PLOTTED SURFACE OBSERVATIONS

SUNDAY
1 JUNE 1986

SUMMARY OF BRITISH WEATHER

Although generally rather brighter than on Saturday, it was another pretty gloomy day across most of the British Isles. There was a fair amount of rain over the southeastern corner of England overnight, this moved away to the east in the morning, but left behind drizzly patches in various parts of the country, with a good deal of mist and hill fog.

Further rain moved into north-western regions of the British Isles early in the day, and although this rain area became less organised as it moved south-east, some bursts of heavier rain did affect parts of central and eastern England during the afternoon and early evening.

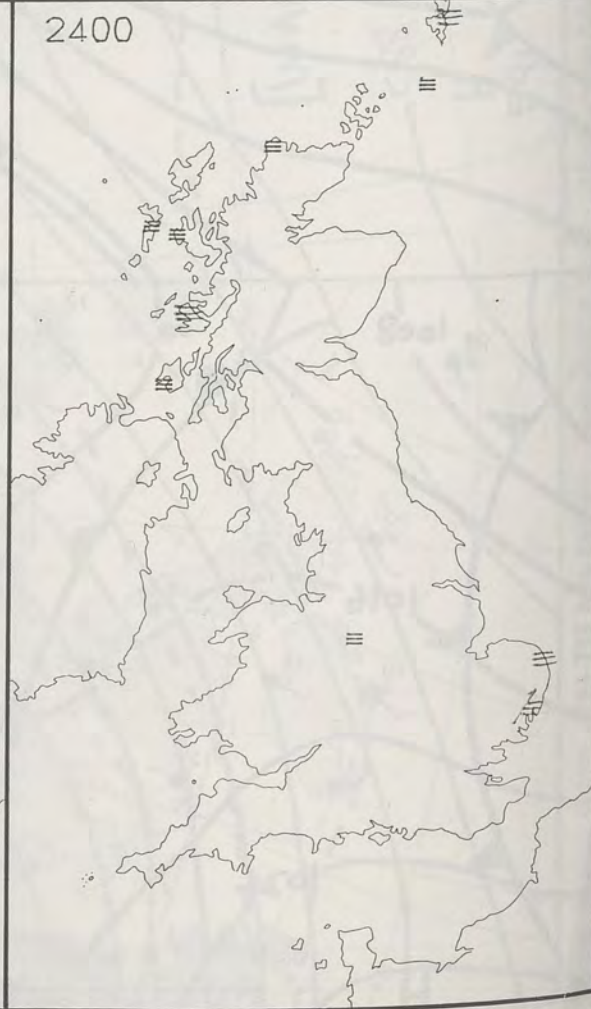

Temperatures were mostly not far from normal, but it was a muggy day. Some western coastal and hilly regions were rather cool. Where it did brighten up a little - in parts of eastern Scotland, northeast England, the southwest Midlands, East Devon and Dorset - it became warm.

MONDAY
2 JUNE 1986

SUMMARY
OF
BRITISH WEATHER

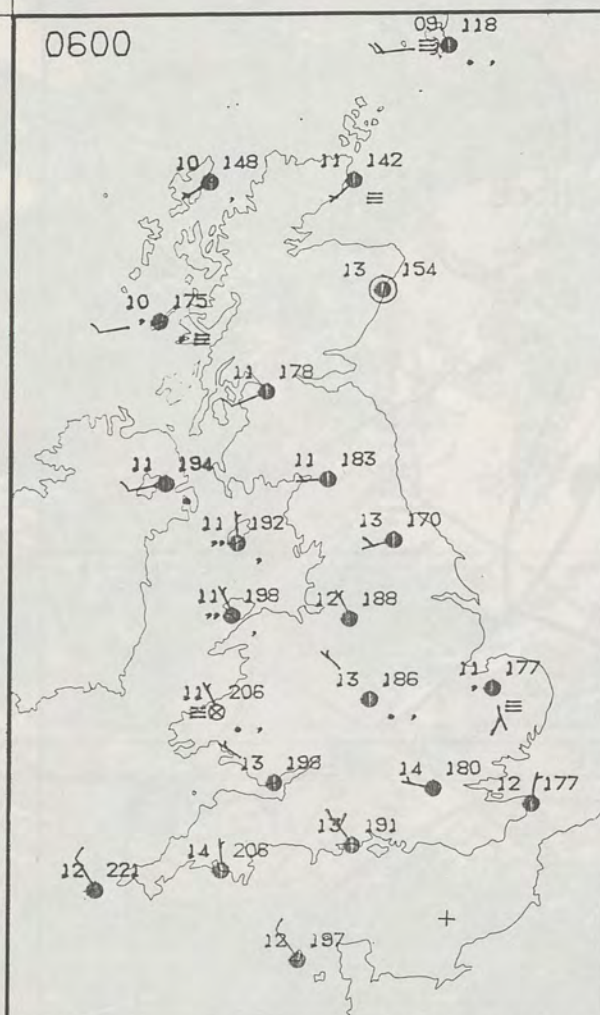

North and east Norfolk, east Suffolk, east Essex and east Kent were dull with occasional drizzle and mist through the period. The Western and Northern Isles of Scotland and the north coast of the mainland were also mostly dull and rather cool and here there were some heavier bursts of rain.

Over the rest of the British Isles it was humid with a lot of cloud, and some drizzle and mist, especially at first. Brighter spells developed in many areas, and many regions of the British Isles became warm. Some outbreaks of rain moved southeast across Scotland and Northern Ireland later, and into parts of northern England in the evening.

TUESDAY
3 JUNE 1986SUMMARY
OF
BRITISH WEATHER

During the night the southern half of England and Wales was very misty with a lot of patchy fog. Over northern England and North Wales most places had a spell of rain, with one or two heavier outbreaks. Scotland and Northern Ireland had a little rain and in Shetland there was a good deal of fog in the first part of the night.

By mid-morning it was raining over much of England and Wales, this was followed by brighter weather in northeast England; with a few showers. The brighter weather spread to all but the extreme southeast of England by evening.

Over Scotland and Northern Ireland it was a day of sunny periods and showers.

Temperatures were mostly below average with many parts of England and Wales having a cool day.

PLOTTED SURFACE OBSERVATIONS

WEDNESDAY
4 JUNE 1986

SUMMARY
OF
BRITISH WEATHER

Overnight one or two showers were to be found over northern and western Scotland; Northern Ireland and along the East Anglian coast, elsewhere it stayed dry and clear.

During the daytime much of southwest England and Wales stayed dry. It was sunny at first but later high clouds made the sunshine rather hazy and by late afternoon Cornwall had a few spots of rain. Over the rest of England and in Scotland there were good sunny spells with some showers. The showers being most frequent in eastern counties, with thunder reported in parts of East Anglia and Kent later on.

Northern Ireland had a good deal of bright weather and just a few light showers.

