DAILY WEATHER REPORTS

1ST APRIL TO 30TH JUNE, 1925.

METEOROLOGICAL STATIONS.

FORECAST DISTRICTS AND BRITISH STATIONS.

STATIONS USED FOR UPPER AIR SUPPLEMENT.

THE BEAUFORT SCALE OF WIND FORCE.

Beaufort Number.	Admiral Beaufort's General Description of Wind.	Specification for use on Land, based on observations made at Land Stations.	Limits of Mean Velocities Statute Miles per Hour.
0	Calm	Calm; smoke rising vertically	Less than 1
1	Light air	Direction of wind shown by smoke drift	1-3
2	Slight breeze	Wind felt on face; leaves rustle	4-7
3	Gentle breeze	Leaves and small twigs in constant motion; wind extends light flag	8-12
4	Moderate wind	Raises dust and loose paper; small branches are moved	13-18
5	Fresh wind	Small trees in leaf begin to sway; crested wavelets on inland waters	19-24
6	Strong wind	Large branches in motion; whistling heard in telegraph wires	25-31
7	High wind	Whole trees in motion; inconvenience felt when walking against wind	32-38
8	Gale	Breaks twigs off trees; generally impedes progress	39-46
9	Strong gale	Slight structural damage occurs (chimney pots and slates removed)	47-54
10	Whole gale	Seldom experienced inland; trees uprooted	55-63
11		Very rarely experienced; accompanied by widespread damage	64-75
12	Hurricane		Above 75

BEAUFORT NOTATION OF WEATHER.

b blue sky (not more than a quarter covered).
 bc sky partly cloudy (one half covered).
 c generally cloudy (three-quarters covered).
 d drizzle. h hail. KQ line squall.
 l lightning. o overcast sky.
 m mist, visibility 1000-10000 m.
 f fog. 200-1000 m.
 F thick fog. less than 200 m.
 p precipitation within sight of station.
 ps passing showers. r rain.
 s snow. rs sleet. t thunder.
 v unusual visibility. y dry air.
 z dust haze; the turbid atmosphere of dry weather.

With present weather is combined, whenever possible, the general character of the weather. A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; h(r) = "hail" or "rain and hail"; Capital letters indicate intensity, suffix o indicates slight; and repetition of letters continuity, thus: - R = heavy rain. rr = continuous moderate rain. rto = continuous light rain.

GALE WARNINGS.

The Meteorological Office issues warnings to ports and fishing stations of gales on or near the coasts of the British Isles. When one of these notices has been received at a station a black canvas cone is hoisted.

The South Cone (point downwards) is hoisted for gales from S.E., veering to S.W., W. or N.W.
 " S.W., veering to W. or N.W.
 " W., veering to N.W.
 " E., veering to S. or S.W.

The North Cone (point upwards) is hoisted for gales from S.E., E. or N.E., backing to N.
 " N.W., veering to N., N.E. or E.
 " N., veering to N.E. or E.
 " N.E., veering to E.

The Signals remain hoisted after the receipt of a warning telegram until danger of a gale is passed. The Districts to which warnings are sent are shown in the British Section of the Daily Weather Report by the following symbols:—

- ▼ South Cone hoisted.
- ▲ North " "

AIR MINISTRY.

METEOROLOGICAL OFFICE, LONDON.

NOTES ON THE INFORMATION CONTAINED IN THE BRITISH AND INTERNATIONAL SECTIONS OF THE DAILY WEATHER REPORT.

Heights of Stations.—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

Tynemouth.—The height of this station above M.S.L. has been 67 feet since September 28th, 1923, and not as entered in the British Section of the Report.

Guernsey.—The height of this station has been 295 feet since July, 1923.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500–2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart (160 miles) in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are $\frac{1}{2}$ inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10⁷ Charts.
or 2 mb " " 1 : 10⁷ " "
or 1 mb " " 1 : 5 × 10⁶ " "

Miles per hour.

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Weather.—In describing the distribution of weather over a district or during an interval of time such as a day, descriptive adjectives are used with the following meanings:—

Fine—mainly b and bc of the Beaufort notation (see previous page).

Fair or fair generally—mainly bc and c.

Cloudy—combinations of bc, c and o, c predominating.

Overcast—mainly c and o.

Dull—overcast with low heavy cloud.

Varying or variable cloud—combinations of b, bc, c, and o.

Precipitation when occurring is specifically mentioned.

Since the end of April, 1925, the use of the terms "mist" and "haze" has been restricted to cases of visibility between 1,100 yards and 1½ miles. These terms are no longer used for visibility of 1½–6½ miles.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

Upper Air Temperature.—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights; they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the

diagram, temperatures are given in degrees Fahrenheit and Absolute. The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10°a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

The statement contained in the Upper Air Supplement from January 1st to May 31st, 1925, implying that these lines are for air saturated at exactly 900 mb. is not strictly true: the pressure corresponding with a height of 1 km. averages about 900 mb. for the range of temperature considered, but is different for each adiabat.

Times of Sunrise, Noon and Sunset.—In compiling the table of Greenwich times of sunrise and sunset for selected stations in the British Section of the Daily Weather Report, the mean declination of the sun for noon of each day is taken. No account is taken of the variation in declination on any given day as between leap year and the three following years, the same figures being repeated from year to year without change.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

Upper Winds.—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

Note.—Ships' Reports.

SEA DISTURBANCE.

9. Confused " "	

SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.
SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

Notes on the Weather of **APRIL,** 1925.

The weather during April was generally unsettled with rainfall above normal in many though not all districts. Snow fell in several parts of Scotland on the 1st-3rd and lay more than 6 inches deep in Edinburgh on the 1st. A ridge of high pressure moved across England on the 3rd and was associated with sharp frost on the morning of the 4th when a grass minimum of 11°F. was recorded at Oundle in Northamptonshire. Pressure subsequently remained low near Ireland for many days giving southerly winds and temporarily warmer weather. Maximum readings of 66°F. were recorded at South Farnborough on the 8th and Workop on the 12th. Local thunderstorms were also experienced during this period.

On the 15th a deep depression passing across the north of Scotland caused high winds and gales in many parts, the velocity attained in gusts exceeding 60 m.p.h. in several instances. On the morning of the 16th the centre moved southeastwards to the North Sea causing a stiffening of the gradient over England where still stronger winds were experienced. On the northwest coasts gusts of 80 m.p.h. were recorded at one or two stations while near the east coast the R.33 was torn from its mooring at Pulham.

During the latter half of the month temperature was frequently below normal, especially on the 20th when a ridge of high pressure extending across Ireland to Scotland gave northeasterly winds over England. Maximum readings remained below 50°F in many parts and failed to exceed 45°F. at Leafield. In the Straits of Dover high winds occurred later in the day and gale force was attained at Dungeness early the following morning. The ridge, however, moved southwards as a depression developed rapidly off the Hebrides on the 22nd and occasioned high southwesterly winds in exposed places in the North and West.

Local thunderstorms were of frequent occurrence during the last week especially in the southeastern counties.

Daily Rainfall at KEW Observatory.

Daily Range of Temperature at KEW Observatory.

TEMPERATURE.

The peaked curves indicate the maximum temperature recorded each day, and the minimum temperature each night throughout the month. The chain lines show normal values.

0=Dry ground.
1=Wet ground.
2=Soft (muddy) wet ground.
3=Hard ground frozen (but less than 2 ins. deep).
4=Hard ground frozen (but more than 2 ins. deep).
5=Dew (or wet grass but not wet ground).
6=Skating to-day in 1860 and 1861 reports (Hoar frost in 0100 and 0700 reports).
7=Snow (thin layer, often not continuous).
8=Snow (deep, impeding traffic, usually a continuous layer).
9=Glazed roads (ice on roads from frozen rain or melted snow).

NOTES ON CHART OF ISOPLETHS (p. 4).
 The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb pressure intervals intersect this line at 1h, 7h, 13h, and 19h, are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 66° N., Long. 18° W. in the north, at Lat. 44° N., Long. 4° E. in the south.

* Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

G. C. SIMPSON, F.R.S., Director.

PRESSURE: ICELAND TO GULF OF LIONS

APRIL, 1925.

ISOPLETHS* BASED ON SIX-HOURLY OBSERVATIONS.

* For explanation see page 3.

————— = 1,020 mb. - - - - - = 1,000 mb.

x — x — x — x = 980 mb.

o — o — o — o = 960 mb.

DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON:

BRITISH SECTION.

No. B.23141

Wednesday 1st April 1925.

GENERAL INFERENCE.

