread severe frost in most places overnight except for the Isles of Scilly, Lands End and parts of the east coast of Scotland. Most of England and Wales again had a very cold day with temperatures remaining below freezing point. Cornwall, northern England, Northern Ireland and Scotland had a rather cold or cold day. Winds were mainly light easterlies but near to coasts they were fresh.

SUMMARY OF BRITISH WEATHER

Southwest England had some severe weather overnight with strong to gale easterly winds and some sleet and snow at times. There were gusts up to 72 knots at a few places during the early hours. Elsewhere over Britain it stayed dry with a moderate or severe frost in most places.

During the day there was some more sleet and snow at times in the far southwest and in the Channel Islands. For the rest of Britain it was a mainly sunny day and generally dry, apart from a few wintry showers in the Northern Isles and eastern Scotland. The gale force winds in the southwest began to moderate later in the day.

It was cold or very cold over the southern part of Great Britain with much of Wales and the southern half of England staying below freezing all day. Scotland and Northern Ireland were mainly rather cold or cold. However, northern areas of Scotland had temperatures not far from normal.

SUMMARY OF BRITISH WEATHER

Cornwall and the Scilly Isles had a little rain and sleet early but it died out before morning. For the rest of Britain, the night was dry and clear with widespread moderate or severe frost.

During the day, many parts of the country had almost unbroken sunshine and it remained dry everywhere.

Temperatures were near the seasonal average over northeast Scotland and the Northern Isles but for other parts of Britain it was rather cold for mid February and central England and East Wales were cold with temperatures not far from freezing.

After dusk, there was frost again in many places and some freezing fog patches formed in northeast England.

SUNDAY
17 FEBRUARY 1985

SUMMARY
OF
BRITISH WEATHER

It was a dry, frosty night, with a moderate or severe frost in many places and freezing fog locally.

Over Northern Ireland, Wales and much of England it was a dry day, with good sunny periods and a few light snow showers. There was patchy cloud in places and in the afternoon and evening it was cloudy in Northern Ireland.

Many places in Scotland were dry with some sunshine, but cloud reached all parts during the afternoon. In northwest and northern Scotland it was mainly cloudy with some rain, sleet and snow.

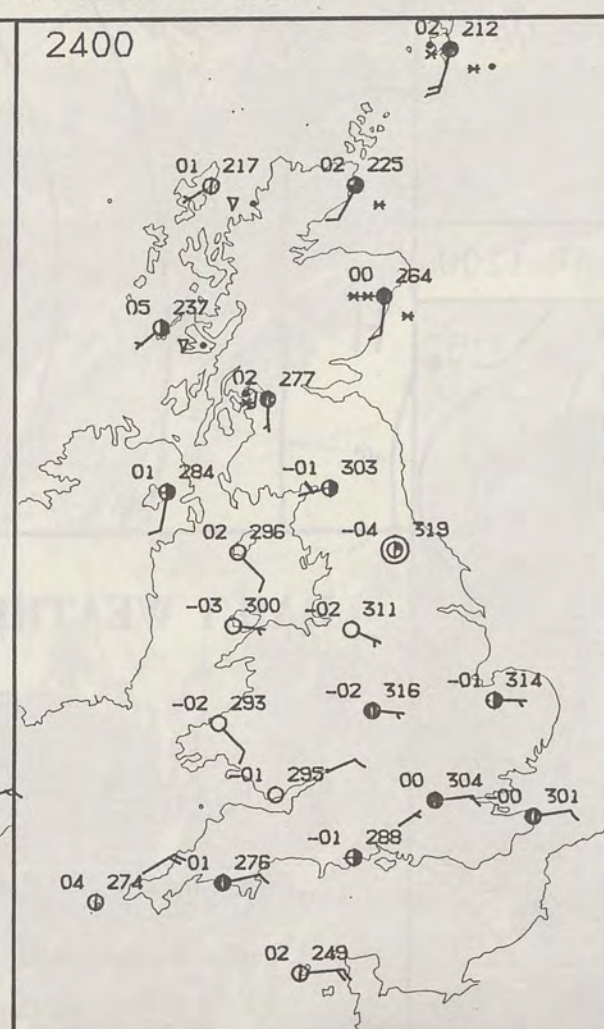

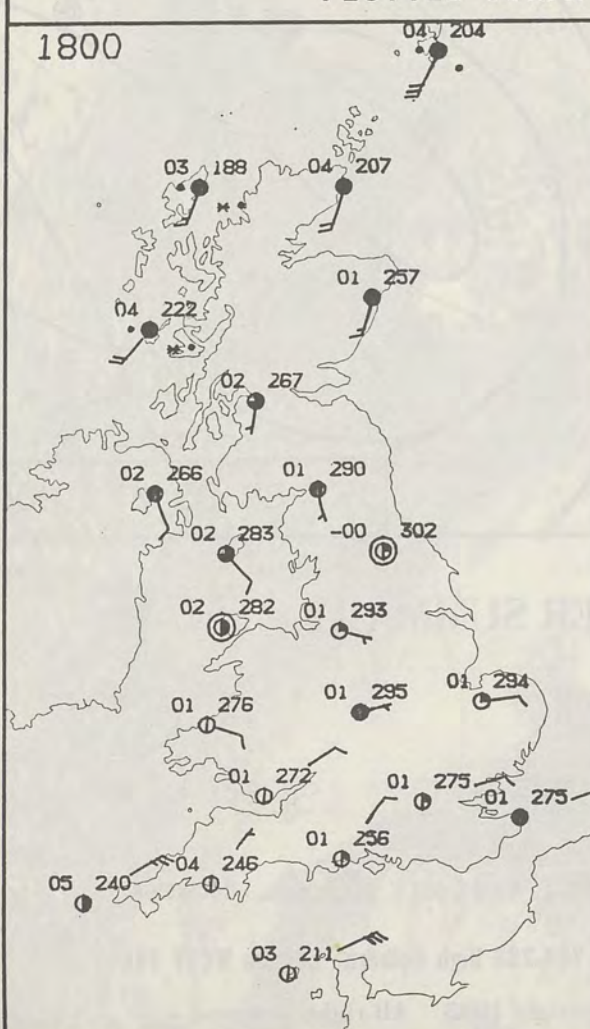

Over much of Britain, temperatures were below normal, and most places had a rather cold or cold day, the lowest temperatures being in central England and Wales.

