Wednesday 1 February 2006

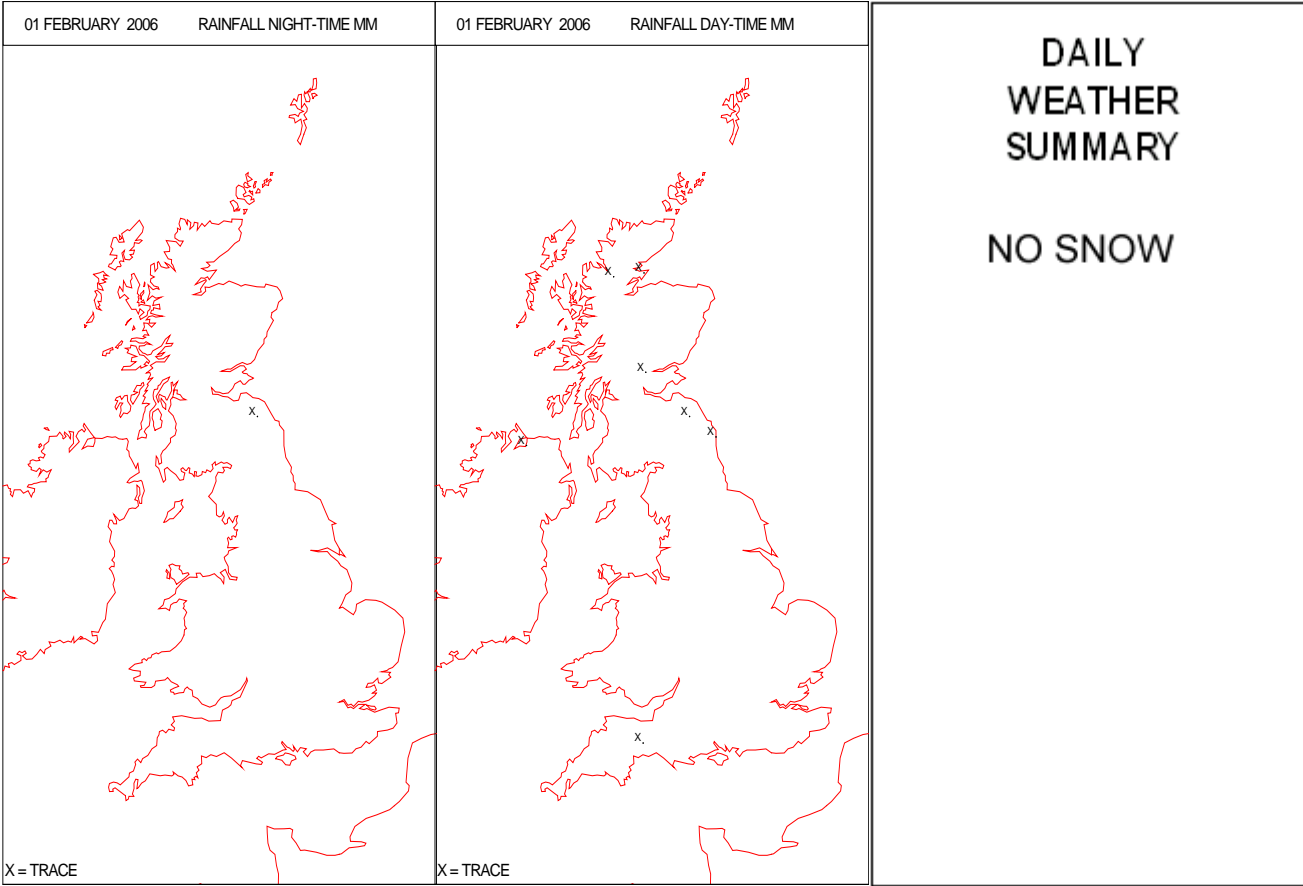

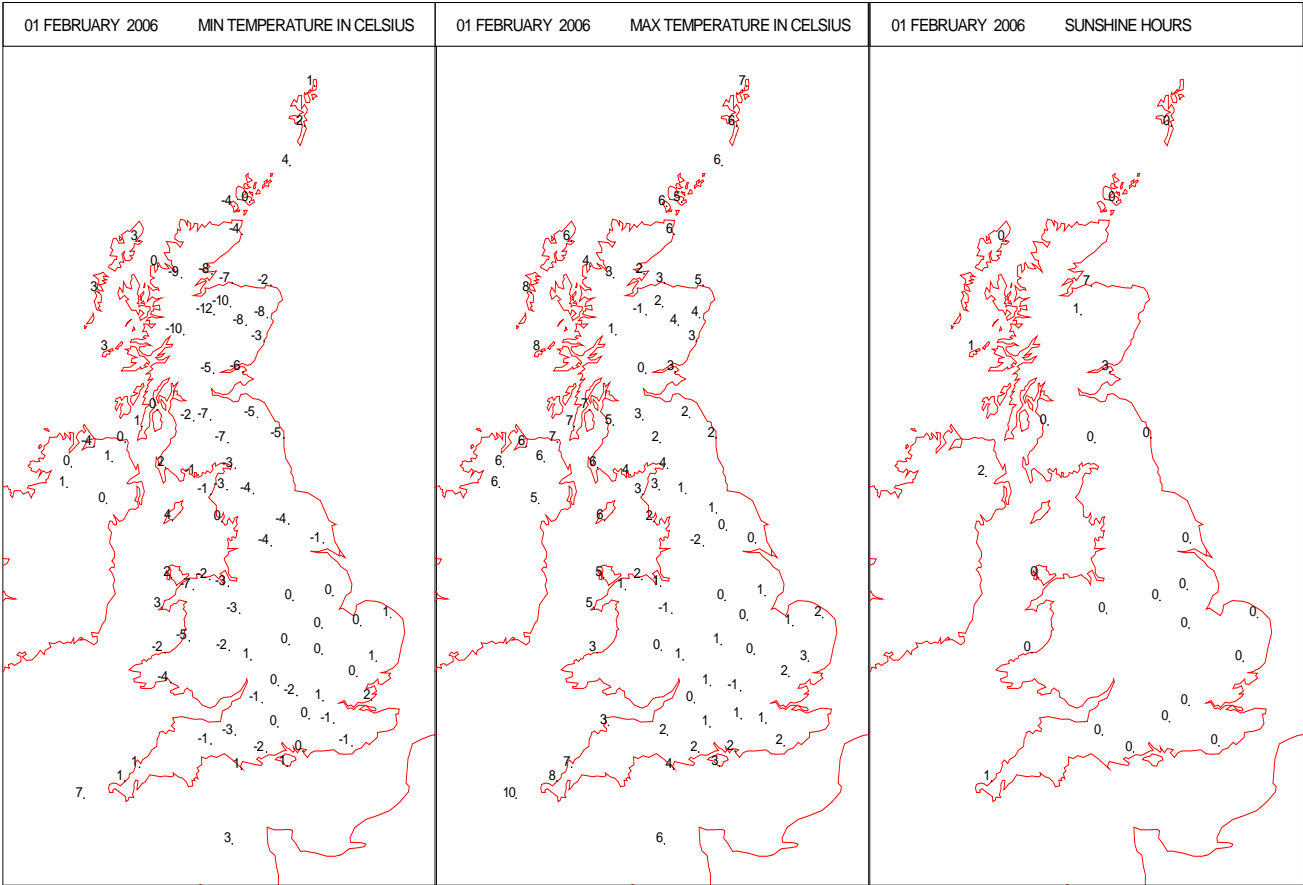

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 01 FEBRUARY 2006	SIG WEATHER	1200 GMT 01 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Wednesday 01 February 2006. Much of England and Wales began Wednesday overcast with mist and fog across many hills whilst Scotland and parts of Northern Ireland were clear and frosty. The status quo was not totally maintained until dawn though, as cloud spread across central and western Scotland and some clear spells did develop elsewhere.</p> <p>The morning was grey and overcast in many places, and temperatures remained below freezing in quite a number of areas with a little localised light drizzle. Indeed, some parts continued below freezing through the afternoon, particularly, but not exclusively across the lower hills. This also meant some thick patches of freezing fog and widespread mist continued throughout the day. Over the higher hills and mountain tops it was clear and sunny and the temperature atop Cairngorm for example reached 9 °C.</p> <p>Temperatures were near average amongst the Isles of Scilly and in Shetland but in general at lowland sites they were rather cold to cold, with a few sites very cold where fog lingered. By contrast some of the mountain tops were exceptionally mild.</p>
1800 GMT 01 FEBRUARY 2006	SIG WEATHER	0000 GMT 02 FEBRUARY 2006	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 9.9 Scilly: St Marys Air, Isles Of Scilly</p> <p>Lowest Maximum: -1.5 Bingley, No 2, West Yorkshire</p> <p>Lowest Minimum: -11.6 Aviemore, Inverness-Shire</p> <p>Lowest Grass Minimum: -15.0 Loch Glascarnoch, Ross & Cromarty</p> <p>Most Rain: 0.4 Charterhall, Berwickshire 0.4 Dunkeswell Aerodrome, Devon</p> <p>Most Sun: 1.2 Camborne, Cornwall</p>