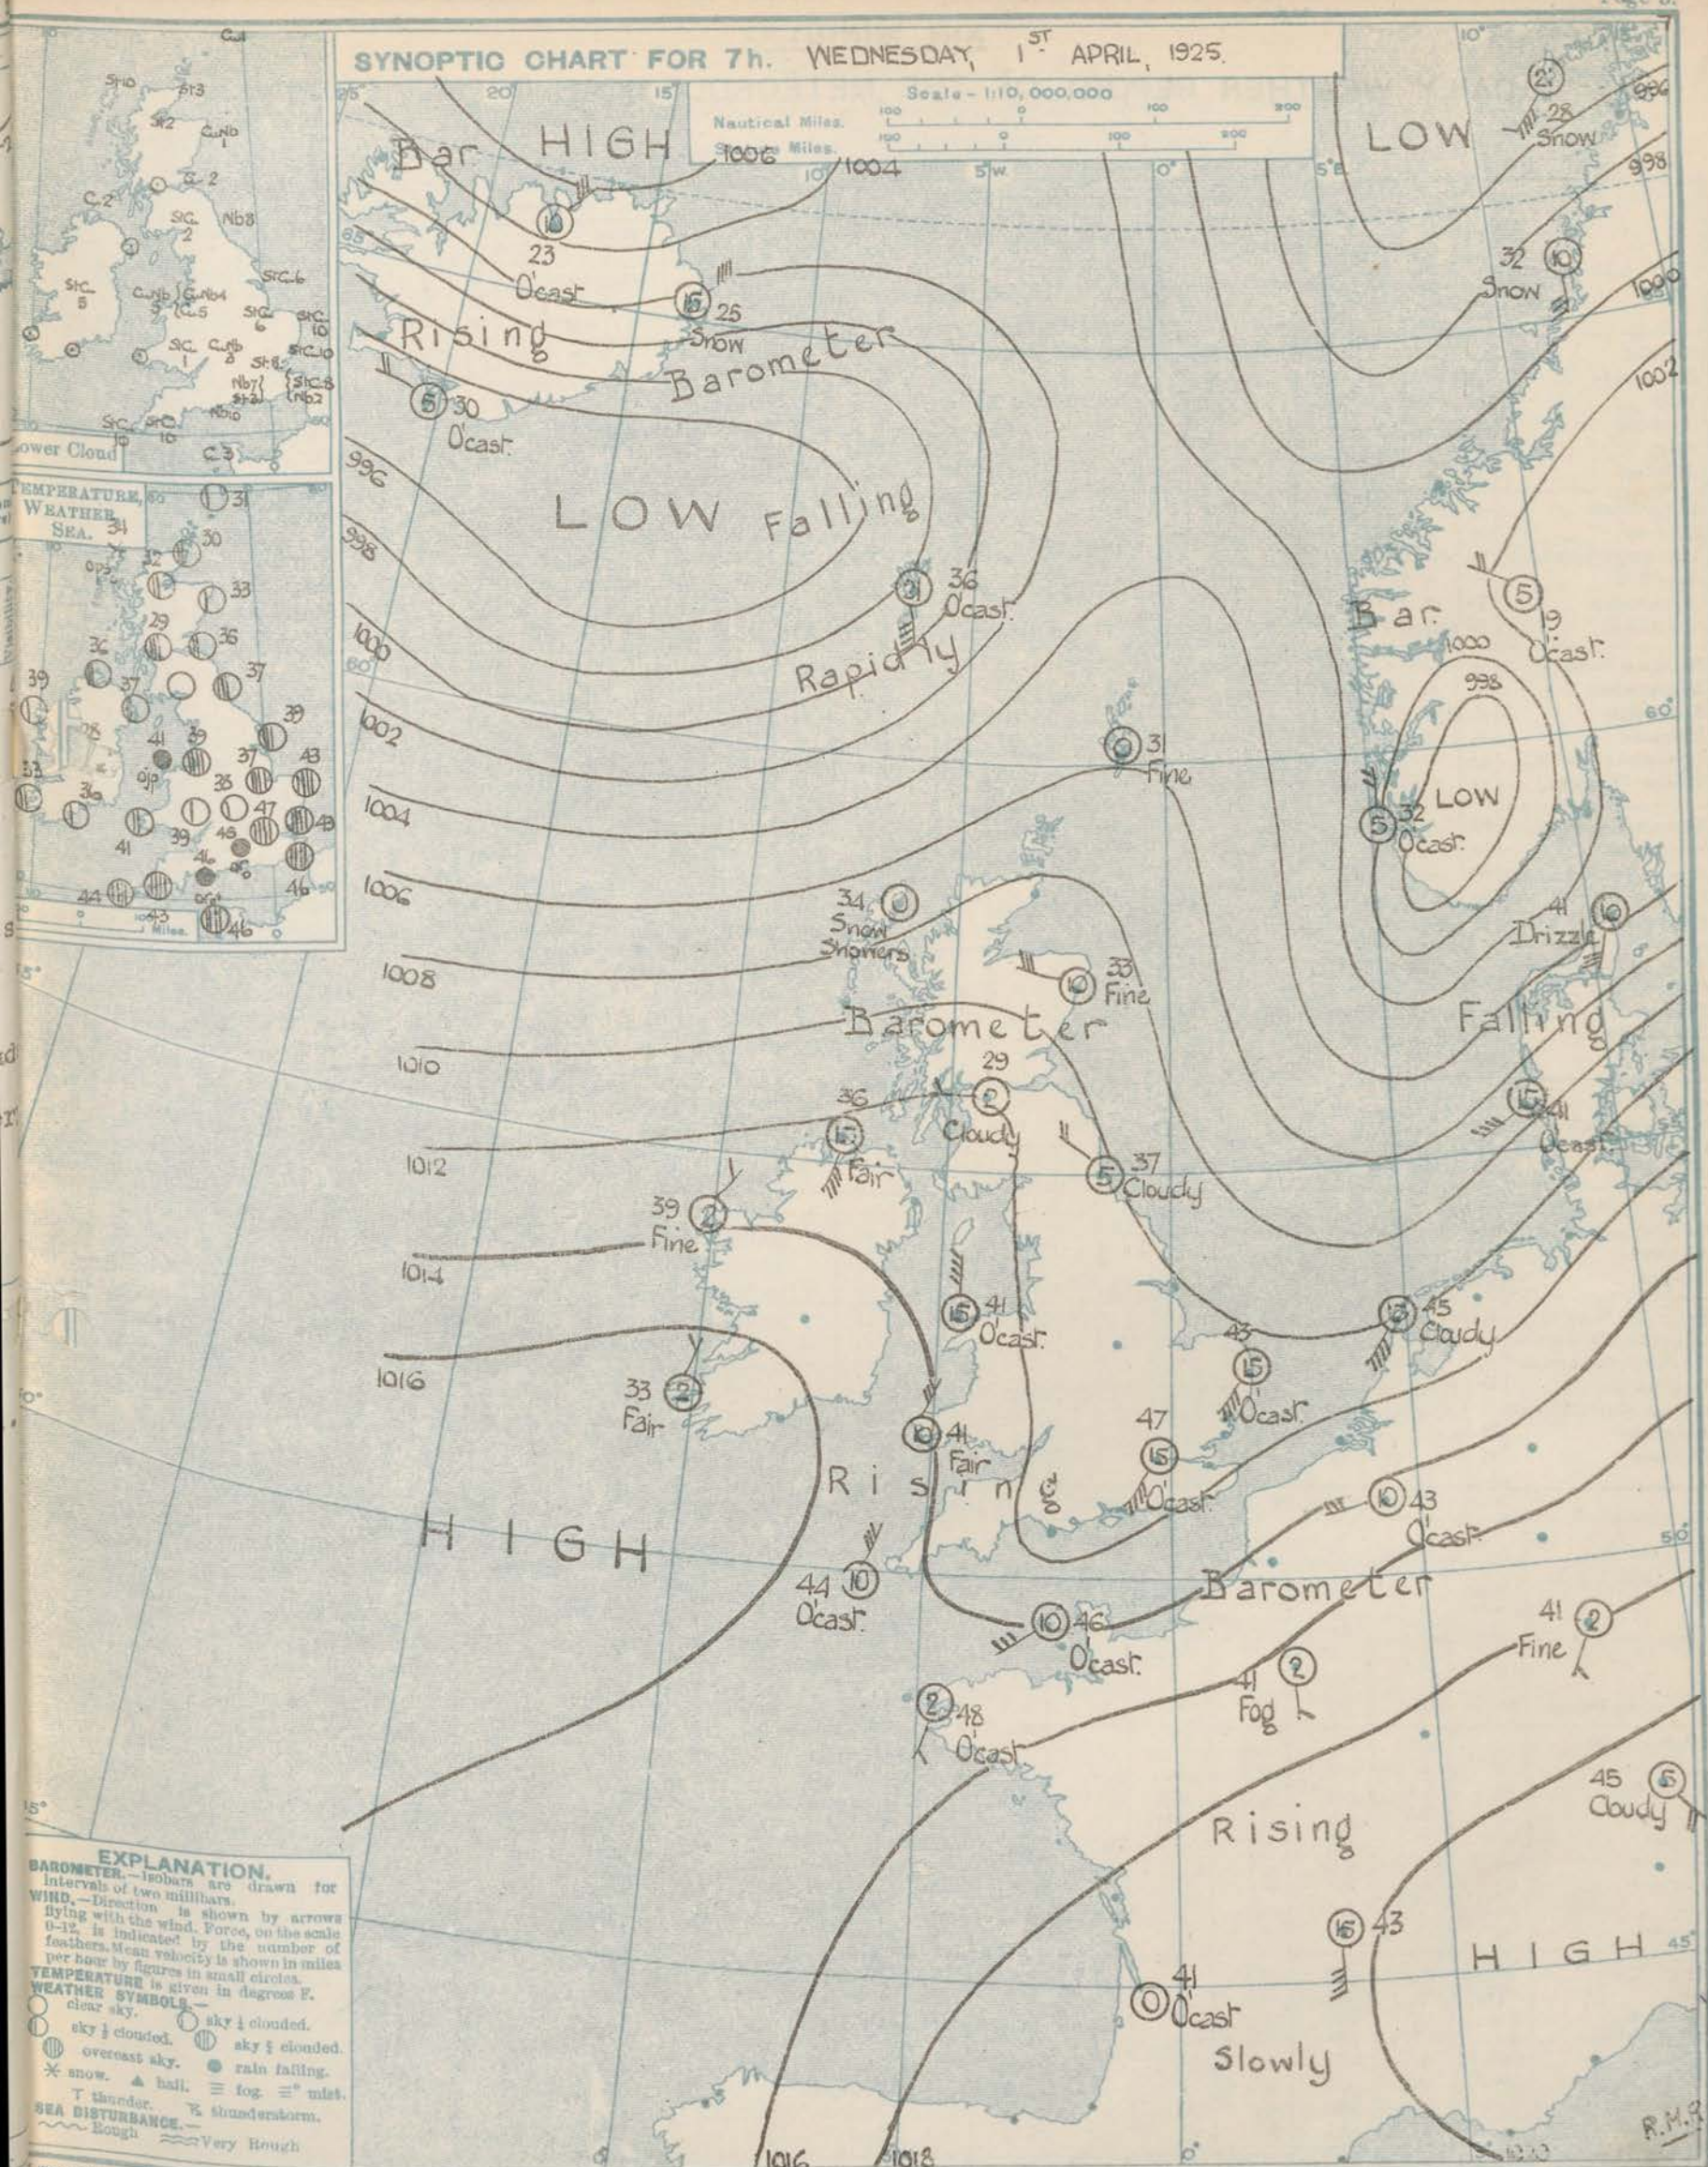

A wedge of high pressure over the British Isles separates a depression over the North Sea from one to the N.W. of the Hebrides and the whole system is moving southeastwards. Wind will be variable but mainly northwesterly and weather showery and rather cold but with considerable bright intervals in most parts.

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T. Wednesday, 1st April, 1925.	Further Outlook.
1. S.E. England	<p>Wind light N. to N.W.; mainly bright but some showers locally; visibility good apart from local morning mist or fog; day temperature rather low, frost at night.</p>	None issued.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales		
7. North Wales		
8. N.W. England		
9. N. Midlands		
10. N.E. England		
11. E. Scotland		
12. S.W. Scotland	<p>Wind moderate or fresh, W. to N.W.; variable sky, some showers of hail or sleet; visibility good; rather cold.</p>	
13. Isle of Man		
14. N. & N.W. Scotland		
15. Hebrides		
16. Orkneys and Shetlands		
17. N.W. Ireland		
18. N.E. Ireland		
19. S.E. Ireland		
20. S.W. Ireland		
As 1 - 11.		

SYNOPTIC CHART FOR 7h. WEDNESDAY, 1st APRIL, 1925.

Scale - 1:10,000,000

Nautical Miles.
Statute Miles.