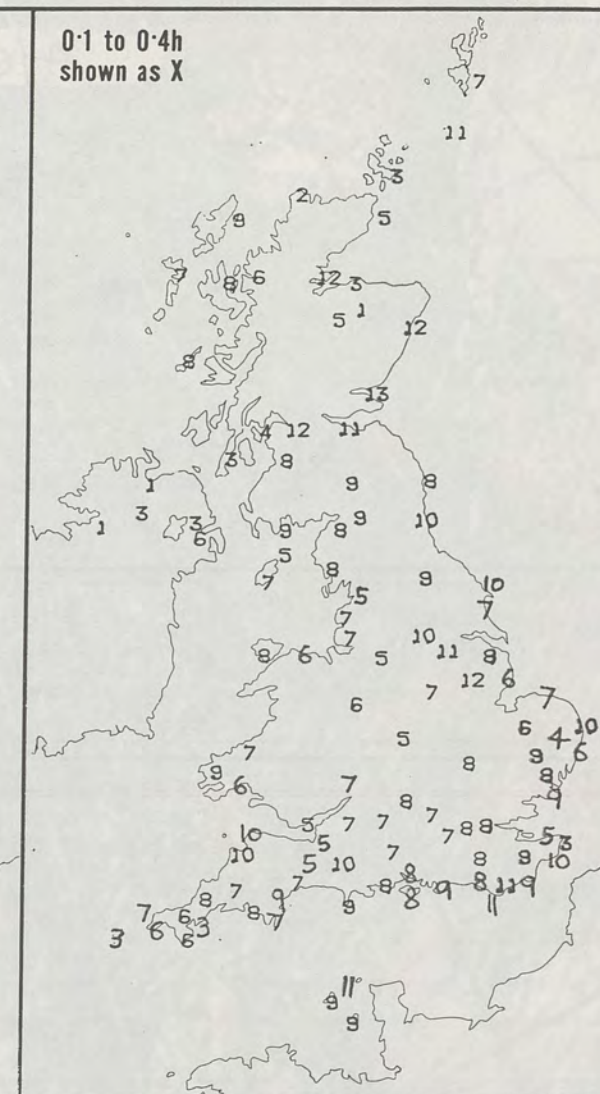

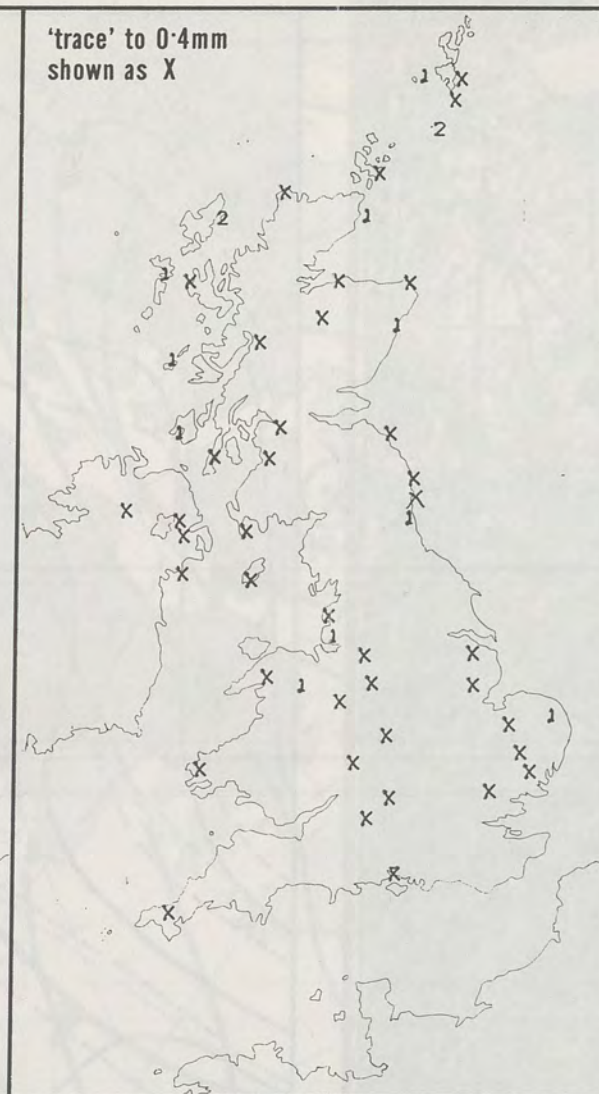

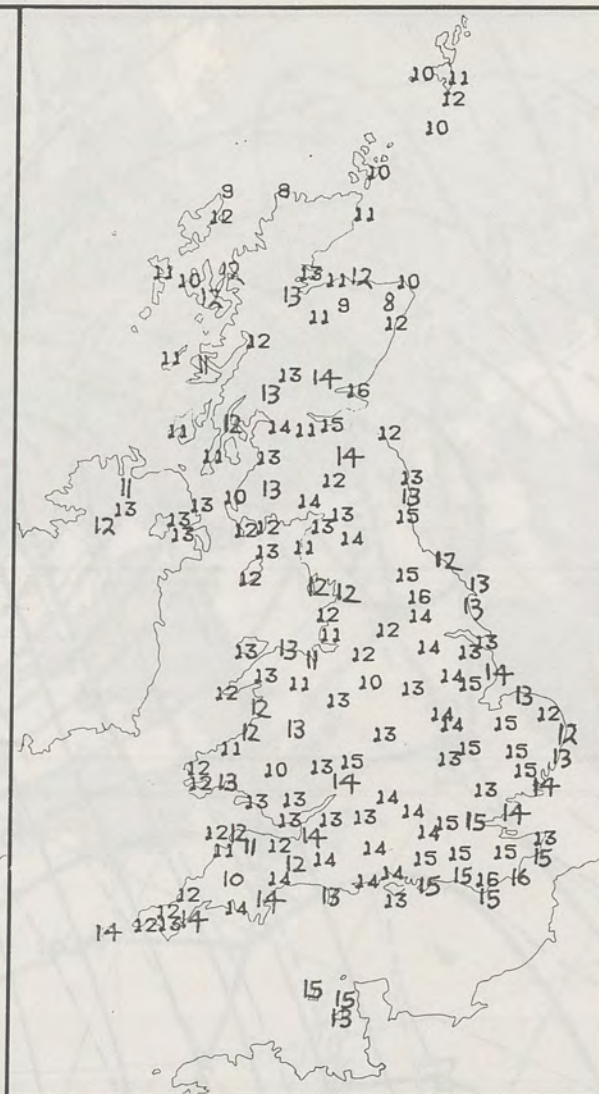

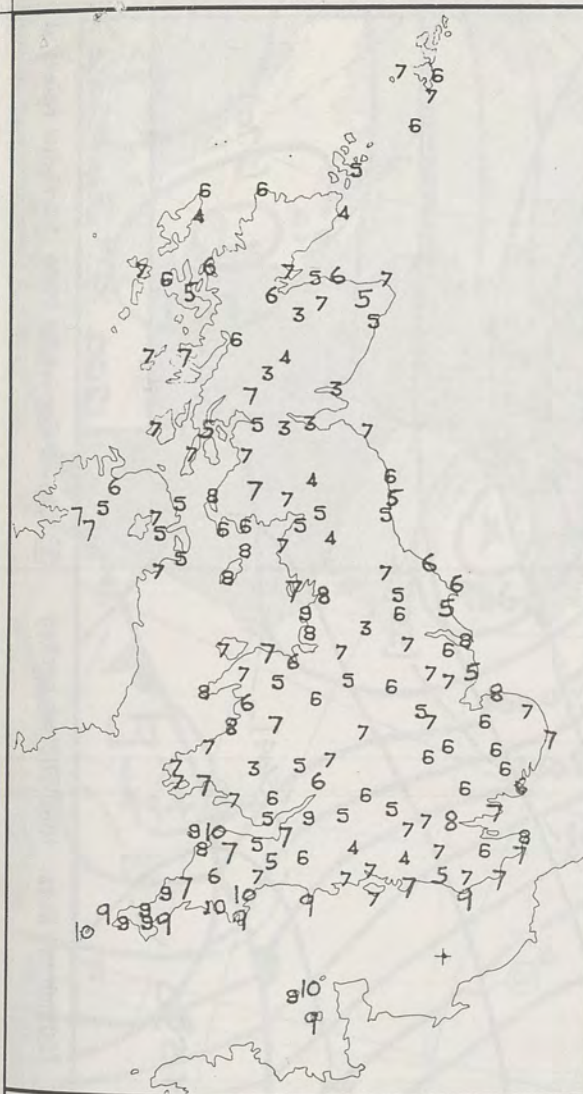

Scotland had a rather cool day; but for the rest of Britain it was cool or very cool.

PLOTTED SURFACE OBSERVATIONS

THURSDAY
5 JUNE 1986

**SUMMARY
OF
BRITISH WEATHER**

Northern and some eastern areas of Scotland had showers overnight, and also at times during the day.

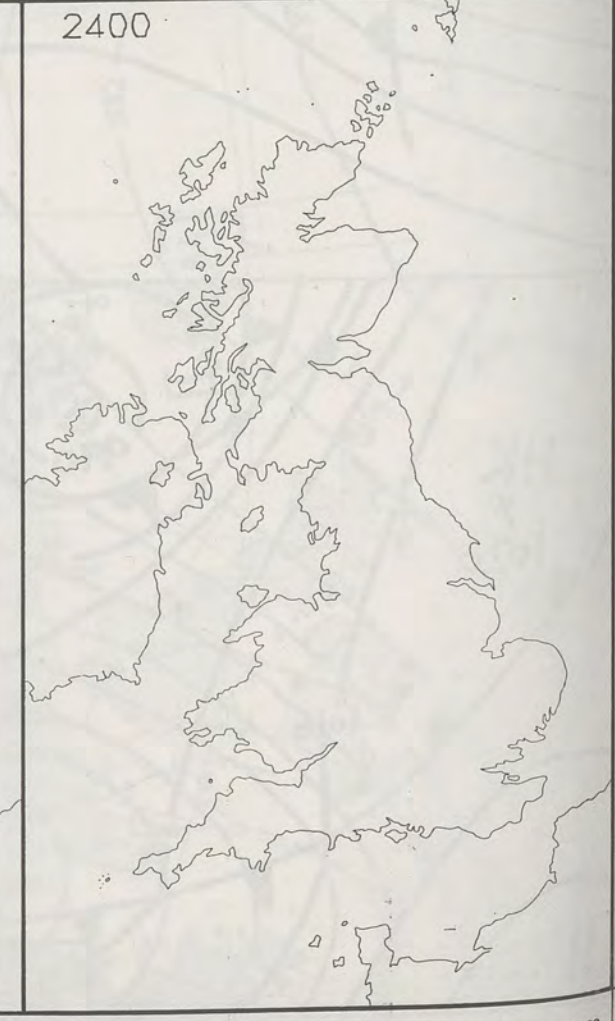

Elsewhere in Scotland, also in Northern Ireland and northwest England, the weather was dry and most of these northern and north-western areas of the United Kingdom had good sunny periods, the best of these in sheltered western areas.

Central and eastern coastal regions of England had a raw, mostly cloudy day, with some showers and a chilly northerly wind. Wales and southern counties of England had sunny periods and just a few well scattered showers.

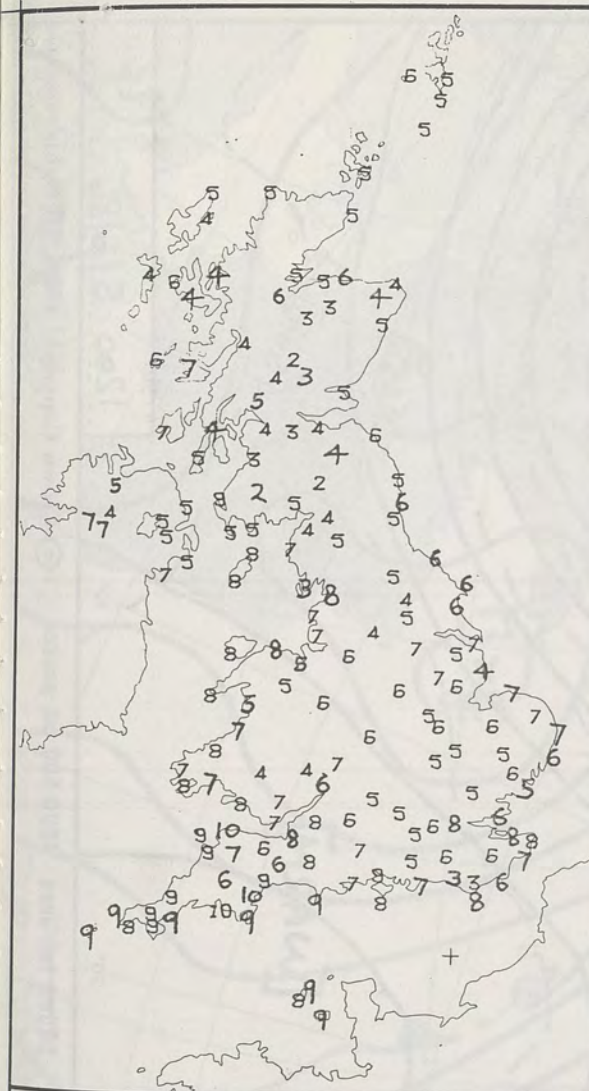

Temperatures were a good 6 or 7 degrees below normal in the dull, windy east coastal regions, making it a very cool day. Elsewhere in the UK it was rather cool or cool.

FRIDAY
6 JUNE 1986

SUMMARY
OF
BRITISH WEATHER

After a cloudy night, eastern counties of England and many easternmost regions of Scotland had rather a lot of cloud through the day, especially in Lincolnshire and East Anglia. There was rain at times, persistent in the east of England with heavier bursts during the early hours, and later in the day. Despite the cloud there were some bright spells too, with some patchy sunshine and a few showers.

Western Scotland, Wales, western England and Northern Ireland had a mostly fine and dry night followed by a day of sunshine. For a time in the morning, some Midland and central southern counties of England were overcast with some light rain.

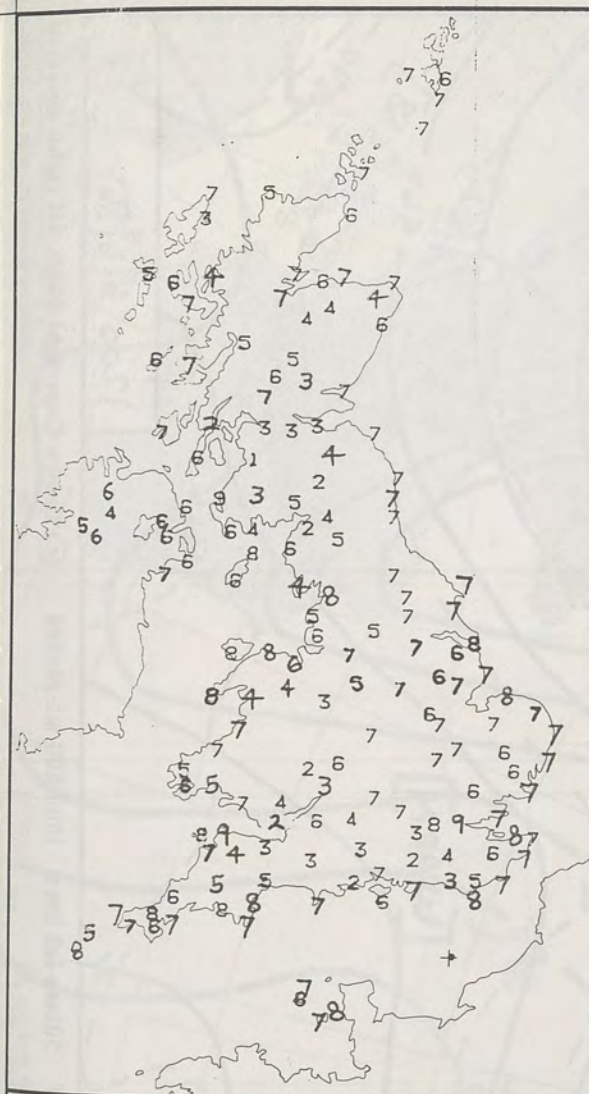

It was again mostly cool in many areas however western Scotland and Northern Ireland had temperatures close to normal.

SATURDAY
7 JUNE 1986

SUMMARY
OF
BRITISH WEATHER

Most central and eastern parts of England and Scotland remained dry and there was a good deal of sunshine during the morning. Cloud increased in the afternoon and there were isolated showers. During the evening showers were quite heavy in parts of Kent.

In western Britain and Northern Ireland there was a lot of cloud and some patches of light rain or drizzle, especially on western coasts and hills where it was rather misty at times. Many places had a dry day however and most of the drizzle died out by midday, and there were some breaks in the cloud during the afternoon and evening.

It was mostly rather cool in the west and north but in central and eastern Britain temperatures were close to the early June average.

MONDAY
9 JUNE 1986

SUMMARY OF BRITISH WEATHER

Most northern and western regions of the British Isles had a wet night, with the heaviest and most persistent rain in southern and western Scotland. Over East Wales, eastern, central and southern England there was only a little rain overnight and some places stayed dry.

Most of Scotland, Northern Ireland and northern England brightened up during the day, but there were some showers. In parts of northwest Scotland it rained most of the day - with a mid-afternoon temperature of only 6°C at Stornoway.

A narrowing and weakening band of rain moved slowly southeast across Wales, southwest and central England during the day; later the rain became heavy again in places. Most of eastern and particularly southeastern England stayed dry with some sunshine, especially in the extreme southeast and the Channel Islands.