SURFACE REPORTS

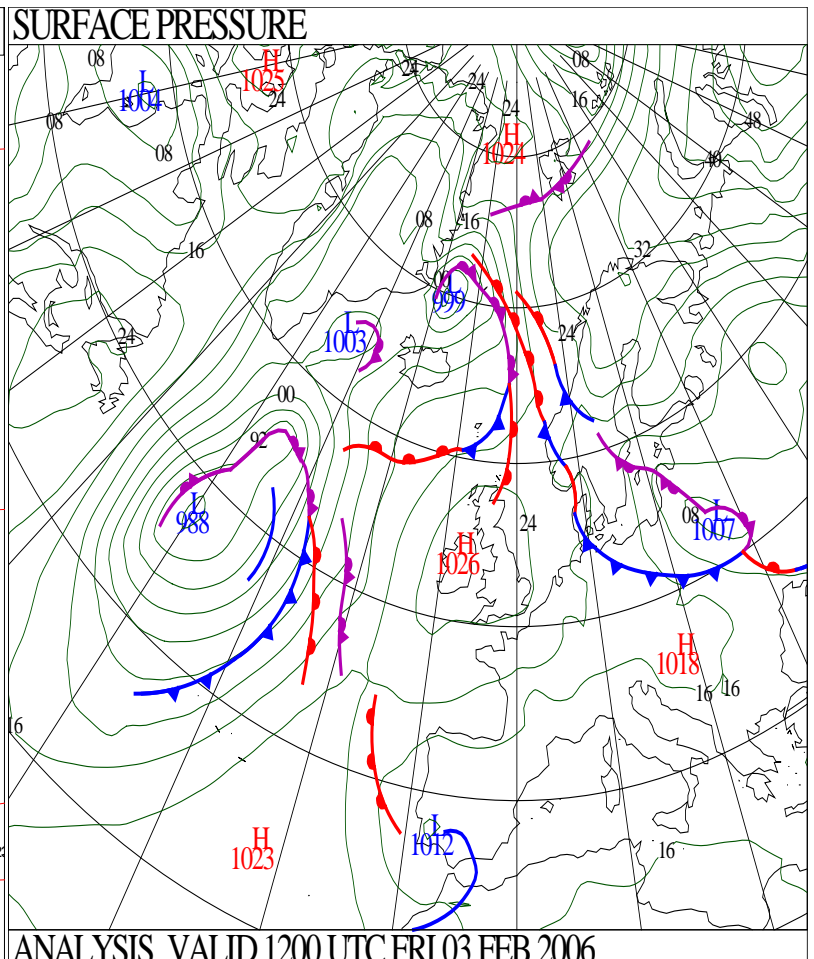

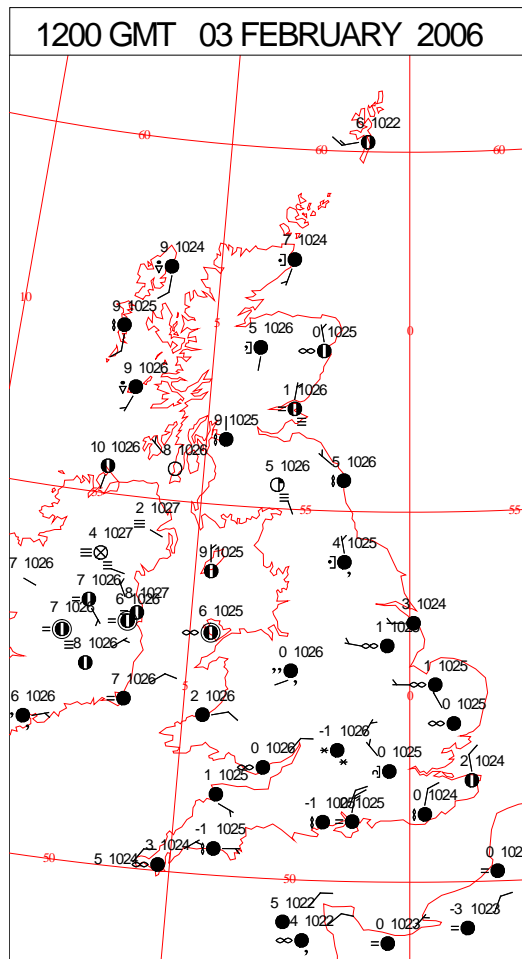

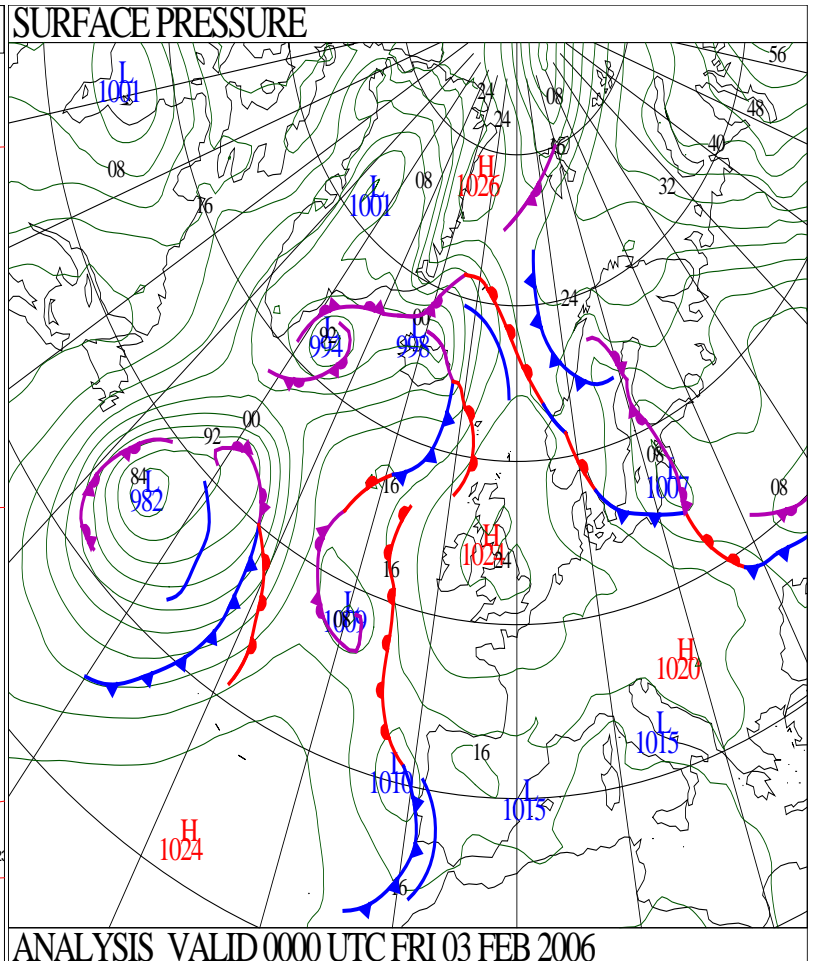

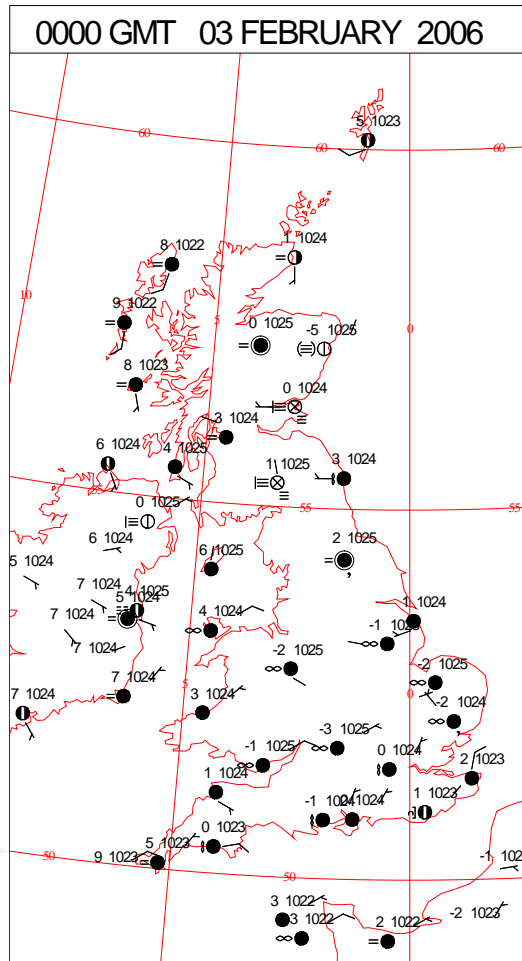

SIGNIFICANT WEATHER

0600 GMT 02 FEBRUARY 2006	SIG WEATHER	1200 GMT 02 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Thursday 02 February 2006.</p> <p>Overnight it was cloudy across much of the UK, although mainly dry. Patchy mist and fog affected parts of southern Britain.</p> <p>During the morning many places were cloudy and light snow, snow grains and freezing drizzle were reported in parts of southern and central England and East Anglia. The mist and fog gradually dispersed and most places were dry but cloudy. The best of any sunshine was in northeast Scotland, and Aberdeen recorded 6.2 hours.</p> <p>There were reports in the afternoon of snow grains and drizzle across central and southern England and East Anglia, and some freezing drizzle in Suffolk. The Outer Hebrides had a few showers but elsewhere there was little change from the morning with large amounts of cloud across much of the UK. Northeast Scotland retained the sunnier skies, and there were sunny spells in parts of Northern Ireland.</p> <p>The evening saw patchy rain across northwest Scotland, but there were no major changes elsewhere.</p> <p>Temperatures generally were in the cold or very cold category, but it was very mild in parts of the western isles.</p>
1800 GMT 02 FEBRUARY 2006	SIG WEATHER	0000 GMT 03 FEBRUARY 2006	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 11.0 Machrihanish, Argyll (In Strathclyde)</p> <p>Lowest Maximum: -2.7 Little Rissington, Gloucestershire</p> <p>Lowest Minimum: -9.2 Glenlivet, Banffshire</p> <p>Lowest Grass Minimum: -13.3 Lossiemouth, Moray (In Grampian Region)</p> <p>Most Rain: 1.8 Aultbea No 2, Ross & Cromarty</p> <p>Most Sun: 6.2 Kinloss, Moray (In Grampian Region)</p>

SURFACE REPORTS

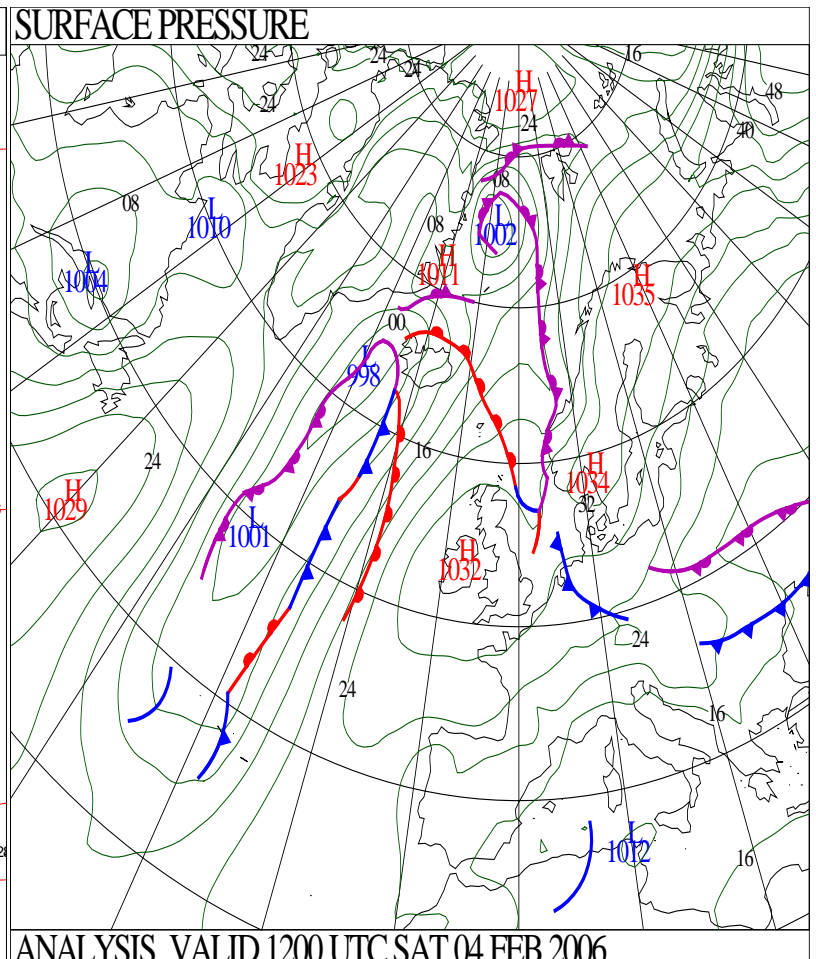

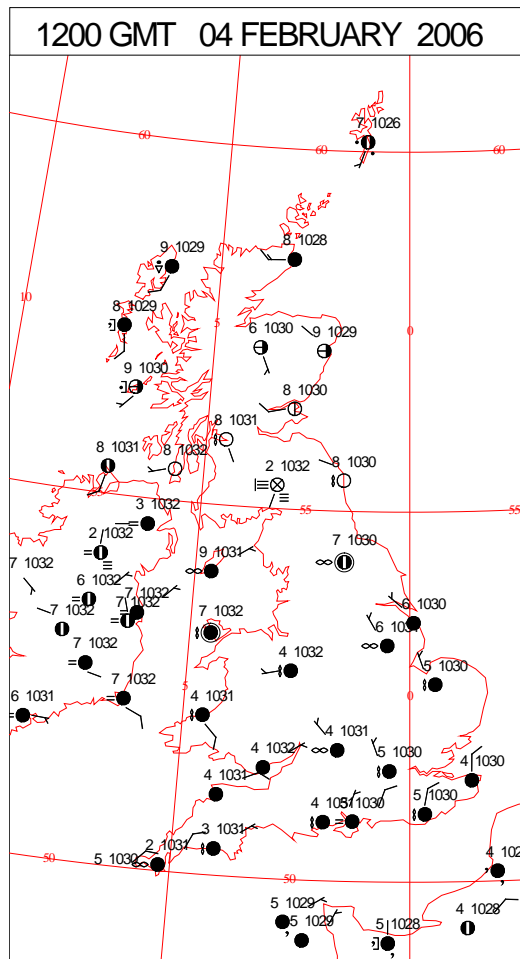

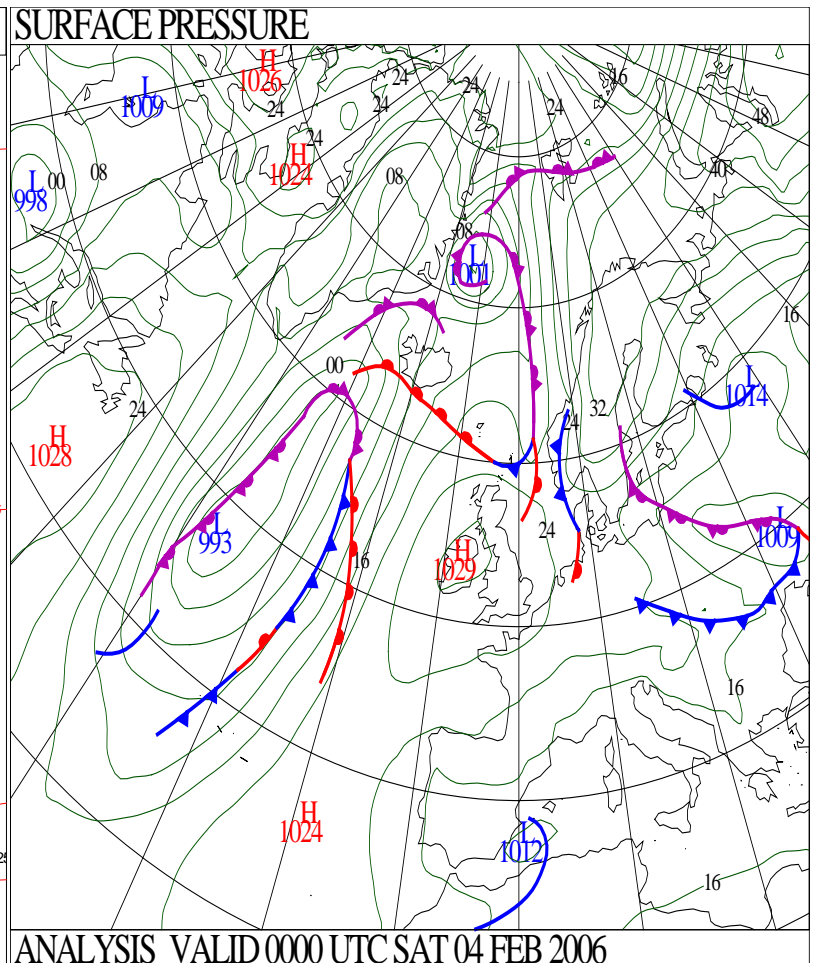

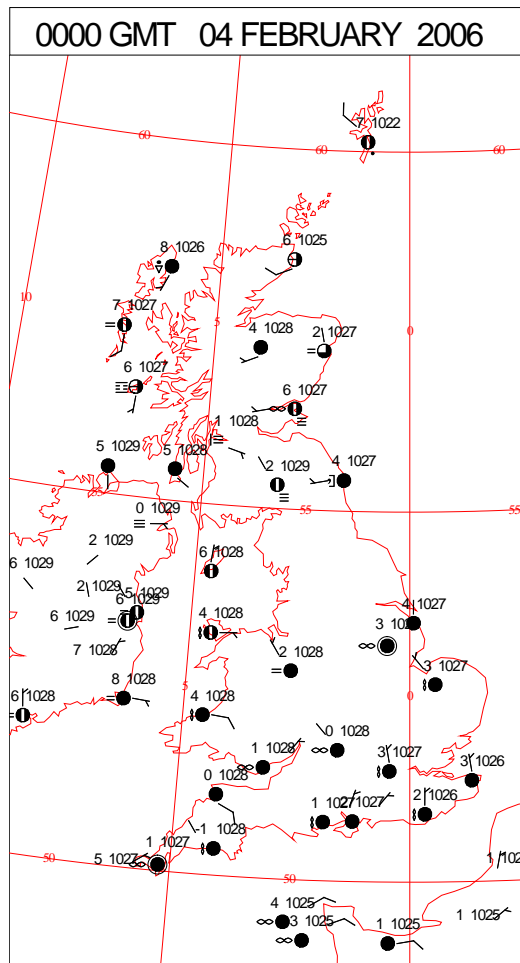

SIGNIFICANT WEATHER

0600 GMT 03 FEBRUARY 2006 SIG WEATHER	1200 GMT 03 FEBRUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Friday 03 February 2006.</p> <p>A weak weather front brought some patchy light rain across the northwest Scotland overnight, with milder conditions here, whilst in south and east Scotland and across Northern Ireland there were some cloud breaks which allowed frost and fog to form, some dense fog especially across Northern Ireland and with quite a sharp frost for Eastern Scotland.</p> <p>Across England and Wales, despite a blanket of cloud there was a widespread frost, the cloud low enough to give some fog over the hills and thick enough to give some isolated drizzle/snow grains or the odd snow flurry. During the day there was very little change really for England and Wales, staying 'very cold' and grey still with snow grains reported locally and with temperatures struggling in places to get above freezing.</p> <p>South Wales and southwest England saw a few sunny intervals. Although some fog persisted all day across Northern Ireland, where it cleared there were sunny spells, with sunny spells too for southwest Scotland. Under these sunnier skies, temperatures rose into the 'mild' category.</p>