EXPLANATION.
BAROMETER.—Isobars are drawn for intervals of two millibars.
WIND.—Direction is shown by arrows flying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS.—
 ○ clear sky. ○ sky & clouded.
 ○ sky & clouded. ○ sky & clouded.
 ○ overcast sky. ● rain falling.
 * snow. ▲ hail. ≡ fog. ≡ mist.
 T thunder. ⚡ thunderstorm.
SEA DISTURBANCE.—
 ~~~~~ Rough. ~~~~~ Very Rough.

# SYNOPTIC CHART FOR 7h. THURSDAY, 2<sup>ND</sup>. APRIL 1925.

Scale - 1:10,000,000

Nautical Miles.  
Statute Miles.

**EXPLANATION.**  
Barometer.—Isobars are drawn for intervals of two millibars.  
Wind.—Direction is shown by arrows flying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
Temperature.—is given in degrees F.  
Weather Symbols.—  
○ clear sky.  
⊙ sky & clouded.  
⊖ overcast sky.  
\* snow. △ hail. ≡ fog. ≡ mist.  
T thunder. T thunderstorm.  
SEA DISTURBANCE.—  
B rough. V Very Rough.

## GENERAL INFERENCE.

A ridge of high pressure lies over England and Ireland. Today in England and Wales winds will be northerly and, apart from showers locally, weather will be mainly fair and cold. Northern and western districts will be affected today, and southern district tomorrow, by a vigorous depression south of Iceland. It will become S.W. to W., temperature rise and some rain is probable in all districts.

# SYNOPTIC CHART FOR 7h. SATURDAY, 4<sup>TH</sup>. APRIL 1925.

Scale - 1:10,000,000

## EXPLANATION.

BAROMETER.—Isobars are drawn at intervals of two millibars.  
 WIND.—Direction is shown by arrows flying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
 TEMPERATURE.—is given in degrees F.  
 WEATHER SYMBOLS.—  
 ○ clear sky. ○ sky & clouded. ○ sky & clouded.  
 ○ overcast sky. ● rain falling.  
 \* snow. \* hail. = fog. = mist.  
 T thunder. R thunderstorm.  
 SEA DISTURBANCE.—  
 ————— Rough ————— Very Rough

## GENERAL INFERENCE.

A large and deep depression off our Western coasts is almost stationary, and secondaries to are moving northwards across the British Isles. Winds will be between S.E. and S.W. fresh to strong, and may reach gale force at times in exposed places. So rain or showers will occur in districts with a rather mild temperature.

| Districts.                | Forecasts for the 24 hours commencing 15h. G.M.T. Sunday 5th April, 1925.                                                          | Further Outlook.                      |

## GENERAL INFERENCE.

The depression off our S.W. coasts is likely to fill up, and a new centre is likely to appear over Scotland, and also fill up slowly. The rain in the East and North will continue for a time, but an improvement is spreading slowly northeastward, and bright periods and showers are likely to be general tomorrow.

| 11. E. Scotland           | Wind E. to S.E., becoming variable or S. to S.W., light or moderate; rainy at first, improving later, with fair periods but some showers; visibility good apart from local morning mist; moderate temperature. |                  |
| 12. S.W. Scotland         |                                                                                                                                                                                                                |                  |
| 13. Isle of Man           |                                                                                                                                                                                                                |                  |
| 14. N. & N.W. Scotland    | Wind mainly between S.E. and N.E., moderate; cloudy, occasional rain; visibility fair; temperature below normal.                                                                                               |                  |
| 15. Hebrides              |                                                                                                                                                                                                                |                  |
| 16. Orkneys and Shetlands |                                                                                                                                                                                                                |                  |
| 17. N.W. Ireland          | Wind northerly, mainly moderate; cloudy, some showers; visibility good; rather cold.                                                                                                                           |                  |
| 18. N.E. Ireland          |                                                                                                                                                                                                                |                  |
| 19. S.E. Ireland          | Wind variable, light; occasional rain or showers, but fair periods; local morning mist; moderate temperature.                                                                                                  |                  |
| 20. S.W. Ireland          | As 17.                                                                                                                                                                                                         |                  |

# SYNOPTIC CHART FOR 7h. MONDAY, 6<sup>th</sup> APRIL, 1925.

**EXPLANATION.**  
Isobars are drawn for intervals of two millibars.  
WIND.—Direction is shown by arrows flying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.  
WEATHER SYMBOLS:  
☉ clear sky.  
☁ sky & cloudy.  
☁☁ sky & cloudy.  
☁☁☁ overcast sky.  
☁☁☁☁ rain falling.  
☁☁☁☁☁ snow & hail.  
☁☁☁☁☁☁ fog.  
☁☁☁☁☁☁☁ mist.  
☁☁☁☁☁☁☁☁ thunderstorm.  
SEA DISTURBANCE:  
— Rough.  
— Very Rough.

## GENERAL INFERENCE.

The shallow area of low pressure over the British Isles is filling up; winds will be light and variable, with further local rain in eastern districts. In western districts weather will be fair for a time, apart from local showers, but a new depression in the Atlantic will probably cause some rain in Ireland and West Scotland tomorrow.