MONDAY
18 FEBRUARY 1985

SUMMARY
OF
BRITISH WEATHER

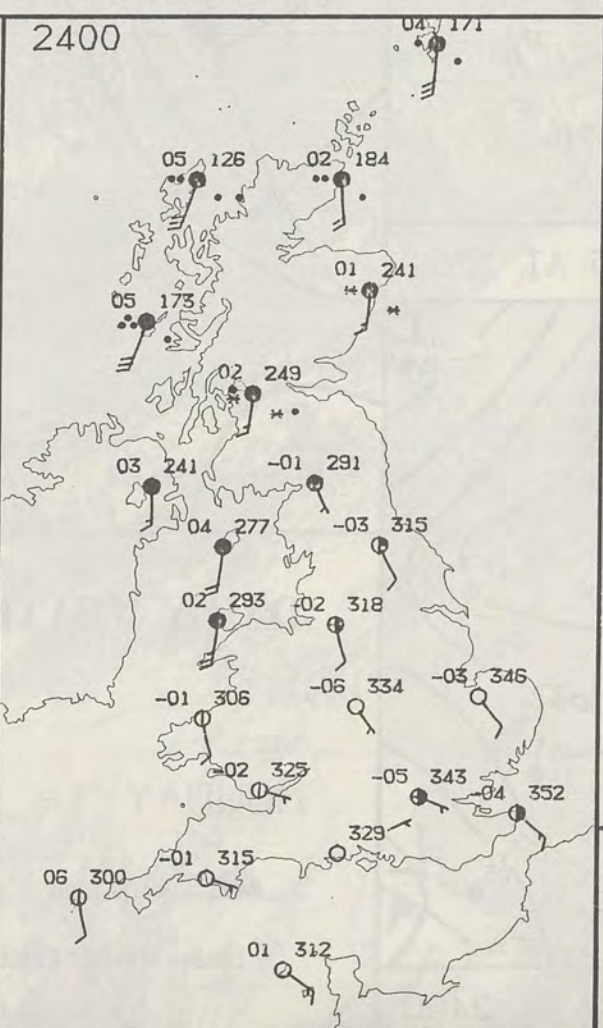

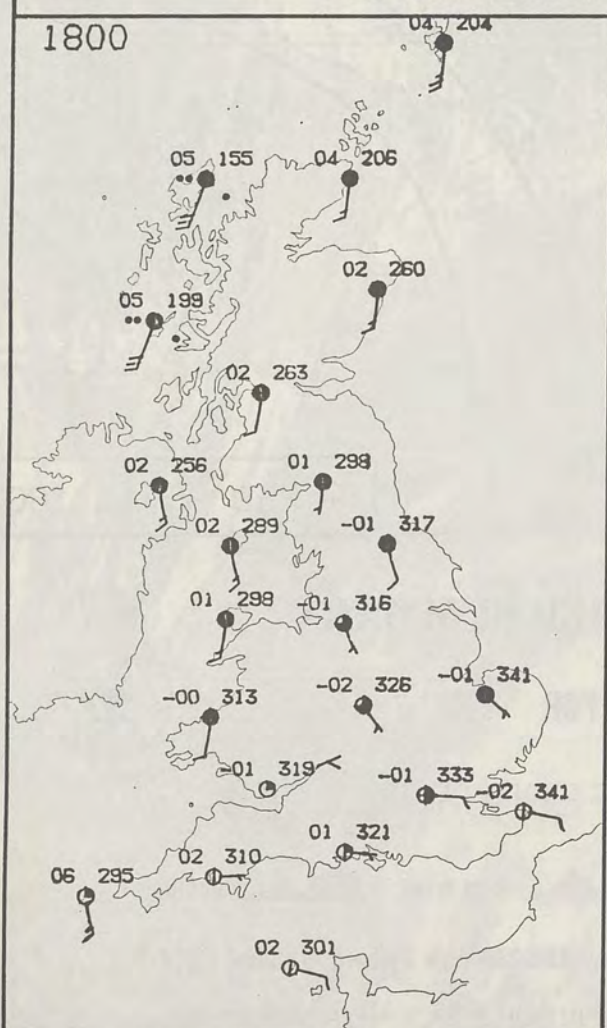

Much of Britain was dry overnight, but Scotland had rain and snow early. There was widespread moderate or severe frost in England, Wales, Northern Ireland and southern Scotland.

England and Wales were dry nearly everywhere during the day and most places were sunny, but in the North Midlands and parts of northern England it was more cloudy in the morning and one or two places had a little snow.

Northern Ireland had a bright morning with some sunshine, but it clouded over in the afternoon, with rain in places in the evening.

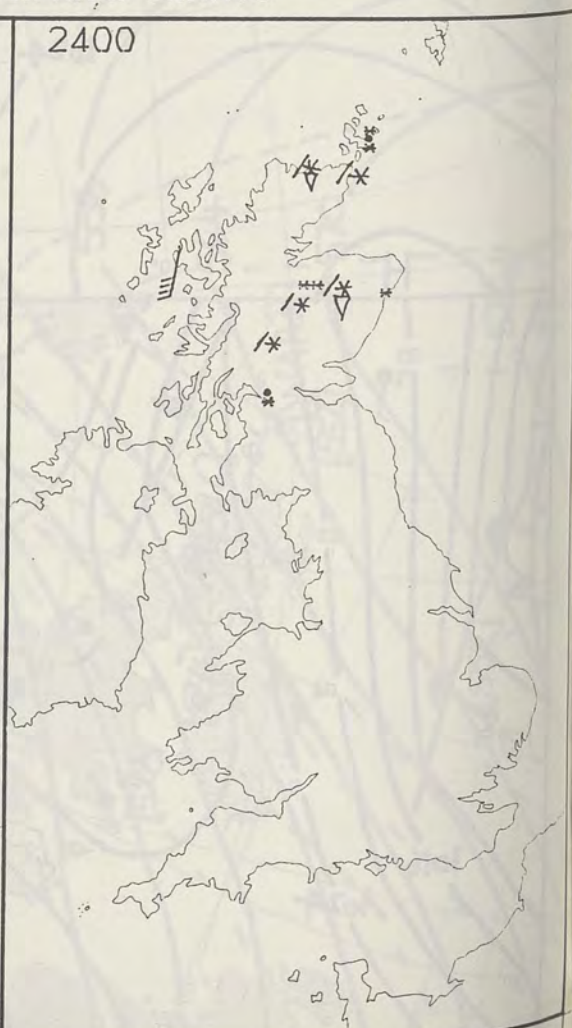

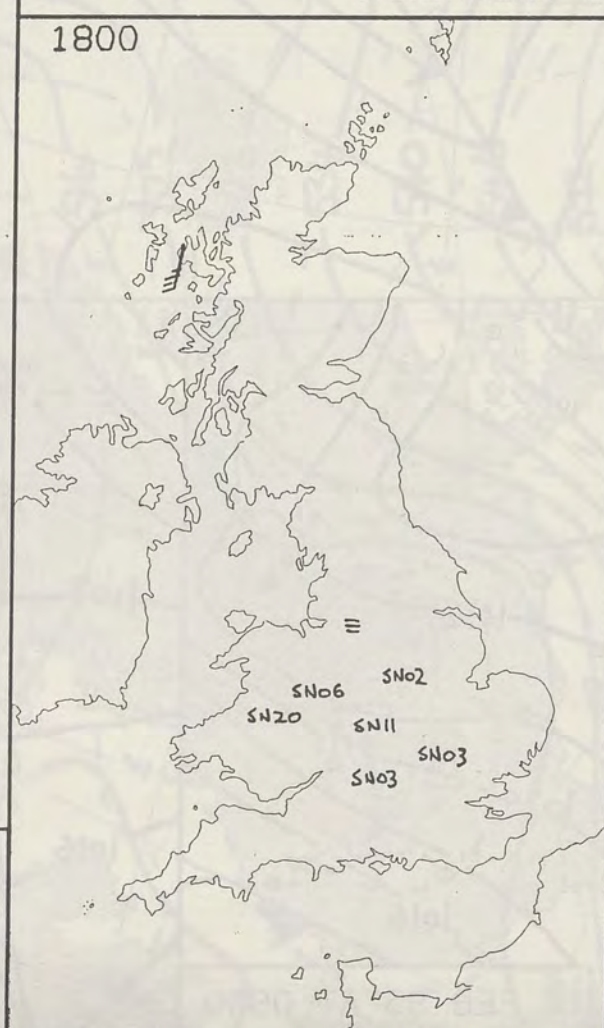

PLOTTED SURFACE OBSERVATIONS

Much of Scotland was dry and bright during the day but late in the afternoon, wet and windy weather reached the Western Isles and then spread to central and northern districts during the evening. Over the mountains the rain turned to snow.