SURFACE REPORTS

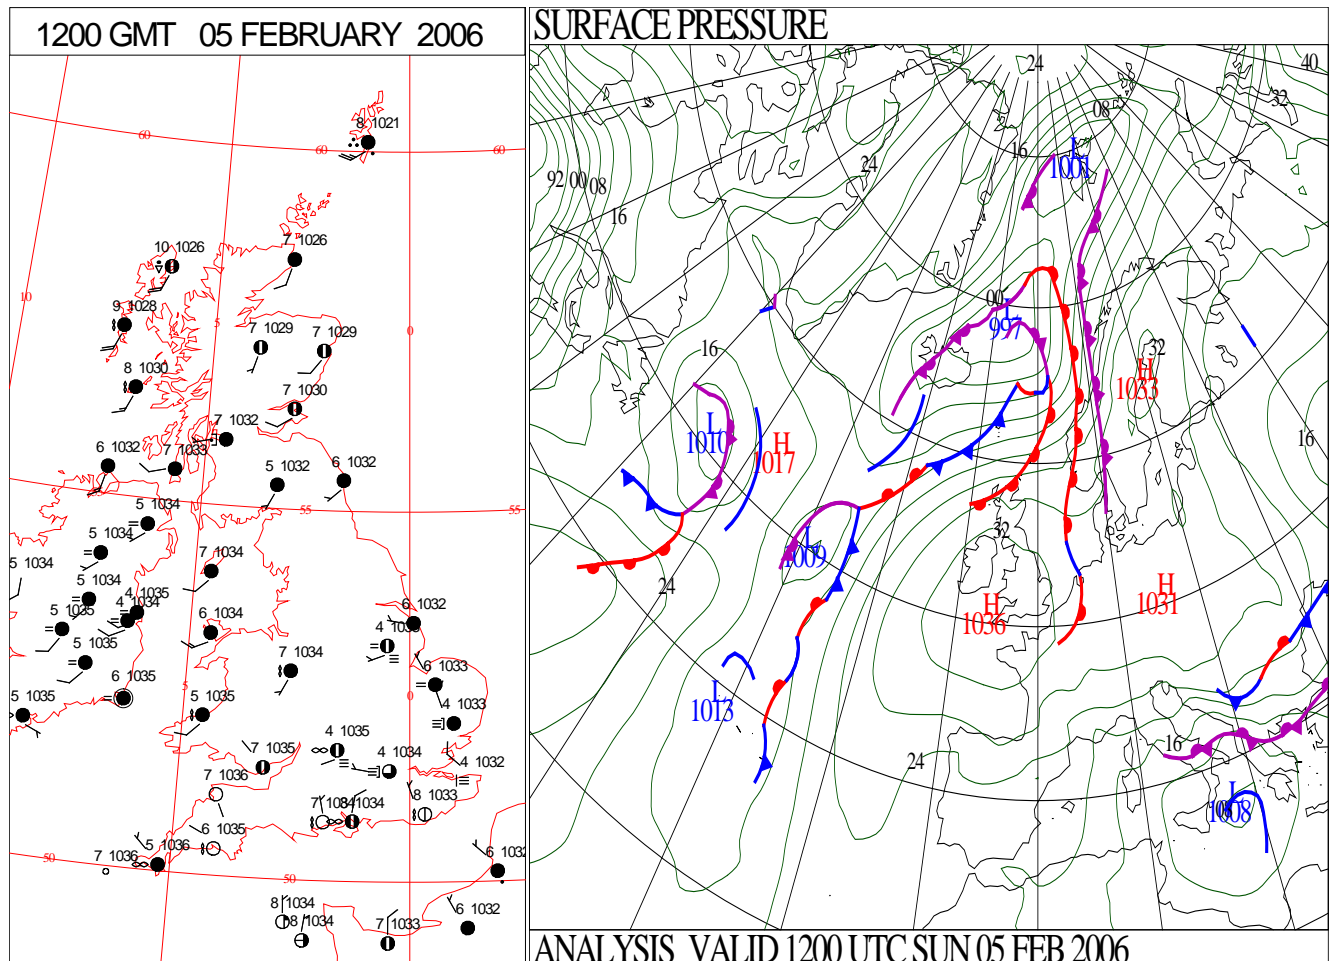

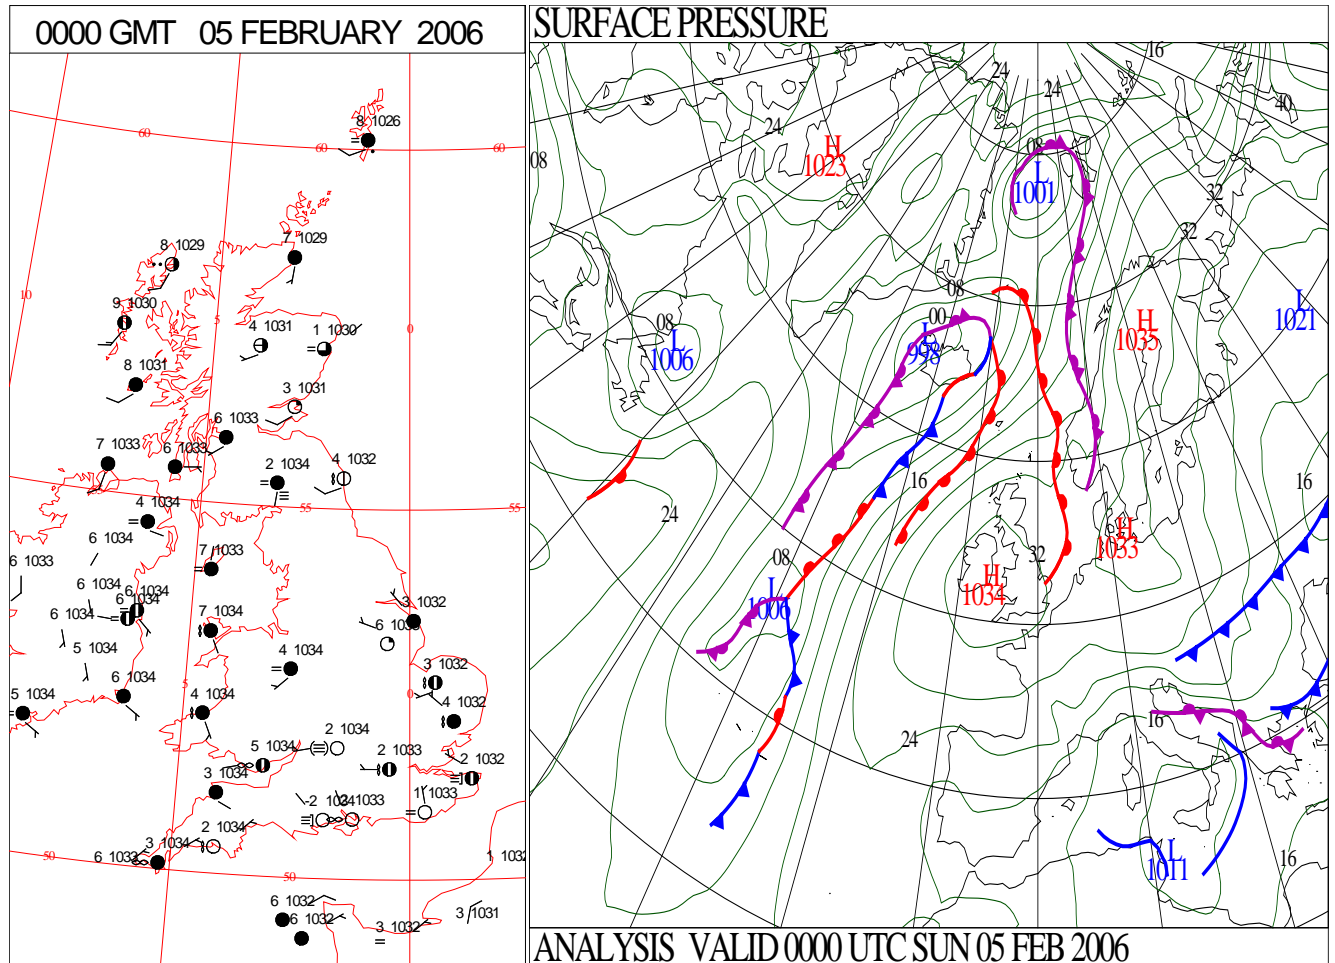

SIGNIFICANT WEATHER

0600 GMT 04 FEBRUARY 2006 SIG WEATHER	1200 GMT 04 FEBRUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Saturday 04 February 2006.</p> <p>Northern Ireland had variable cloud overnight and some fog patches. West and southwest Scotland had clear periods and over the Southern Uplands in particular fog became extensive. Thicker cloud to the north gave some light rain and drizzle with cloud more variable in the east. England and Wales had a cloudy night.</p> <p>Northern Ireland stayed dry and cloudy through the day. Western and northern parts of Scotland had a mostly cloudy day and across the north and especially in the Northern Isles, there was some light rain and drizzle. The fog across the Southern Uplands lasted all day but in complete contrast eastern Scotland had a sunny afternoon.</p> <p>Much of England and Wales stayed cloudy and most places were dry. Some thicker cloud over northwest England gave some spots of rain on the Pennines and there was a little light rain in Norfolk in the evening. Northeast England had some brighter spells but then fog formed in places in the evening. Over Scotland it was mostly very mild. Temperatures were near average generally elsewhere but it was rather cold over south Wales and southwest England.</p>
1800 GMT 04 FEBRUARY 2006 SIG WEATHER	0000 GMT 05 FEBRUARY 2006 SIG WEATHER	
		<p>EXTREMES</p> <p>Highest Maximum: 12.6 Aboyne No 2, Aberdeenshire</p> <p>Lowest Maximum: 2.2 Dunkeswell Aerodrome, Devon</p> <p>Lowest Minimum: -4.6 Dunkeswell Aerodrome, Devon</p> <p>Lowest Grass Minimum: -6.6 Strathallan Airfield, Perthshire (In Tayside)</p> <p>Most Rain: 2.4 Baltasound No 2, Shetland</p> <p>Most Sun: 4.3 Dyce, Aberdeenshire</p>