## Districts.

Forecasts for the 24 hours commencing 15h. G.M.T. Tuesday, 7th April, 1925.

## Further Outlook.

|                           |                                                                                                                                                          |                                       |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|
| 1. S.E. England           | Light SE or variable wind; mainly cloudy, local rain; some improvement tomorrow; local morning mist or fog; mild.                                        | Unsettled with wind mainly southerly. |
| 2. E. England             |                                                                                                                                                          |                                       |
| 3. E. Midlands            |                                                                                                                                                          |                                       |
| 4. W. Midlands            |                                                                                                                                                          |                                       |
| 5. S.W. England           | Light variable wind; mainly fair but local showers; morning mist or fog locally; mild.                                                                   |                                       |

SYNOPTIC CHART FOR 7h. TUESDAY, 7<sup>TH</sup>. APRIL 1925.

Nautical Miles  
Statute Miles

Scale - 1:10,000,000

**EXPLANATION.**  
Isobars are drawn for intervals of two millibars.  
Wind - Direction is shown by arrows lying with the wind. Force, on the small scale, is indicated by the number of lines. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.  
WEATHER SYMBOLS -  
☉ clear sky.  
☁ sky cloudy.  
☁☁ sky 1/2 cloudy.  
☁☁☁ overcast sky.  
\* snow. \* hail. ☁ fog. ☁ mist.  
☁ thunder. ☁ thunderstorm.  
SEA DISTURBANCE -  
☁ Rough. ☁☁ Very Rough.

## GENERAL INFERENCE.

A large depression on the Atlantic is moving slowly eastward. Except in the west of Ireland, quiet, fair weather will continue today, but thundery showers may occur at a few places in England. Subsequently winds will become generally southerly, and rain will spread slowly eastward, though it is unlikely to reach Eastern England till after tomorrow.

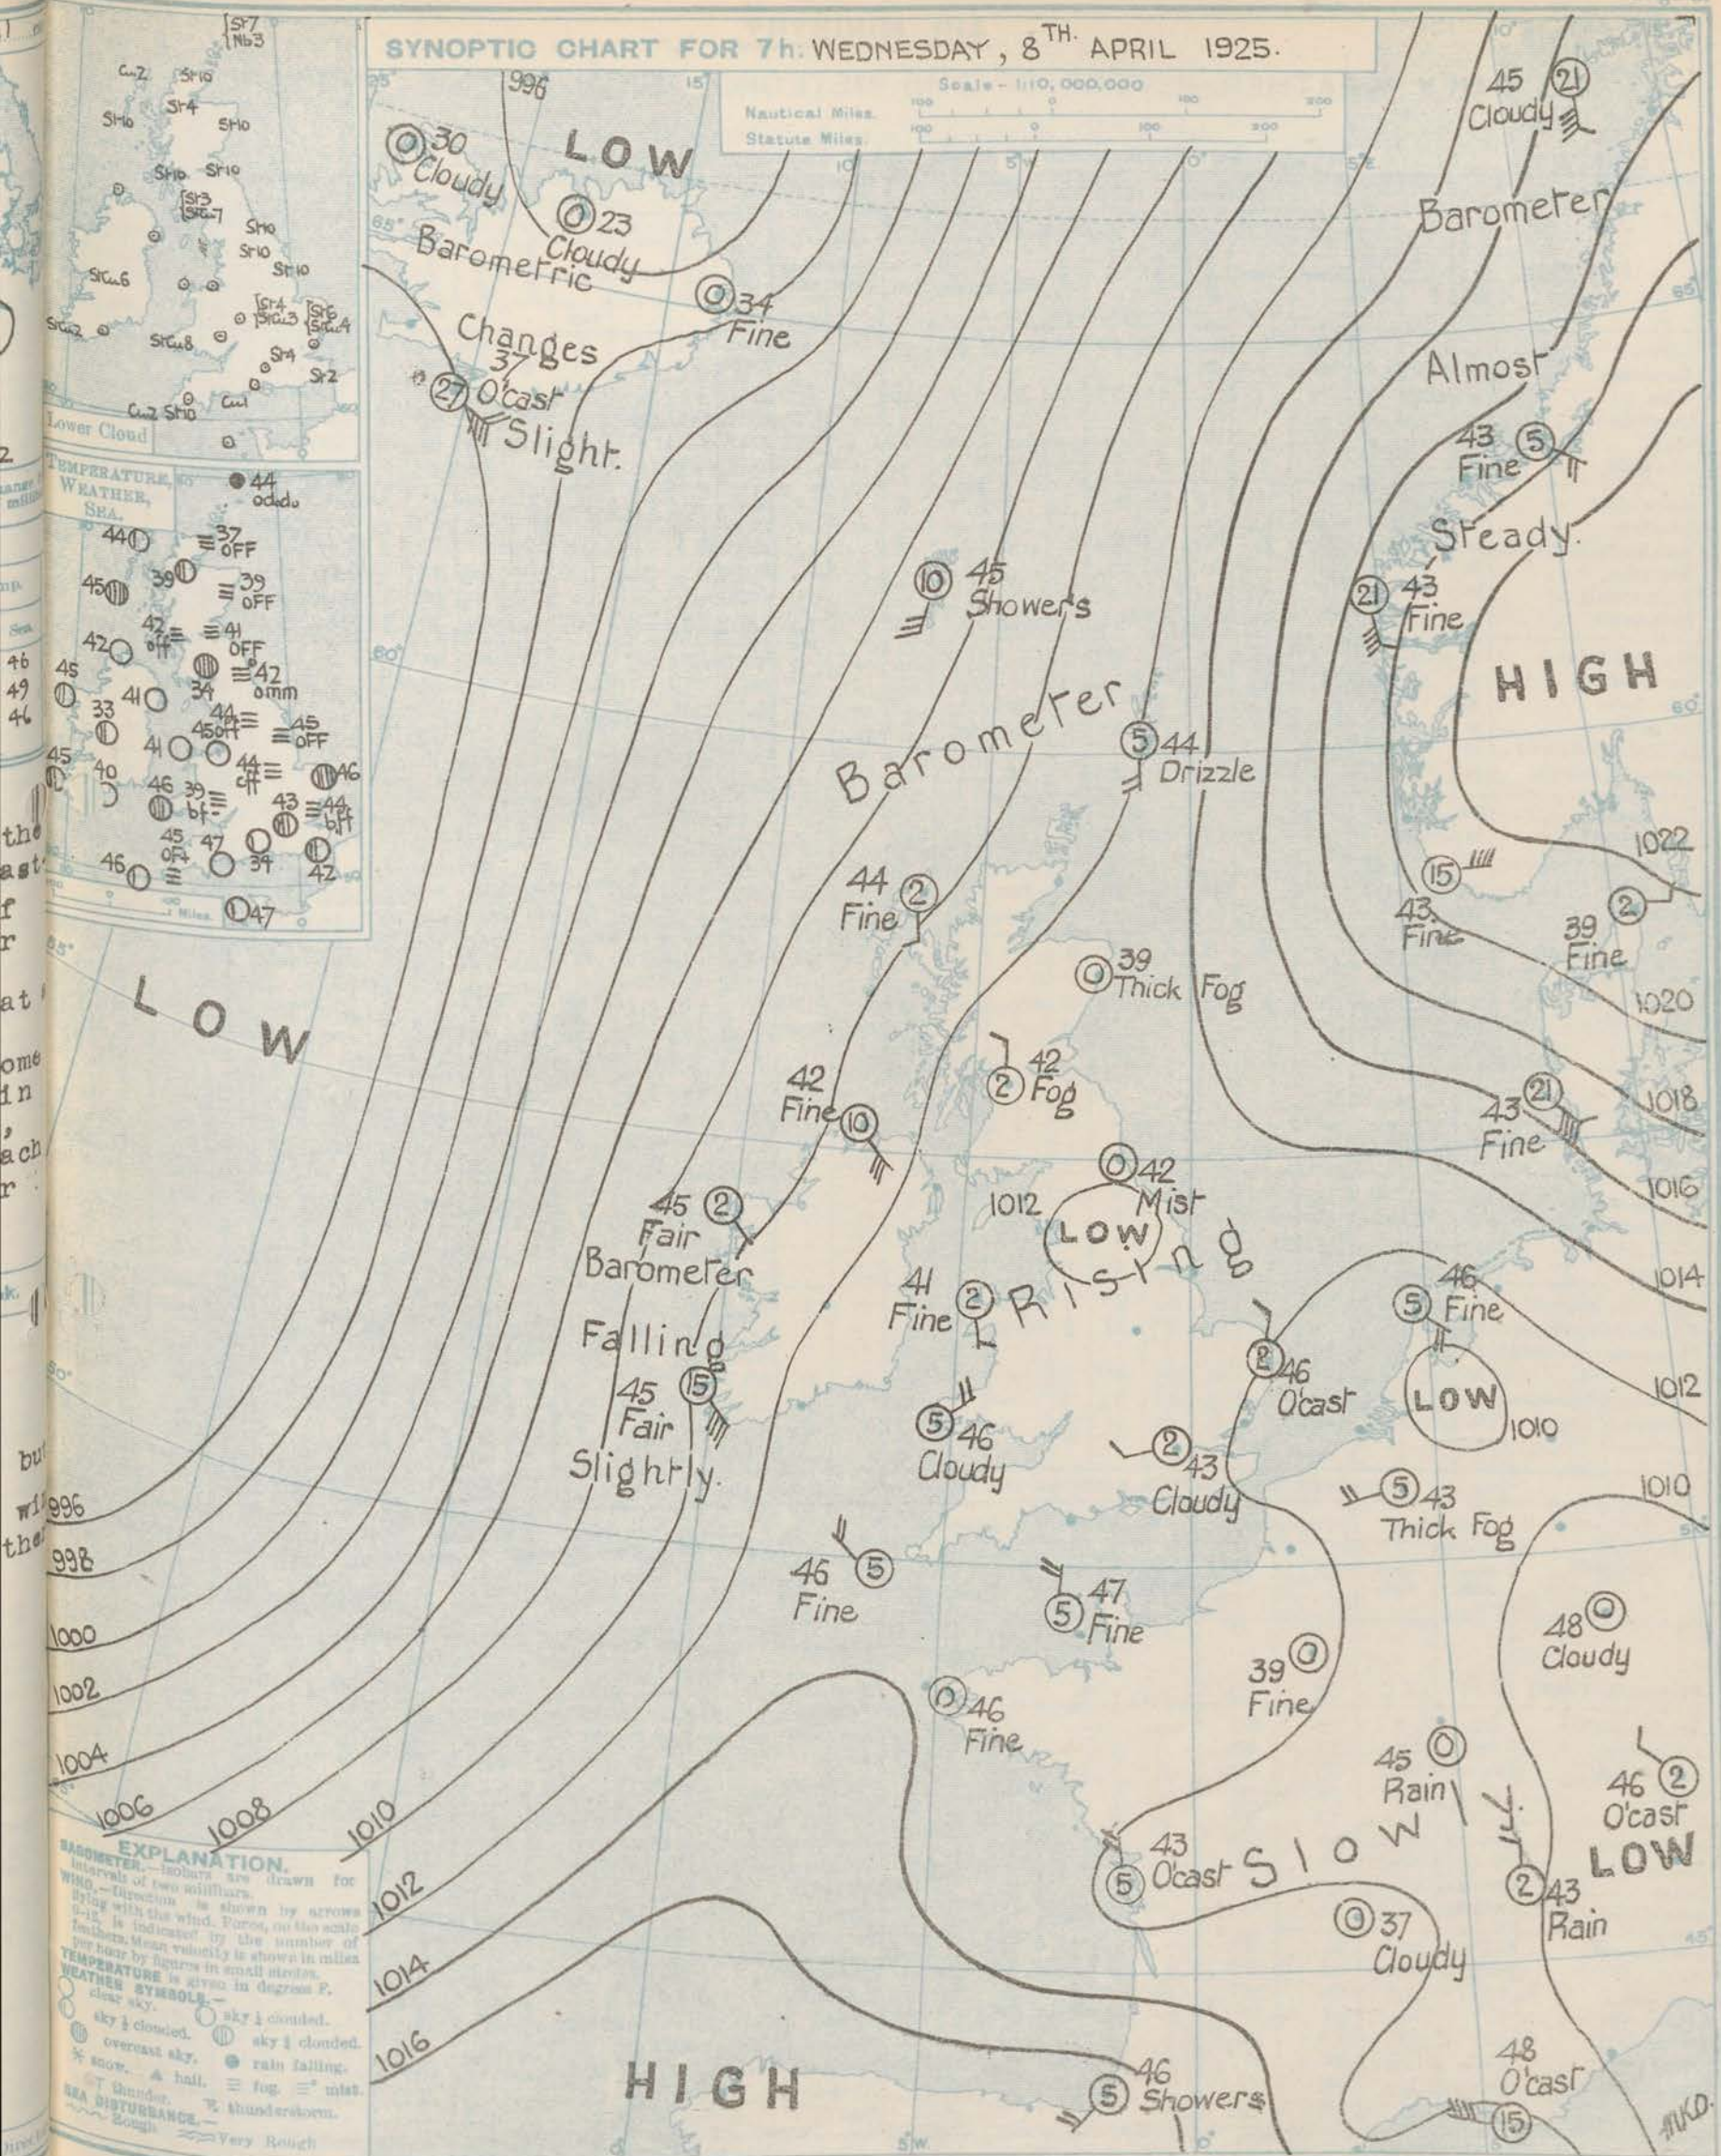

## Districts. Forecasts for the 24 hours commencing 15h G.M.T. Wednesday, 8th April, 1925.

## GENERAL INFERENCE.

An intense secondary which has developed off Scilly is likely to move rather slowly E.N.E. Will be mainly between south and southeast, freshening generally and reaching gale force locally S.W. England. Rain will extend to all districts, but will not reach the East and North till tonight or tomorrow. Rainfall will be heavy in S.W. England.

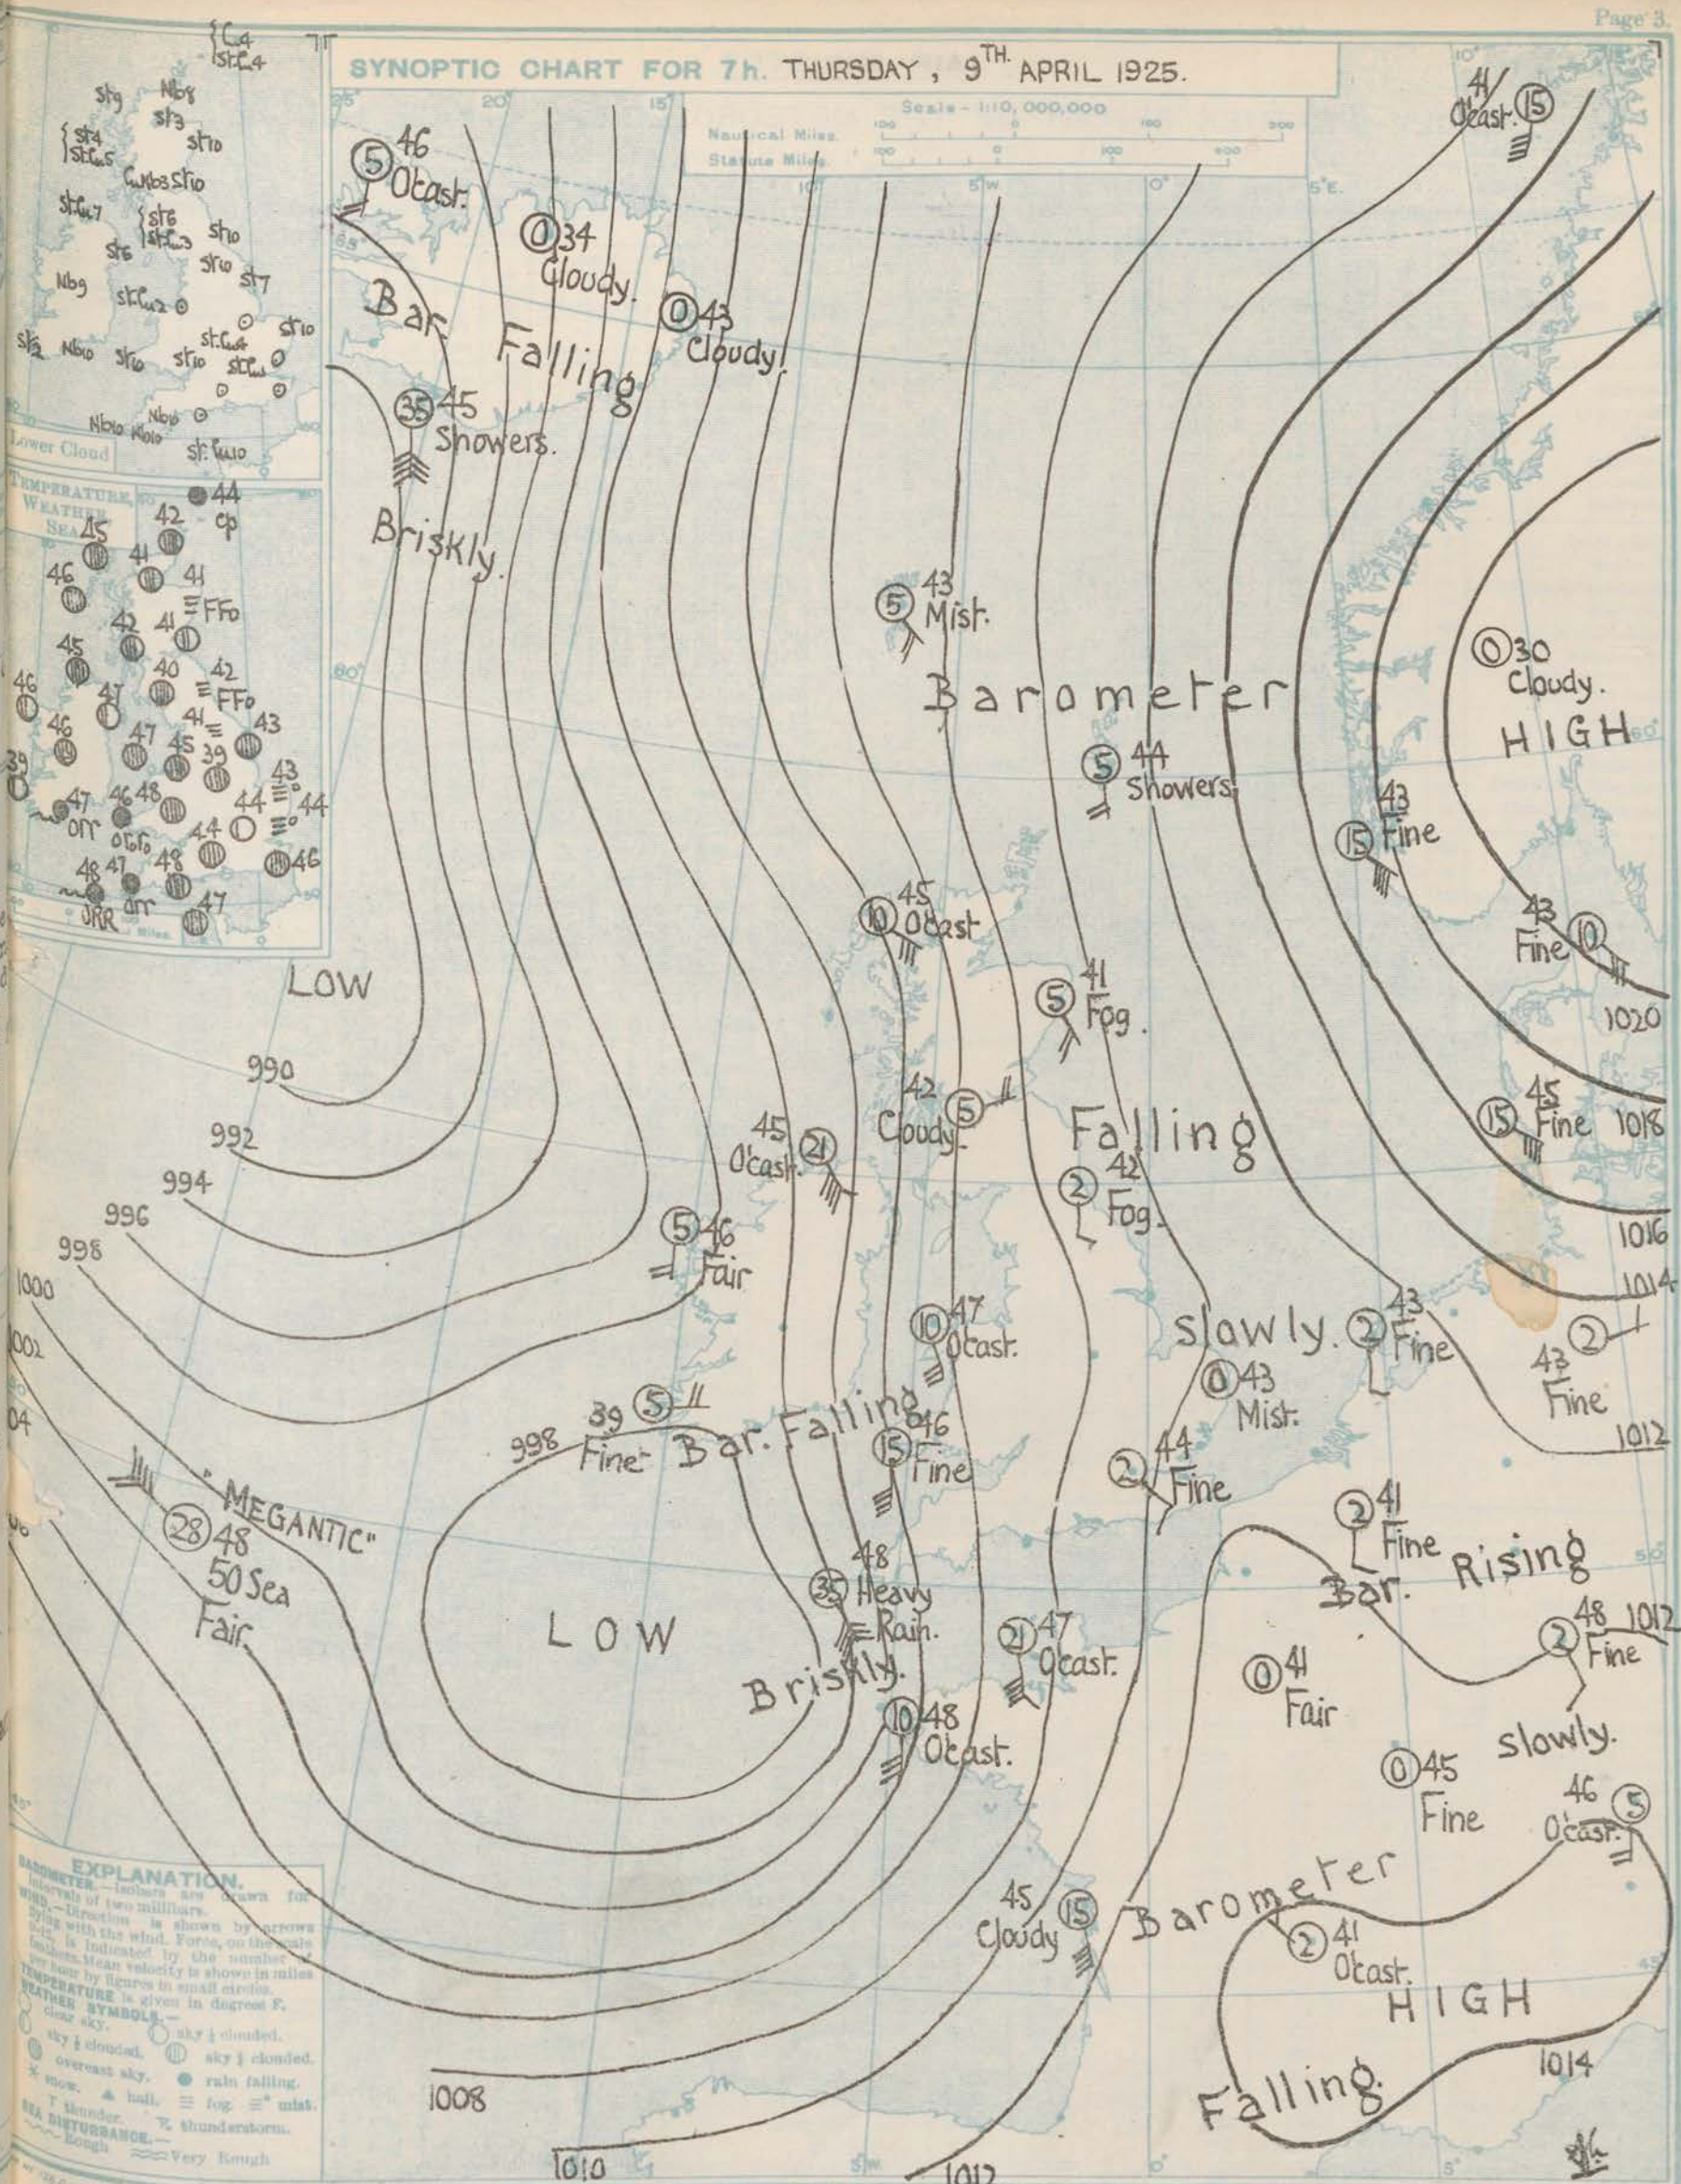

| Districts.                | Forecasts for the 24 hours commencing 15h. GMT. Thursday, 9th April, 1925.                                                                                                          | Further Outlook.                          |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|
| 1. S.E. England           | Wind between S. and S.E., increasing to fresh or strong; becoming overcast with some rain tonight and tomorrow; visibility fair, deteriorating somewhat; mild.                      | Unsettled, but mild in Eastern districts. |
| 2. E. England             |                                                                                                                                                                                     |                                           |
| 3. E. Midlands            |                                                                                                                                                                                     |                                           |
| 4. W. Midlands            | Same as 4 - 7.                                                                                                                                                                      |                                           |
| 5. S.W. England           | Wind between S. and S.E., strong to a gale, probably veering W. or N.W. and moderating later; considerable rainfall, probably some bright intervals tomorrow; moderate temperature. | South Cone hoisted 0840 9/4/25.           |
| 6. South Wales            |                                                                                                                                                                                     |                                           |
| 7. North Wales            |                                                                                                                                                                                     |                                           |
| 8. N.W. England           | Wind S.E., moderate to strong, becoming variable; rain at times; visibility moderate; mild.                                                                                         |                                           |
| 9. N. Midlands            |                                                                                                                                                                                     |                                           |
| 10. N.E. England          | Wind freshening from S.E., fair at first, probably some rain later; visibility fair apart from local fog on E. Coast at first; rather cold on E. Coast, mild elsewhere.             |                                           |