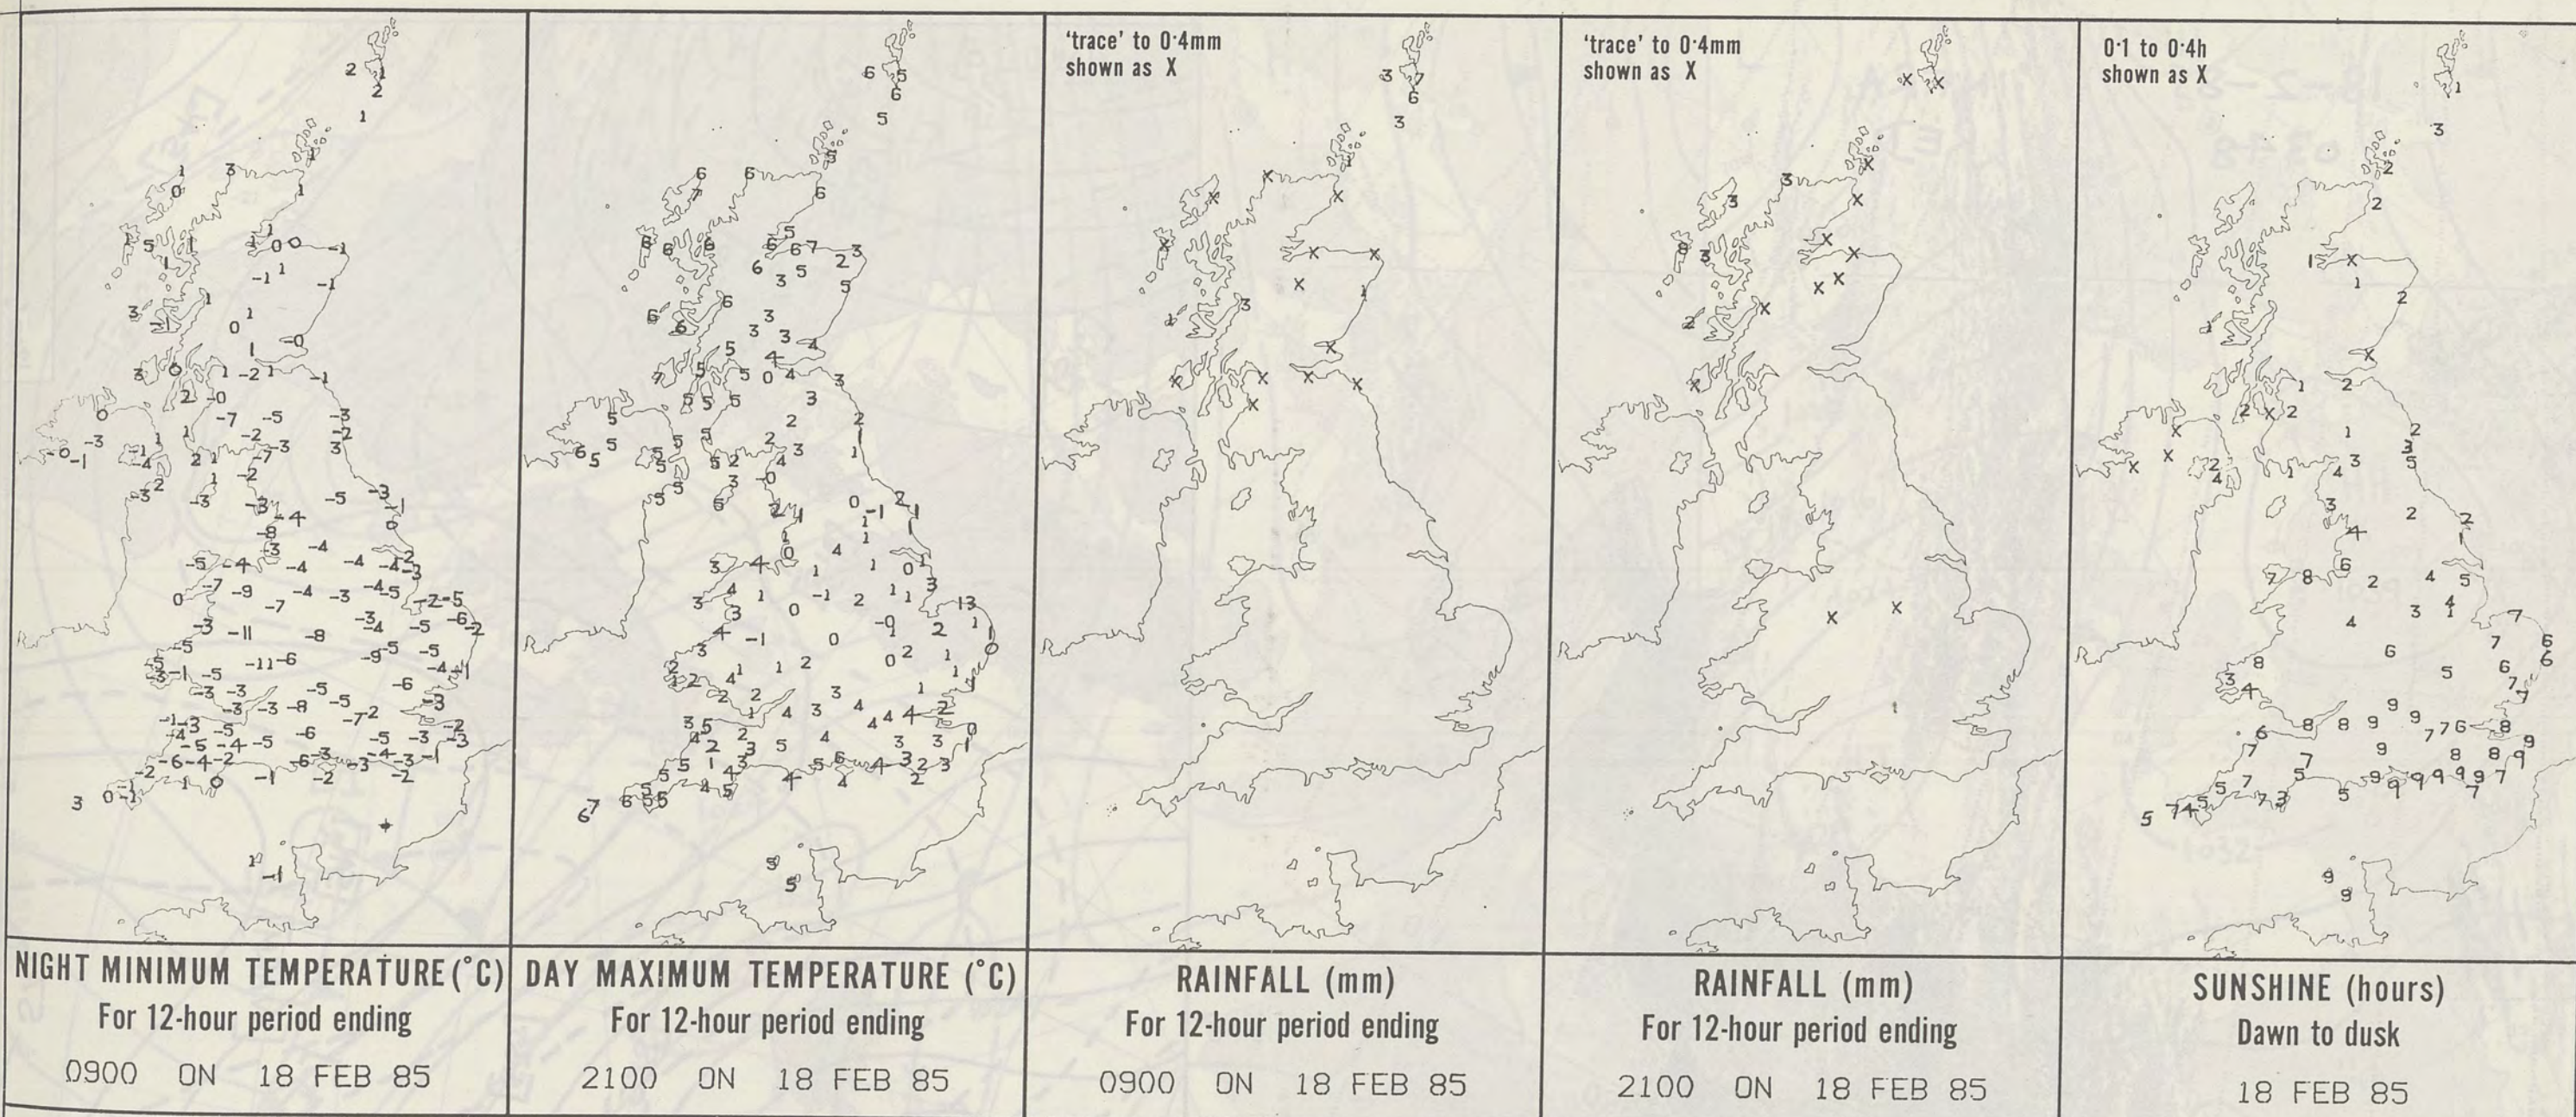

Temperatures over Scotland and Northern Ireland were close to or a little below normal, but much of England and Wales had a cold day.

19 FEBRUARY 1985

SUMMARY
OF
BRITISH WEATHER

In England and Wales it was a dry night with moderate or severe frost in most places.

Southern and central regions of England had a dry day with sunny periods. In northern England, North and West Wales, it was a mainly cloudy day and after a dry morning, outbreaks of light rain and snow spread from the northwest during the afternoon and evening.

In Scotland and Northern Ireland rain was heavy at times, especially in western Scotland. Over the mountains and in many central and eastern parts of Scotland, there was a period of snow in the early hours. After dawn snow turned to rain except over the highest ground. Brighter weather reached northwest Scotland during the afternoon and this dry weather with clearing skies moved steadily southeast to reach southern Scotland and Northern Ireland during the evening.

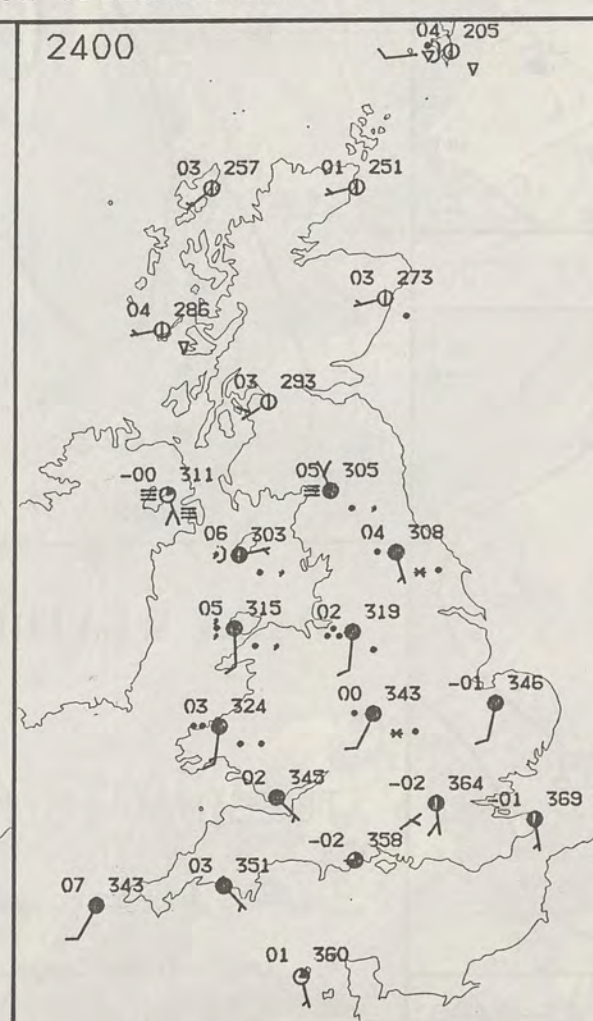

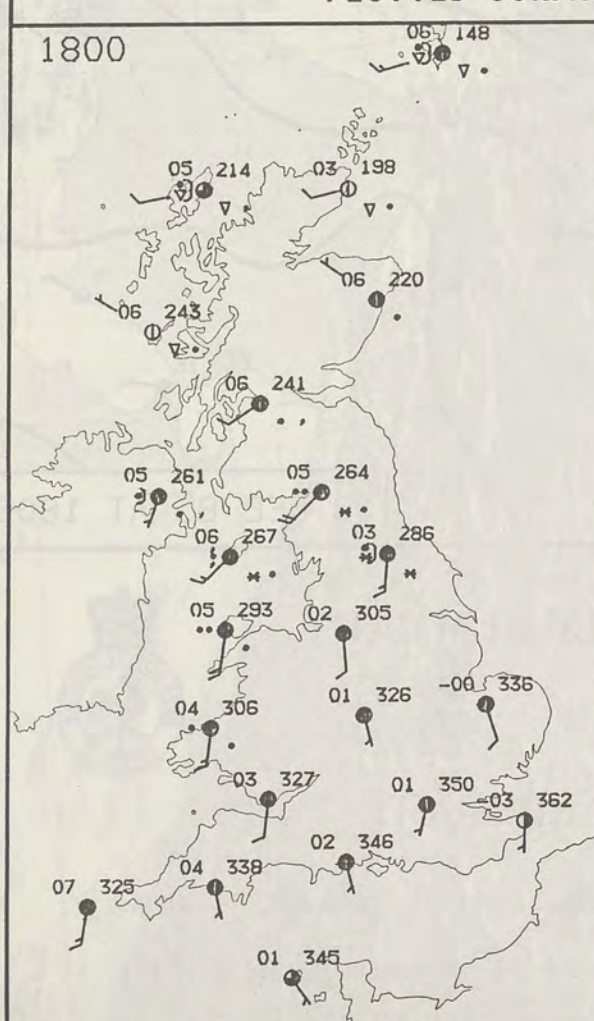

Over most of England away from the southwest it was a cold or very cold day. In Scotland and Northern Ireland temperatures were near normal generally but a few places, on the coasts of the Moray Firth, became warm. Wales and southwest England were generally rather cold but it was cold in some places in Wales.

WEDNESDAY
20 FEBRUARY 1985SUMMARY
OF
BRITISH WEATHER

Over most of England and Wales it was cloudy and there were patches of light sleet or rain, mainly in central and eastern England. In West Wales and northwest England it was misty with drizzle at times. In the Channel Islands it was sunny and extreme southern parts of England had a dry day with some hazy sunshine.

In Lincolnshire, northeast England, Scotland and Northern Ireland it was a mainly dry day with a good deal of sunshine but there were some mist patches which persisted all day, especially in southwest Scotland. In western Scotland and Northern Ireland cloud thickened during the evening and there was light rain or drizzle in places.

In northern Britain, after slight frost in places at first it was a mild day and in parts of eastern Scotland it was very mild. In the southwest of England and Wales, temperatures were near normal, but in the Midlands, northwest England, central southern and southeast England together with East Anglia it was rather cold or cold.