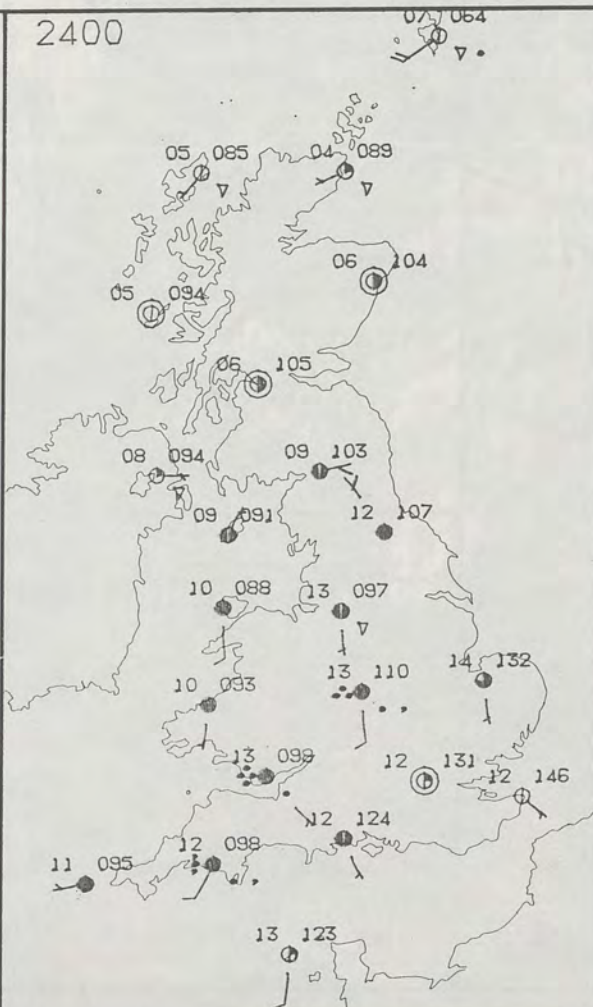

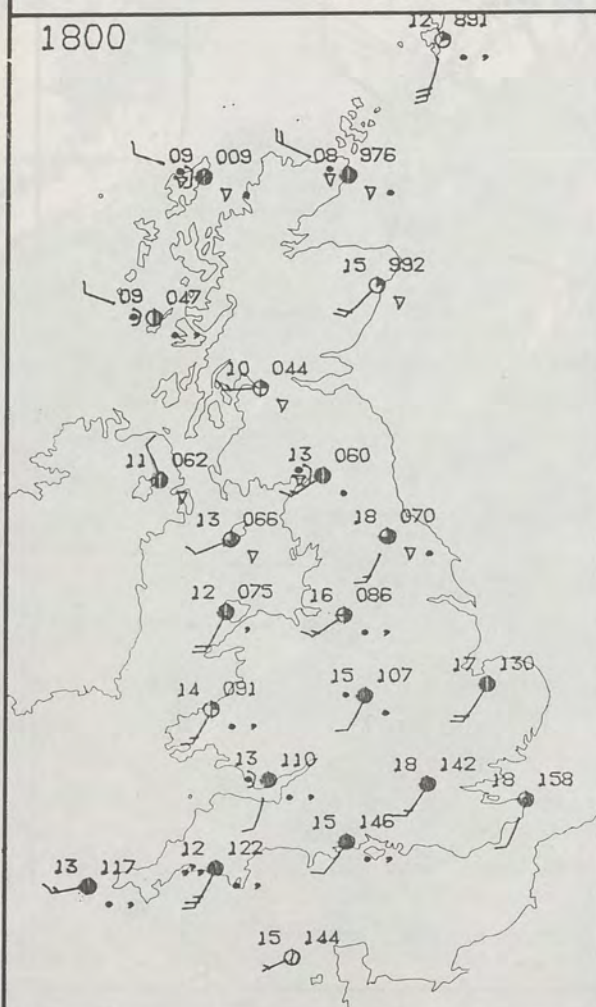

It was generally windy with gales in some northern and western areas. Nevertheless eastern and central districts of Scotland and eastern districts of England were warm. It was rather cool in most western regions.

2400

TUESDAY
10 JUNE 1986SUMMARY
OF
BRITISH WEATHER

Rain moved northeast across southwest England, most of Wales, the west and north of the Midlands and northern England during the early hours and was heavy in many places.

Southeastern Britain stayed dry with some clear intervals and most of Scotland and Northern Ireland had a dry - and cold - night.

The rain moved steadily on across Scotland and the east of Northern Ireland during the morning. Drier, brighter weather moved northeast across Wales and the southern half of England, after just a short spell of mostly light rain in the southeast.

By mid-afternoon all of England and Wales had brighter skies, and some coastal areas of the southwest were quite sunny. There were quite a few showers too except in southernmost counties of England. Some of the showers were heavy with hail and an isolated thunderstorm, and some of the showers were rather prolonged in the northwest. It was mostly rather cool and windy and decidedly cool in Wales and southwest England.

Rain fell for several hours over much of Scotland and Northern Ireland during the afternoon, except the far west. Much of Scotland had a very cold day and heavy snow fell for a time in the afternoon in the Cairngorms, and Northern Ireland had a cool day.

1800

2400

WEDNESDAY
11 JUNE 1986SUMMARY
OF
BRITISH WEATHER

Persistent rain gradually cleared away from northeast Scotland in the early hours of the morning. Scotland, Northern Ireland and northwest England had a mainly sunny day after a few showers earlier on. The strong winds in the far north slowly decreased.

A further area of rain reached Cornwall in the early morning and extended northeastwards across southern counties by dawn, some of the rain was heavy. The northern limit of the rain was roughly from southeast Wales, across the south Midlands into Suffolk with long sunny periods and scattered showers further north. Brighter skies followed the rain into the far southwest by mid-morning, but the sunny conditions did not reach southeast England till the end of the afternoon. Wales and the remainder of England had a mainly sunny day.

Temperatures ranged from near normal in Scotland and Northern Ireland to rather cool over much of England and Wales and decidedly cool in eastern areas of England.

SUMMARY OF BRITISH WEATHER

Most places had a clear, cool night with a touch of air frost reported at Eskdalemuir in southwest Scotland.

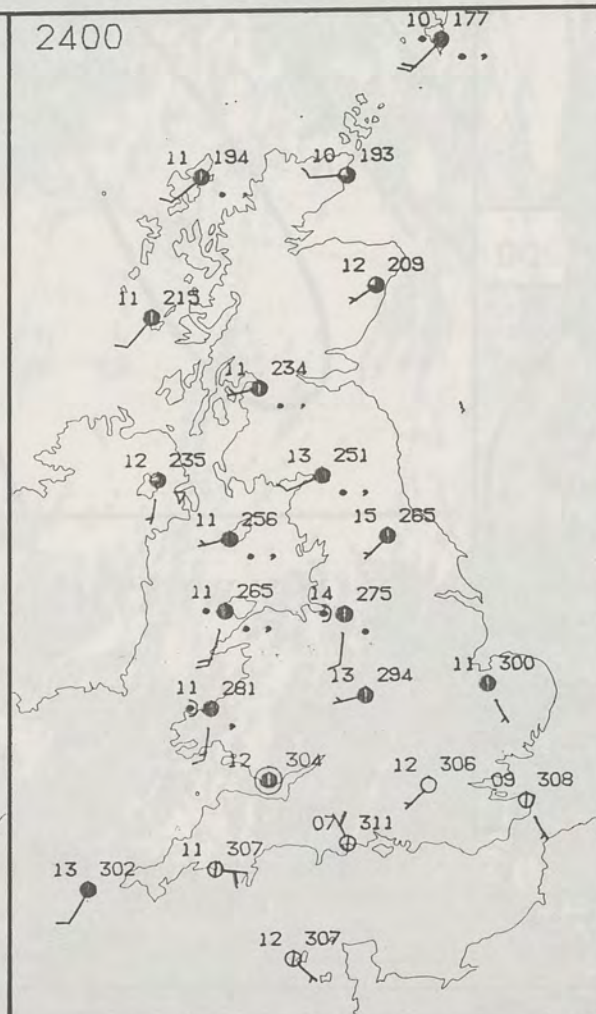

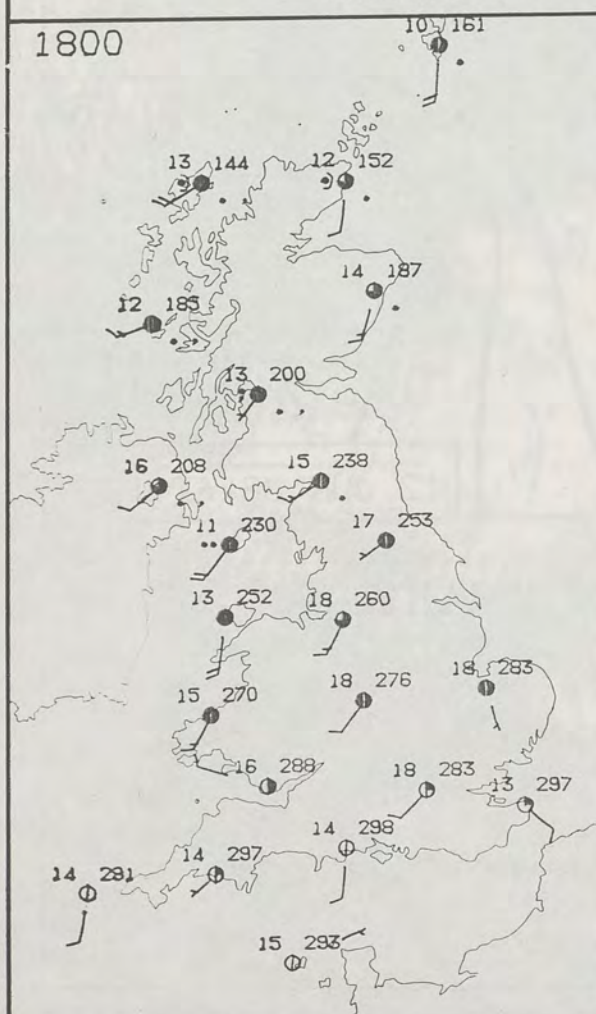

By the morning thickening cloud had extended across much of western Britain with occasional rain in Northern Ireland, western Scotland and west Wales. The cloud reached many central and eastern districts in the morning but any rain here was light and confined to northern Britain.

During the afternoon the cloud broke over much of England and Wales with temperatures rising to normal values but sea breezes kept it cool along many coasts. Some bright intervals developed over eastern Scotland and it remained overcast in Northern Ireland and western Scotland until the evening with spells of rain or drizzle. Northern Ireland had near normal temperatures but Scotland was mainly rather cool.

FRIDAY
13 JUNE 1986

SUMMARY OF BRITISH WEATHER

Apart from a little light rain here and there, much of Scotland stayed dry overnight.

Northern Ireland started off dry, but by morning there was a little rain and drizzle in most places.

England and Wales had a generally dry night, but near west facing coasts and hills in West Wales, northwest England and the Isle of Man sea fog and low cloud brought in some drizzle at times.