| 11. E. Scotland           |                                                                                                                                                                                     |                                           |
| 12. S.W. Scotland         |                                                                                                                                                                                     |                                           |

**GENERAL INFERENCE.**

A low pressure trough of decreasing intensity extends from Iceland across the British Isles to Belgium and a wedge of relative high pressure off our S.W. Coast is spreading northeast. A fresh depression is indicated on the Atlantic. In the South winds will be westerly light or moderate in force, further north southerly or variable light. Weather will be mainly fair temporarily, apart from local thundery showers, and temperature will remain mild.

| Districts.                | Forecasts for the 24 hours commencing 15h. GMT.                                                                                                    | Friday, 10th April, 1925. | Further Outlook.               |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|--------------------------------|
| 1. S.E. England           | Light winds mainly between W. and N.W., mainly fair, but a risk of local thundery showers; mist locally, mild.                                     |                           | Unsettled but continuing mild. |
| 2. E. England             |                                                                                                                                                    |                           |                                |
| 3. E. Midlands            |                                                                                                                                                    |                           |                                |
| 4. W. Midlands            |                                                                                                                                                    |                           |                                |
| 5. S.W. England           | Westerly winds light or moderate; fair at first, apart from local thundery showers probably becoming less fair again tomorrow; mist locally; mild. |                           |                                |

# SYNOPTIC CHART FOR 7h. FRIDAY, 10<sup>th</sup> APRIL, 1925.

Nautical Miles  
Statute Miles

Scale - 1:10,000,000

Barometer

**EXPLANATION.**  
Isobars are drawn for every 2 millibars.  
Direction is shown by arrows.  
Force, on the scale, is indicated by the number of millibars.  
Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.  
**WEATHER SYMBOLS.**  
☉ sky & clouded.  
☁ sky & clouded.  
☁☁ overcast sky.  
☁☁☁ rain falling.  
☁☁☁☁ fog.  
☁☁☁☁☁ mist.  
☁☁☁☁☁☁ thunderstorm.  
**SEA DISTURBANCE.**  
☁☁☁☁☁☁ Very Rough.

## GENERAL INFERENCE.

A deep depression is centred southwest of Iceland, and a V shaped secondary westward of it is moving east. Winds will become southerly generally, strong at times on our W. and S.W. coasts. Weather will be fair over Great Britain today, except for a few isolated showers, but rain will soon begin in West Ireland, spreading eastward later.

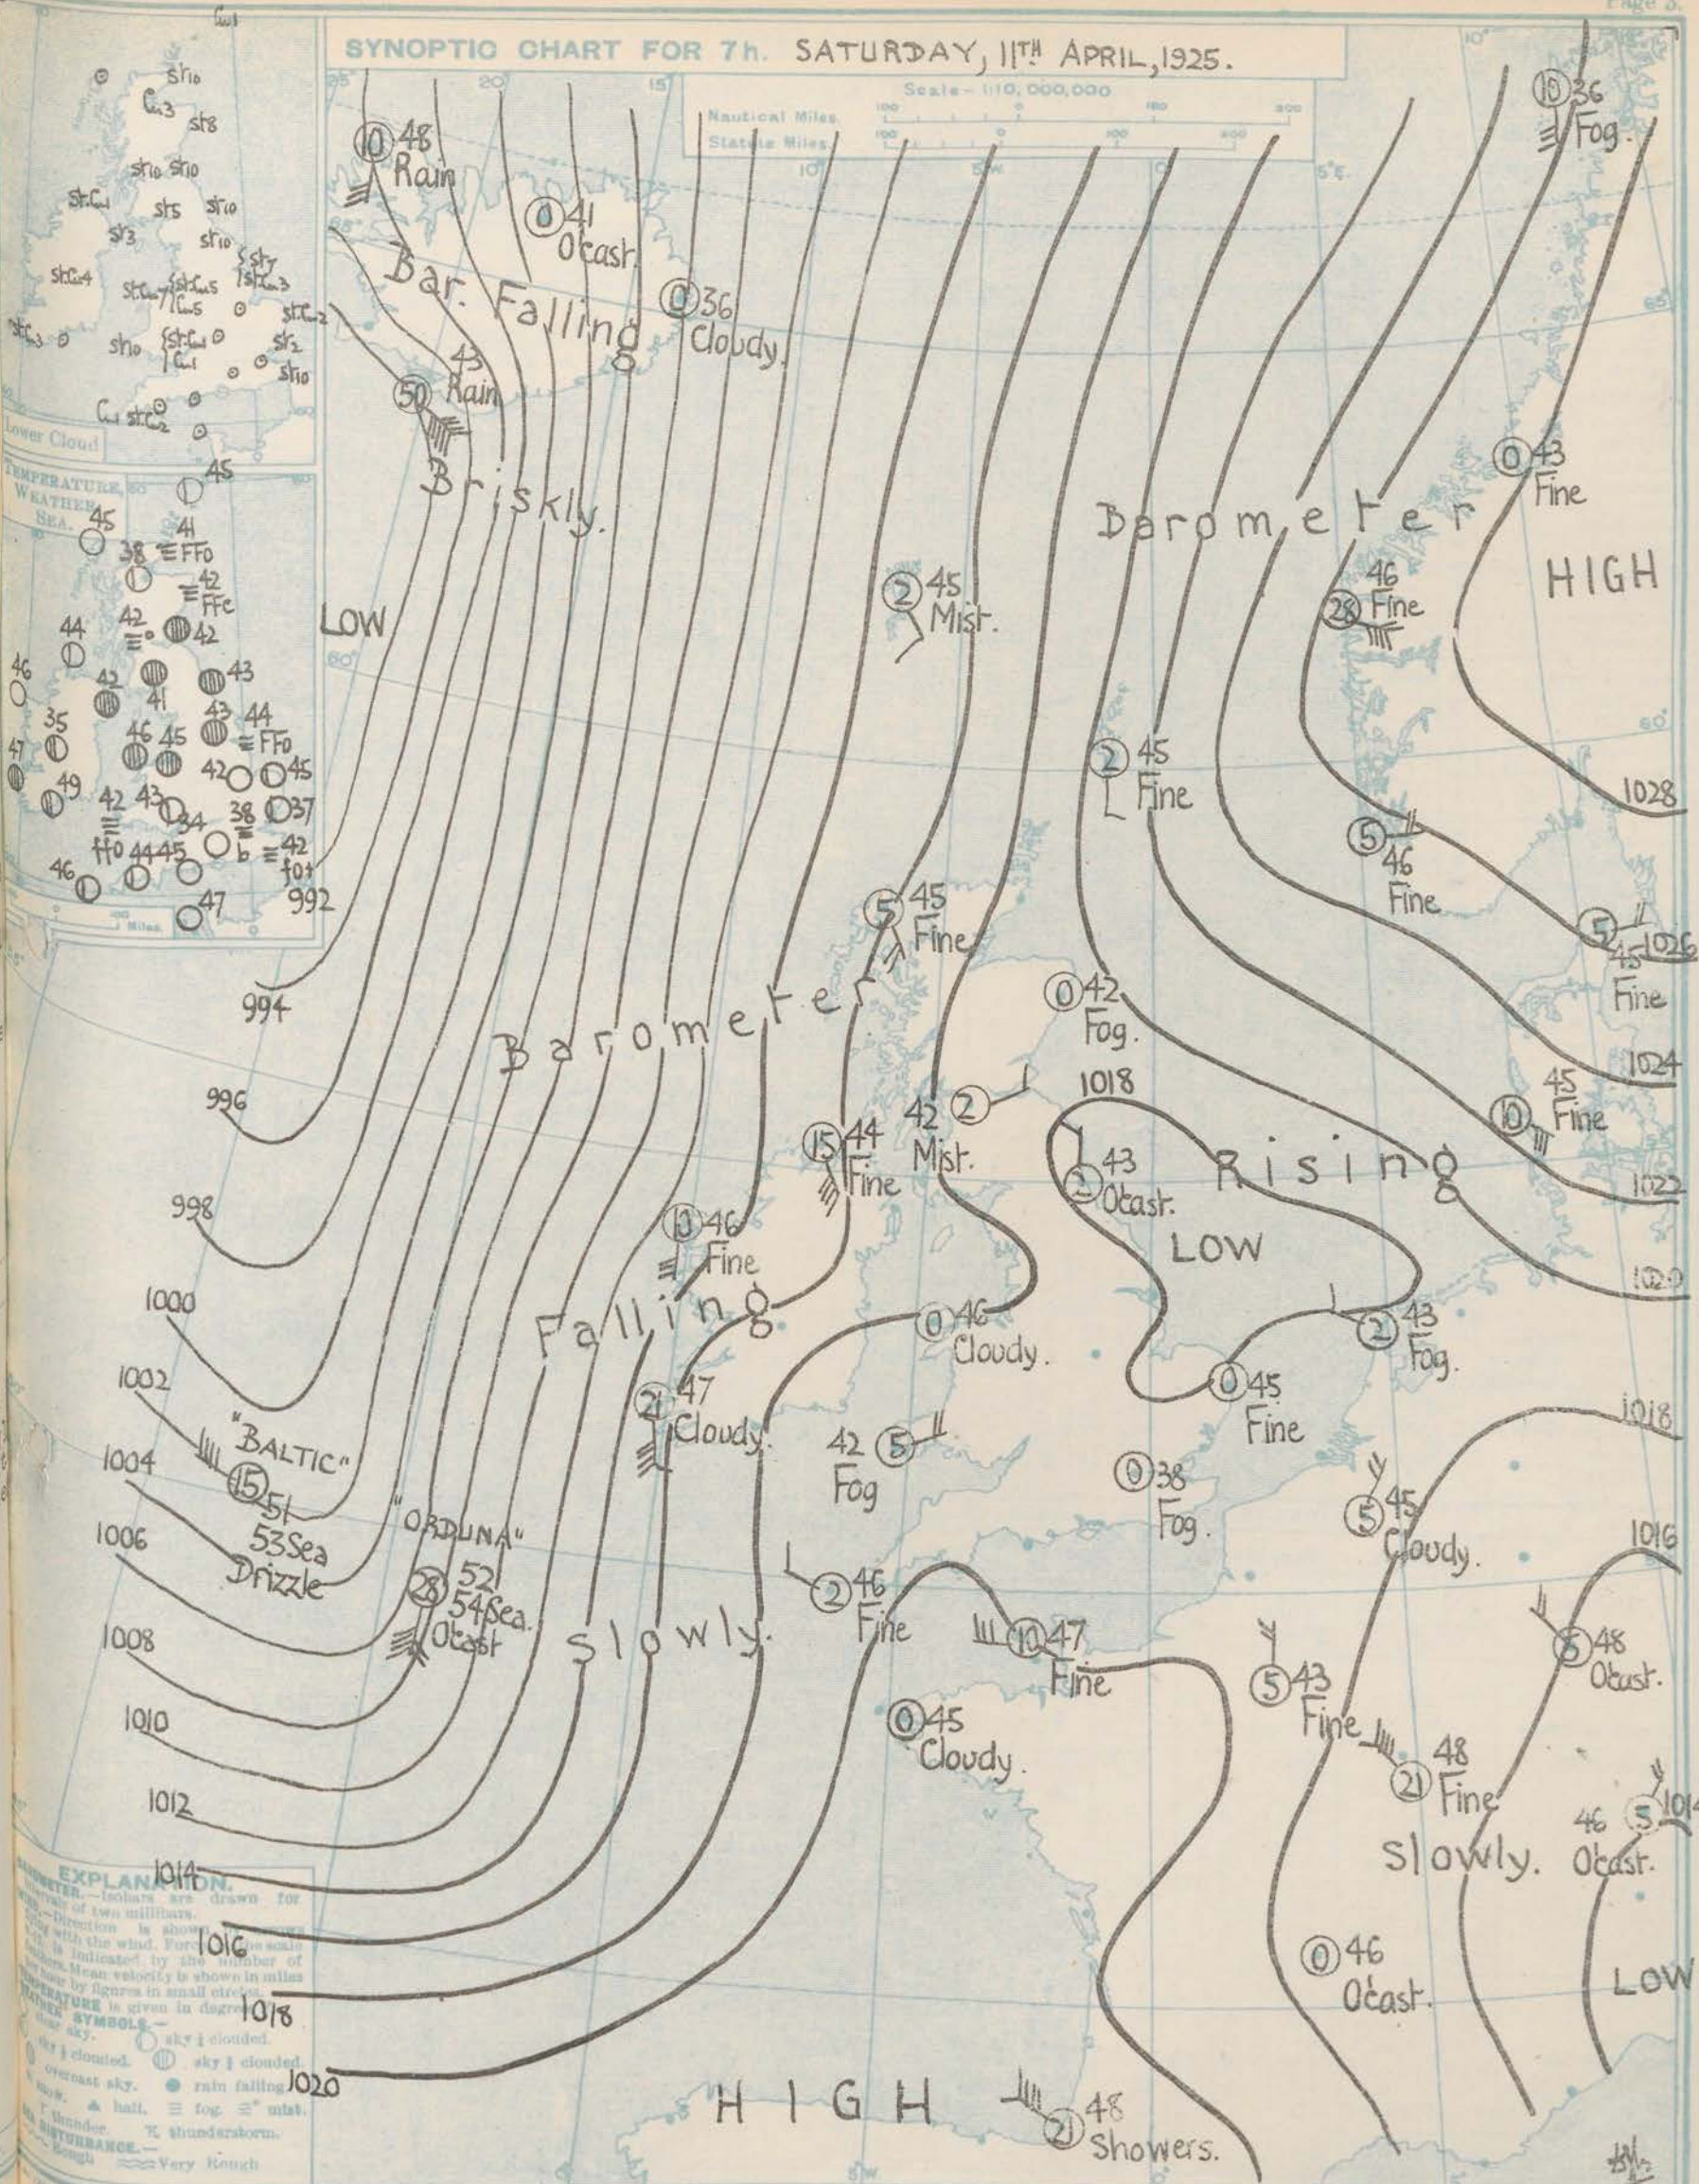

| Districts.                | Forecast for the 24 hours commencing 15h. G.M.T. Saturday, 11th April, 1925.                                                                                                    | Further Outlook.                                                       |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 1. S.E. England           | Wind becoming southerly, mainly light or moderate; fair today except for isolated thundery showers; less fair tomorrow, and perhaps some rain; local morning mist or fog; mild. | Unsettled; wind becoming west in S.W. districts with bright intervals. |
| 2. E. England             |                                                                                                                                                                                 |                                                                        |

## GENERAL INFERENCE.

A trough of low pressure over the British Isles is filling up. Winds will be light and variable in most districts with mild and mainly fair weather apart from local thundery showers.

| Districts.                | Forecasts for the 24 hours commencing 15h. GMT Sunday 12th April, 1925.                                                                         | Further Outlook.            |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 1. S.E. England           | Light variable winds, mainly fair but risk of local thundery showers; some morning mist or fog; local coastal fog; rather high day temperature. | Unsettled but fair periods. |
| 2. E. England             |                                                                                                                                                 |                             |
| 3. E. Midlands            |                                                                                                                                                 |                             |

## GENERAL INFERENCE.

There is still a depression southwest of Iceland and a secondary disturbance is moving northwards across the British Isles. Rain or showers in Scotland, Ireland and Western England will be followed by a temporary improvement in these parts but it is doubtful whether there will be any general break in the fair weather over Eastern England.

| Districts.                | Forecast for the 24 hours commencing 15h. GMT Monday, 13th April, 1925.                                                  | Further Outlook.                          |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|