THURSDAY
21 FEBRUARY 1985

SUMMARY
OF
BRITISH WEATHER

Overnight, dense fog formed in central and eastern areas of England and there was patchy fog elsewhere. Most of this cleared slowly during the morning but parts of the Midlands and east England stayed foggy all day.

In England and Wales there was some early morning drizzle, which mostly cleared away during the day. However, it stayed dull and misty, except in the extreme south of Cornwall and the Channel Islands where it was sunny all day.

In Northern Ireland and western Scotland after a bright start, cloud increased during the afternoon and there was light rain in the west. Eastern Scotland remained dry and mainly sunny.

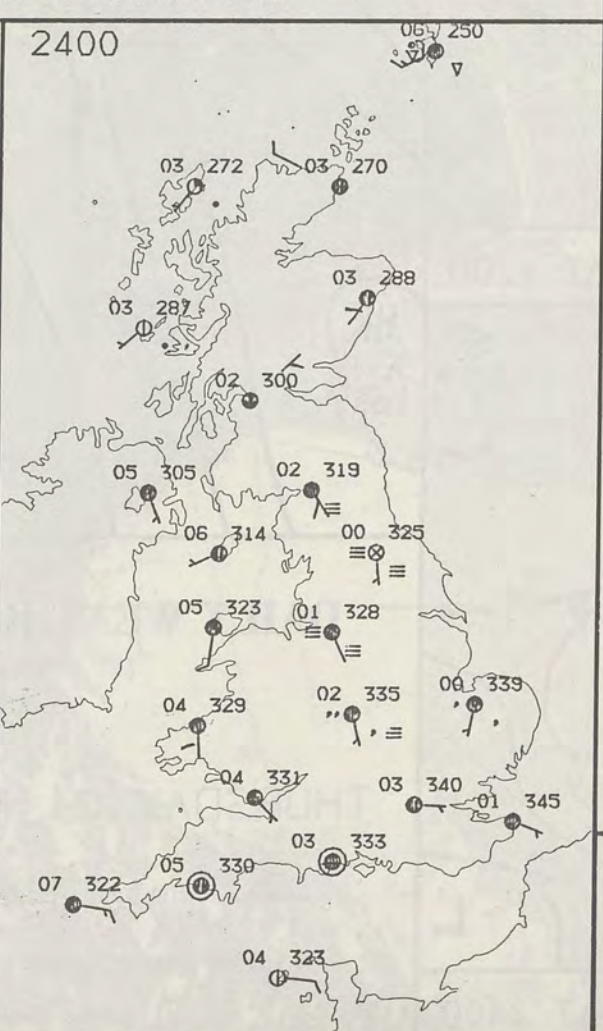

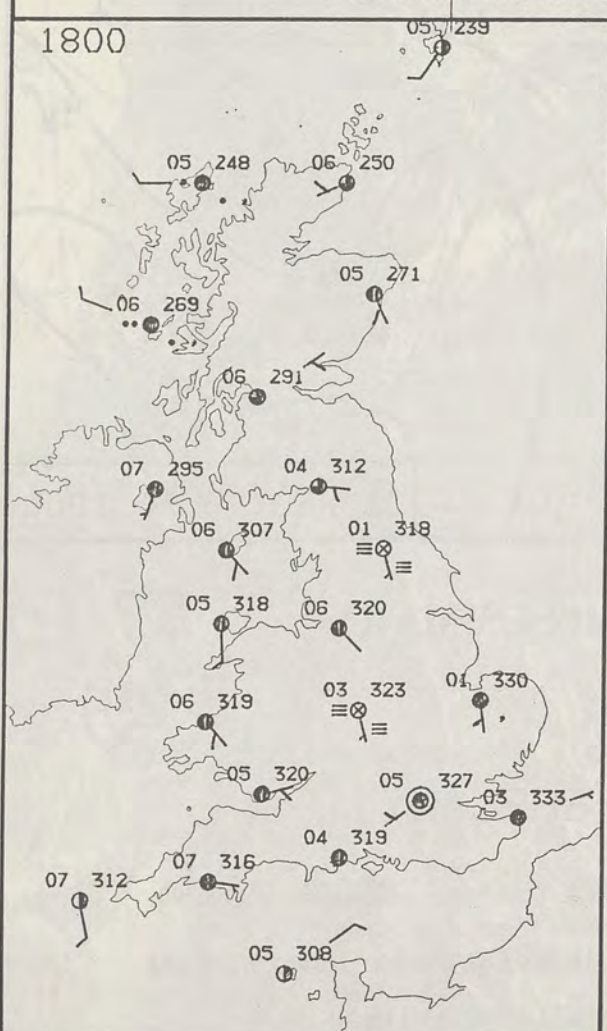

It was mostly mild or very mild in central and eastern Scotland but cold or very cold in eastern England, the Midlands, East Anglia and southeast England. Remaining parts of the UK had near normal temperatures.

PLOTTED SURFACE OBSERVATIONS

FRIDAY
22 FEBRUARY 1985

SUMMARY OF BRITISH WEATHER

Overnight dense fog patches formed, these were mainly in the Midlands and northern England. The rest of England and Wales were cloudy overnight but mainly dry. In Scotland and Northern Ireland the cloud amounts were variable and there was a little rain in places.

During the morning most of the fog slowly cleared, but it stayed foggy all afternoon in parts of North Yorkshire; this fog finally cleared in the evening. Most of England and Wales stayed cloudy during the day but in the extreme southwest and north there was some sunshine. During the evening there was rain in parts of the north and west of England and Wales.

Eastern Scotland was bright during the morning. In the afternoon the wind strengthened and rain spread into Northern Ireland and western Scotland. Rain moved to other parts of Scotland in the evening.

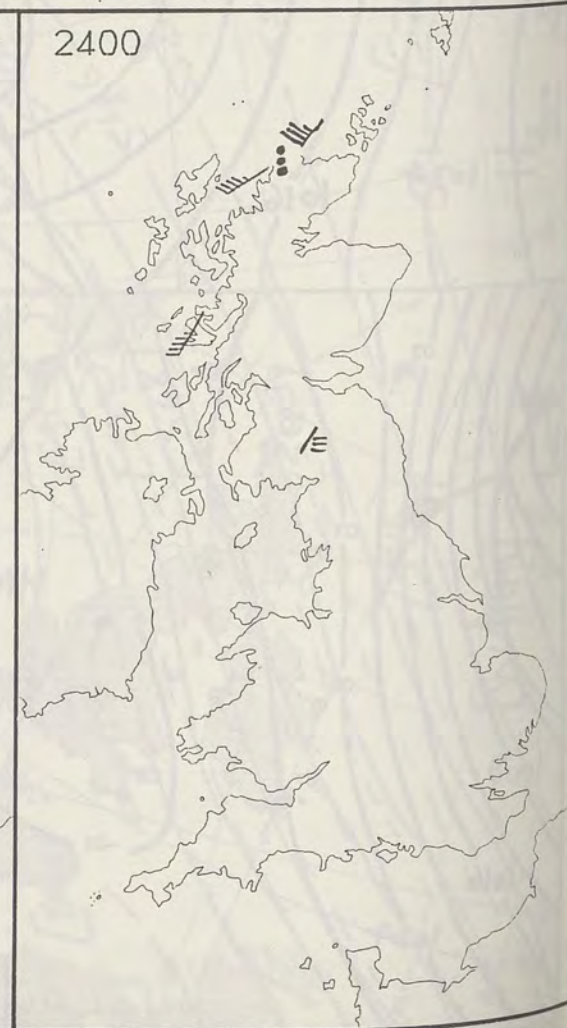

It was generally mild in eastern Scotland but rather cold or cold over England away from western counties. The remainder of the UK had near normal temperatures.