SURFACE REPORTS

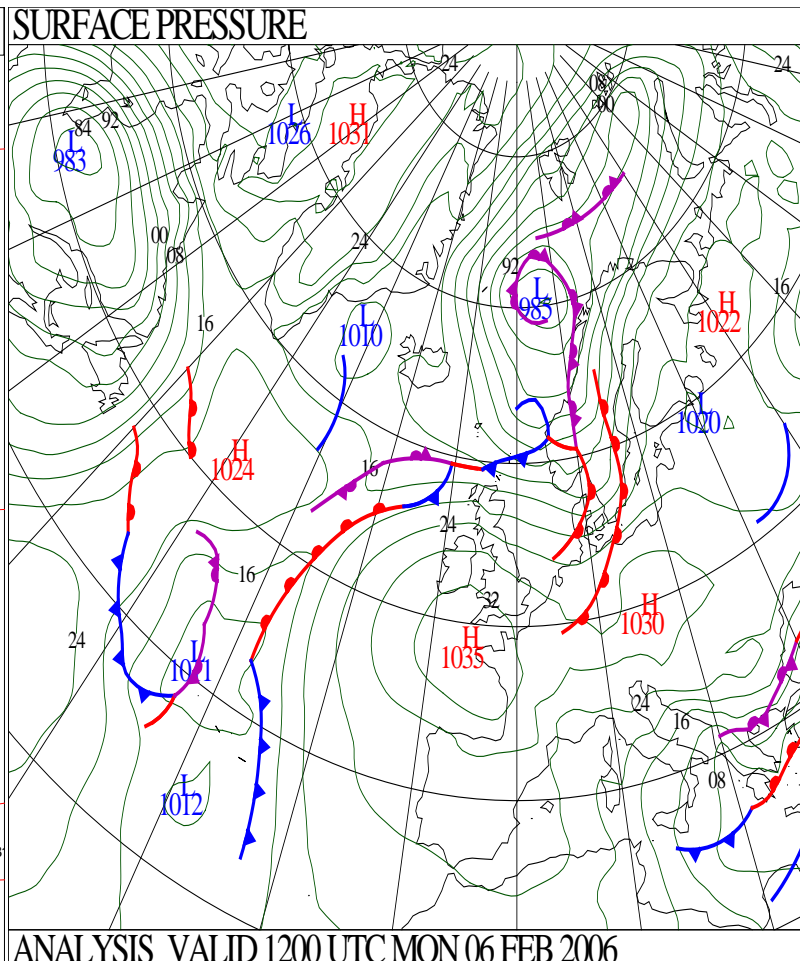

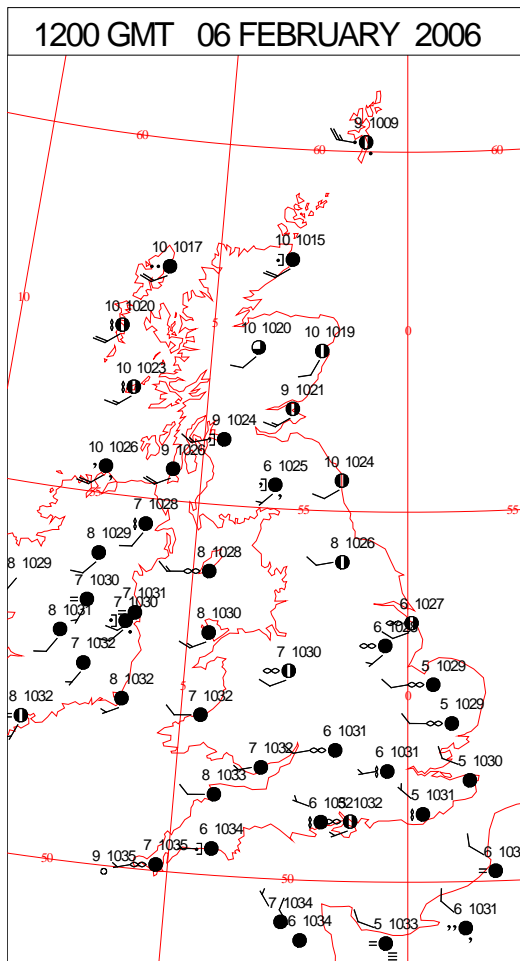

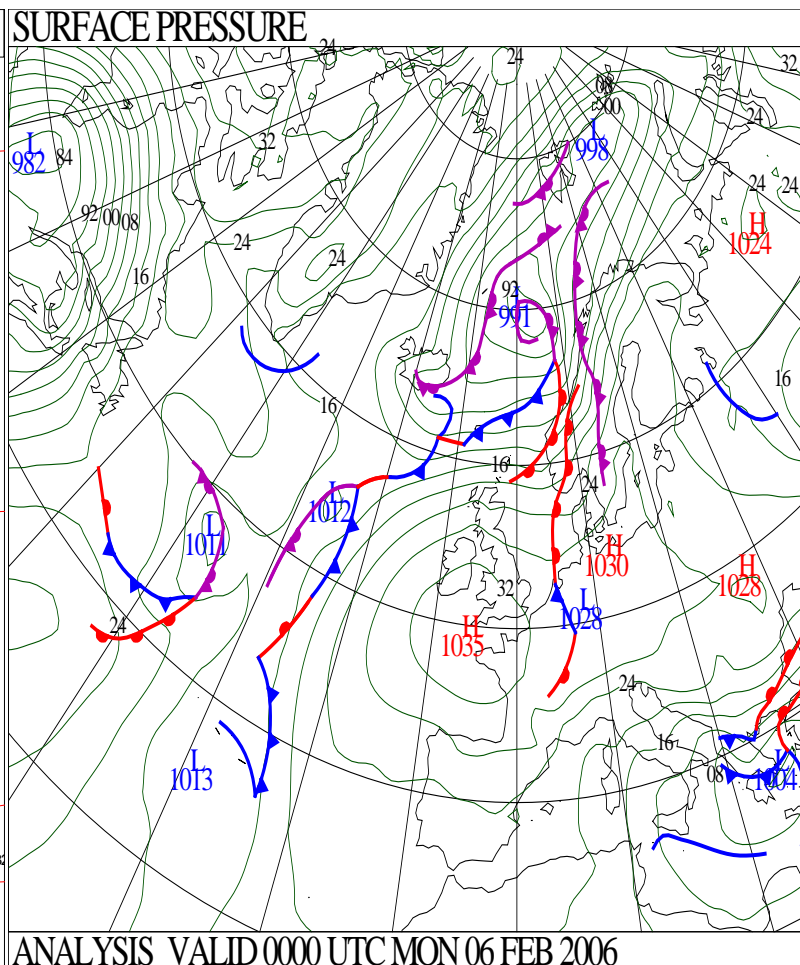

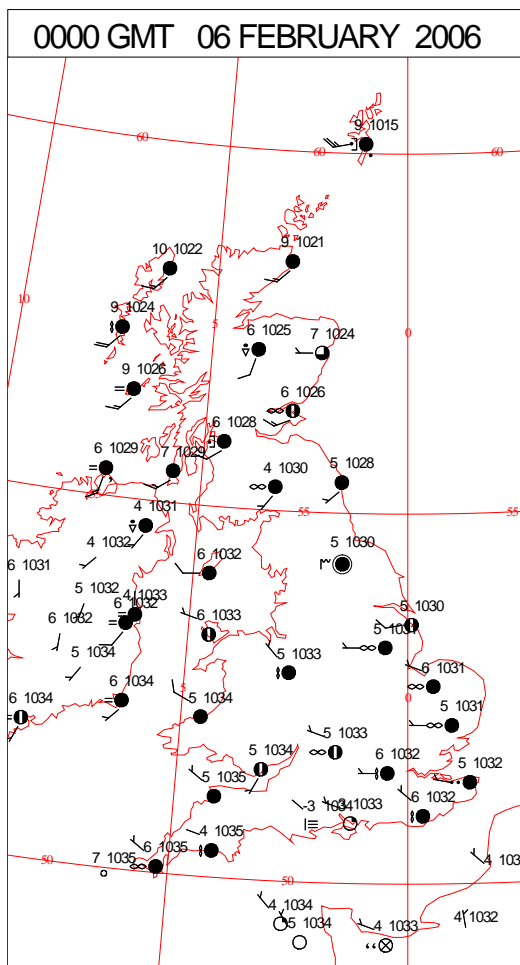

SIGNIFICANT WEATHER

0600 GMT 05 FEBRUARY 2006 SIG WEATHER	1200 GMT 05 FEBRUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Sunday 05 February 2006.</p> <p>The majority of England, Wales, Northern Ireland, and most of Scotland was dry with variable cloud leading to mist and fog patches by morning in some areas, and also some areas of frost. The cloud was thicker across the northwestern fringes of Scotland and here there was some occasional light rain. In addition there was an occasional shower near southern North Sea coasts.</p> <p>Some fog patches lingered throughout the morning but there were also some areas of sunshine, in southern England in particular. Elsewhere it was rather cloudy but some brighter spells occurred in locations to the east of high ground in the northern UK too.</p> <p>Outbreaks of rain continued across the Outer Hebrides and Northern Isles in the afternoon and at times during the evening. By early afternoon the remaining pockets of fog had lifted and dispersed and it was then a dry and fairly cloudy afternoon for most. However, the sunny spells in the south led to clear spells, allowing a patchy frost to develop.</p> <p>Temperatures were mainly near average or mild, however, parts of southwest England and southwest Wales were rather cold.</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 06 FEBRUARY 2006	SIG WEATHER	1200 GMT 06 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Monday 06 February 2006.</p> <p>For much of the UK it was a rather cloudy night. Patchy rain and drizzle also plagued the Northern Isles and northern fringes of mainland Scotland. However, there were clear spells across eastern Scotland, particularly over Aberdeenshire and also across Hampshire and Dorset for a time. These holes in the cloud sheet allowed a local frost to develop.</p> <p>During the morning the rain became more persistent across the northern fringes with this rain edging further south across the northern half of Scotland during the afternoon. At the same time the cloud broke across Shetland. Across the rest of the UK it was generally dry but mostly cloudy and dull with just the odd break in the cloud, mainly in the east.</p> <p>During the evening the rain across Scotland became more fragmented but skies remained cloudy across most of the UK.</p> <p>For the northern half of Scotland it was very mild and locally exceptionally mild. For the rest of Scotland, Northern Ireland and northern England it was mild but across the rest of England and Wales temperatures were close to normal.</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 08 February 2006.

A band of mostly light rain lying from East Anglia and southeast England southwestwards to southwest England soon moved away southwards with clearing skies following. The mild weather in the rain area was replaced by fresher conditions from the north.

There was a touch of frost in a few sheltered places in the north despite a fresh breeze. The day saw the whole of the UK covered in a showery north-to-northwesterly airstream but with most the showers in the north, especially Scotland where they became frequent in the northeast. The best of the sunshine was in the south where most places were dry. A few showers percolated southwards (i.e. into Cheshire and the west Midlands).

Later, showers worked down the east coast into Norfolk. The airstream became colder through the day, this most noticeable over Scotland where showers turned to snow, and the cold was penetrating here with strong northerly winds. It was actually a touch on the mild side in the south where winds were lighter away from the east coast. Especially pleasant in shelter where many places had more than 7 hours of sun.

EXTREMES

Highest Maximum:

10.2 Great Malvern, Hereford & Worcester

Lowest Maximum:

2.7 Loch Glascarnoch, Ross & Cromarty

Lowest Minimum:

0.3 Aviemore, Inverness-Shire
0.3 Saughall, Ayrshire

Lowest Grass Minimum:

-5.4 Strathallan Airfield, Perthshire (In Tayside)

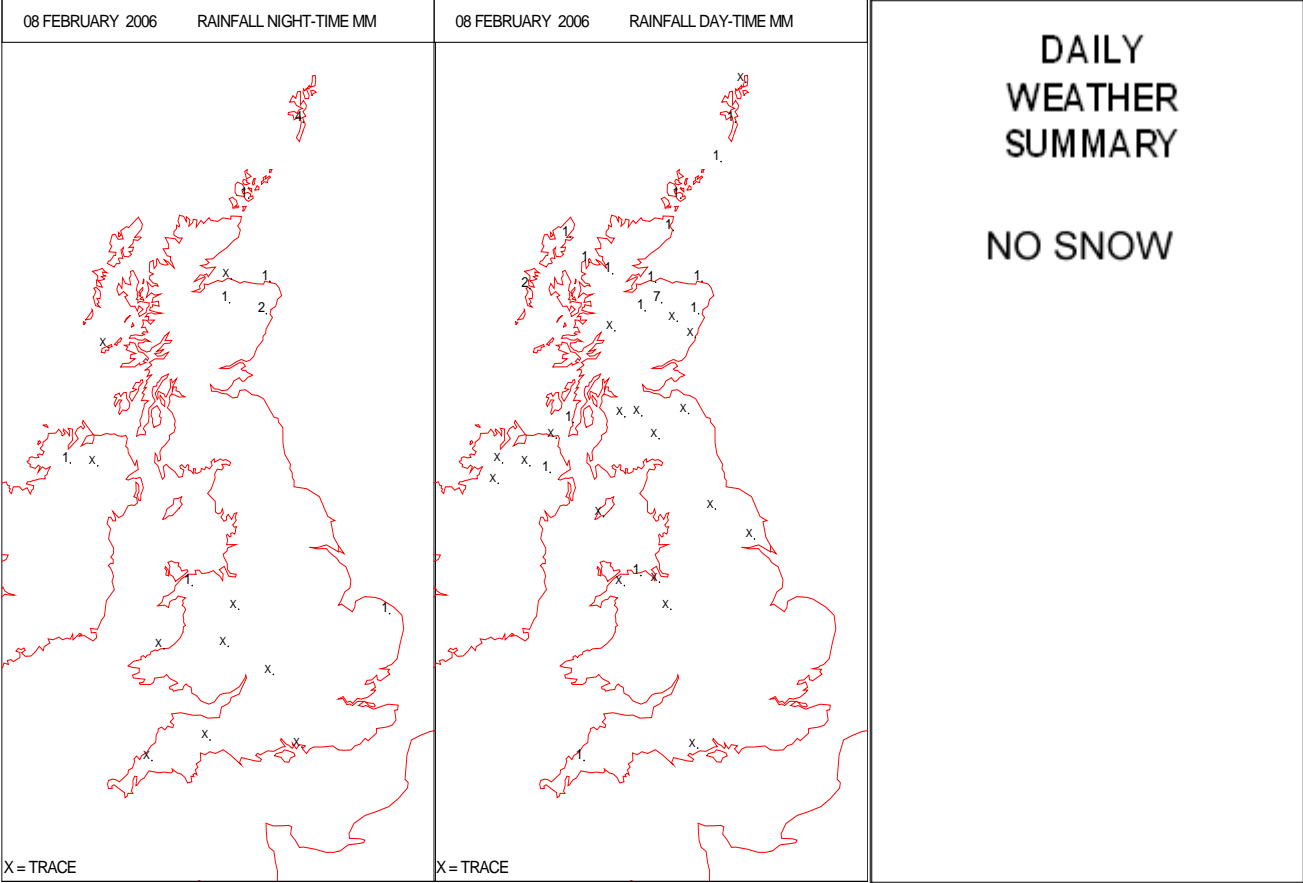

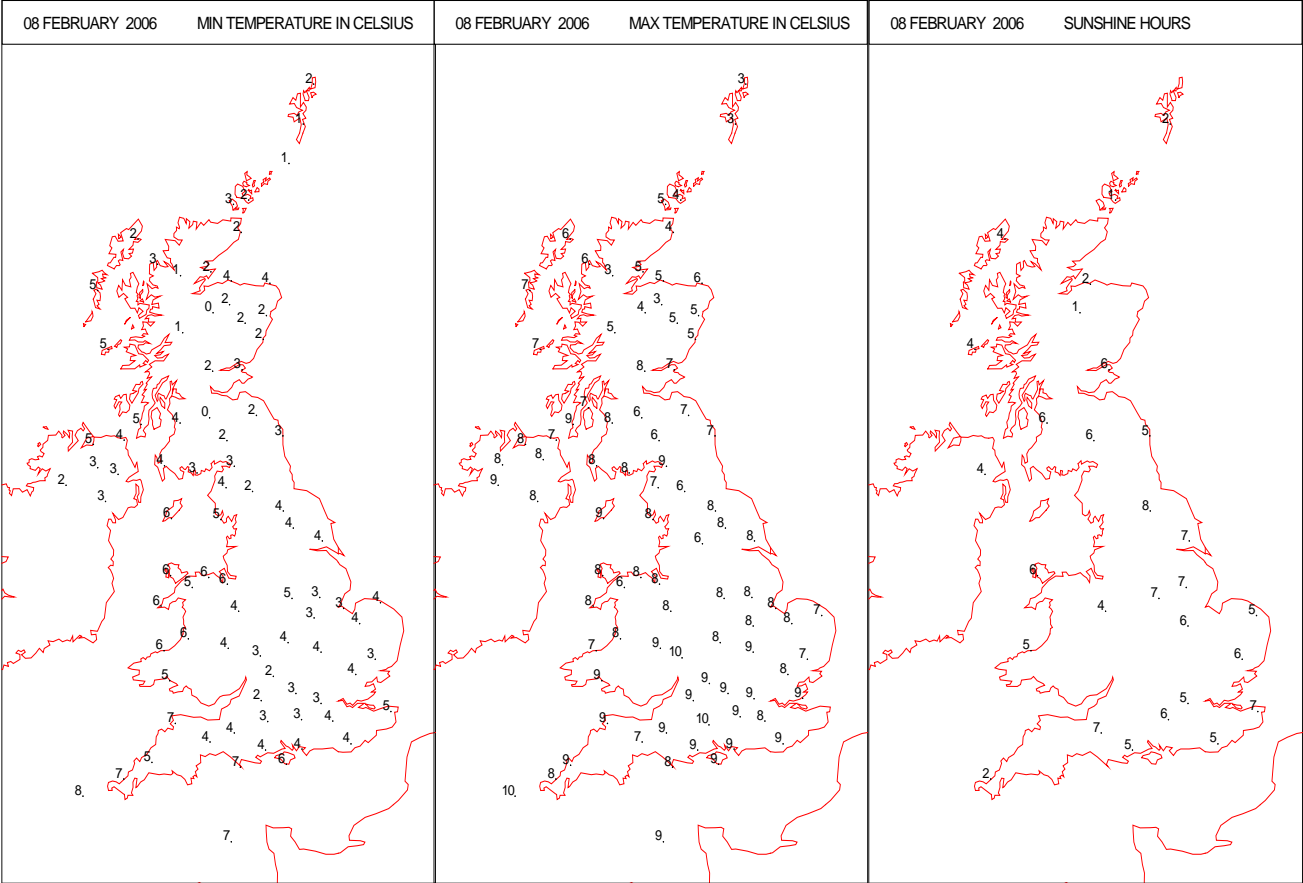

Most Rain:

7.9 Glenlivet, Banffshire

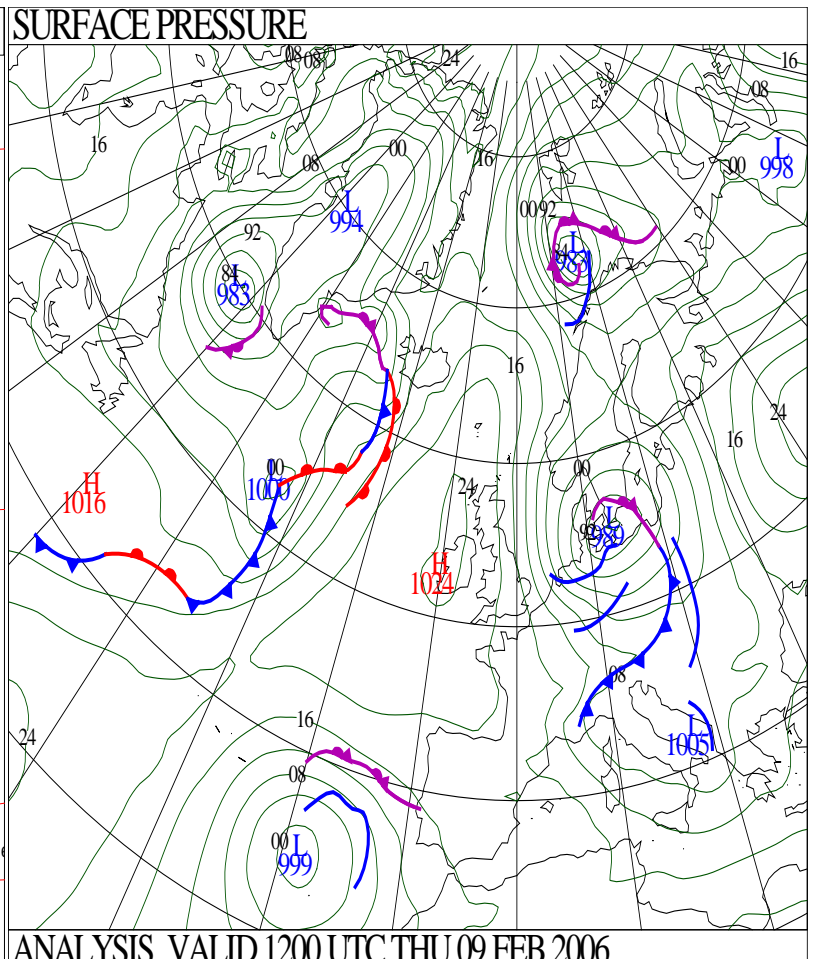

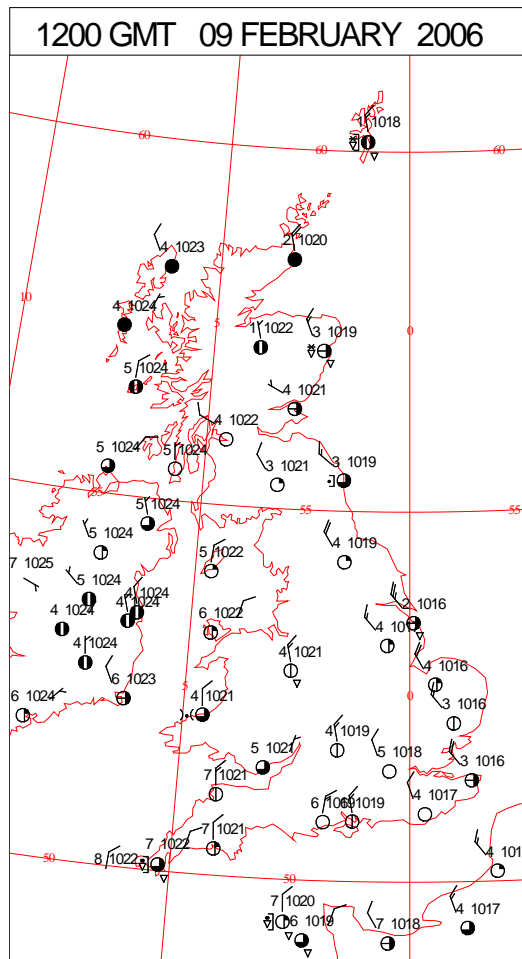

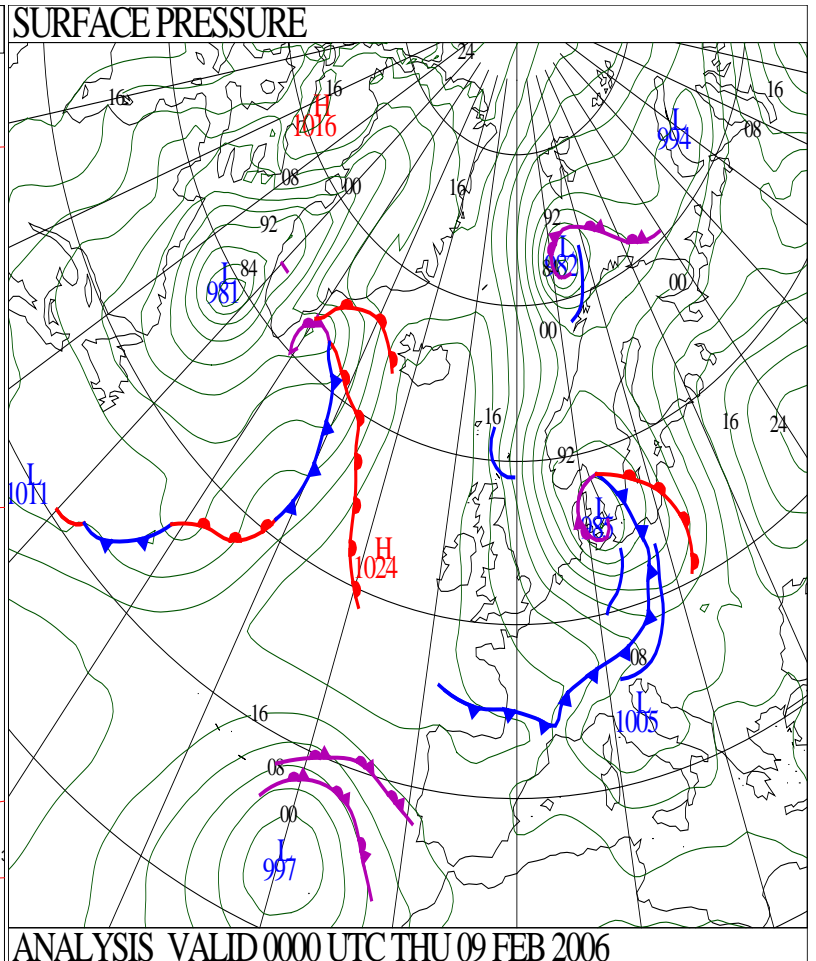

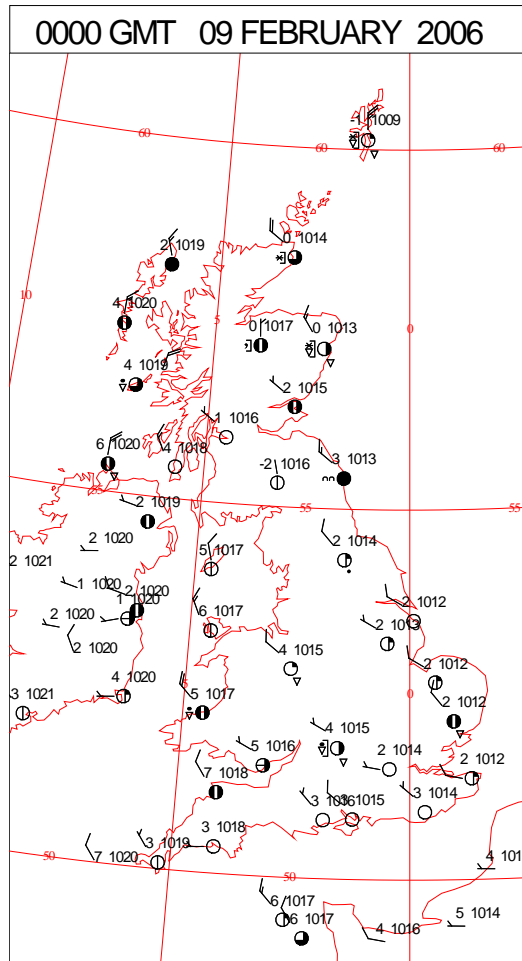

Most Sun:

8.8 Marham, Norfolk

SURFACE REPORTS

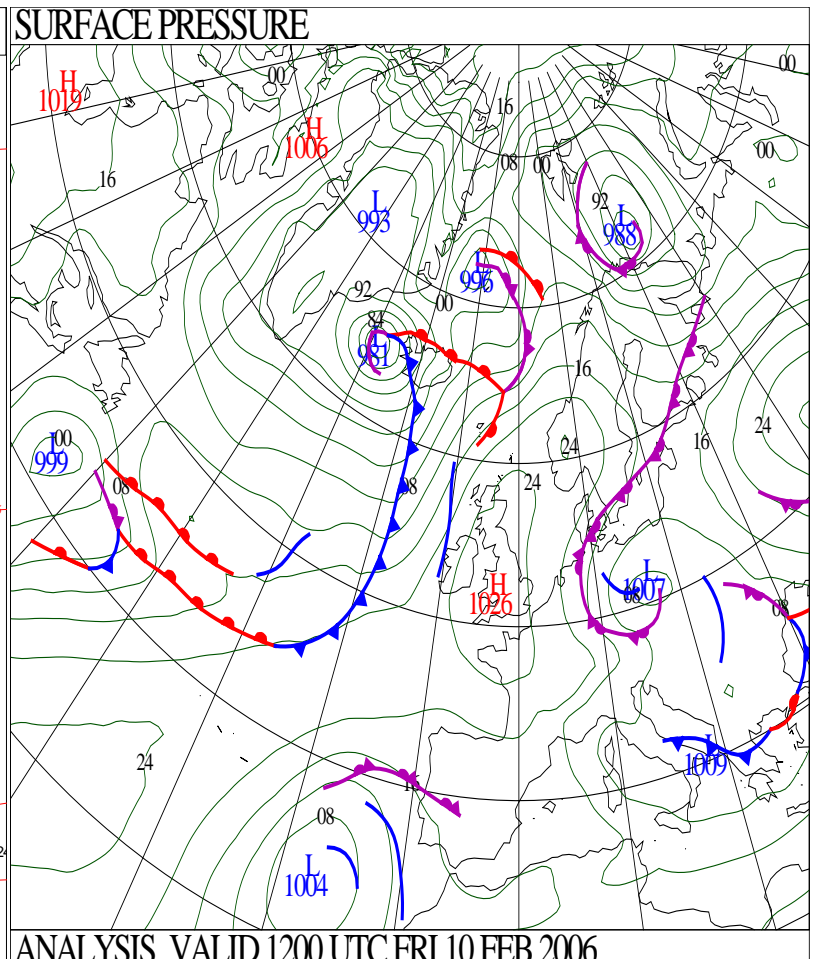

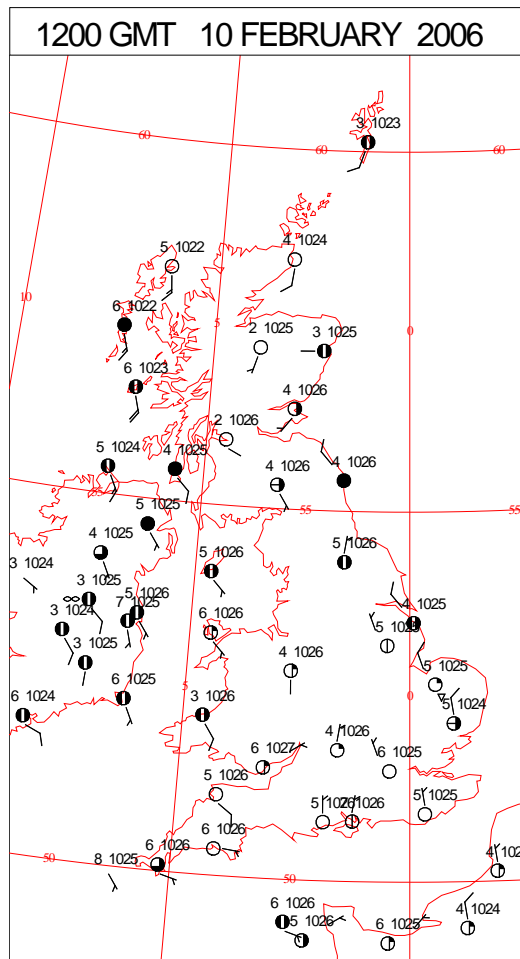

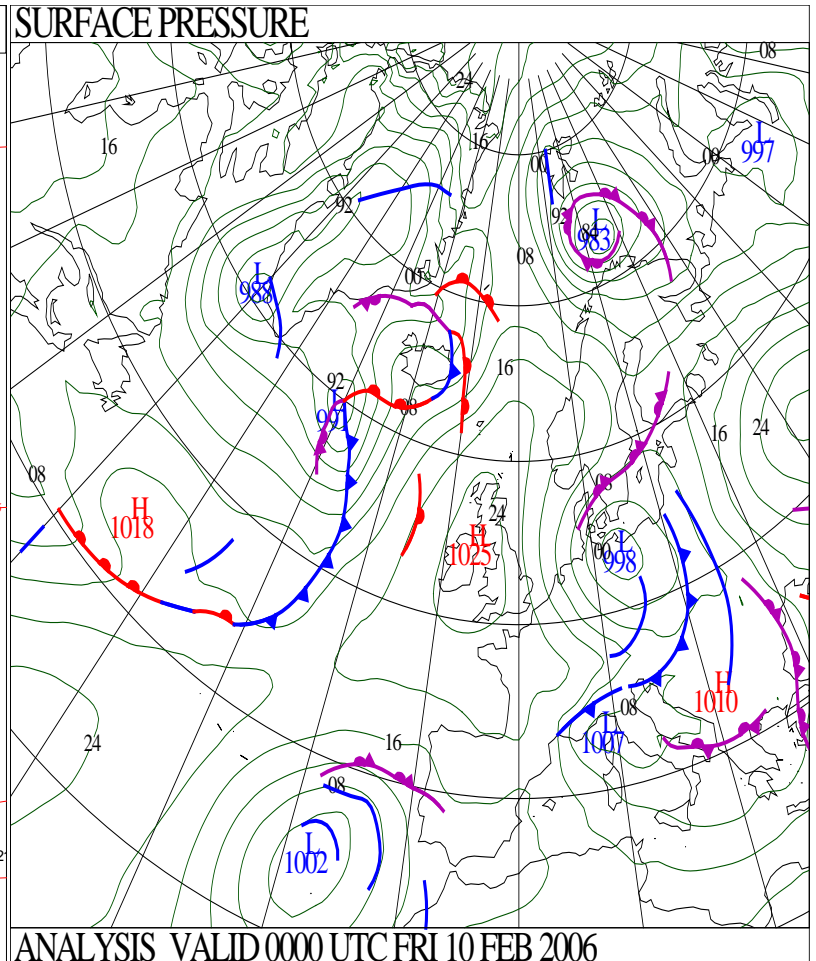

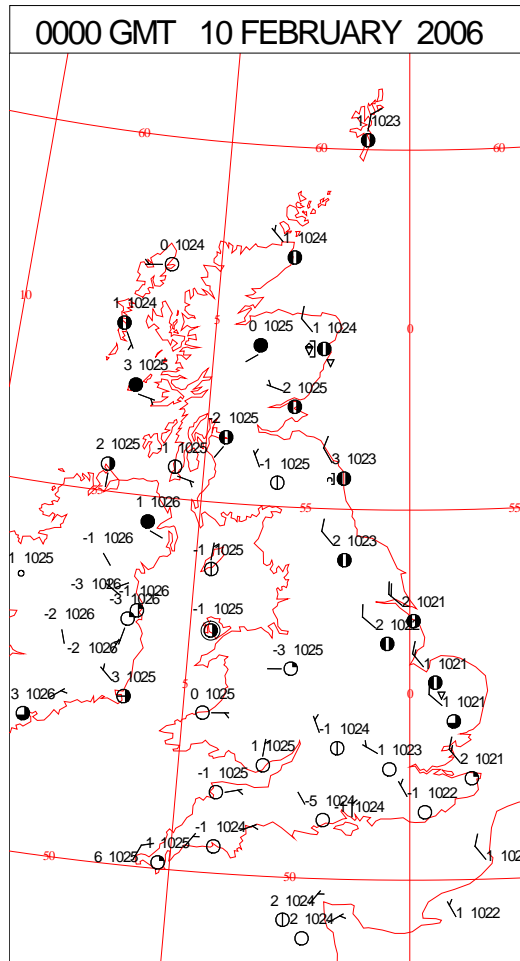

SIGNIFICANT WEATHER

0600 GMT 09 FEBRUARY 2006	SIG WEATHER	1200 GMT 09 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Thursday 09 February 2006.</p> <p>Cloud amounts were variable overnight, with largely clear skies running through Central Scotland down towards Southeast England. Across western areas cloudier skies gave a few light showers, especially across Wales and the Midlands. However most of the shower activity was to be found running down northeast Scotland, the eastern fringes of Yorkshire and Lincolnshire, down into Norfolk and East Suffolk. In the south these showers were initially of rain, but as the night wore on they became progressively wintry. Under clearer skies some patchy frost formed. During the day the cloud in the west tended to clear with showers here fading, but eastern areas of the UK remained generally cloudy down as far as East Suffolk, with further showers of hail, sleet and snow (Lerwick reported some slight accumulations of less than 1 cm). Elsewhere it was largely sunny, with over 8 hours reported in places. Despite the sunshine it felt quite chilly, especially given the strong northwesterly winds running down North Sea coasts. Highs ranged from near average to rather cold. A widespread frost developed during the evening, sharp in places.</p>