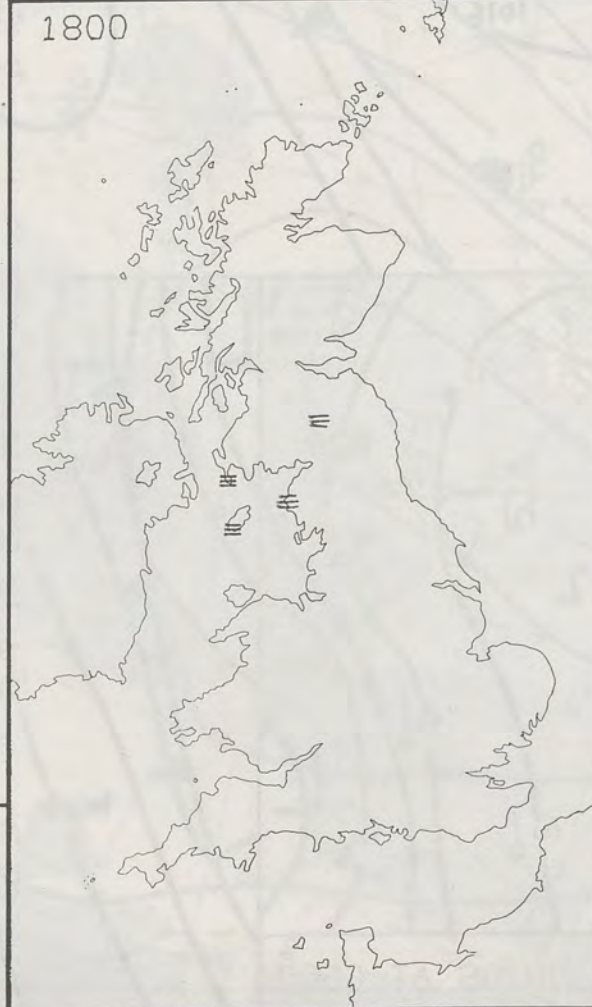

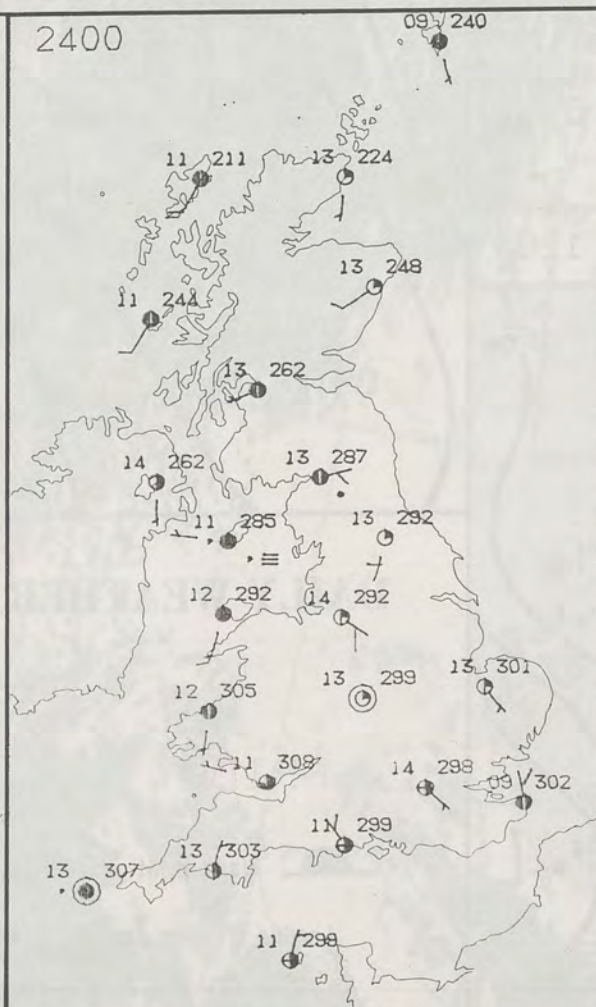

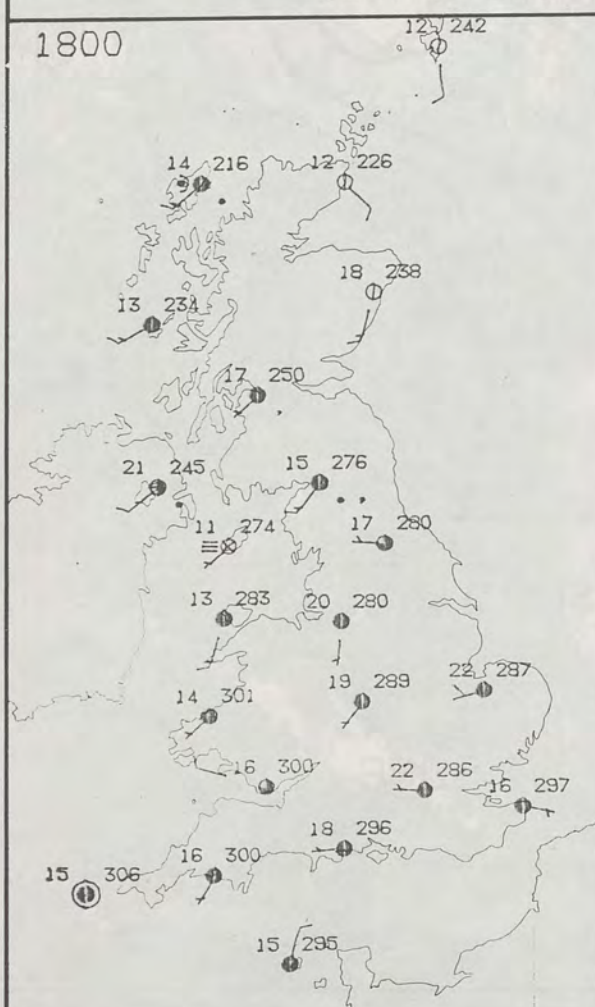

This dull misty weather persisted for much of the day. Over northeast England it was fairly cloudy too. In contrast southern England, southwest Wales and East Anglia had a sunny day.

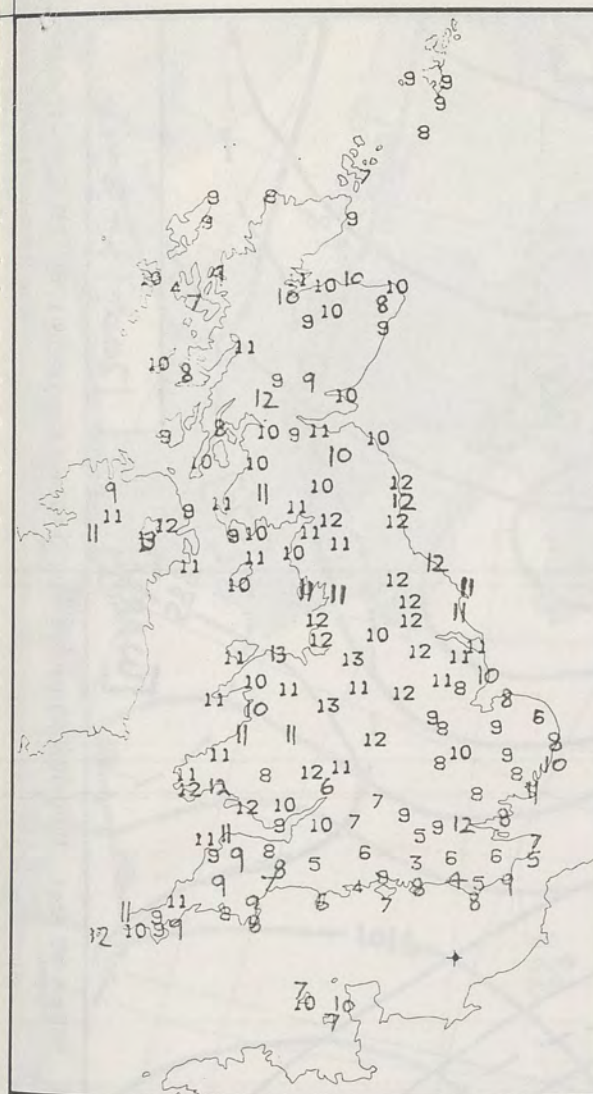

Southern Scotland and Northern Ireland had early rain and drizzle, but it died out later and they then joined the rest of Scotland in dry weather with some sunny spells.

Temperatures were near or a little below average near western coasts of England and Wales and also over much of western and northern Scotland. Northern Ireland became warm later on. Eastern Scotland and England and Wales except the far west, had a warm day.

SATURDAY
14 JUNE 1986

SUMMARY OF BRITISH WEATHER

There was a little drizzle and patchy fog near some coasts and hills in the west, but elsewhere over Britain it stayed dry and clear overnight.

By day much of the country enjoyed almost unbroken sunshine; even the cloudier western parts of Wales, northwest England and western Scotland brightened up during the late morning and afternoon, but it stayed dull and misty, with some drizzle, over the Outer Hebrides.

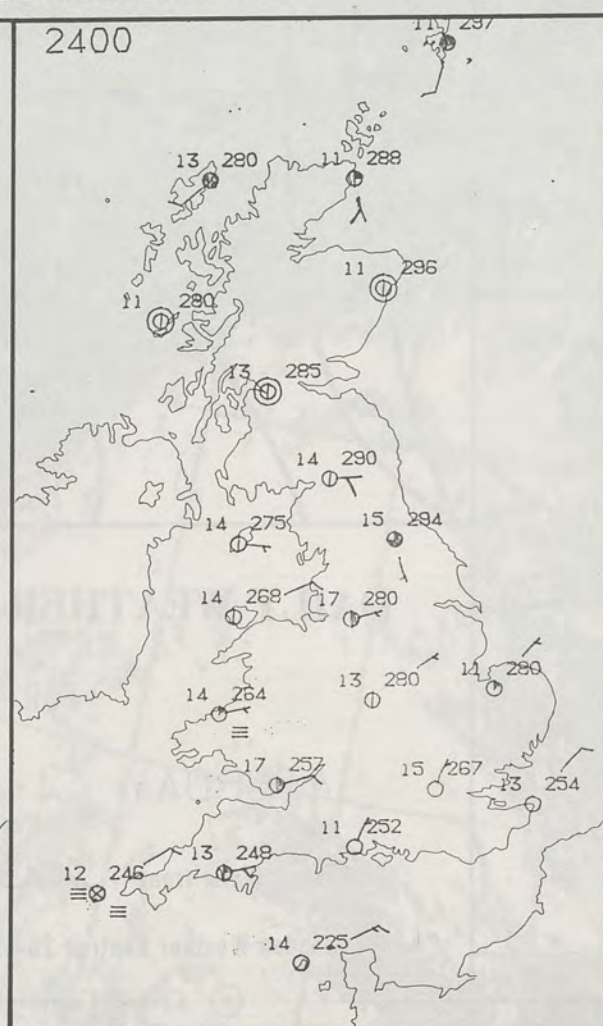

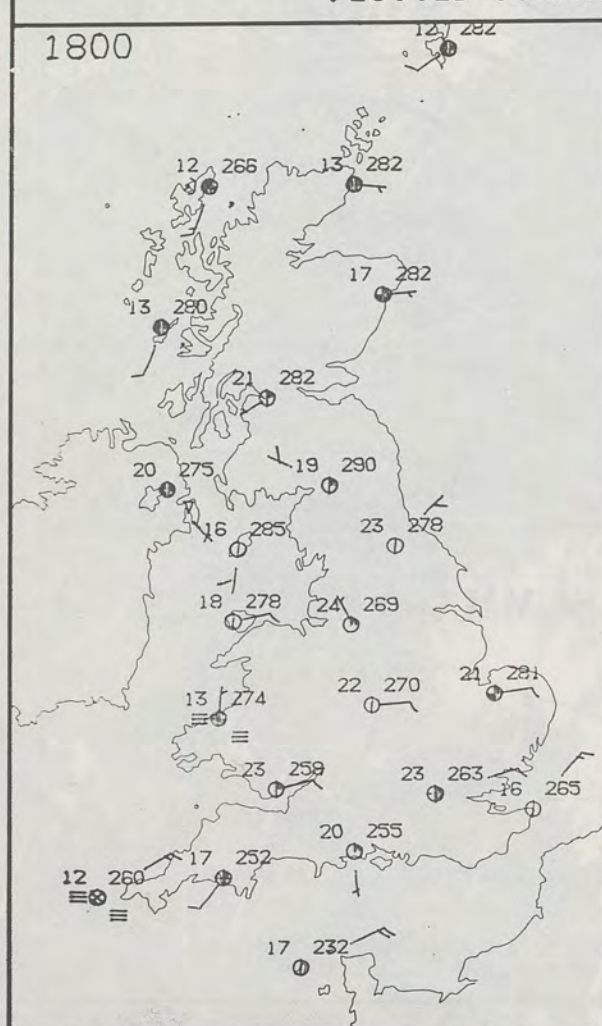

Temperatures were near average in the Channel Islands and near most western coasts. Elsewhere it was very warm, with a few places as far apart as central southern England and eastern Scotland having a hot afternoon.

SUNDAY
15 JUNE 1986

SUMMARY
OF
BRITISH WEATHER

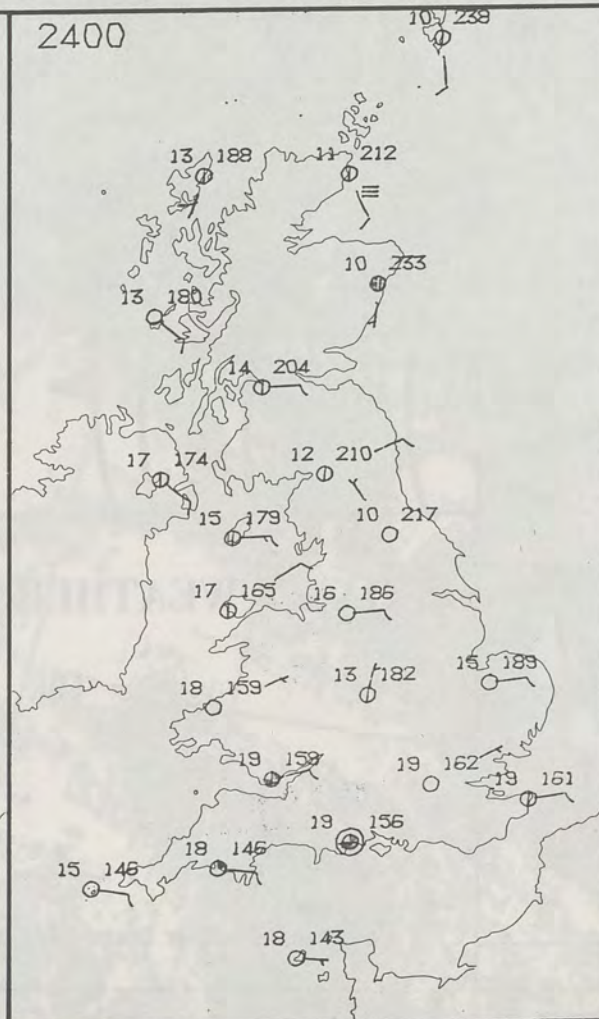

The far northwest of Scotland had some cloud overnight, but this had all cleared by dawn, and the remainder of the country had a clear night, with just a few short-lived mist patches around dawn.