SUMMARY
OF
BRITISH WEATHER

Most places had rain and drizzle overnight, but southern England, much of Wales and parts of north-east Scotland stayed dry. Over England and Wales it was quite cold, with frost in parts of eastern and southern England.

During the day Northern Ireland and much of Scotland were cloudy with some rain and drizzle, but parts of northeast Scotland stayed dry. Most places in Wales had a dry day with some sunshine, with just a little rain in the north.

Northern England and East Anglia had a little rain and drizzle in the morning, but the afternoon was dry. Sunny periods developed later in East Anglia.

Southern England and the Channel Islands had a dry day and in central southern, southwest England and the Channel Islands it was a mainly sunny day.

Most places had a very mild day, exceptionally mild in central and eastern Scotland. Kent, Surrey and Sussex, however, had near normal temperatures. It was windy at first in northern Scotland.

TUESDAY
26 FEBRUARY 1985

SUMMARY
OF
BRITISH WEATHER

There was a slight frost in many places at first, with hill and coastal fog and some patches on low ground also.

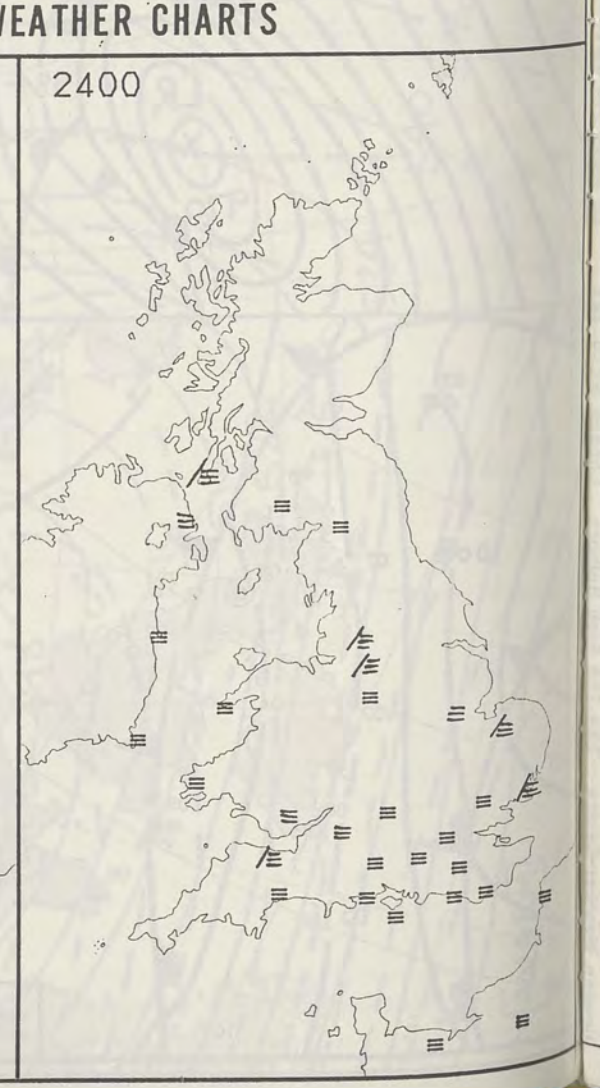

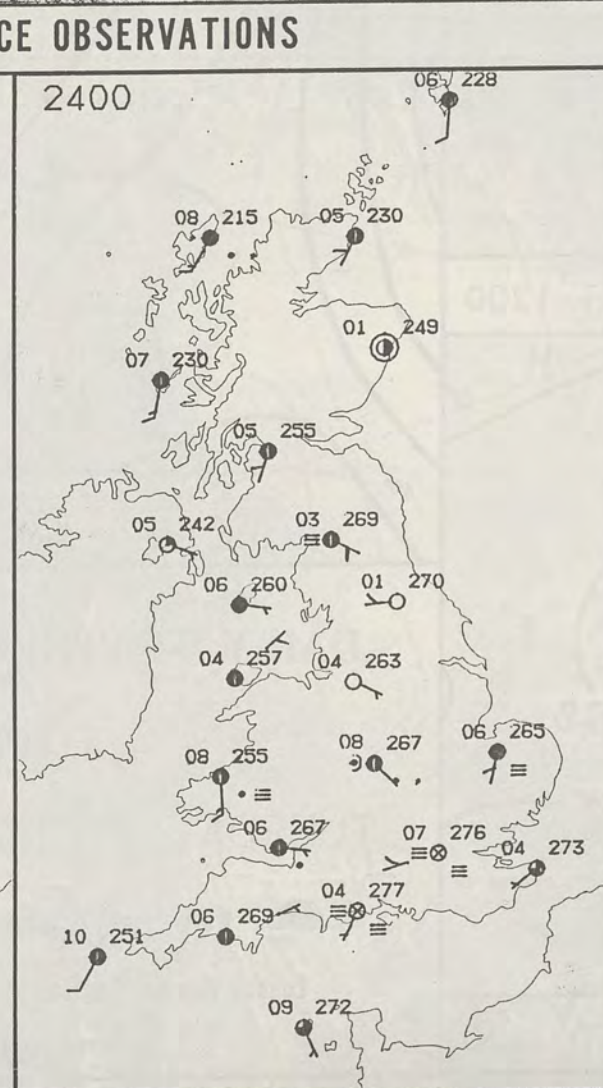

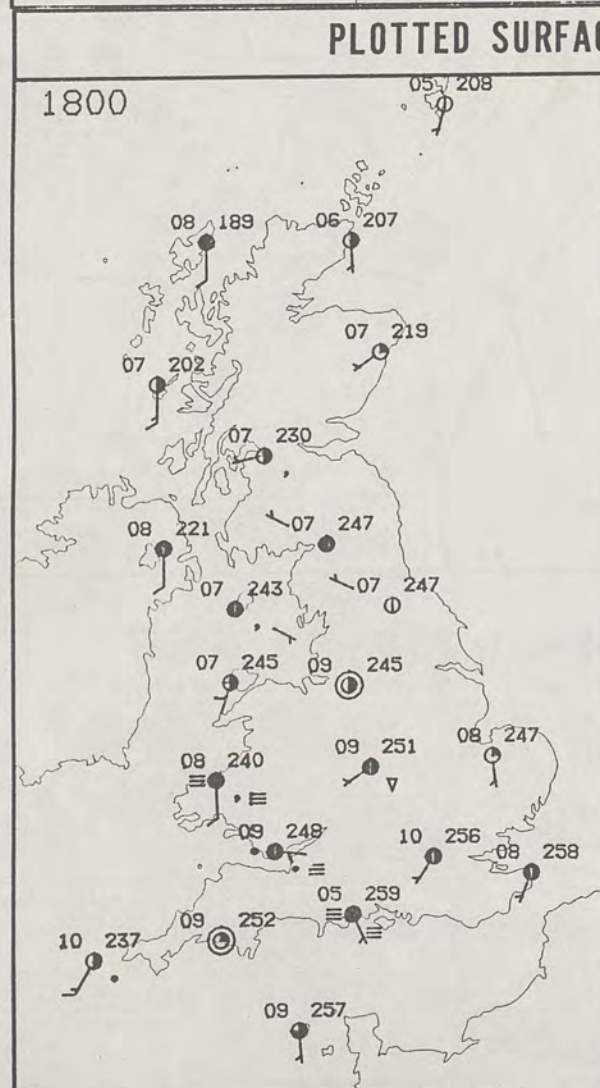

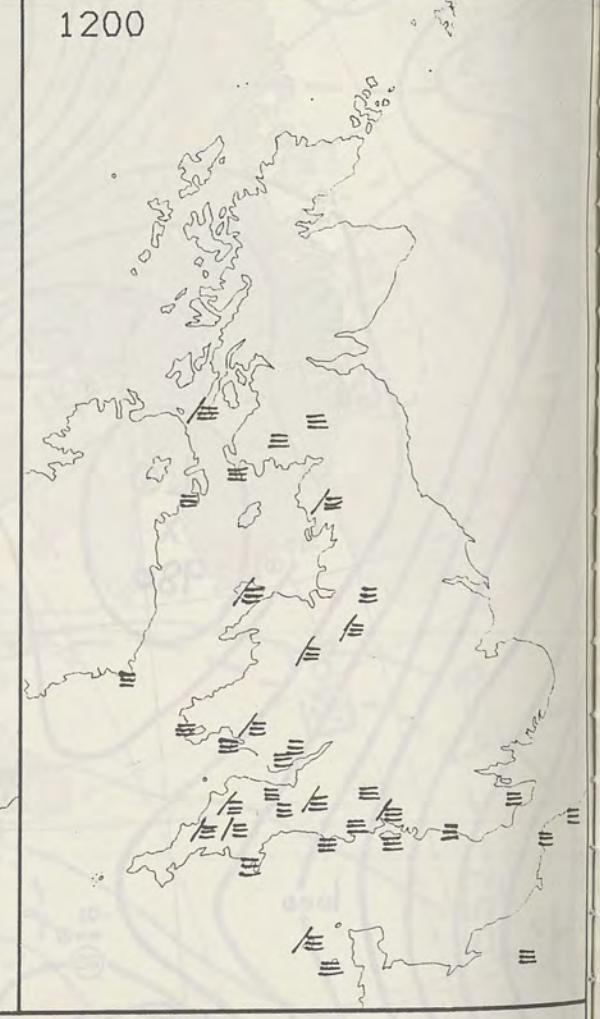

Most regions remained dry with sunny or clear intervals developing but in Wales, parts of western England and southwest Scotland it was mainly cloudy with drizzle or light rain at times, and in southwest Wales some heavier rain during the evening. Misty conditions persisted along some stretches of the south coast, also in parts of Wales and some western coastal regions.