SIGNIFICANT WEATHER

0600 GMT 10 FEBRUARY 2006	SIG WEATHER	1200 GMT 10 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Friday 10 February 2006.</p> <p>A dry and clear night across much of the UK, allowing a widespread penetrating frost to develop. Some patchy cloud affected Northern Ireland as well as the eastern side of the UK. The cloud in the east was thick enough to give a few mainly light wintry showers. There was negligible mist or fog due to the very dry nature of the air.</p> <p>During the day, much of the central tranche of the UK had a dry and sunny day. Weymouth recorded over 9 hours of sunshine, the sunniest day of the year so far. Cloud continued to affect eastern areas, especially south of the Borders, where a few hail and sleet showers were reported. Across the west, cloud amounts generally increased through the day, although it did stay largely dry.</p> <p>During the evening a frost returned rapidly under the clear skies in central parts. Across western Scotland, the cloud became thick enough to give some patchy outbreaks of rain. Elsewhere was mainly cloudy, but dry.</p> <p>Light to gentle breezes generally, increasing moderate to fresh in the far northwest later. Temperatures were mostly rather cold.</p>

SIGNIFICANT WEATHER

0600 GMT 12 FEBRUARY 2006 SIG WEATHER	1200 GMT 12 FEBRUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Sunday 12 February 2006.</p> <p>The night was cloudy over Northern Ireland with steady rain and there was also some rain over south and southwest Scotland. Over north and east Scotland it was dry and rather cloudy. Rain initially over west Cornwall at midnight spread across England and Wales by morning, with some heavy bursts occurring over the Welsh Mountains and the Moors.</p> <p>Northern Ireland had rain into the morning, but it became lighter and in the afternoon there were some brighter spells. Eastern and especially northeastern parts of Scotland had sunny periods, with clearer breaks lingering over the Northern Isles into the evening. Southern Scotland had some rain for a time but this mostly cleared in the afternoon, leaving a few scattered outbreaks.</p> <p>England and Wales started cloudy with outbreaks of rain. Drier conditions spread into the southwest and south Wales by midday. There was some sunshine in parts of the southwest. The heaviest rain eased eastwards, finally clearing the southeast in the evening. Cloudy skies remained for most with some drizzle in places.</p> <p>It was mild or very mild in western, central and northern parts. Temperatures were near average elsewhere.</p>

SURFACE REPORTS

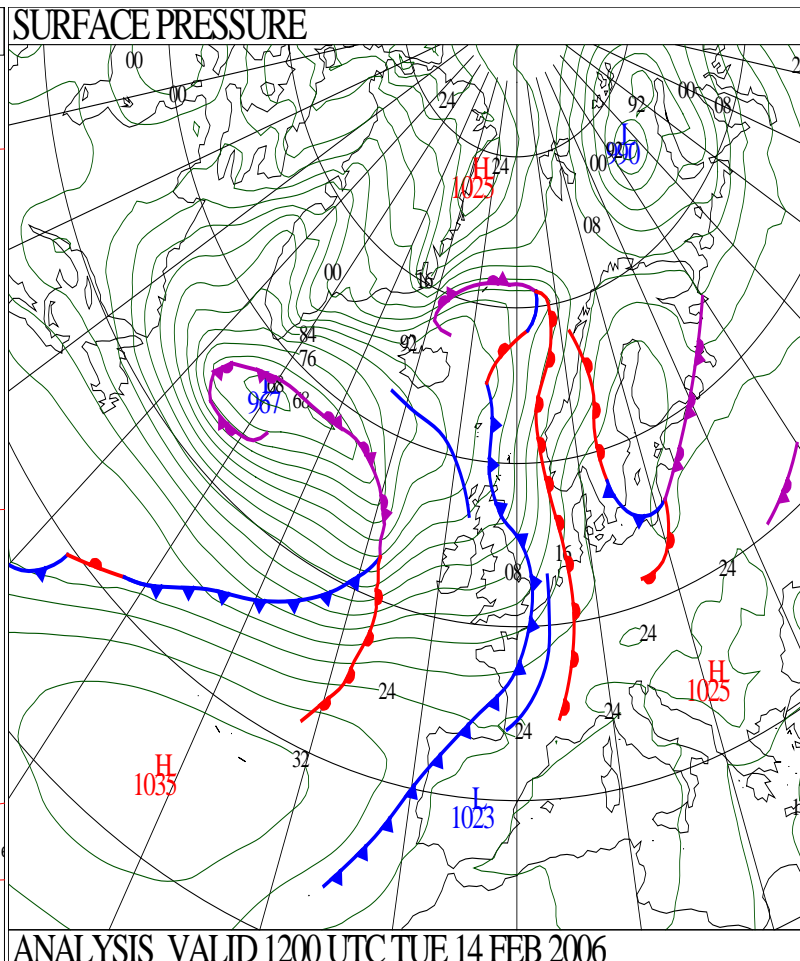

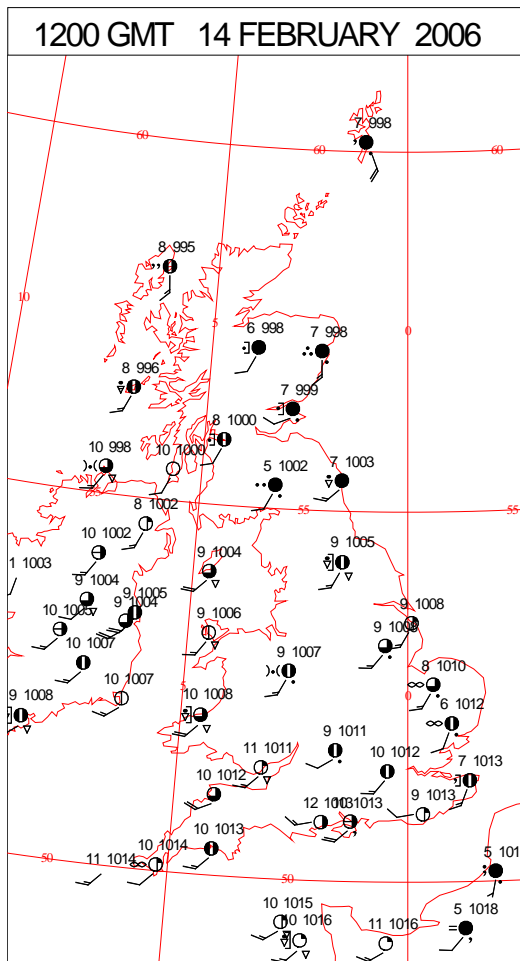

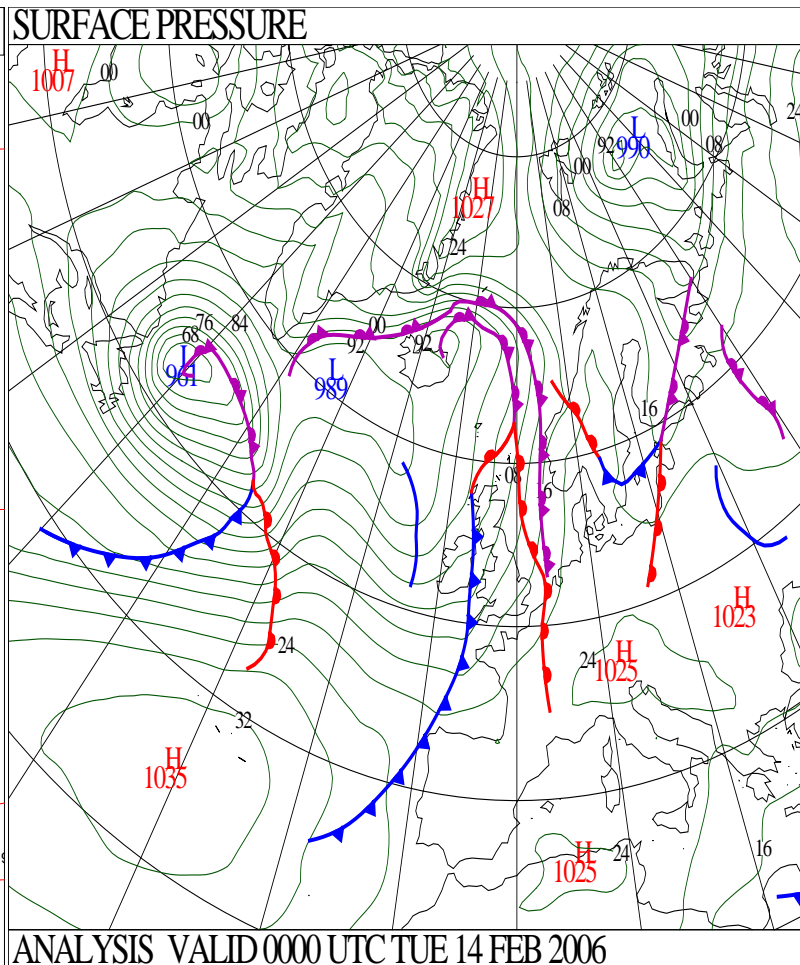

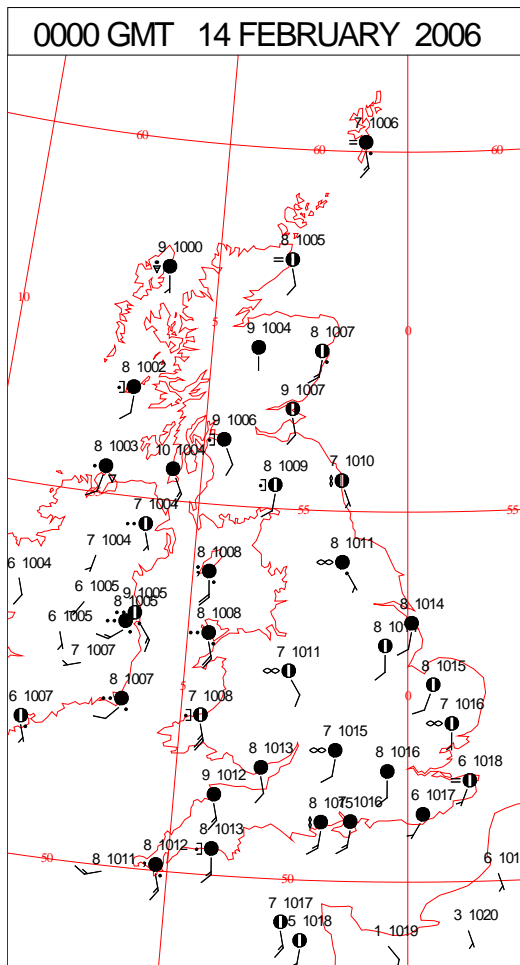

SIGNIFICANT WEATHER

0600 GMT 13 FEBRUARY 2006	SIG WEATHER	1200 GMT 13 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Monday 13 February 2006.</p> <p>A largely cloudy day across the whole of the UK, but mild or very mild (13.2 °C at Castlederg). Some drizzly rain affected the southeast at first and some rain moved east before dawn to affect Northern Ireland and western Scotland during the morning (locally heavy at times — Sloy, 9.2 mm for 09-21 UTC), this moving east across Scotland and the far north of England during the afternoon. During the evening another area of rain arrived from the Atlantic into Northern Ireland and western Scotland. Between rain bands the Western Isles brightened up to be one of the 'sunniest' parts of the UK with an hour or so sunshine, with many other parts staying generally cloudy. However, some areas in the strip from about Lincolnshire southwards to west Surrey brightened up too with several hours hazy sunshine in places (exceptionally, 4.7 hours at Wisley), but many places had no sun at all, including London. A breezy day in the west and far north with the southerly wind touching fresh to strong at times in the more exposed places, but staying light to moderate over the rest of the country.</p>

SIGNIFICANT WEATHER

0600 GMT 14 FEBRUARY 2006 SIG WEATHER	1200 GMT 14 FEBRUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Tuesday 14 February 2006.</p> <p>Outbreaks of rain across western Scotland, Northern Ireland, Wales and southwest England moved east or northeast during the night. The rain became heavy at times over the higher ground of western Scotland and northwest England but the rain band weakened across central and southern England. Clear spells and scattered showers followed across Cornwall by daybreak.</p> <p>The area of rain continued its northeastward progress, finally clearing from northeast Scotland by mid-afternoon. Much of the UK had sunny spells and showers, with most of the showers developing across western and central areas. Some of the showers drifted over to eastern parts but they tended to peter out during the late afternoon. It was notably sunny across the Channel Islands.</p> <p>Thickening cloud layers advanced from the west to bring outbreaks of rain during the evening. Heavy bursts of rain developed over parts of Northern Ireland and southwest Scotland. At the same time, southerly gales affected the west of both Wales and Scotland. A gust of 50 knots was recorded at Aberdaron (Gwynedd).</p> <p>The afternoon temperatures were in the mild or very mild categories.</p>