# SYNOPTIC CHART FOR 7h. MONDAY, 13<sup>TH</sup> APRIL, 1925.

**EXPLANATION.**  
Isobars are drawn for intervals of two millibars.  
Wind direction is shown by arrows lying with the wind. Force, on the scale, is indicated by the number of lines. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.  
**WEATHER SYMBOLS.**  
☉ sky clear.  
☁ sky cloudy.  
☁☁ sky & cloudy.  
☁☁☁ overcast sky.  
☁☁☁☁ rain falling.  
☁☁☁☁☁ snow & hail.  
☁☁☁☁☁☁ fog.  
☁☁☁☁☁☁☁ mist.  
☁☁☁☁☁☁☁☁ thunder.  
☁☁☁☁☁☁☁☁☁ thunderstorm.  
**SEA DISTURBANCE.**  
☁☁☁☁☁☁☁☁☁ Very rough.

## GENERAL INFERENCE.

A depression off the west coast of Ireland will cross the British Isles, causing rain generally for a time, but the rain may not reach Eastern England until late in the day. Winds will be southwesterly today, fresh to strong.

-----

## GENERAL INFERENCE.

A depression over Northern Scotland is moving away north-east but a new disturbance will probably advance from the Atlantic before long. Winds will be westerly backing to S.W. or S. later, strong to a gale locally at first, and there will be occasional rain or hail showers generally with a moderate to rather low temperature.

## Districts.

Forecasts for the 24 hours commencing 15h G.M.T.

Wednesday, 15th April, 1925.

## GENERAL INFERENCE.

The deep depression over the North Sea will move away to Germany and become less deep, and the British Isles will come under the influence of a ridge of high pressure to the west of Ireland. There will be west to northwest gales over most of England and Ireland today and showers of rain or hail in all districts, with considerable sunny periods, and an improving tendency.

## Districts.

Forecasts for the 24 hours commencing 15h G.M.T.

Thursday, 16th April, 1925.

## Further Outlook.

With present weather is combined, whenever possible, the general character of the weather. A "solid" divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; - = has decreased + = has increased. |        |          |           |             |                 |        |      |      |      |                                                        |      |   |  |  | Beaufort No. Statute miles per hour.                                                                                                                                                                                            |  |  |  |  |  |  |  |  |  |  |  |  |  |  | Objects not visible at 50 yards.                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## GENERAL INFERENCE.

A depression approaching from the Atlantic will cause rain in Ireland and Western Scotland today but over Eastern Scotland and most of England the weather will be fine and bright. The temperature will become generally higher.

## Further Outlook.

Rain at times in all districts but considerable fair periods in the south of England.

---

## Districts.

Forecast for the 24 hours commencing 15h. GMT. Friday, 17th April, 1925.

**GENERAL INFERENCE.**

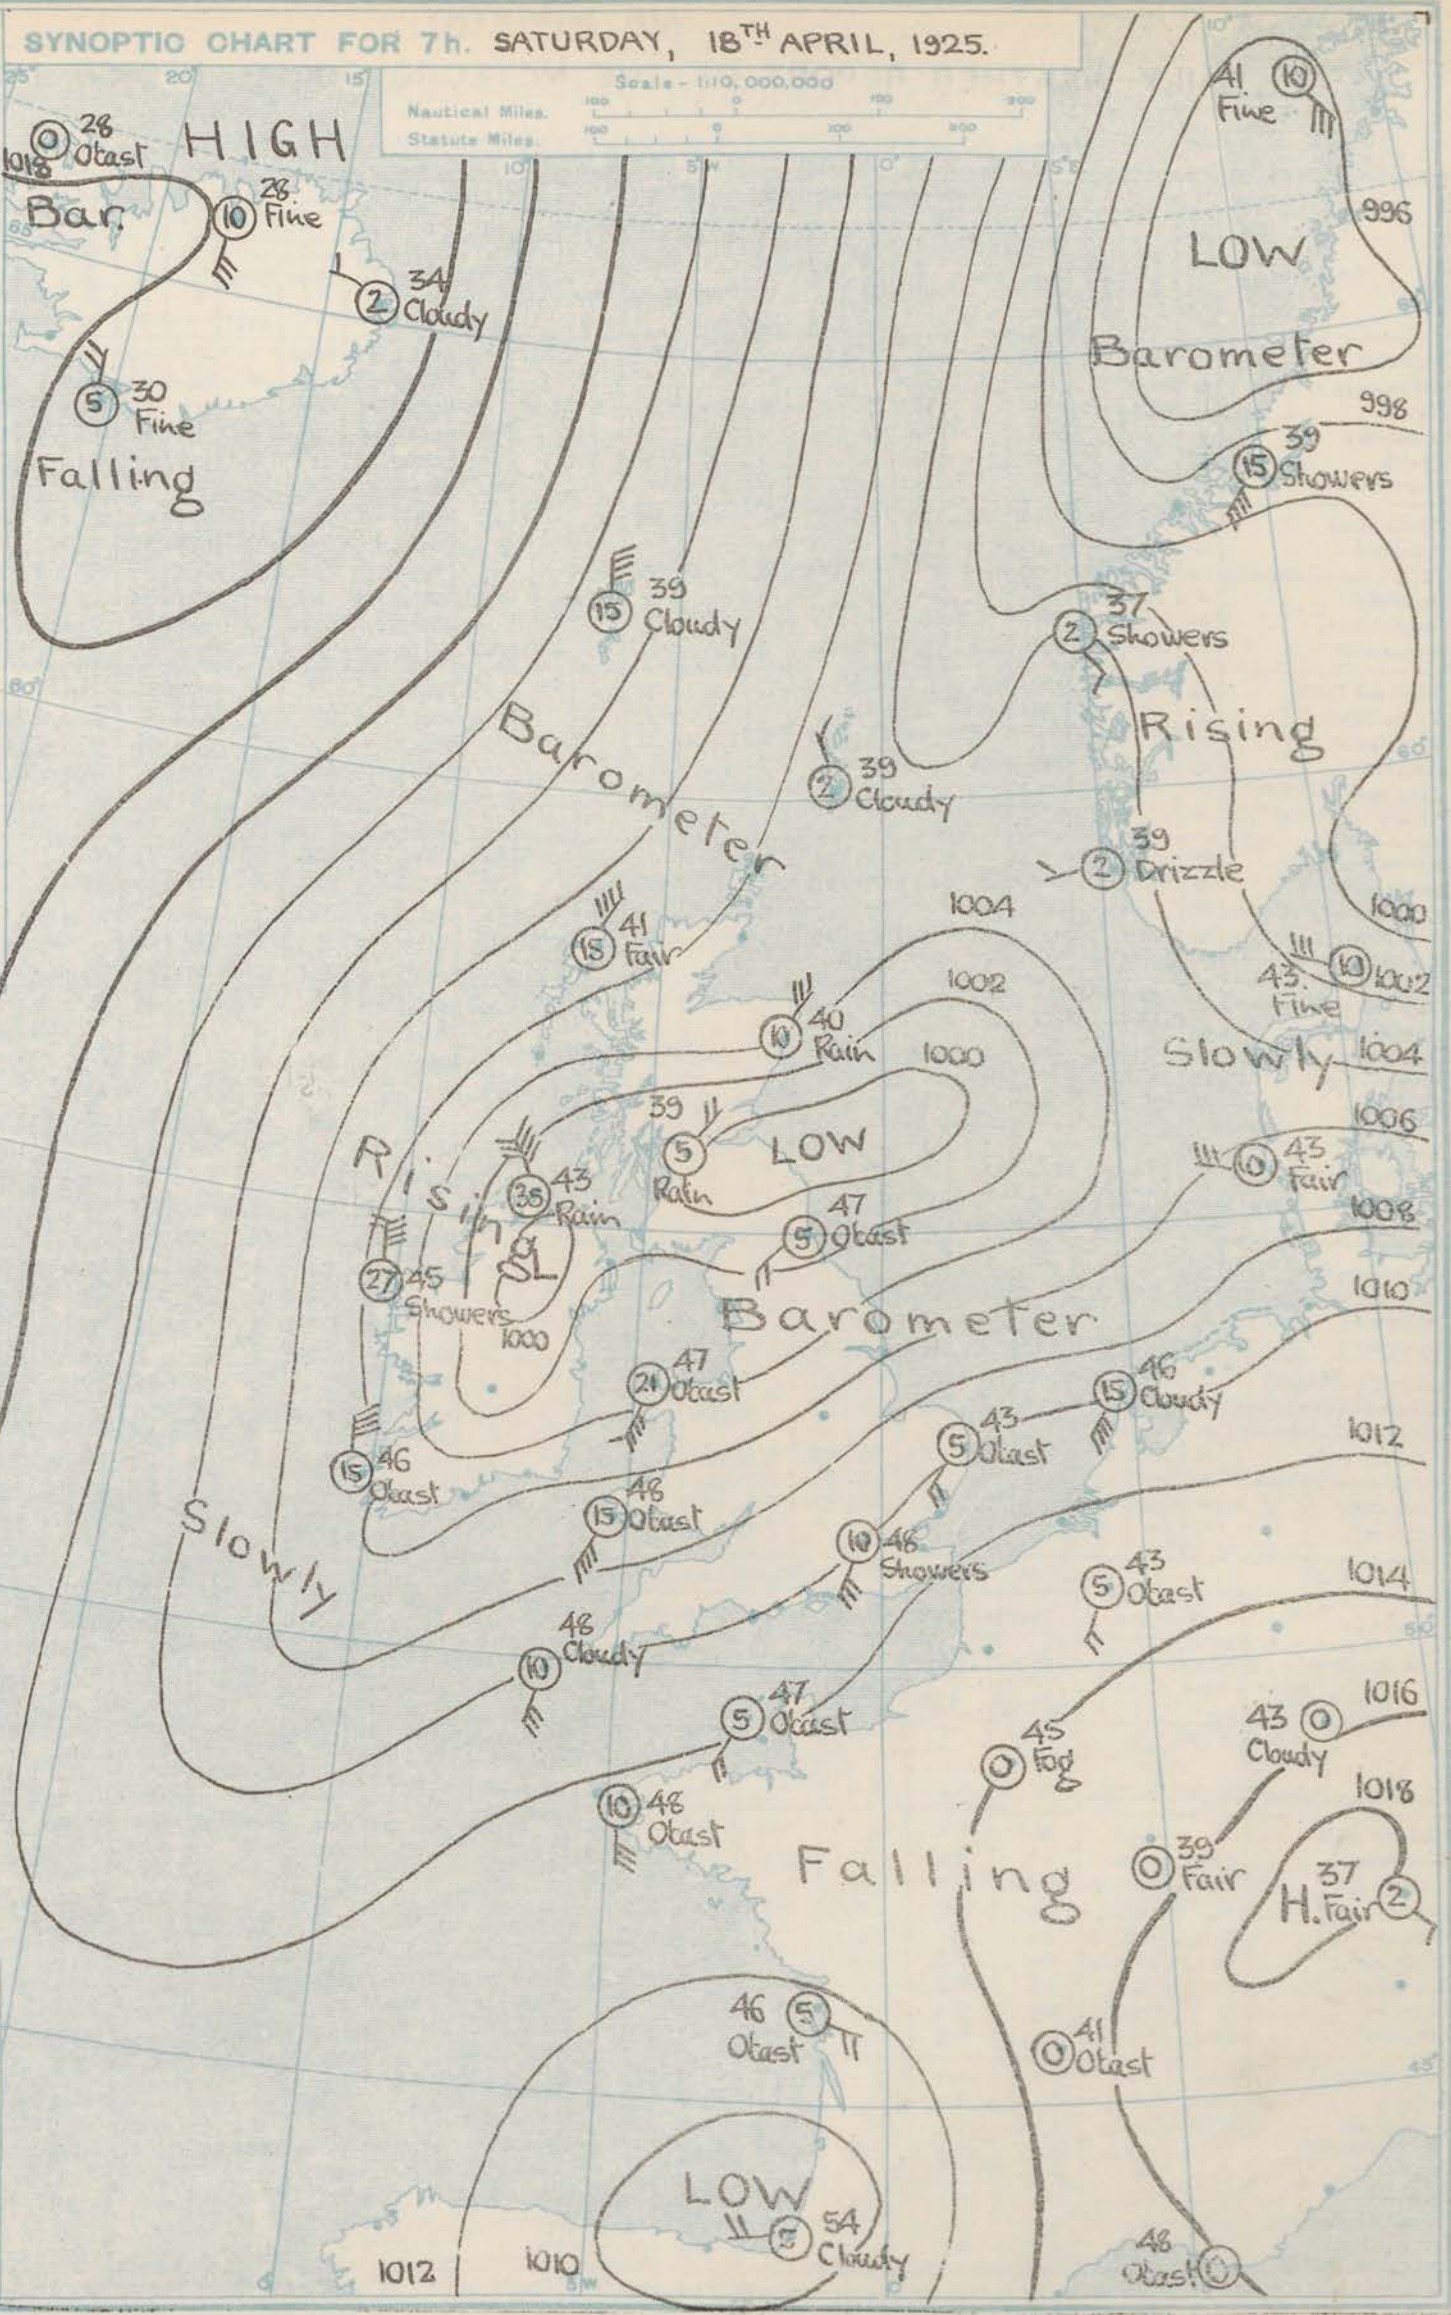

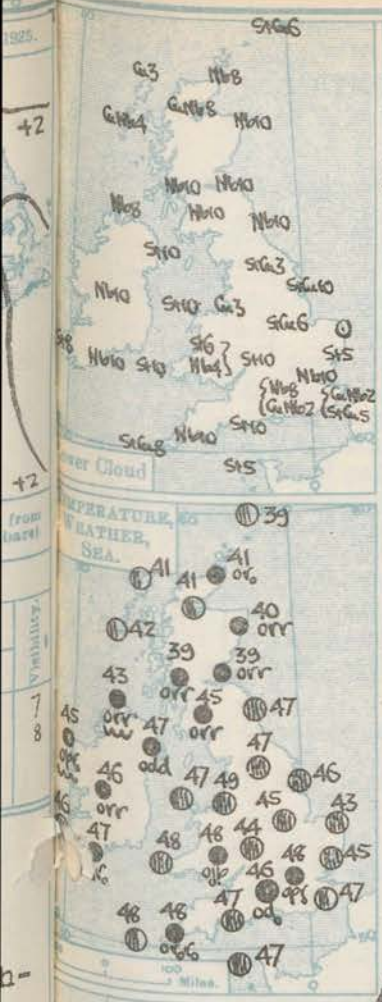

A complex depression is moving southeastwards across the British Isles and another depression is developing south-west of Iceland. Generally unsettled weather is probable for the next day or two and the temperature will be rather low in Scotland and Ireland, becoming lower in England.

| Districts.                | Forecasts for the 24 hours commencing 15h. GMT. Saturday, 18th April, 1925.                                                                      | Further Outlook.                |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|

# SYNOPTIC CHART FOR THE Sunday, 19<sup>th</sup> April, 1925.

Scale - 1:10,000,000  
Nautical Miles 0 100 200 300  
Statute Miles 0 100 200 300

All times are G.M.T. Add one hour to get summer time.

**EXPLANATION.**  
Isobars are drawn for intervals of two millibars.  
Direction is shown by arrows flying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.  
WEATHER SYMBOLS:  
☉ clear sky. ☁ sky cloudy.  
☁☁ sky & cloudy. ☁☁☁ sky & cloudy.  
☁☁☁☁ overcast sky. ☁☁☁☁☁ rain falling.  
☁☁☁☁☁☁ snow & hail. ☁☁☁☁☁☁ fog & mist.  
T thunder. V showerstorm.  
SEA DISTURBANCE:  
— rough. — Very Rough.

# SYNOPTIC CHART FOR 7h. MONDAY, 20<sup>TH</sup>. APRIL 1925.

Scale - 1:10,000,000  
Nautical Miles. 0 100 200 300  
Statute Miles. 0 100 200 300

All times are G.M.T. Add one hour to get summer time.

**EXPLANATION.**  
BAROMETER.—Isobars are drawn for intervals of two millibars.  
WIND.—Direction is shown by arrows lying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.  
WEATHER SYMBOLS.—  
☉ clear sky. ☁ sky cloudy. ☁☁ sky cloudy.  
☁☁☁ overcast sky. ● rain falling.  
✕ snow. △ hail. ≡ fog. ≡ mist.  
T thunder. F thunderstorm.  
SEA DISTURBANCE.—  
— Rough — Very Rough

# SYNOPTIC CHART FOR 7h. TUESDAY, 21<sup>ST</sup> APRIL, 1925.

Nautical Miles  
Statute Miles

Scale - 1:10,000,000

All times are G.M.T. Add one hour to get summer time.

## HIGH

### EXPLANATION.

**BAROMETER.**—Isobars are drawn for intervals of two millibars.  
**WIND.**—Direction is shown by arrows lying with the wind. Force, on the scale 0-12, is indicated by the number of lines. Mean velocity is shown in miles per hour by figures in small circles.  
**TEMPERATURE.**—Temperature is given in degrees F.  
**WEATHER SYMBOLS.**  
○ clear sky. ○ sky & clouded.  
● sky & clouded. ● sky & clouded.  
☁ overcast sky. ☁ rain falling.  
❄ snow. ⚡ hail. ☁ fog. ☁ mist.  
⚡ thunder. ⚡ thunderstorm.  
**SEA DISTURBANCE.**  
— Rough. — Very Rough.

## AIR MINISTRY.

## DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON:

## GENERAL INFERENCE.

A deep depression has passed to the north of Iceland but secondaries are now affecting the west of Ireland. Winds will be southwesterly in all districts and occasional rain is probable in the West and North.