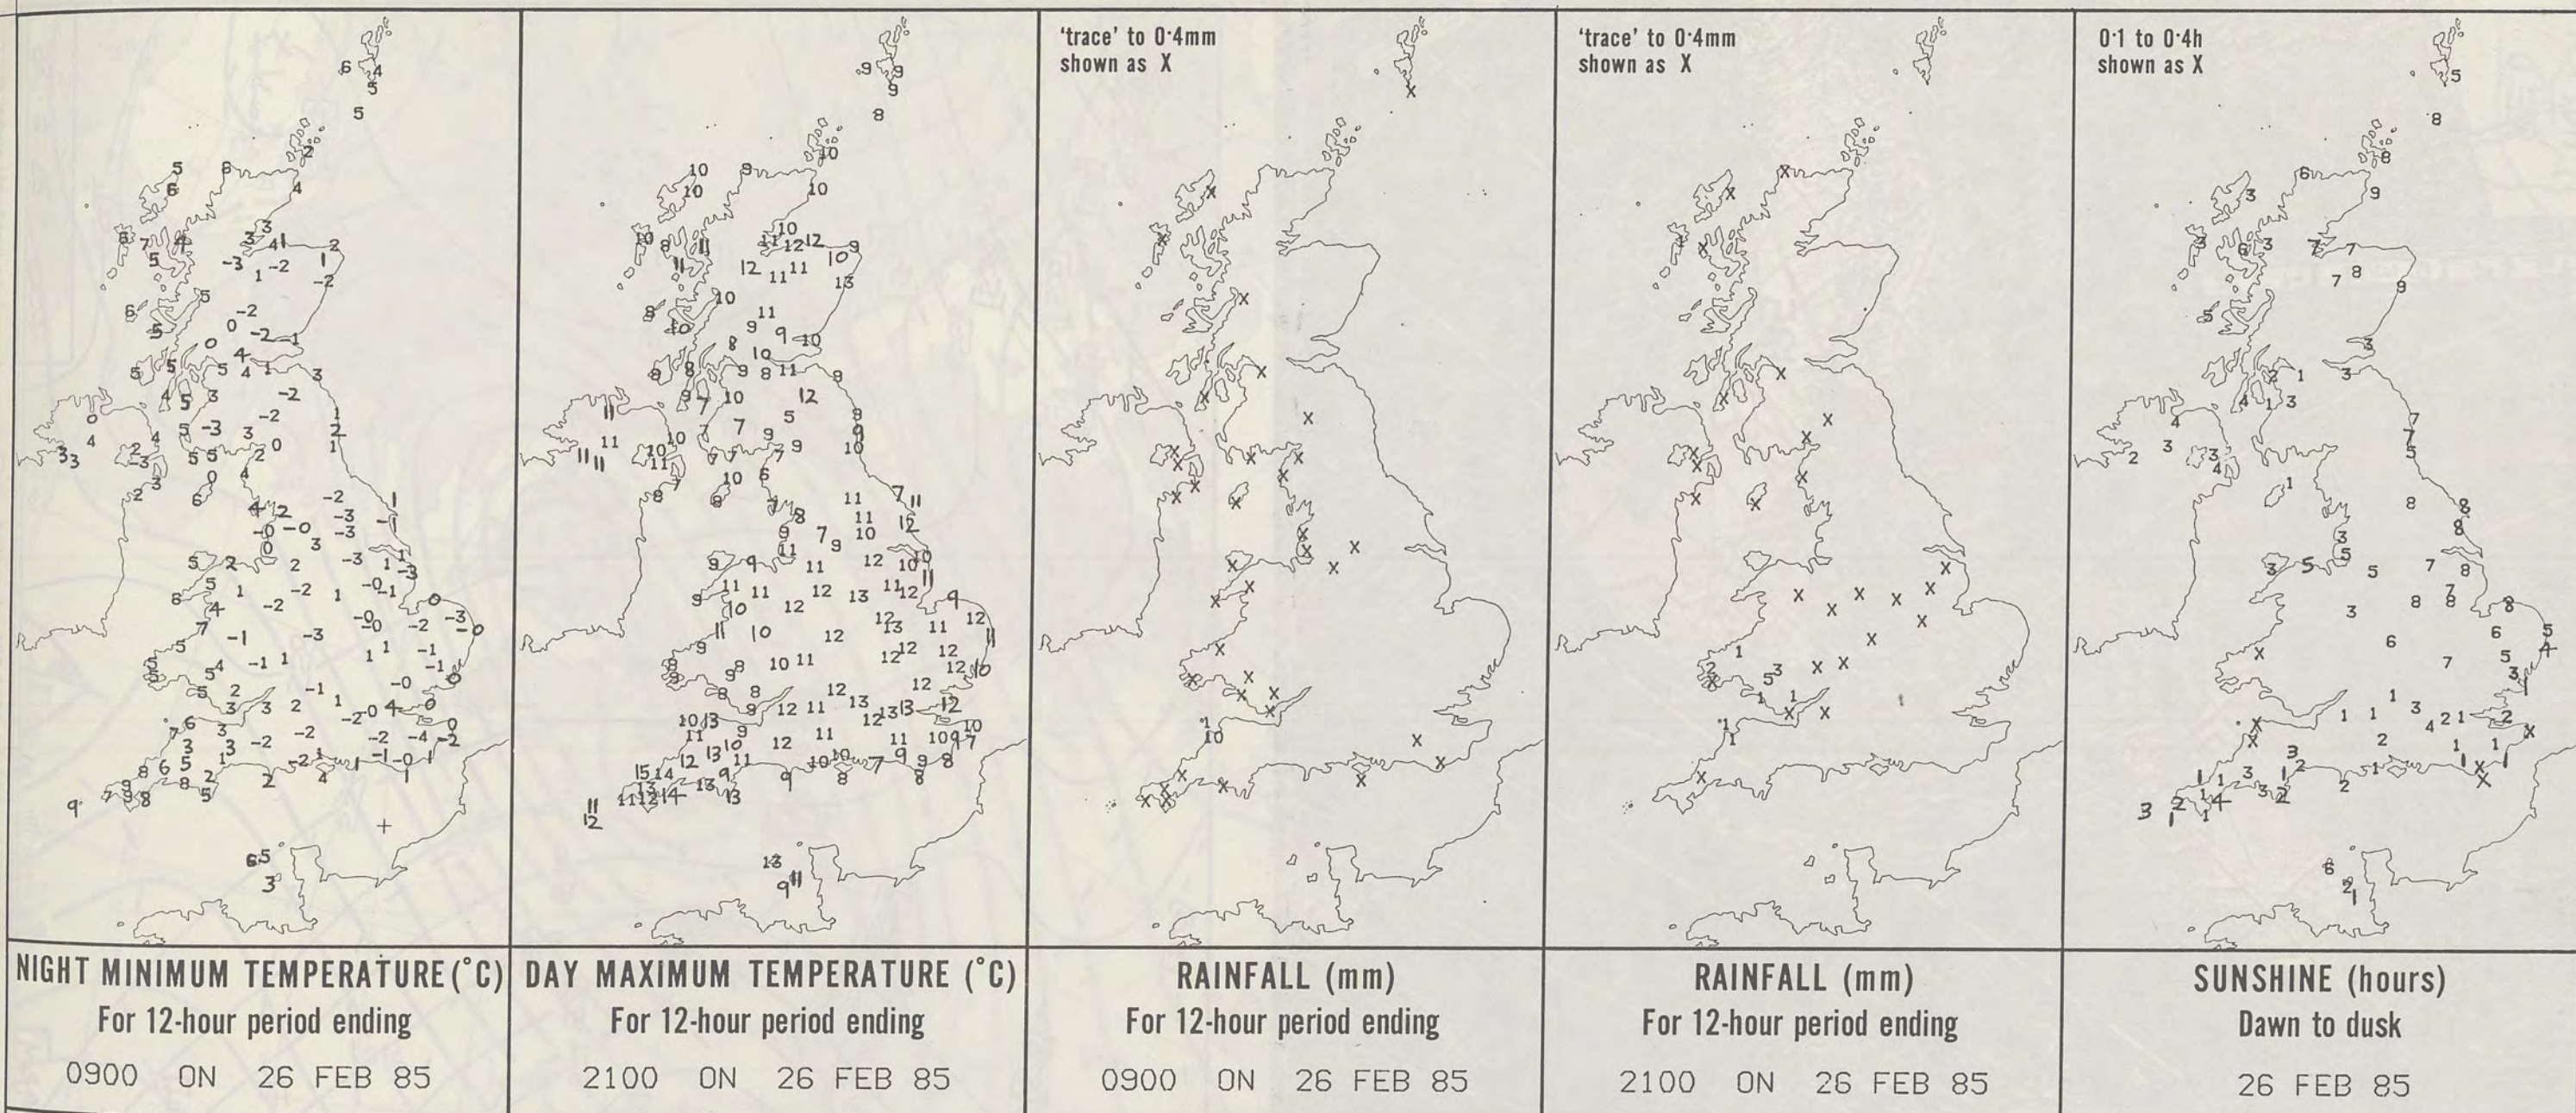

During the evening fog patches developed again in southern and eastern parts of England.

Temperatures were generally mild or very mild although along parts of the south coast, in Cumbria and southwest Scotland they were nearer normal.

WEDNESDAY
27 FEBRUARY 1985

SUMMARY
OF
BRITISH WEATHER

Fog was widespread over much of England and Wales during the night. In northeast England, Scotland and Northern Ireland the fog was patchy with a sharp frost by dawn in eastern Scotland and northeast England.

During the morning the sun came through in most places but near North Sea coasts and along the Channel coast from Sussex to Devon the fog continued to roll in off the sea, and here it stayed rather cold.

Inland over Wales, Kent, East Anglia, the North Midlands and northwest England it stayed mostly cloudy with a little rain here and there. Later in the day the Isle of Man and Northern Ireland also had light rain.

By evening most western parts of Britain were dry and clear, but elsewhere the fog returned fairly widely with some dense patches in the Midlands, East Anglia and central southern England.