SIGNIFICANT WEATHER

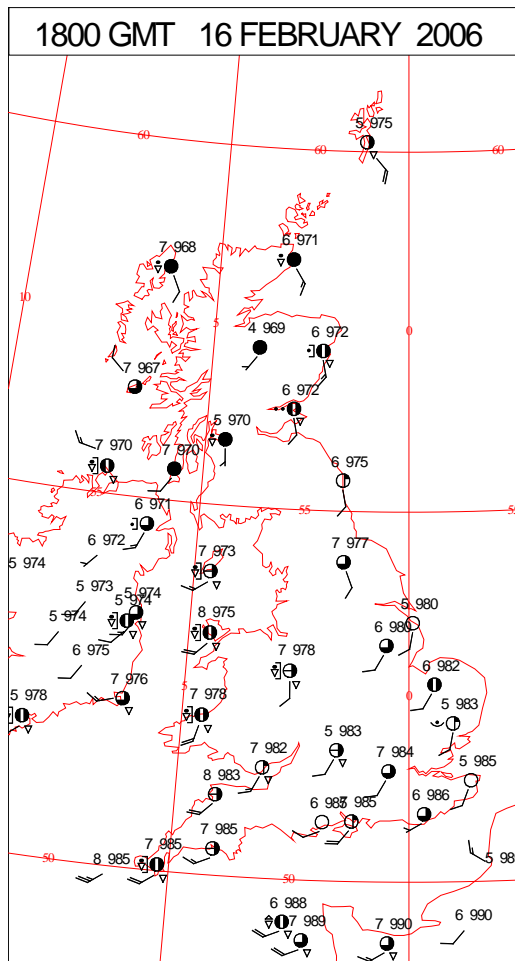

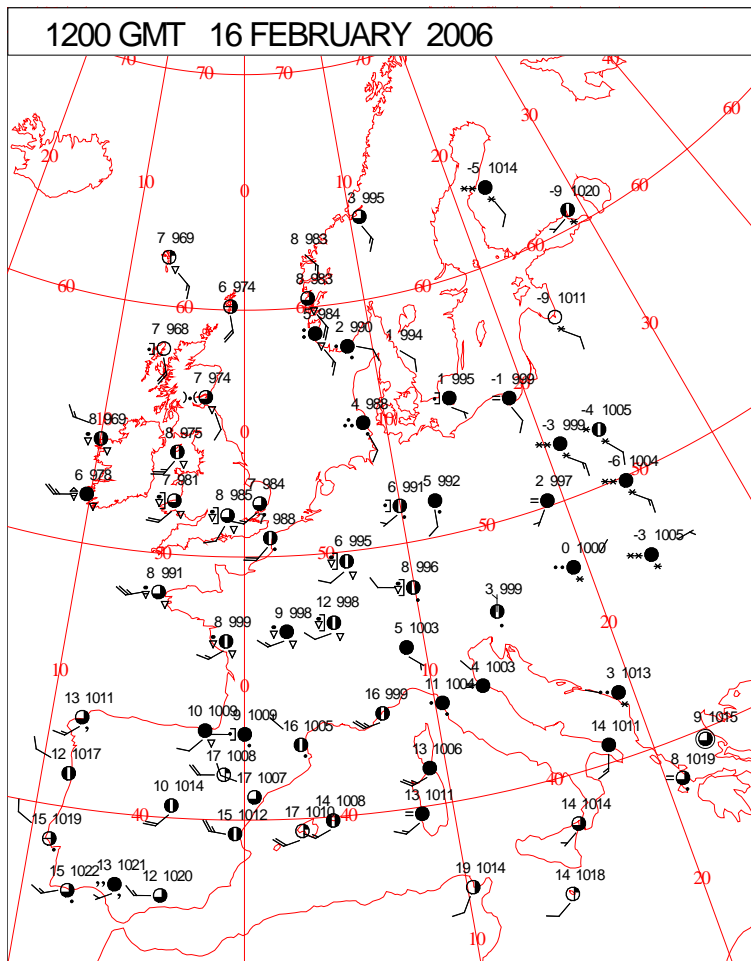

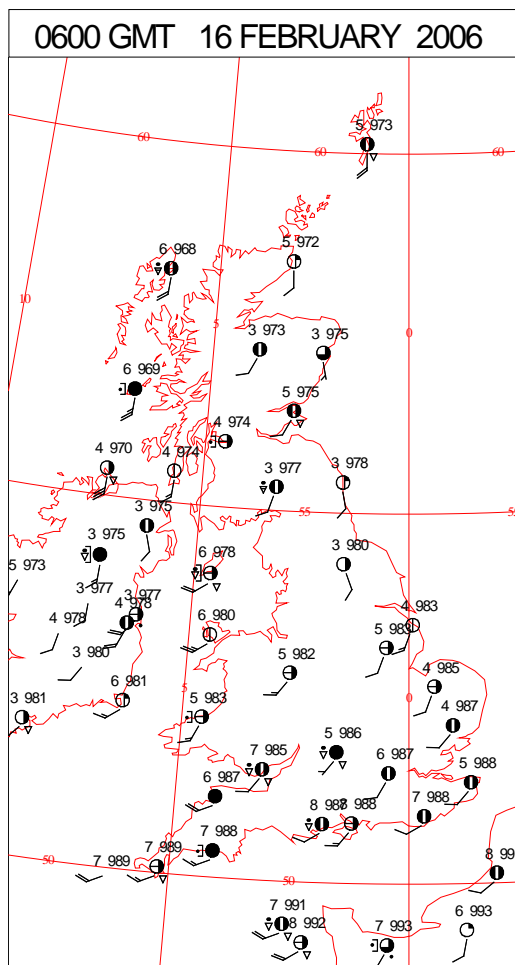

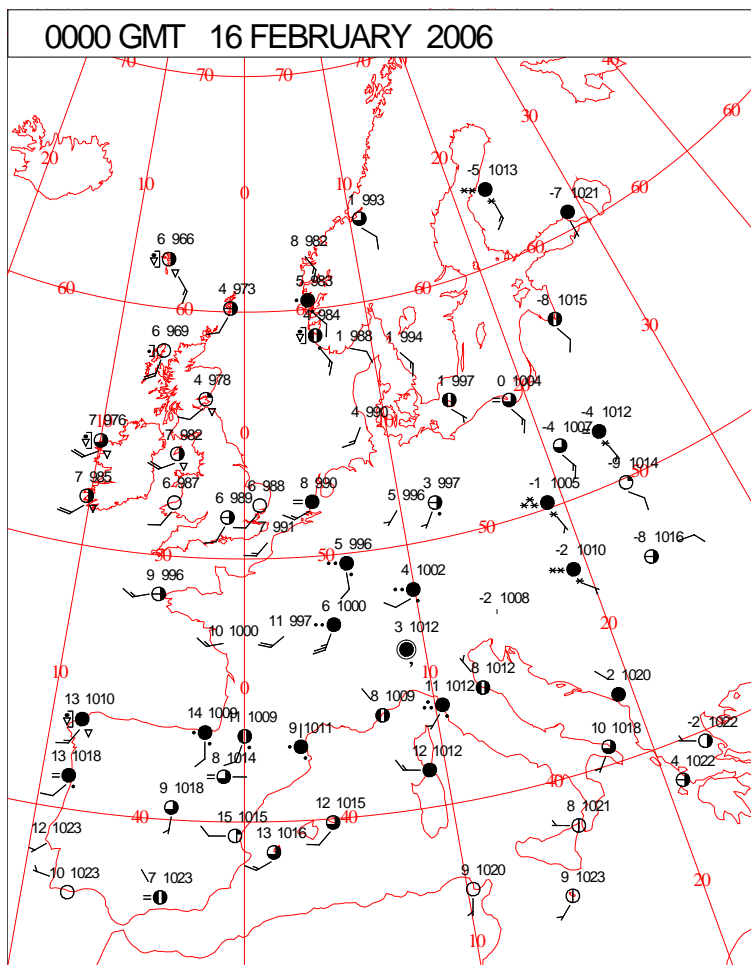

0600 GMT 15 FEBRUARY 2006	SIG WEATHER	1200 GMT 15 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Wednesday 15 February 2006. Overnight rain across much of the UK moved east, clearing all but East Anglia and southeast England by the end of the night. Showers followed across Northern Ireland and western Scotland, but many other parts of the UK became dry. During the morning the residual rain moved east and much of England and Wales was dry with sunny spells, but showers developed across some western areas, particularly southwest England. Showers continued to drift across northwestern parts of the UK. During the afternoon showers persisted across Northern Ireland and western Scotland (locally heavy with hail and thunder), and some drifted over northern England. Further south there were sunny spells and showers (thunderous over Dorset and Cornwall), but more widespread cloud skirting southern counties of England brought rain for a time to parts of Cornwall, Devon, Somerset and Dorset later in the afternoon, and to other south coast counties in the evening. Showers persisted over northern parts of the UK, thunderous over northern England. Highest gust was 61 knots at The Needles at 04 UTC and 05 UTC. Temperatures were generally in the mild category.</p>

SIGNIFICANT WEATHER

0600 GMT 17 FEBRUARY 2006	SIG WEATHER	1200 GMT 17 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Friday 17 February 2006.</p> <p>Much of the UK had a cloudy, relatively mild night with patchy rain or showers. Some of the showers were heavy along the English Channel shores. It was windy across Shetland and along the exposed coasts of southern England. A gust of 50 knots was recorded at the Isles of Scilly. Patchy mist and fog developed over parts of northern England towards daybreak. There was a local air frost in Northern Ireland and Scotland.</p> <p>The patchy rain and showers tended to peter out from most places during the morning. However, showers continued across southwest England and the Channel Islands. Some of the showers were heavy and frequent hail showers were reported from Guernsey airport where peak gusts reached 49 knots. There were some sunny spells in places, notably across Northern Ireland, Anglesey and some western parts of both England and Scotland. A frost developed under clear spells and light winds across much of Scotland and Cumbria during the evening.</p> <p>The afternoon temperatures were mostly in the mild category.</p>

SIGNIFICANT WEATHER

0600 GMT 18 FEBRUARY 2006	SIG WEATHER	1200 GMT 18 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Saturday 18 February 2006.</p> <p>Much of the UK had a dry night with variable cloud and clear spells. Haze, mist and fog patches developed during the night. The air temperatures fell sub-zero in places but a widespread frost formed across Scotland. Scattered rain showers affected the east and northeast of Scotland, together with the Outer Hedbrides, Anglesey and Kent. Thicker cloud layers produced occasional rain across Cornwall, the Isles of Scilly and the Channel Islands.</p> <p>The low cloud, mist and fog patches were slow to disperse in some locations. Most of the UK had a dry day with patchy cloud and some bright or sunny spells. It was notably sunny across parts of East Anglia, Wales and western Scotland. Patchy rain or showers developed across eastern Scotland and along southern counties of England.</p> <p>The afternoon temperatures were near normal or in the mild category, but very mild in Norwich, Manchester and Preston. It was locally cold where fog persisted.</p>

SIGNIFICANT WEATHER

0600 GMT 19 FEBRUARY 2006	SIG WEATHER	1200 GMT 19 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Sunday 19 February 2006.</p> <p>Much of the UK had a dry night with clear spells. Northeast Scotland was cloudy with patchy rain that turned wintry over higher ground. Mist and fog formed across much of England and Wales with some dense and locally freezing fog patches. Southern counties of England became cloudier later and this generally prevented a frost forming but the rest of the UK saw a widespread frost.</p> <p>The cloud in the south continued north through the day into England and most of Wales, reaching a line from Merseyside to The Humber by the afternoon. Rain spread to southern counties of England through the day, reaching a line Bristol/Ipswich by evening. Northern Ireland and most of Northern England were dry with sunny spells. Scotland saw a mixture of variable cloud and sunny spells with a few showers in the east. The rain continued across southernmost counties throughout the evening but elsewhere it was dry with variable cloud and clear spells.</p> <p>The afternoon temperatures were around normal but were rather cool in parts of the Midlands and Lincolnshire were fog lingered.</p>

SIGNIFICANT WEATHER

0600 GMT 20 FEBRUARY 2006	SIG WEATHER	1200 GMT 20 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Monday 20 February 2006.</p> <p>It was cloudy across England and Wales overnight, with outbreaks of rain and brisk winds affecting southernmost counties, whilst showers ran into northeast England. Sleet was reported over hills in the southwest. The cloud was more broken across Scotland and Northern Ireland, bringing scattered wintry showers, chiefly to eastern Scotland. A patchy frost formed under the clearer slots here.</p> <p>Remnants of the overnight rain cleared from southeast England during the morning, leaving bright or sunny spells and scattered showers across the British Isles. Most of the showers fed into eastern areas of England and Scotland, allowing the sunniest weather to develop further west. However a few showers also made it across to the west of the Pennines, into central and later southern England, as well as parts of Wales. Some snow was reported over the hills, especially in the north. It remained breezy in the south.</p> <p>During the evening, showers became more concentrated across northern and eastern areas, and turned increasingly wintry, whilst clear spells developed further south and west. Temperatures were mostly normal, but rather cold in parts of the south.</p>

SURFACE REPORTS

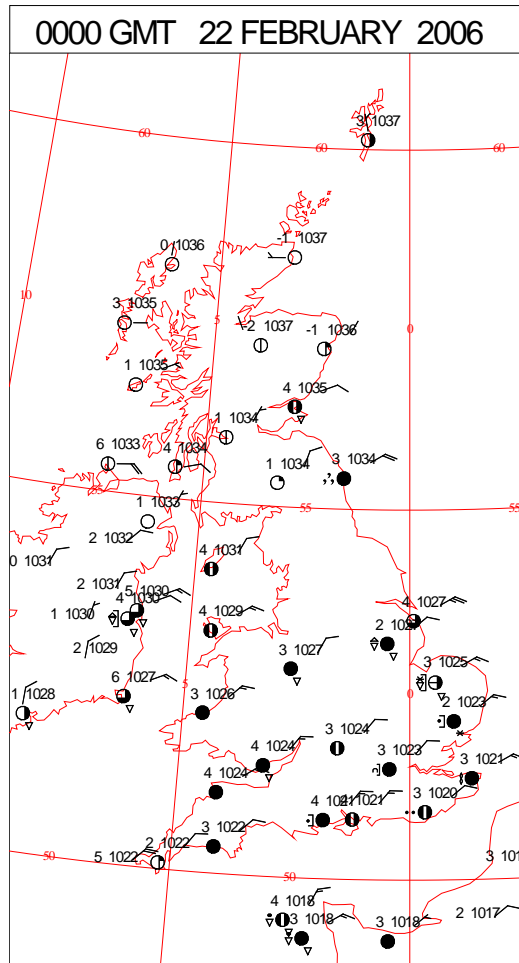

SIGNIFICANT WEATHER

0600 GMT 21 FEBRUARY 2006	SIG WEATHER	1200 GMT 21 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Tuesday 21 February 2006.</p> <p>Overnight many eastern parts of England (and a few places in eastern Scotland) had showers of rain, sleet and snow, and by dawn these had drifted west over central and southern England; a few made it across the Pennines to northwest England. Elsewhere the weather was mainly dry with clear intervals.</p> <p>During the morning showers, occasionally wintry with hail at times, affected eastern Scotland, central, southern and eastern England and parts of Wales, but Northern Ireland and western Scotland stayed dry with sunny periods. The best of the sunshine was in the Inner Hebrides with Tiree recording more than 9 hours. In the afternoon the showers continued their migration westwards with a few light ones cropping up in Northern Ireland and one or two in western Scotland. The showers tended to become lighter and more scattered later in the afternoon and evening, but they turned thundery near the Isles of Scilly.</p> <p>Temperatures were generally in the normal or rather cold category; it was cold in parts of The Midlands but locally mild in southwest Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 22 FEBRUARY 2006	SIG WEATHER	1200 GMT 22 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Wednesday 22 February 2006. It was mostly cloudy overnight across England and Wales, with outbreaks of rain, occasionally sleet and snow, spreading westwards. Much of this was light; despite this, snow was also evident at lower levels at times, being reported even in Central London. However there were no reports of accumulations. To the north and northwest, it was a mostly dry night for Northern Ireland and Scotland where clear periods allowed a fairly widespread frost, locally severe over parts of the Highlands. During the night southeastern parts of Scotland became cloudier with some showers. During the day outbreaks of rain, sleet and snow across England and Wales (snow mostly on hills by morning), continued to edge slowly west, becoming drier though it remained dull and mostly cloudy, feeling bitterly cold in the brisk easterly breeze. Northern Ireland remained mainly dry with sunny spells, and across Scotland showers continued to feed west through the Firth of Forth. Across remaining parts of Scotland though it was mostly dry and sunny. Highs were mostly on the cold side, near average in the sunshine.</p>