With almost unbroken sunshine, Sunday turned out very warm, locally hot in places inland, though some coasts were cooler.

The evening was dry everywhere, and rather humid in the south.

PLOTTED SURFACE OBSERVATIONS

MONDAY
16 JUNE 1986

**SUMMARY
OF
BRITISH WEATHER**

Western Scotland and Northern Ireland had a clear, dry night, followed by a dry morning. Cloud spread to Northern Ireland by midday, and on to western Scotland during the afternoon and evening. Some thundery showers and odd spots of rain broke out in the evening.

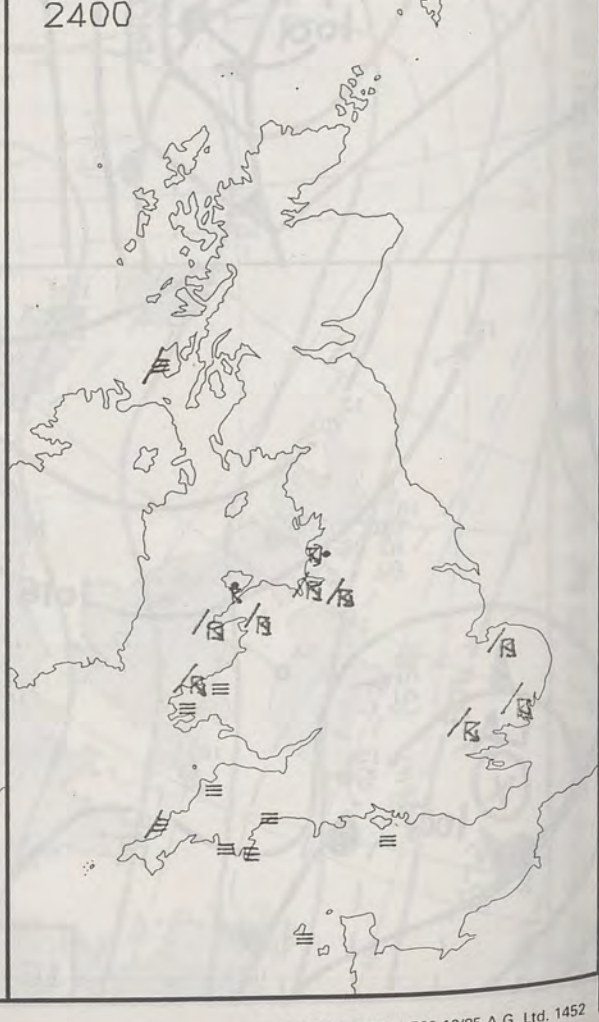

Patchy fog or low cloud affected coastal areas of eastern Scotland and northeast England, but this cleared inland, resulting in a dry and mostly sunny day. The evening was dry, with patchy low cloud reforming inland.

Remaining areas of the United Kingdom had a dry, clear but rather humid night, followed by a mostly dry and sunny morning and early afternoon. Later in the day, some isolated thunderstorms developed, though many places missed these and had a sunny, hot and humid afternoon. During the evening, some heavy thunderstorms affected the far west of Wales and parts of northwest England.

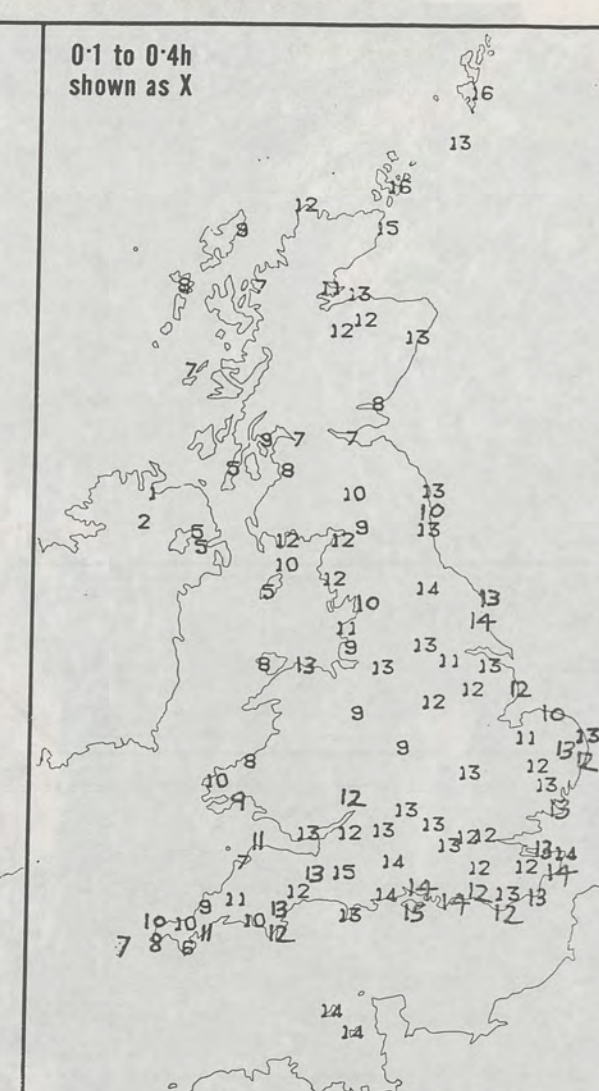

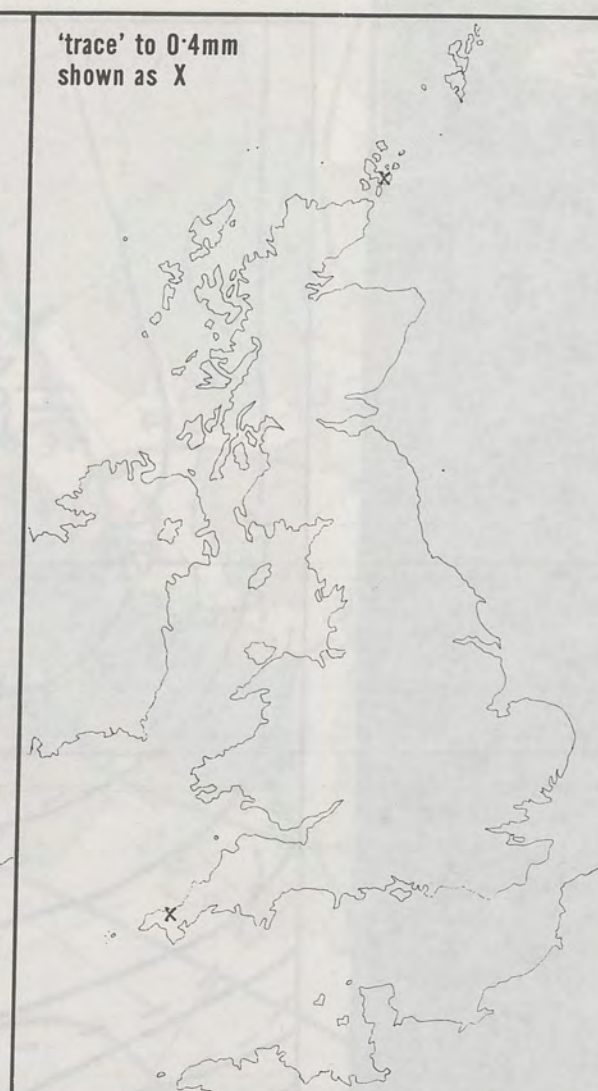

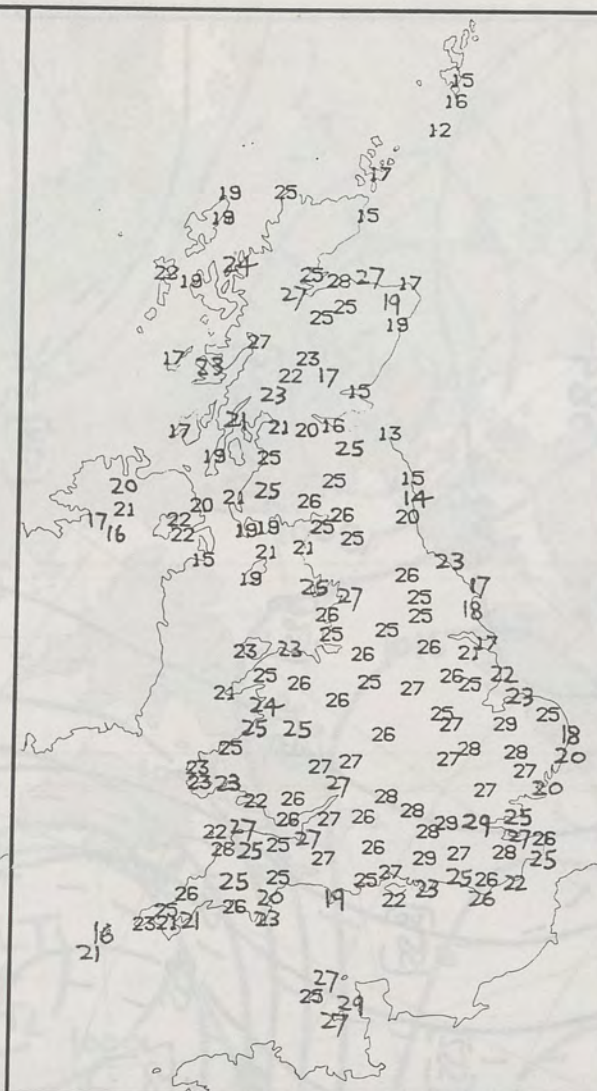

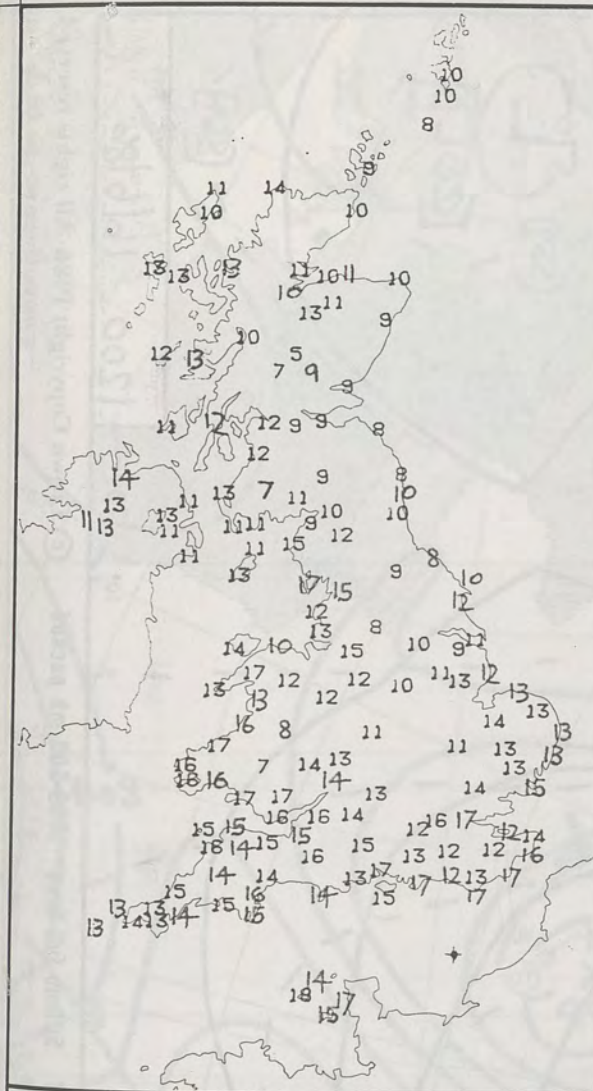

Temperatures climbed well above the long term normal in most places giving a hot day though once again many coasts were cooler and some northwestern areas also did not do too well, although even there many places were very warm.