By day most places were very mild, however western Scotland, eastern England, Norfolk, Kent and Sussex had temperatures near normal.

PLOTTED SURFACE OBSERVATIONS

THURSDAY
28 FEBRUARY 1985

SUMMARY OF BRITISH WEATHER

Overnight dense fog formed in many places, especially in England, down the eastern side of Scotland and in the Forth and Clyde valleys.

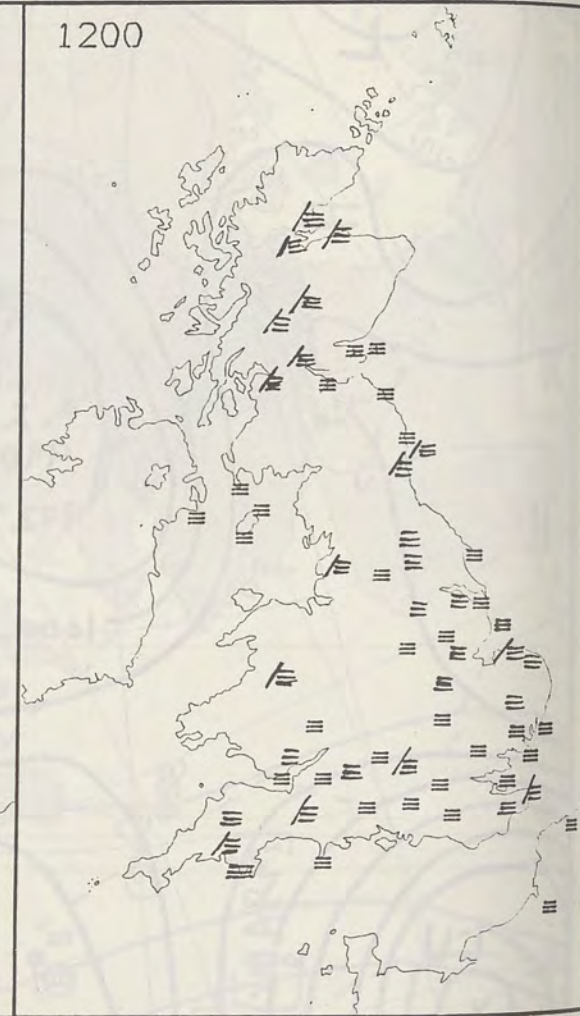

During the day most of the fog gradually cleared but it stayed dull and misty in many eastern counties. In the southwest of England, Wales, Northern Ireland and much of Scotland there was a good deal of sunshine.

Most of the day was dry, apart from a little drizzle from the fog. During the evening, rain spread into the southwest of England and parts of South Wales. There were strong southeasterly winds here too.

There was a frost in parts of Scotland overnight. During the day it stayed cold in eastern counties of Britain but was exceptionally mild in parts of the west and north.