| Districts.                | Forecasts for the 24 hours commencing 15h G.M.T. Wednesday, 22nd April, 1925.                                                 | Further Outlook.               |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| 1. S.E. England           | Wind S.W., light to moderate; fair to cloudy; visibility moderate to good; mild.                                              | Mild with southwesterly winds. |
| 2. E. England             |                                                                                                                               |                                |
| 3. E. Midlands            |                                                                                                                               |                                |
| 4. W. Midlands            | Wind S.W., moderate to fresh; becoming cloudy; visibility moderate to good; mild.                                             | Mild with southwesterly winds. |
| 5. S.W. England           |                                                                                                                               |                                |
| 6. South Wales            |                                                                                                                               |                                |

## SUMMARIES FOR THE PAST 24 HOURS.

ISALLOBAR 0

23<sup>rd</sup> April 1925

POSITION NUMBERS

+2 +4

Barometric Change from 4h. to 7h. (Half millibars)

Observations from Cross Channel Steamers.

GENERAL INFERENCE.

A deep depression over the

Faeroes is moving away N.E.

Mainly bright weather is probable

for a time with westerly winds

but thundery showers of hail or

rain will occur locally. Further

disturbances not far out on the

Atlantic will affect Western

districts tomorrow.

Further Outlook.

Unsettled.

South Cone

flying all coasts.

Today

As 1 - 16.

Tomorrow

Wind backing; cloud increasing, some rain.

Meteorological Office: Air Ministry, Kingsway, London, W.C.2.

Forecasts issued at

0930 G.M.T.

G. C. SIMPSON, F.R.S., Director.

## GENERAL INFERENCE.

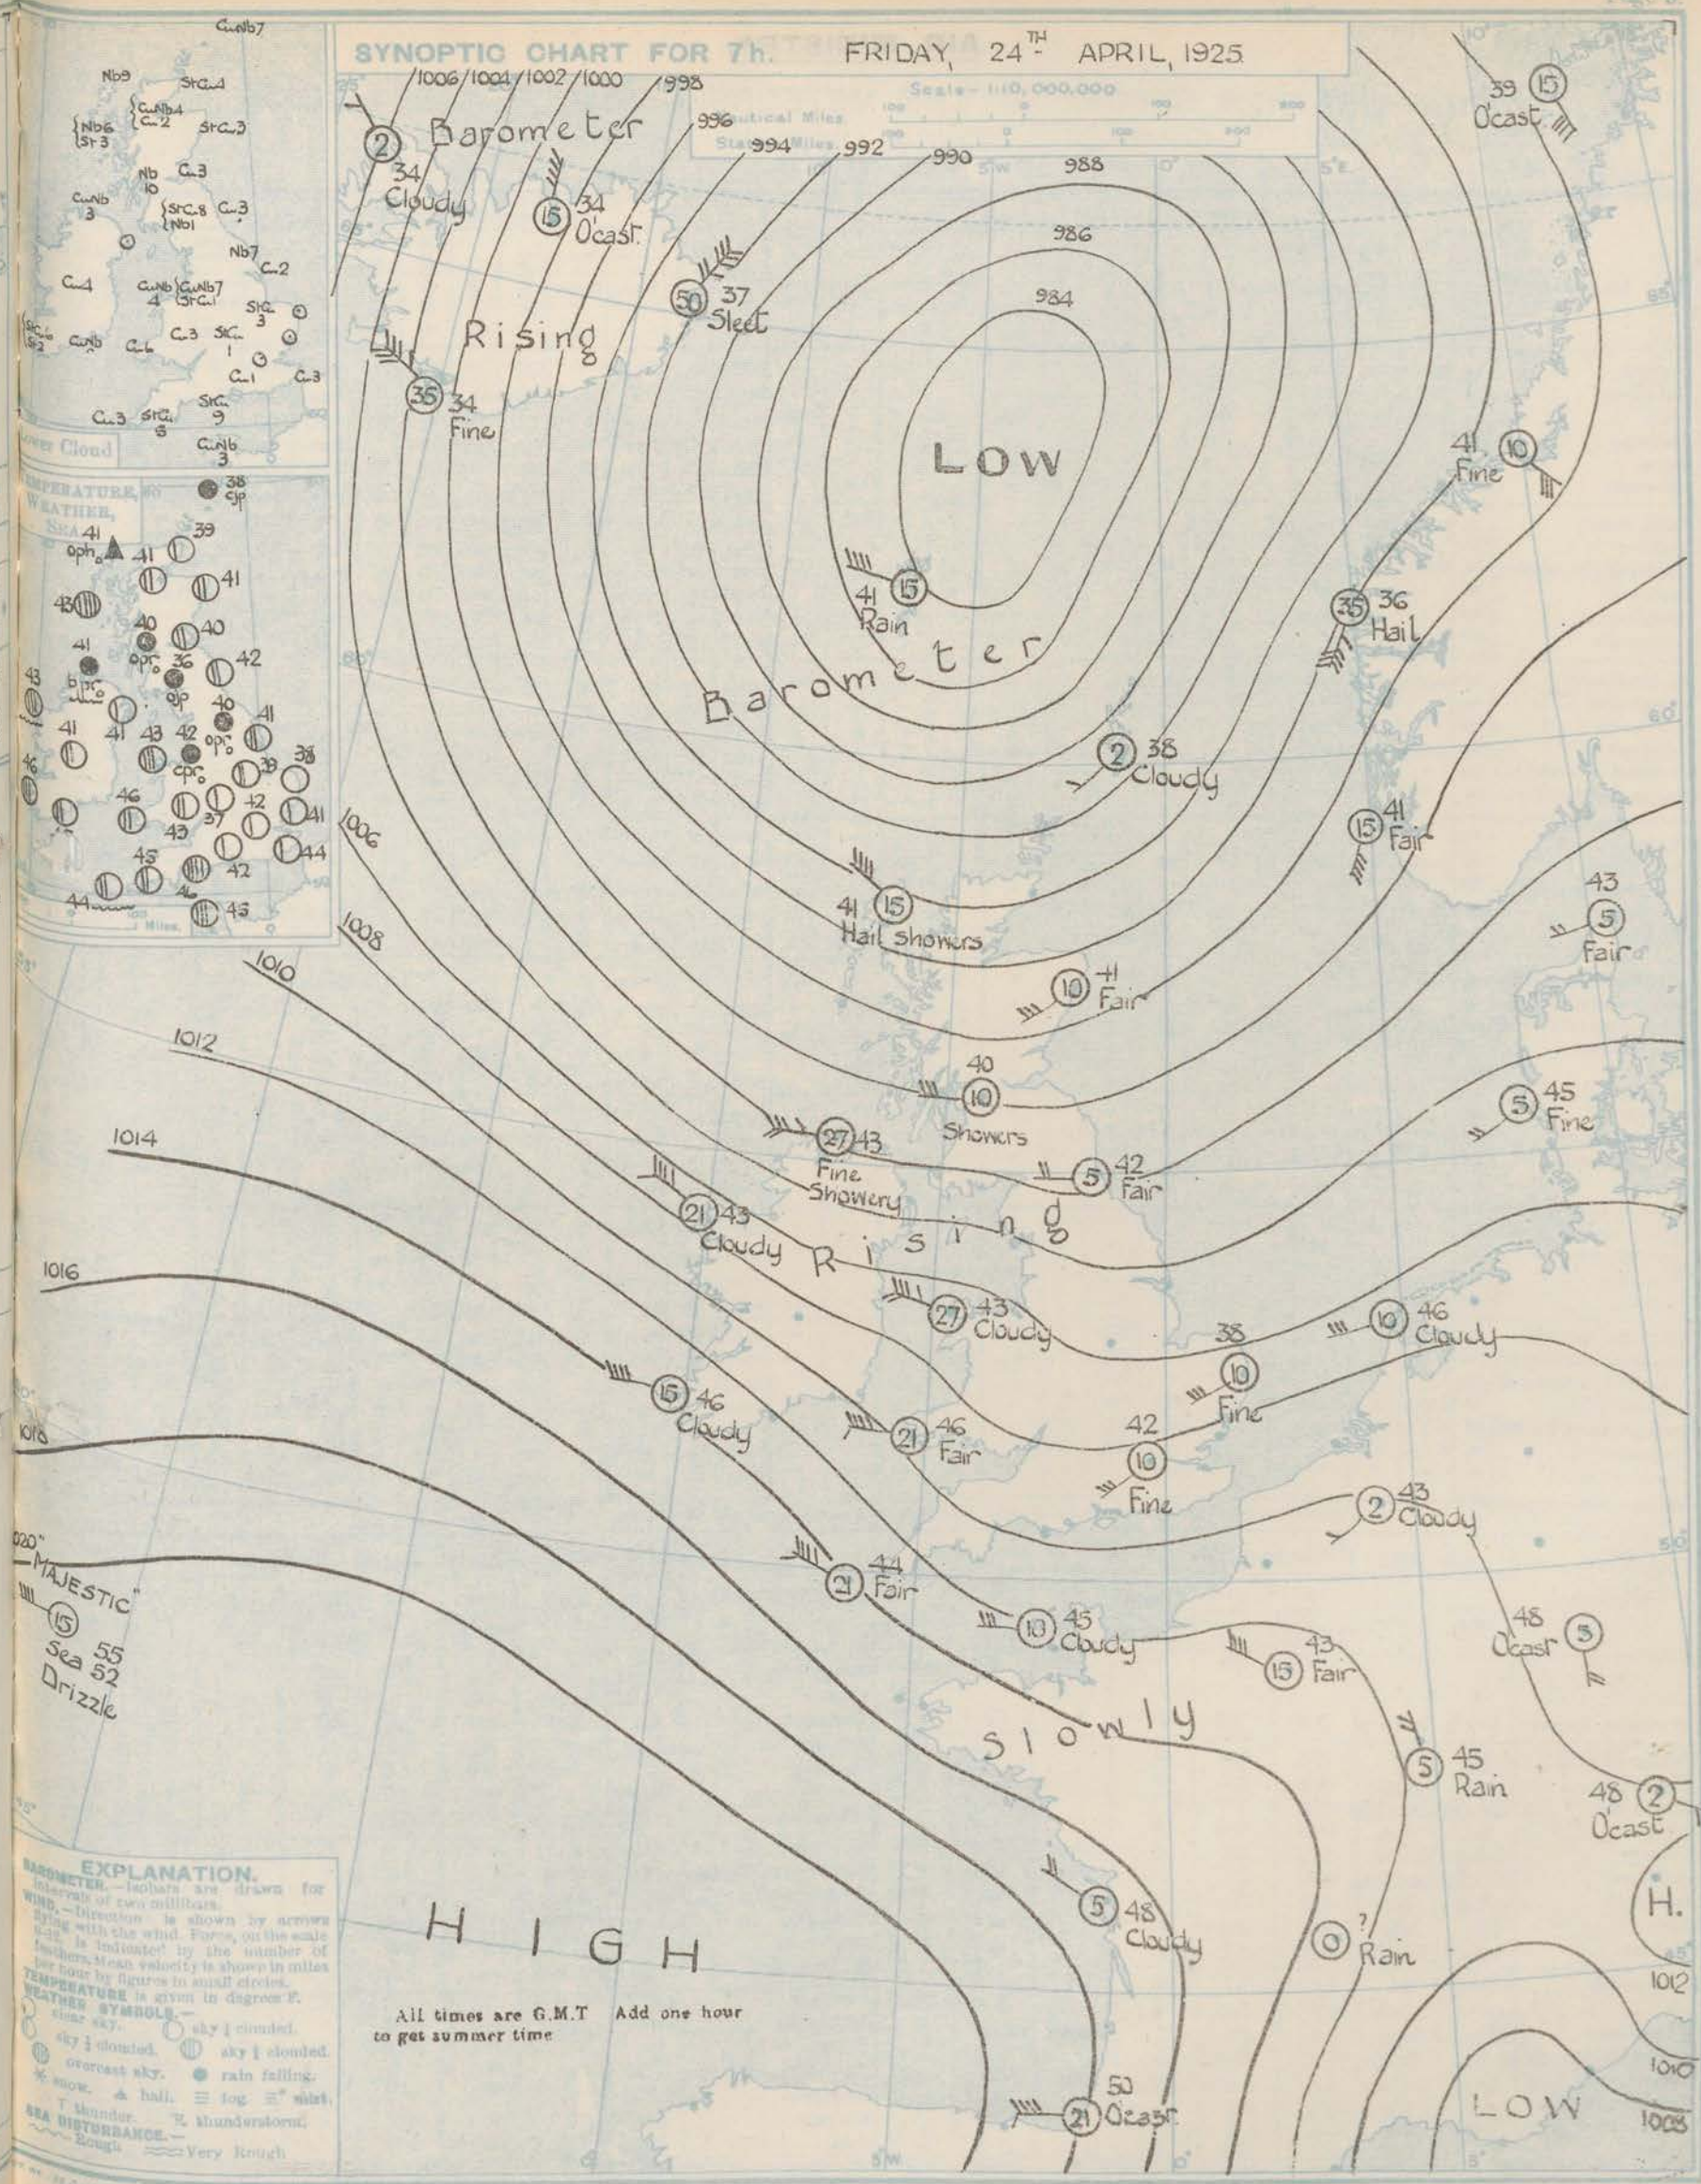

The depression north of the Faeroes is becoming less deep. Winds will be westerly, fresh and rather squally with local showers of rain or hail but considerable bright periods.

## GENERAL INFERENCE.

The depression near the Faeroes is nearly stationary but a secondary to the south of Ireland is moving eastwards over England. Showery weather will continue in the Northern districts but rain starting now in the southwest of England will probably reach Eastern England this evening.

## Further Outlook.

Unsettled.

| Districts.                | Forecasts for the 24 hours commencing 15h. GMT. Saturday, 25th April, 1925.                                                                                       | Further Outlook. |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| 1. S.E. England           | Wind light, variable, becoming westerly, moderate or fresh tomorrow; some rain this evening. Probably brighter but showery tomorrow; visibility moderate to good. | Unsettled.       |
| 2. E. England             |                                                                                                                                                                   |                  |

## GENERAL INFERENCE.

A nearly stationary depression, centred over the North Sea, is filling up and an anticyclone stretches from the Azores to the west of Ireland. Further depressions are, however, indicated out on the Atlantic. Weather will continue to be of a changeable showery type with little change of temperature.

## Districts.

Forecasts for the 24 hours commencing 15h. GMT. Sunday, 26th April, 1925.

Further Outlook.

Similar conditions.

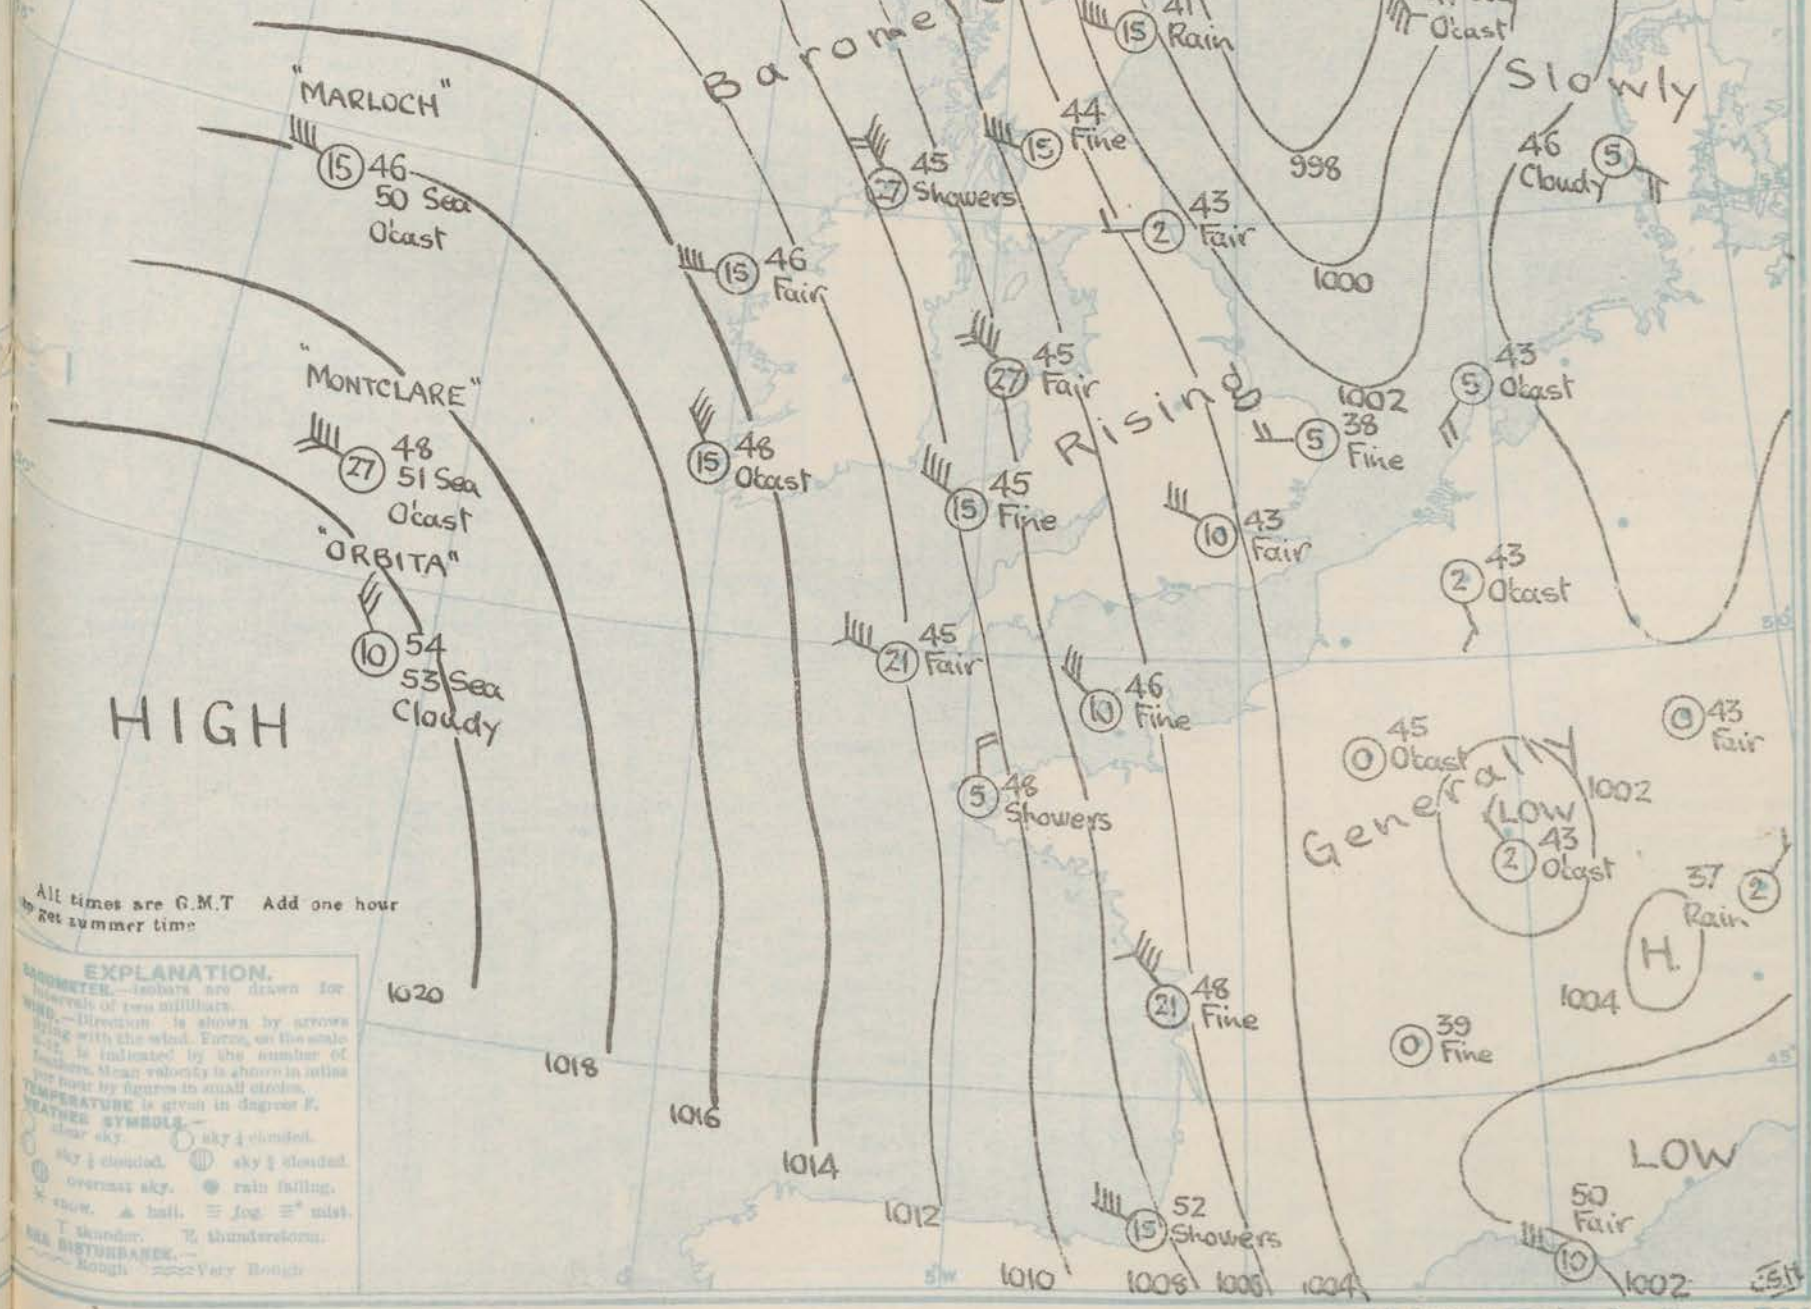

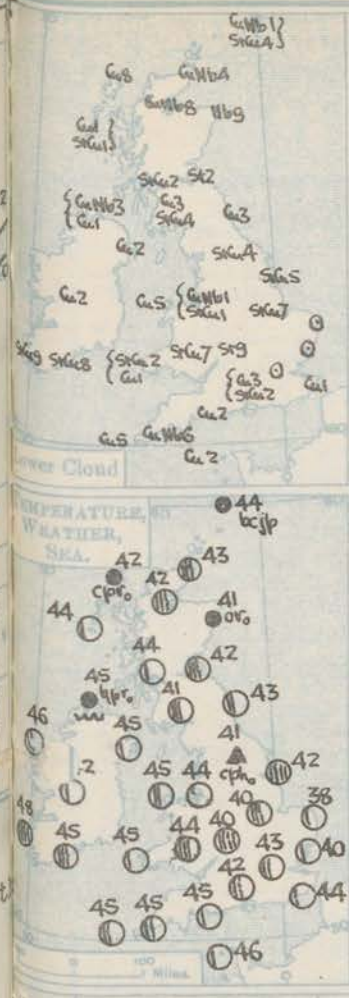

## ALL DISTRICTS.

Wind mainly between west and northwest, moderate or fresh locally; some showers but considerable bright periods; visibility moderate to good; little change of temperature but risk of night frost locally.

# SYNOPTIC CHART FOR 7h. SUNDAY, 26<sup>th</sup> APRIL, 1925.

Scale - 1:10,000,000  
Nautical Miles. 100 200 300  
Statute Miles. 100 200 300

All times are G.M.T. Add one hour for summer time

**EXPLANATION.**  
Isobars are drawn for intervals of two millibars.  
WIND.—Direction is shown by arrows lying with the wind. Force, on the scale 0-12, is indicated by the number of lines. Mean velocity is shown in italics per hour by figures in small circles.  
TEMPERATURE is given in degrees F.  
WEATHER SYMBOLS.—  
☉ sky clear.  
☁ sky cloudy.  
☁☁ sky & cloudy.  
☁☁☁ overcast sky.  
☁☁☁☁ rain falling.  
❄ snow. ▲ hail. ☁ fog. ☁ mist.  
☁ thunder. ☁ thunderstorm.  
☁☁☁☁☁ Very Rough

## GENERAL INFERENCE.

A small depression off North-west Ireland will probably move southeastward to France, and high pressure will spread southward from Iceland. Wind will be variable becoming generally east to north-east. There will be rain today in southwest districts and local showers in Eastern England, but fair weather is probable in Scotland and Northwest England.

## Further Outlook.

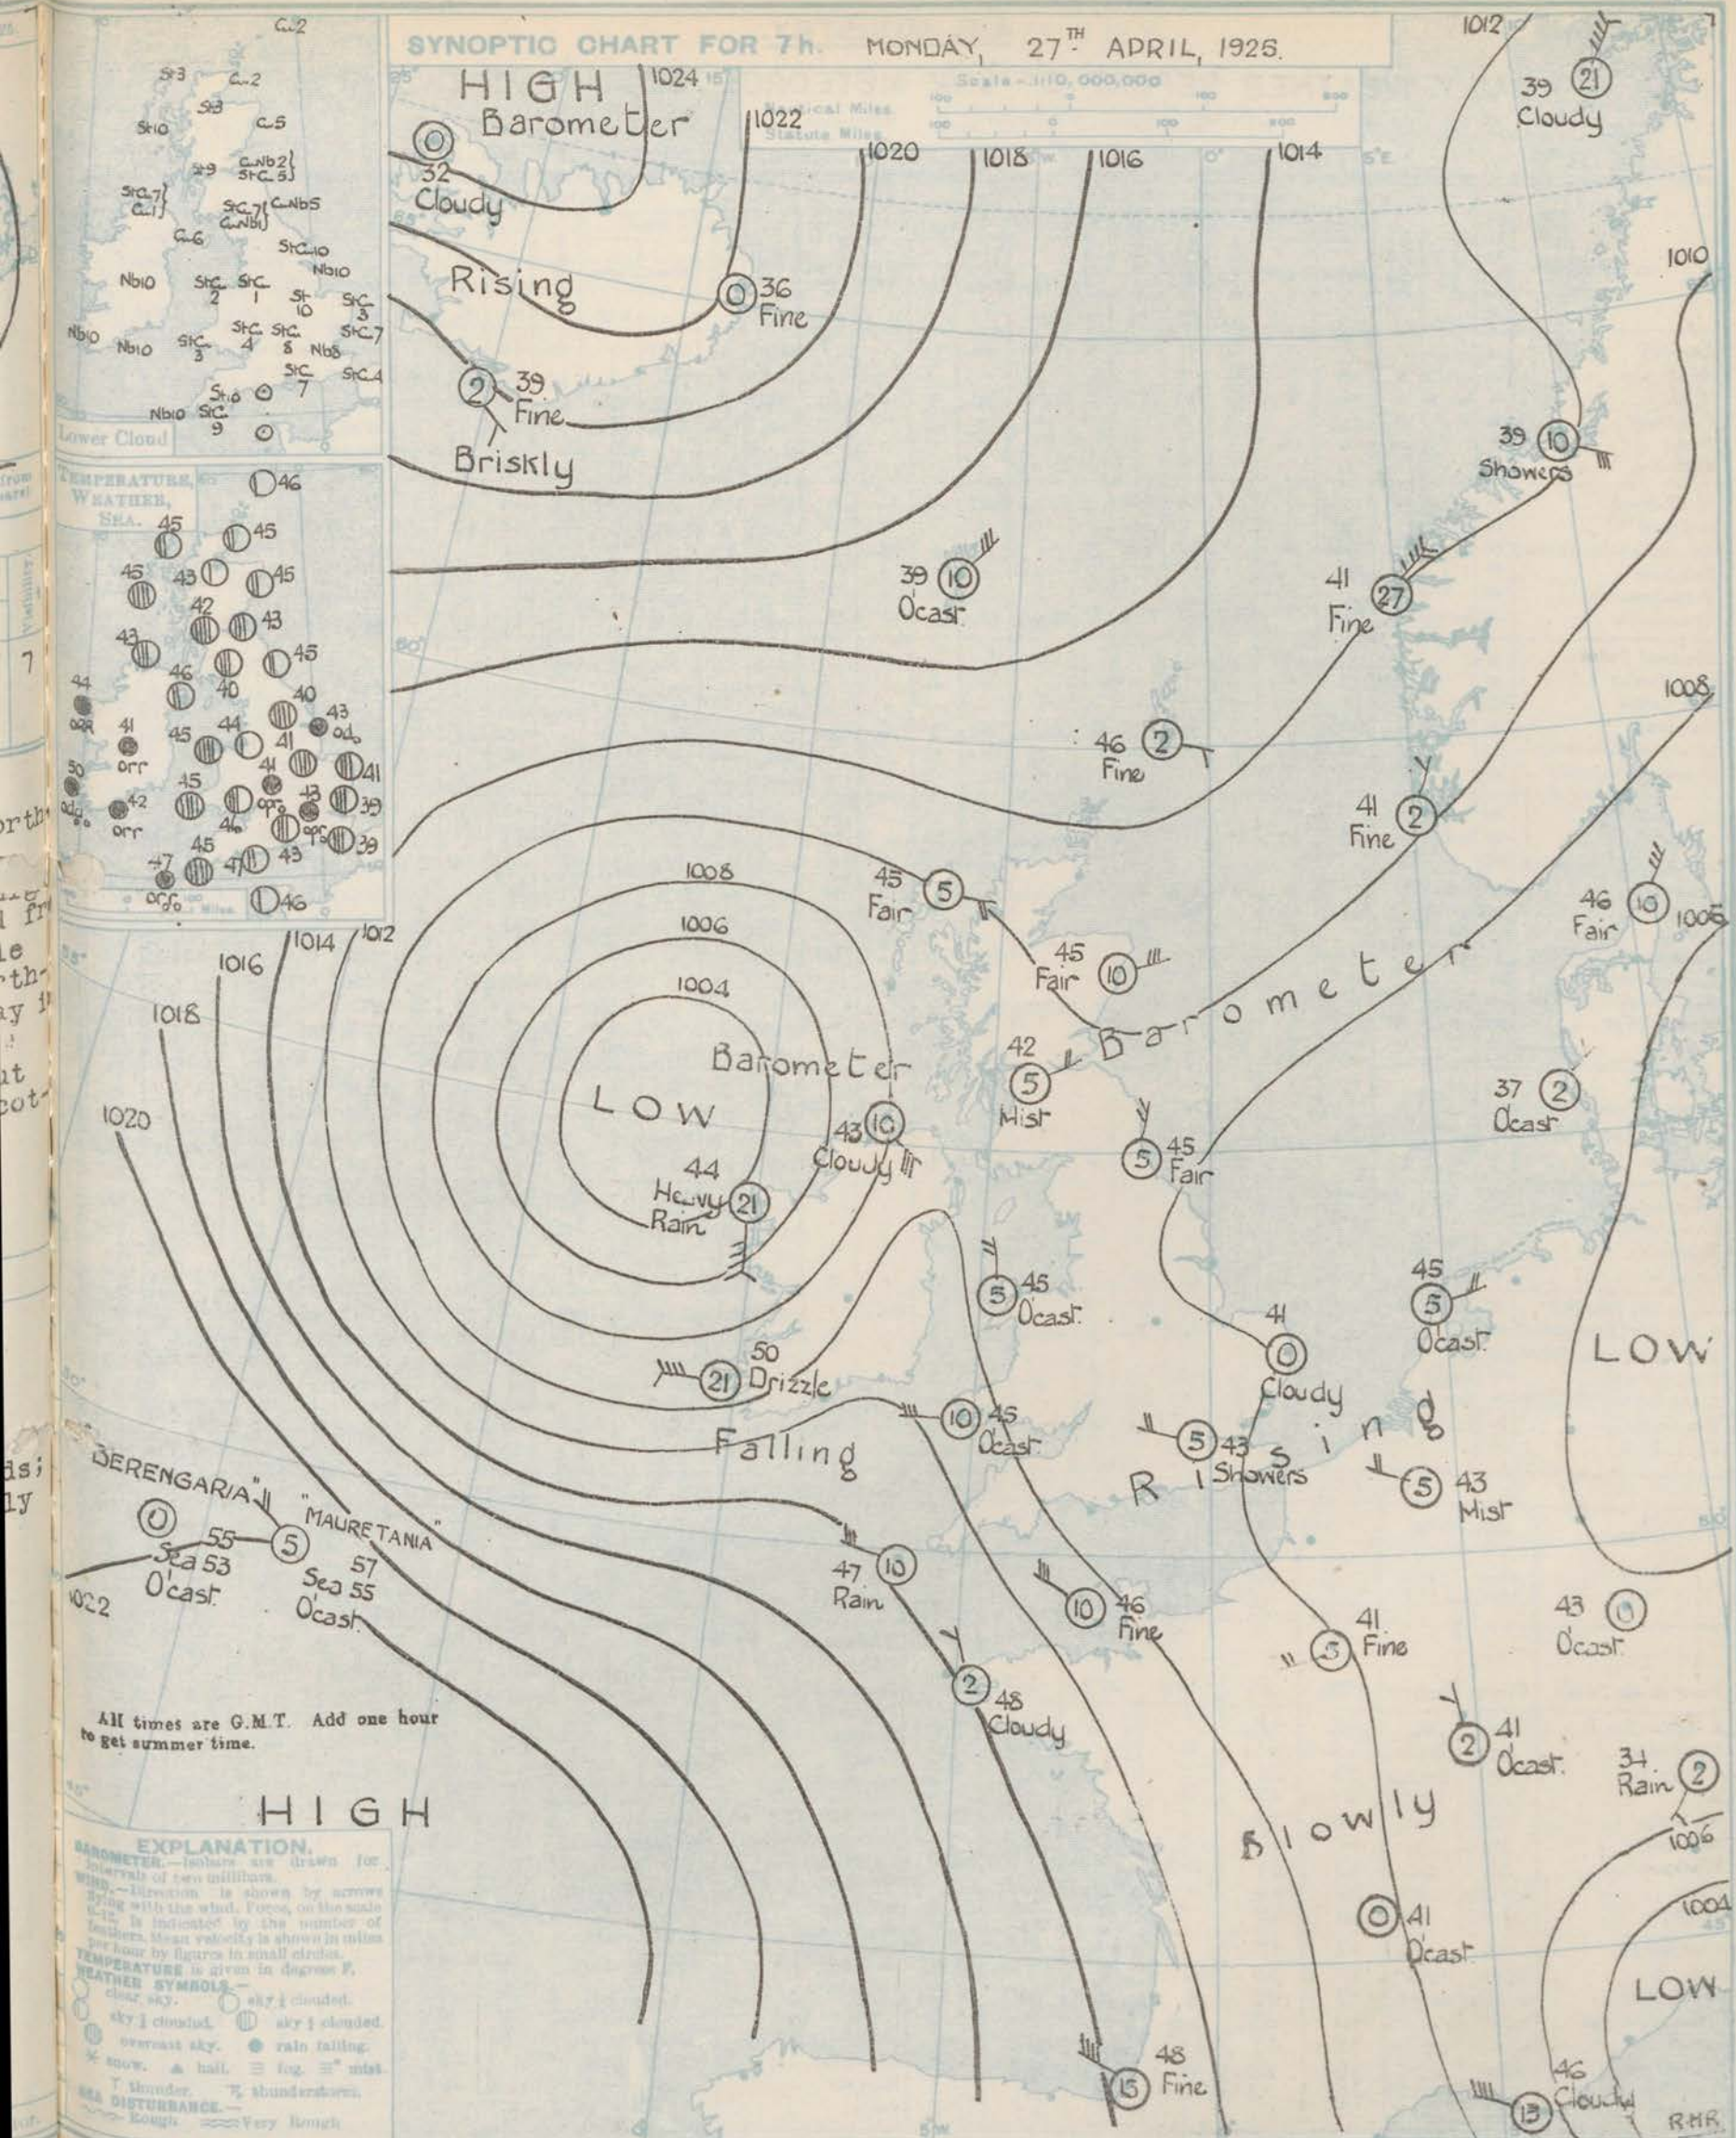

Rather cold, with N.E. winds; probably mainly dry.

-----

## Districts. Forecasts for the 24 hours commencing 15h G.M.T. Monday, 27th April, 1925.

|                           |                                                                                                                                                               |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. S.E. England           | Wind light variable, becoming E. to N.E.; fair to cloudy, local showers; local morning mist; rather cold, with risk of ground frost.                          |
| 2. E. England             |                                                                                                                                                               |