TUESDAY
17 JUNE 1986

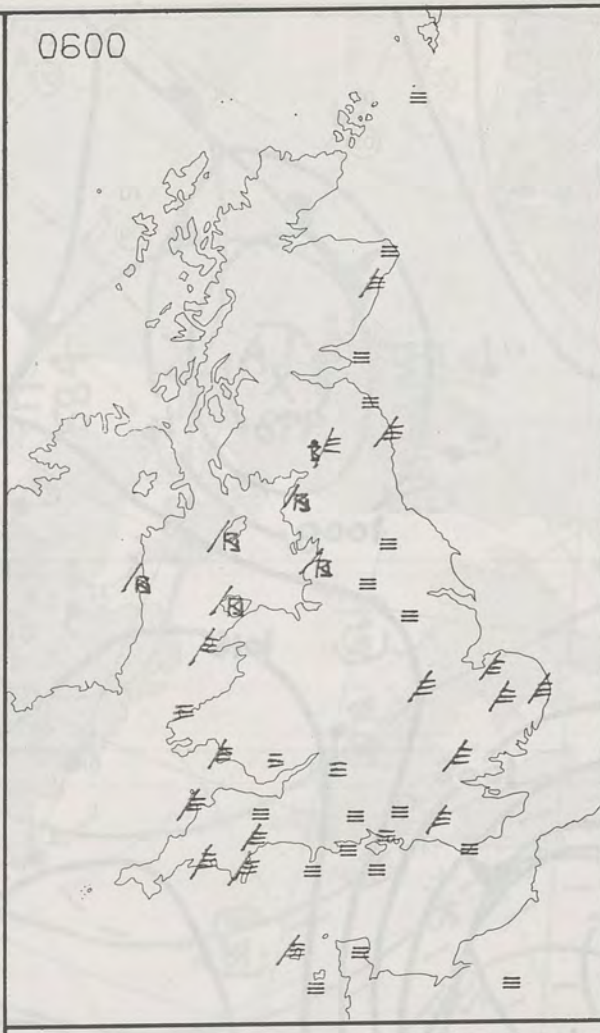

SUMMARY
OF
BRITISH WEATHER

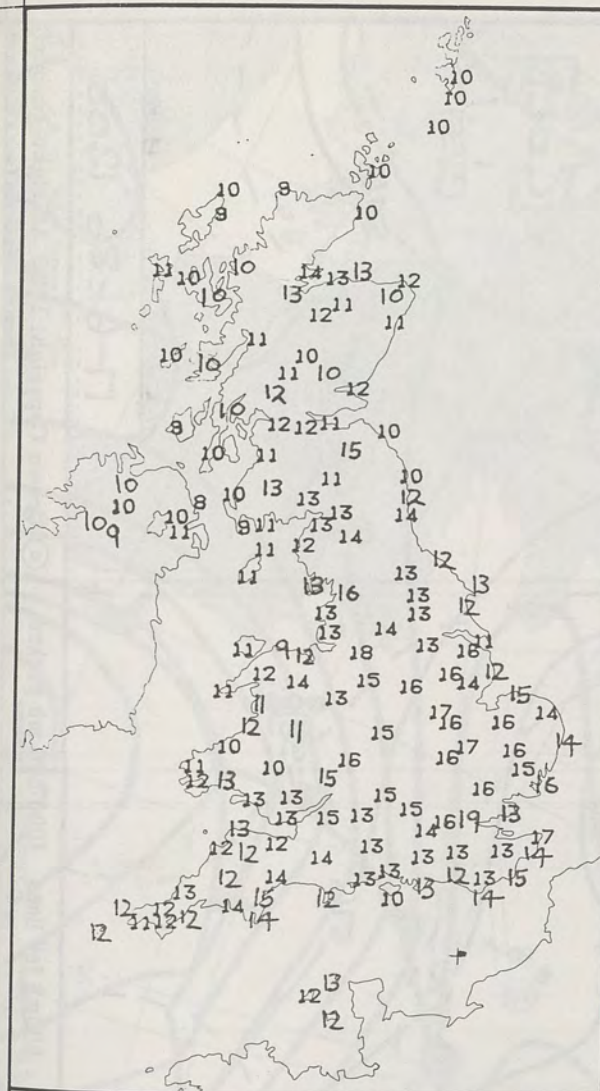

Most of England and Wales remained dry and eastern parts of England had a good deal of sunshine after the clearance of early morning mist. In central and western regions there was a lot of cloud and in northwestern parts of Wales and England there were scattered thunderstorms in the early hours giving heavy rain in places. The rest of England and Wales had a mostly dry day and southwestern counties of England became quite sunny.

In southern and eastern Scotland it was cloudy with outbreaks of rain which were heavy at times and there were several thunderstorms. In northwest Scotland and Northern Ireland it was mainly cloudy with patches of rain in the morning but the latter part of the day was dry.

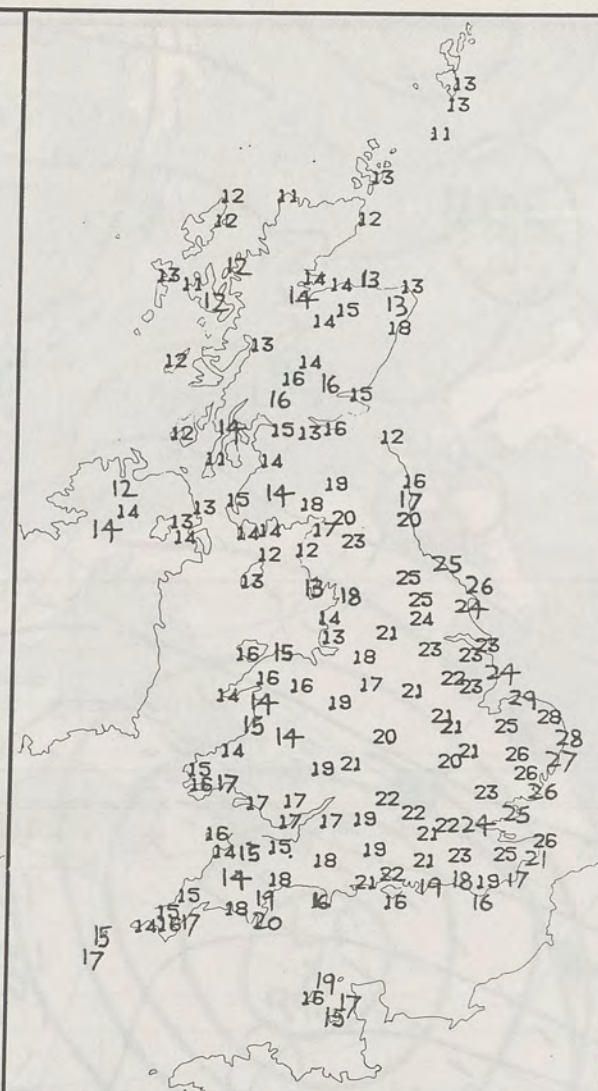

Temperatures varied considerably; parts of eastern England were hot again for a time while in central parts of Britain temperatures were near normal and in Northern Ireland and some northwestern areas it was rather cool.

WEDNESDAY
18 JUNE 1986

SUMMARY OF BRITISH WEATHER

Wales and the southern half of England had a dry day with a good deal of sunshine in most places and temperatures were close to the mid-June average. West Wales, Devon and Cornwall were rather cool.

In eastern parts of England and Scotland cloud persisted and there were a few patches of light rain or drizzle in northeast England and eastern Scotland, especially during the morning, later in the day there were breaks in the cloud, particularly in northeast England, but it was generally rather cool.

In northwest England, Northern Ireland and western Scotland there was a lot of cloud but it remained dry and sunny intervals developed in most places later in the day; temperatures were a little below normal.

THURSDAY
19 JUNE 1986

SUMMARY OF BRITISH WEATHER

It was a dry night across the whole of the country, with some patchy mist and fog in parts of East Anglia, the North Midlands and northwest England.

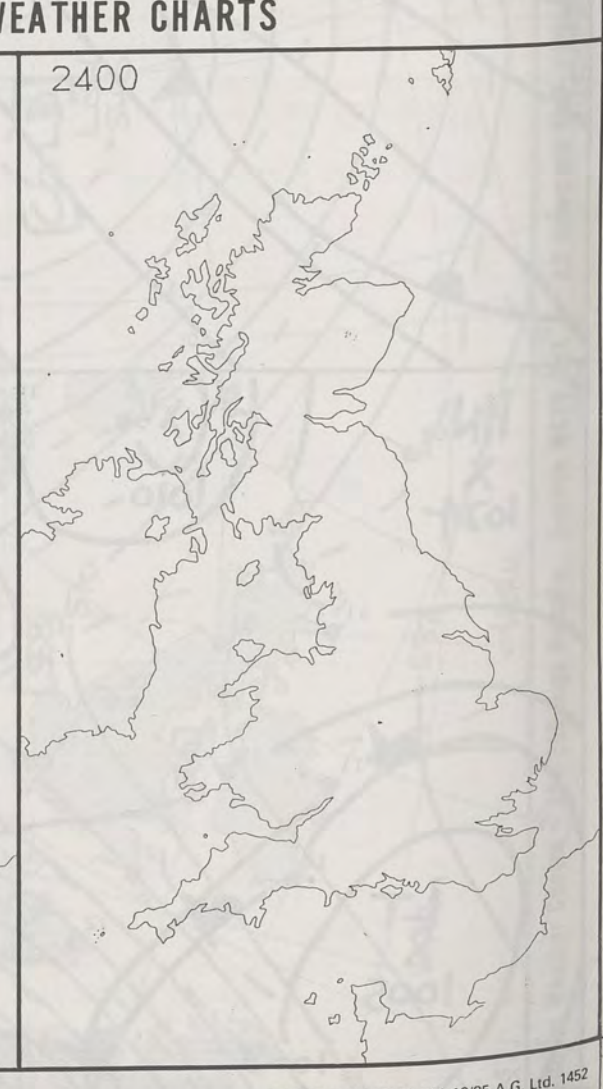

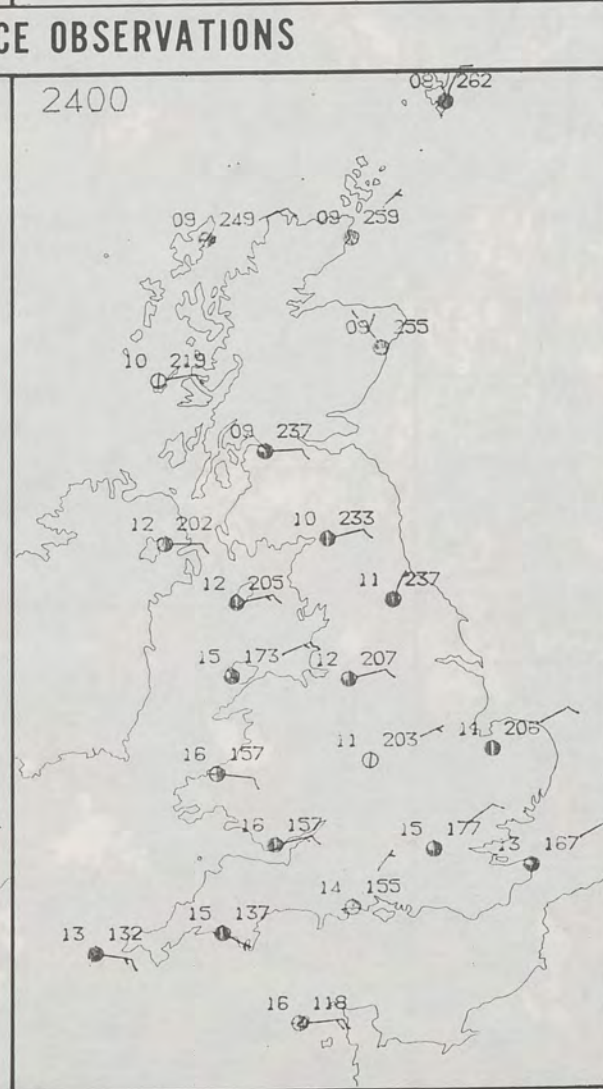

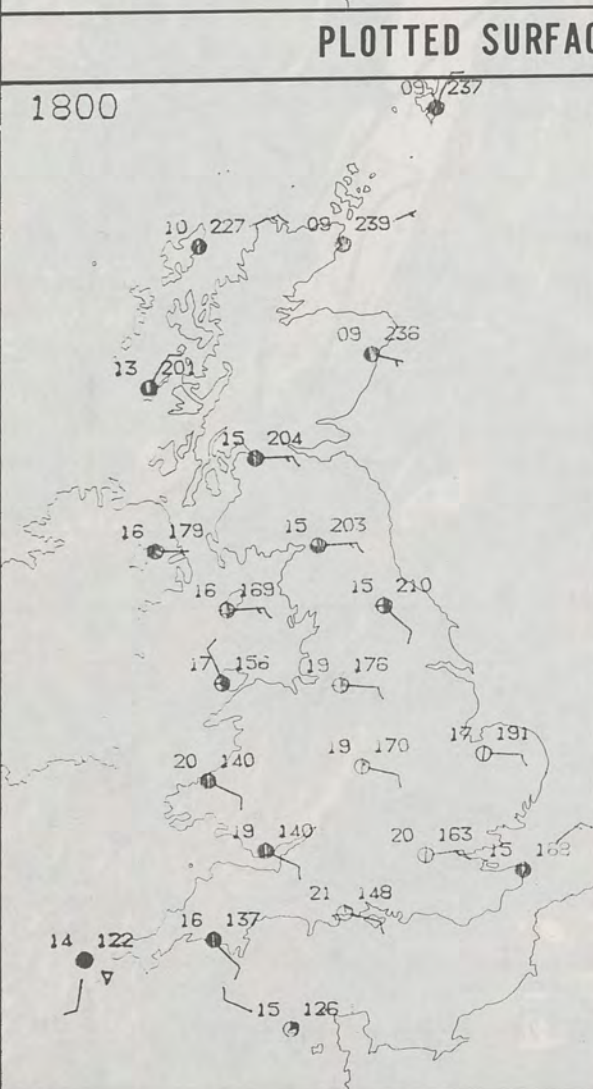

During the day northeast Scotland and the Northern Isles kept a good deal of cloud. Northeast England started off cloudy but brightened up later.