SIGNIFICANT WEATHER

0600 GMT 23 FEBRUARY 2006	SIG WEATHER	1200 GMT 23 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Thursday 23 February 2006.</p> <p>It was mostly cloudy across the UK overnight, starting off with the odd wintry shower, but with some heavier showers across the Isles of Scilly for a time. In many places, even despite the cloud, temperatures fell close to freezing or just below. As the night wore on a more general area of rain moved in from the North Sea onto eastern coasts of England, spreading across much of northern England and East Anglia by morning, turning more to sleet and snow as it did so. During the day this area edged slowly westwards, whilst extending into parts of Scotland and Northern Ireland and eventually reaching southwest England late afternoon. Across England and Wales especially, it gave a few hours of snowfall at times, settling temporarily in places. Rain, sleet and snow continued to affect western areas into the evening, becoming generally drier elsewhere though with some lines of wintry showers extending back through the Midlands, across parts of Northern England and East Anglia. Highs ranged from near normal to cold, though locally Mild across Western Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 24 FEBRUARY 2006	SIG WEATHER	1200 GMT 24 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Friday 24 February 2006.</p> <p>Much of the UK had a cloudy night. Outbreaks of rain covering northern England, the Midlands, Lincolnshire, Cambridgeshire, Wales and southwest England moved southwest. The rain turned to sleet or snow in most places during the night. Thicker patches of cloud produced slight rain and drizzle at times across parts of eastern and southern Scotland. It turned misty or foggy over the hills of northern England.</p> <p>The rain, sleet and snow tended to peter out as it continued to move west and southwest during the morning. Most places were then mainly dry, cloudy and breezy but scattered wintry (sleet, snow and hail) showers developed. Further sleet and snow showers developed over parts of southwest England during the afternoon. There were some sunny spells, notably along the north coasts of both Cornwall and Devon as well as in parts of East Anglia.</p> <p>The afternoon temperatures were mostly near normal or in the rather cold category. It was mild over west and northwest Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 25 FEBRUARY 2006	SIG WEATHER	1200 GMT 25 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Saturday 25 February 2006.</p> <p>An area of rain, sleet and snow pushed westwards overnight affecting coastal areas of Sussex and Hampshire along with Dorset and the West Country. The rain cleared all bar Cornwall by dawn. A band of showers moved onto northern Scotland late in the night.</p> <p>The rain cleared Cornwall around mid-morning and, with clearing skies, much of southern England and Wales had a sunny day. It did however feel bitterly cold over southern and eastern England in the strong northeasterly wind. Further north the band of showery rain continued to work its way southwards, reaching northern England by midday and the north Midlands by evening.</p> <p>During the evening the rain became slow moving over eastern England, the Midlands and northern parts of East Anglia. The rain then started to move southwestwards into the southern half of Wales.</p> <p>Temperatures were rather cold over southern England, the Midlands, east Wales and northwest Scotland, but normal elsewhere.</p>

SURFACE REPORTS

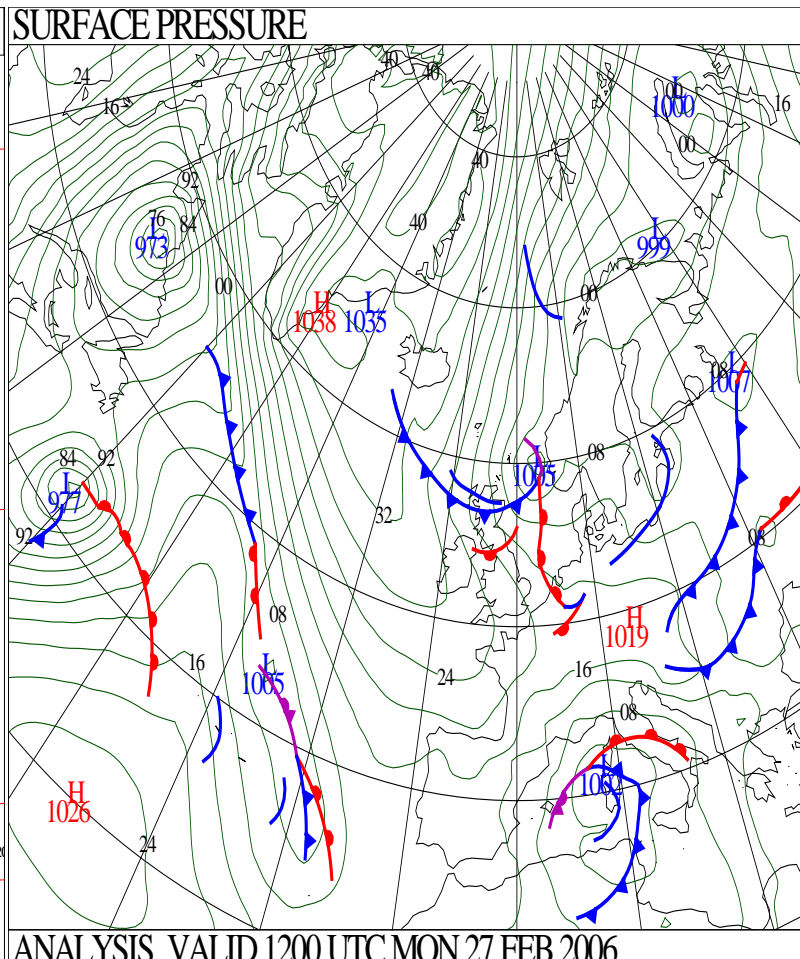

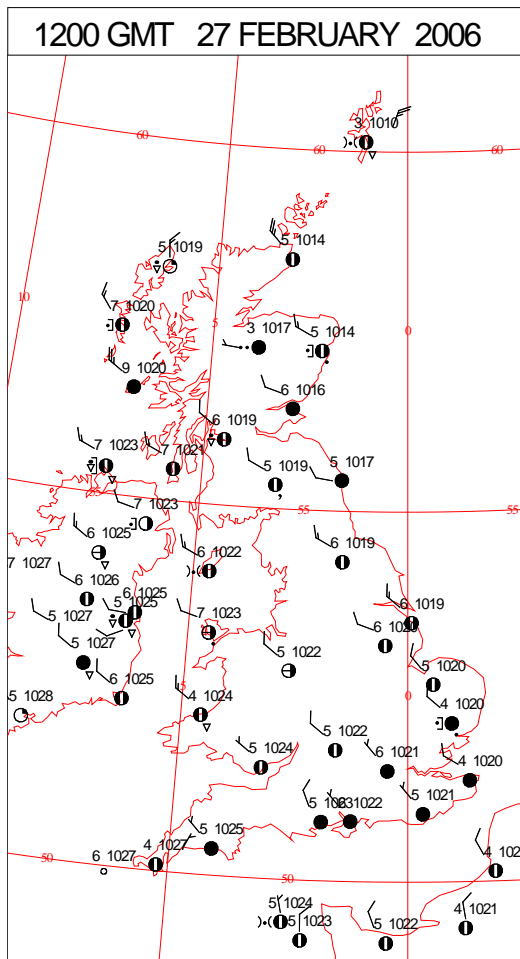

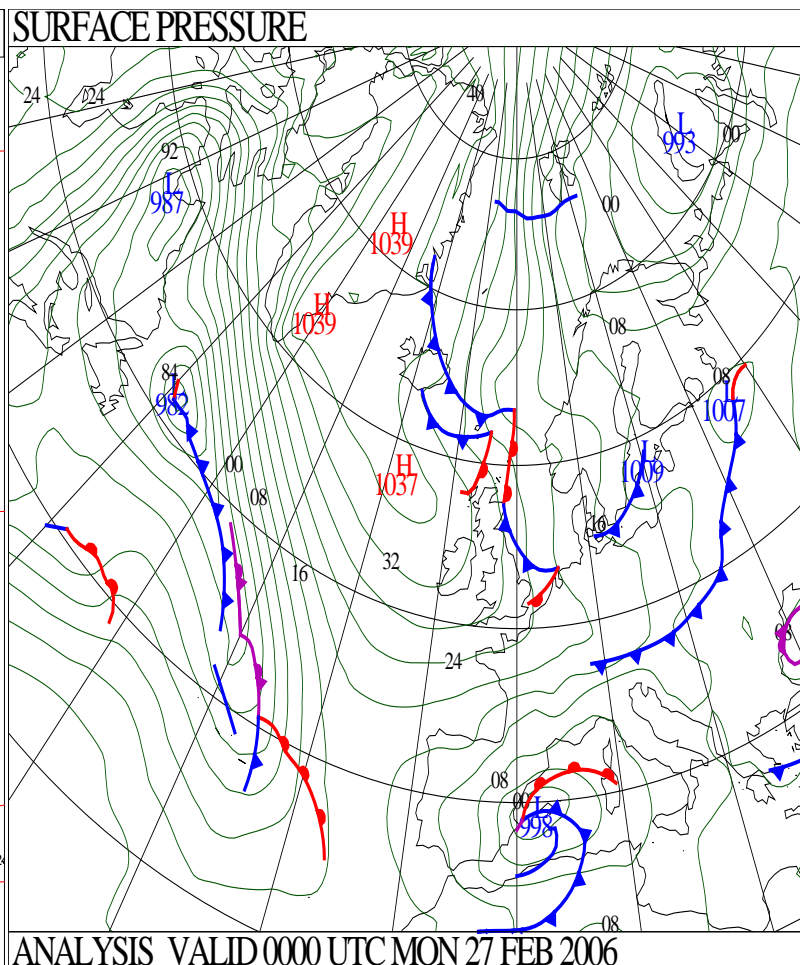

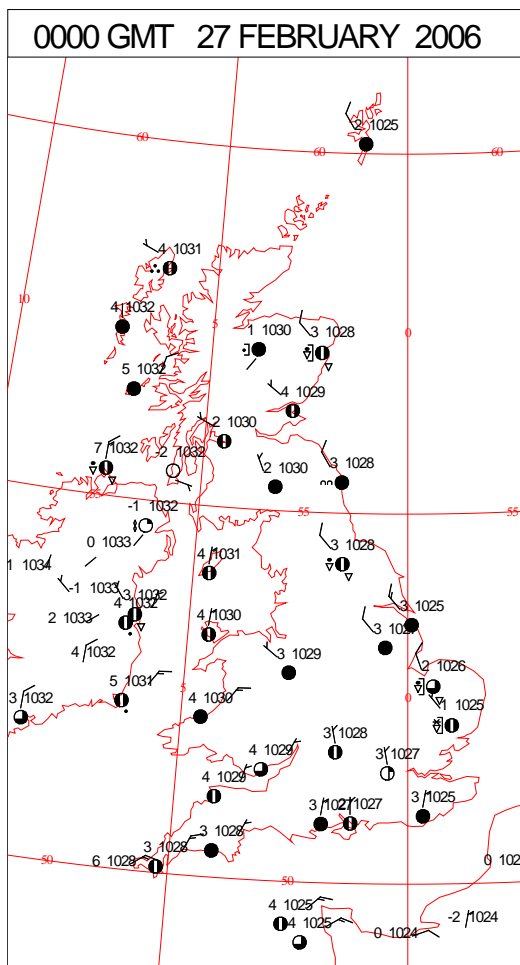

SIGNIFICANT WEATHER

0600 GMT 26 FEBRUARY 2006 SIG WEATHER	1200 GMT 26 FEBRUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Sunday 26 February 2006.</p> <p>A largely cloudy scenario over the UK throughout the period. As usual, there were a couple of exceptions. West Scotland was largely clear overnight with local frost (even in the Islands) whilst there were good bright or sunny spells over East Anglia, the east Midlands and over parts of southeast England, clouding over again by evening.</p> <p>Bursts of mainly light showery rain affected many eastern parts during the night (mainly the Lincolnshire area) but most places had at least a little rain (local sleet or snow over higher ground especially) although many western areas stayed dry. By evening these light showery bursts mainly affected East Anglia along with eastern and northern Scotland.</p> <p>The mainly fresh north-to-northeast breeze (locally strong at first in the southeast) very gradually eased through the day to make it feel less cold than recently, but it was still a cold day with many maxima struggling to beat 4 °C or 5 °C. Least cold were western and some southern parts, and western Scotland was 'warmest' (mainly near 8 °C) and here the winds were lightest too.</p>

SIGNIFICANT WEATHER

0600 GMT 27 FEBRUARY 2006	SIG WEATHER	1200 GMT 27 FEBRUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Monday 27 February 2006. Overnight was mainly cloudy with occasional clear periods allowing a local frost. Most places were dry but a few light wintry showers affected mainly eastern parts. During the early hours some persistent rain, sleet and snow moved into Scotland. During the morning the area of rain, sleet and snow moved southwards affecting most of Scotland. Elsewhere it was mainly cloudy with a few wintry showers, mainly in Northern Ireland and on North Sea facing coasts. Through the afternoon the rain, sleet and snow band edged into northern England with snow showers and sunny spells developing over Scotland in its wake. Further south the cloud became thick enough to produce some spells of light rain but much of central southern and southwest England stayed dry. The area of rain continued to move slowly southwards towards southeast England through the evening with sleet and snow mainly over the highest ground. Snow showers continued across Scotland, Northern Ireland and parts of northern England driven inland on a brisk northwesterly wind. Temperatures were around average across Scotland and Northern Ireland but it was rather cold elsewhere.</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

0600 GMT 28 FEBRUARY 2006 SIG WEATHER	1200 GMT 28 FEBRUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Tuesday 28 February 2006.</p> <p>During the night an area of showery rain and sleet covered the Midlands, southern England and south Wales at first. By daybreak though, this had cleared away to the south and in its wake a very cold northerly flow became established across the whole of the UK. Frequent showers, these mainly of snow or hail, affected coasts exposed to the northerly wind and by the end of the night there were significant accumulations in places, especially across northern Scotland. There was a widespread frost and icy patches.</p> <p>A very cold and wintry day followed. Most places had sunny spells but sometimes heavy and thundery snow or hail showers piled into northern, eastern and western Scotland, Northern Ireland, Wales, southwest England, the extreme east of England and East Anglia. Further accumulations of snow occurred with some heavy falls across northern Scotland where conditions became dangerous for travelling. Some snow melt occurred, though, in the sunshine further south. Remaining areas of the UK were sheltered from the northerly winds but a scattering of hail and snow showers developed during the afternoon.</p> <p>Temperatures were mostly in the cold or very cold category and there was a significant wind chill in exposed areas.</p>