| 3. E. Midlands            |                                                                                                                                                               |
| 4. W. Midlands            | Wind mainly S.E. to S., backing E. to N.E., fresh at times locally; some rain today, probably mainly fair tomorrow; visibility moderate to good; rather cold. |
| 5. S.W. England           |                                                                                                                                                               |
| 6. South Wales            |                                                                                                                                                               |
| 7. North Wales            |                                                                                                                                                               |
| 8. N.W. England           |                                                                                                                                                               |
| 9. N. Midlands            |                                                                                                                                                               |
| 10. N.E. England          | Wind mainly E. to N.E.; light or moderate; mainly fair; visibility good apart from local morning mist; rather cold, ground frost at night.                    |
| 11. E. Scotland           |                                                                                                                                                               |

Observations from Cross Channel Steamers.

GENERAL INFERENCE.

An anticyclone is established over Iceland while a depression over France is moving east, and a secondary developing north of Scotland is likely to move south. Winds will be mainly between northeast and north, with cold unsettled weather for some days. Except in North Scotland weather today will be mainly fair with varying cloud and local showers.

# SYNOPTIC CHART FOR 7h. TUESDAY, 28<sup>TH</sup> APRIL, 1925.

Scale - 1:10,000,000

Nautical Miles  
Statute Miles

-All times are G.M.T. Add one hour to get summer time.

**EXPLANATION**  
Barometer - shows the pressure in inches of mercury.  
Wind - Direction is shown by the arrow pointing in the direction the wind is blowing from. Force is shown by the number of lines following the arrow.  
Temperature - is shown by the number in the circle.  
Sea - is shown by the number in the circle.  
Weather - is shown by the symbol in the circle.  
Clouds - are shown by the number in the circle.  
Rain - is shown by the number in the circle.  
Thunder - is shown by the number in the circle.  
Fog - is shown by the number in the circle.  
Mist - is shown by the number in the circle.  
Snow - is shown by the number in the circle.  
Hail - is shown by the number in the circle.  
Thunderstorm - is shown by the number in the circle.  
Sea Disturbance - is shown by the number in the circle.

KQ line squall. l lightning. o overcast sky. p passing showers. q squally. r rain. s snow. ts sleet. t thunder. u ugly, threatening sky. v unusual visibility. w dew. x hoar frost. y dry air. z dust haze; the turbid atmosphere of dry weather. h(r) = "hail" or "rain and hail." Capital letters indicate intense; suffix a indicates slight; repetition of letters indicates continuity. R = heavy rain. r = slight rain. rr = continuous rain. SYMBOLS. < = (less than (for cloud height), > = (more than (for precipitation). @ = solar halo. @ = lunar halo. With present weather, l combined, whenever possible, the general character of the weather. A "solidus" divides actual existing weather from preceding conditions, thus: -bc = fair weather after rain; -bc = has decreased + = has increased. |                  |                           |            |         |                           |          |                |                           |        |                           |      |                           |                  |                                               |                                  |        |                                         |                       |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                             |        |      |      |      |       |      |   |  |  |
| The BEAUFORT SCALE of WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 50 feet above the ground.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                  |                           |            |         |                           |          |                |                           |        |                           |      |                           |                  |                                               |                                  |        |                                         |                       |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                             |        |      |      |      |       |      |   |  |  |

GENERAL INFERENCE.

Pressure is becoming uniform over the British Isles and winds will be light and variable. Thundery showers will occur at many places. Day temperature will rise slightly but ground frost will develop at night. A depression will probably approach our southwest coasts before long.

SYNOPTIC CHART FOR 7h. WEDNESDAY 29<sup>TH</sup> APRIL 1925

Scale - 1:10,000,000  
Nautical Miles. 100 0 100 200  
Statute Miles. 100 0 100 200

All times are G.M.T. Add one hour to get summer time.

**EXPLANATION.**  
**BAROMETER.**—Isobars are drawn for intervals of two millibars.  
**WIND.**—Direction is shown by arrows flying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
**TEMPERATURE** is given in degrees F.  
**WEATHER SYMBOLS.**  
○ clear sky. ○ sky & clouded.  
☁ sky & clouded. ☁ sky & clouded.  
☂ overcast sky. ☂ rain falling.  
\* snow. ▲ hail. ≡ fog. ≡ mist.  
T thunder. T thunderstorm.  
**SEA DISTURBANCE.**  
— Rough — Very Rough