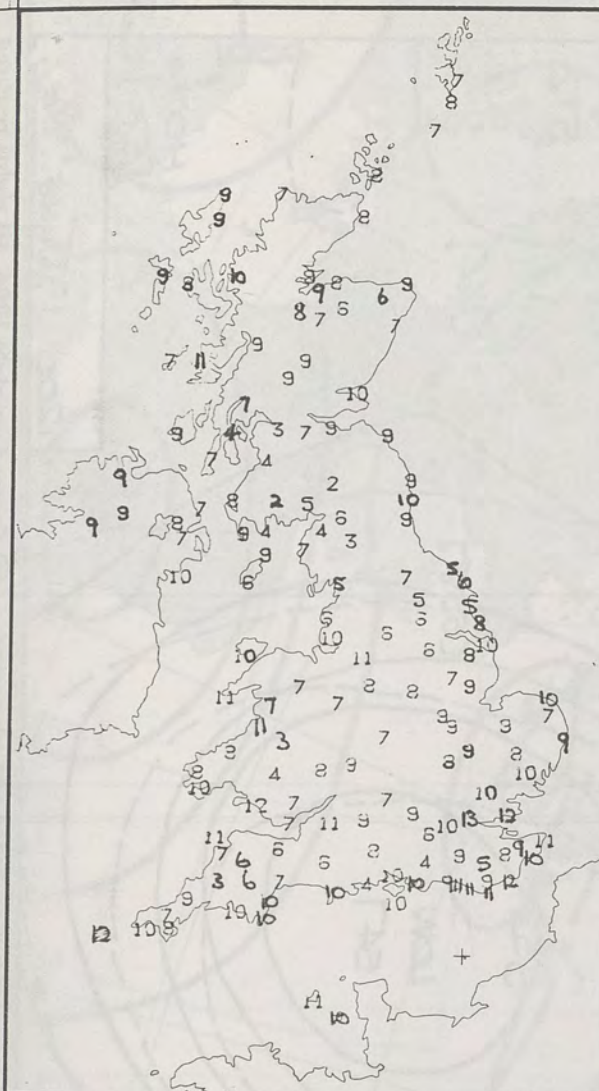

At the other end of the country - over the Isles of Scilly, Cornwall and Dyfed in southwest Wales, there was also a lot of cloud, with a few spots of rain in southwest England. Elsewhere over Britain the day was dry and generally sunny.

Near North Sea coasts and over the far north of Scotland it was cool, but for the rest of Scotland and Northern Ireland temperatures were not far from normal. England and Wales, away from the North Sea coasts, had a warm or very warm day, but the cloud in the far southwest kept things rather cool.

PLOTTED SURFACE OBSERVATIONS

FRIDAY
20 JUNE 1986

SUMMARY OF BRITISH WEATHER

Over much of Britain it was a cloudy night and in Scotland there was a little rain here and there while Cornwall had showers and thunderstorms and west Devon a few showers.

During the day western Scotland, Northern Ireland, northwest England and West Wales were sunny and in central Scotland, the Midlands and East Wales the weather brightened up in the afternoon.

Eastern Scotland, the Glasgow area along with northeast England and East Anglia stayed cloudy all day and most places were fairly cold with quite a brisk northeasterly wind, keeping temperatures a little below normal.

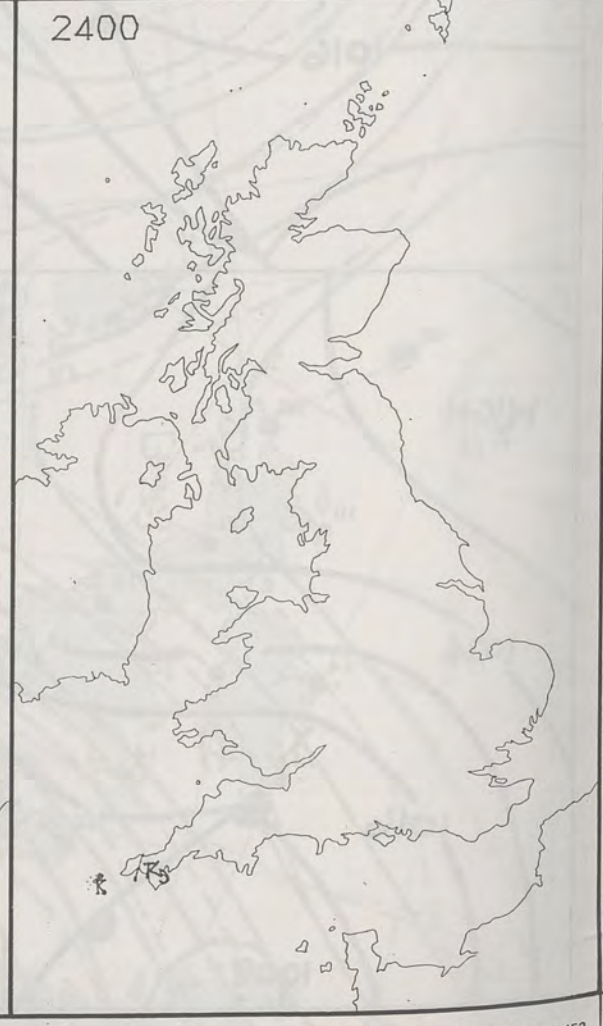

On the south coast of England from Sussex to Dorset it was mostly sunny and warm and much of southern England turned brighter in the afternoon but Cornwall stayed cloudy with some very heavy showers and several thunderstorms. In the Channel Islands there were some showers and thunderstorms too but much of Britain had a dry day.

SUMMARY
OF
BRITISH WEATHER

Much of Britain had a dry night and in many places it clouded over, but in Cornwall and the Channel Islands there was heavy rain and thunder.

During the day western Scotland, Northern Ireland, northwest England, central and northern Wales had a sunny day with temperatures close to or a little above normal.

Over central and eastern areas of England and Scotland the weather brightened up during the morning and then it was fairly sunny, and here too it turned out quite warm, but on the coasts of eastern England and southeast Scotland it stayed cold and cloudy all day. During the evening much of East Anglia and the northeast of England clouded over again, with a little drizzle here and there.

Cornwall, West Devon and the Channel Islands had heavy rain and thunderstorms and these spread to other parts of southwest and central southern England in the evening.

SUNDAY
22 JUNE 1986

SUMMARY
OF
BRITISH WEATHER

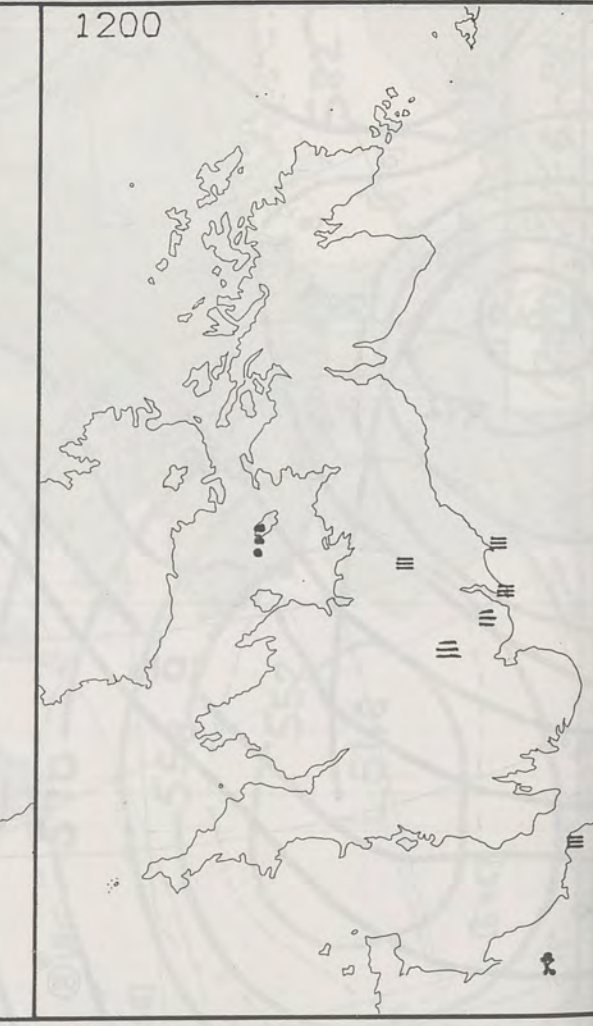

Eastern and central parts of Scotland had a cloudy night and morning, with some pockets of drizzle. A clear night elsewhere in Scotland, followed by sunshine, and during the afternoon most of Scotland had dry and sunny weather, though with cool winds in the east.

The night turned cloudy over much of England, Wales and Northern Ireland, with only the far southwest clear. Some patchy drizzle and fog formed in eastern counties. Isolated thunderstorms were reported in the southeast early in the night. During the day, although the southwest and some coastal areas elsewhere saw sunshine, the day was characterised by large amounts of cloud and pockets of heavy, sometimes thundery rain, which lingered in places well into the evening.

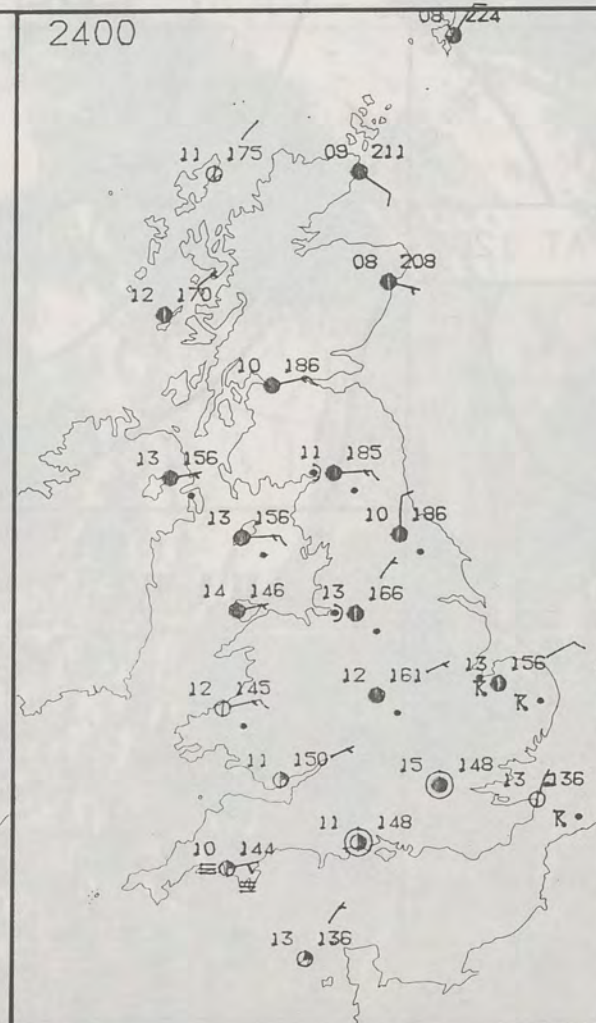

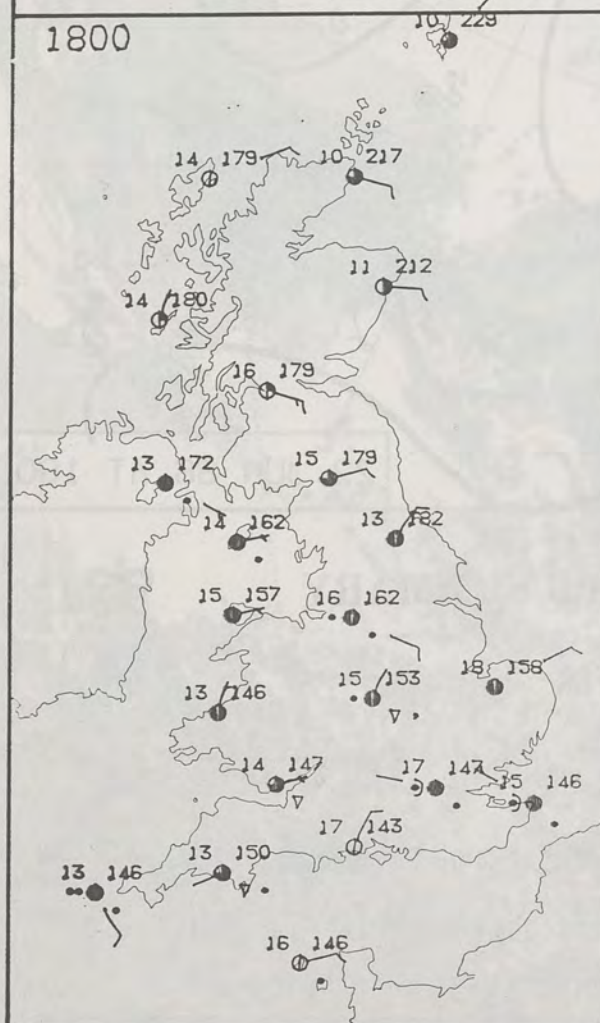

Temperature levels were very variable, ranging from well below normal under thick overcast cloud and near the east coast, to a few degrees above normal in some of the Scottish sunnier areas.

MONDAY
23 JUNE 1986

SUMMARY
OF
BRITISH WEATHER

Northern Scotland had a dry night, followed by a dry and sunny day, though the east coast remained dull and misty.

Southern Scotland, Northern Ireland and northern England had a cloudy night with some heavy rain, followed by a mostly cloudy day with some light rain, but also brighter spells developing during the afternoon. Cloud increased and thickened towards evening.

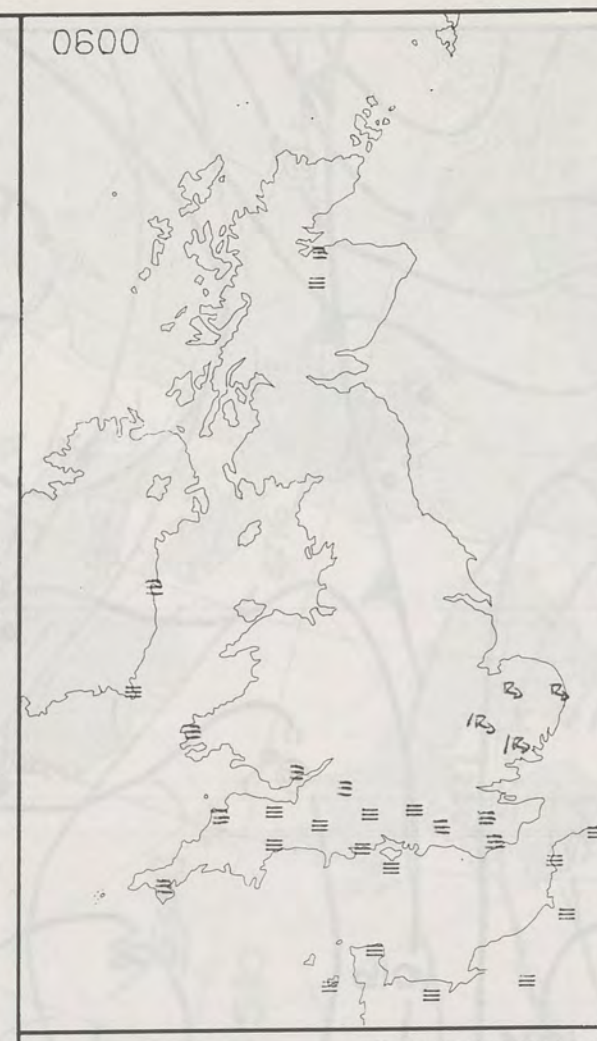

For the remainder of England and all of Wales, dense fog formed in southern counties of England for a while overnight, and some heavy rain with scattered thunderstorms lingered in East Anglia and eastern England. The fog cleared readily into the morning, but many places had a cloudy day, with the best of any sunshine near coasts. In East Anglia isolated showers developed, and later in the day some heavy and thundery rain moved into southern counties, moving north to central areas during the evening.

Temperature levels again very variable, ranging from about normal given sunshine, to much below normal along dull and misty coasts in the east.

TUESDAY
24 JUNE 1986SUMMARY
OF
BRITISH WEATHER

An area of rain, heavy at times, covered the North Midlands, North Wales and southern counties of northern England at first, and moved slowly north across the rest of northern England and much of Northern Ireland by the morning. There were isolated thunderstorms over northeast England, and fog over hills and near some coasts. Southern Britain had a mostly dry night, and most of Scotland had a dry night too.

During the day, the area of rain continued moving slowly north into Scotland, but the rain became lighter and more intermittent. Northernmost regions of Scotland stayed dry and fairly sunny. There was some fog near the east coast.

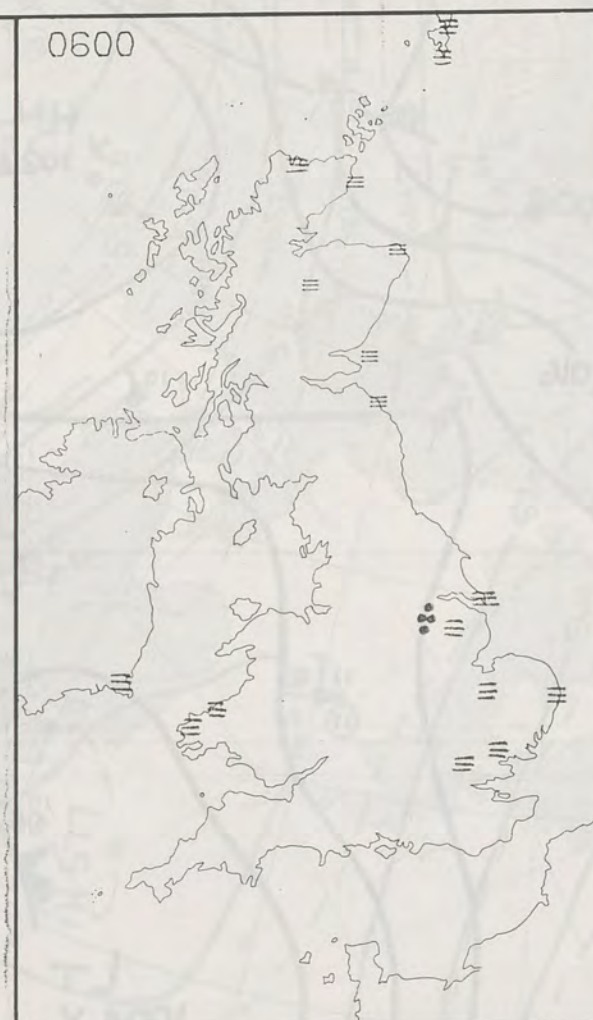

Northern Ireland and northern England became mostly dry and a little brighter, but further outbreaks of rain moved northeast across southwest England and Wales, and later Northern Ireland. The Midlands, East Anglia and southeast England were mostly dry and bright with only the odd light shower.

Temperatures were mostly not far from normal, but parts of north-west Scotland were warm.

25 JUNE 1986

SUMMARY OF BRITISH WEATHER

There was some rain overnight in western and northern regions, but southeastern Britain had a fine night.

During the day, a little more rain fell in northwestern districts, and there were a few light showers in northern and western England and Wales. However, most of the country had a dry, bright day, and many parts of England and Wales were sunny.

Most places were warm, and it was very warm over much of eastern and central England. However, temperatures were only near normal in parts of northwest Scotland.

SUMMARY

OF

BRITISH WEATHER

It was a dry night everywhere and most places were mild. Over England it turned misty.

During the day much of Britain was sunny and warm but quite brisk easterly winds kept the east coast cooler.

Most places were dry but in Northern Ireland, southern England and the Channel Islands there were a few showers here and there and in the Channel Islands one or two thunderstorms, and in the Western Isles of Scotland there was some rain.

SUMMARY
OF
BRITISH WEATHER

Much of Britain had a dry night although in northern and western Scotland there was a little rain and later in the night Cornwall had a few thunderstorms. Over southern England it was a very warm night, at Exeter Airport it was the warmest night since records began in 1942 with the lowest temperature 22°C (72°F).

During the day most places had a lot of dry fairly sunny weather but in western areas of both England and Wales, the Isle of Man and in Northern Ireland there were some showers and thunderstorms. Northern and western Scotland had a little rain here and there.

Most places were again warm or hot but east to southeast winds kept eastern coastal districts much cooler than inland.

SATURDAY
28 JUNE 1986

SUMMARY
OF
BRITISH WEATHER

Much of the United Kingdom had a dry, warm night, with mostly clear skies and well broken cloud. There were some scattered showers in the north though, and many western coasts of Wales and England turned very misty with sea fog.

Saturday morning was mostly dry. Temperatures climbed strongly in the bright sunshine, though parts of the West Country were cloudy with some showery rain and many coasts here remained misty. The afternoon was dry and hot in most places, although somewhat cooler on coasts affected by sea breezes.

Some isolated thundery showers turned up during the evening in the far west of Britain and in parts of Northern Ireland, becoming rather more widespread and heavy in Cornwall and West Devon towards midnight.

SUNDAY
29 JUNE 1986

SUMMARY
OF
BRITISH WEATHER

Scotland, northern and most eastern districts of England had a dry night, followed by a dry day, with sunshine.

Midland and central southern counties of England, also northern and eastern Wales had a dry, mostly clear night. It clouded over during the morning with thick upper cloud, and some very light rain was reported from some areas in the south, and over Wales. The afternoon was dry with sunshine in places.

Southwest Wales, southwest England and the Channel Islands had outbreaks of heavy, squally thundery rain, with hail being reported in places.

Northern Ireland had thunderstorms overnight. During the day, some thicker cloud gave bursts of rain in the west, but in the east it was generally dry.

More thunderstorms were reported in southwest Britain during the evening, but other areas stayed dry.

Many places (especially inland) were again very warm or hot.

SUMMARY OF BRITISH WEATHER

There were further thunderstorms in the Channel Islands, Devon and Cornwall overnight. Otherwise it was a dry night, but low cloud and mist spread inland from the North Sea across many eastern and central districts of Britain.

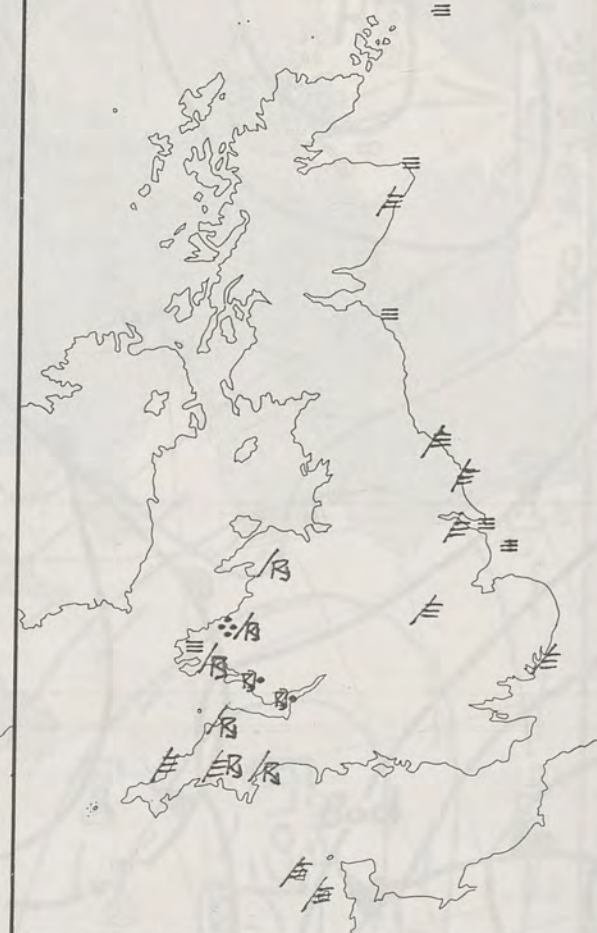

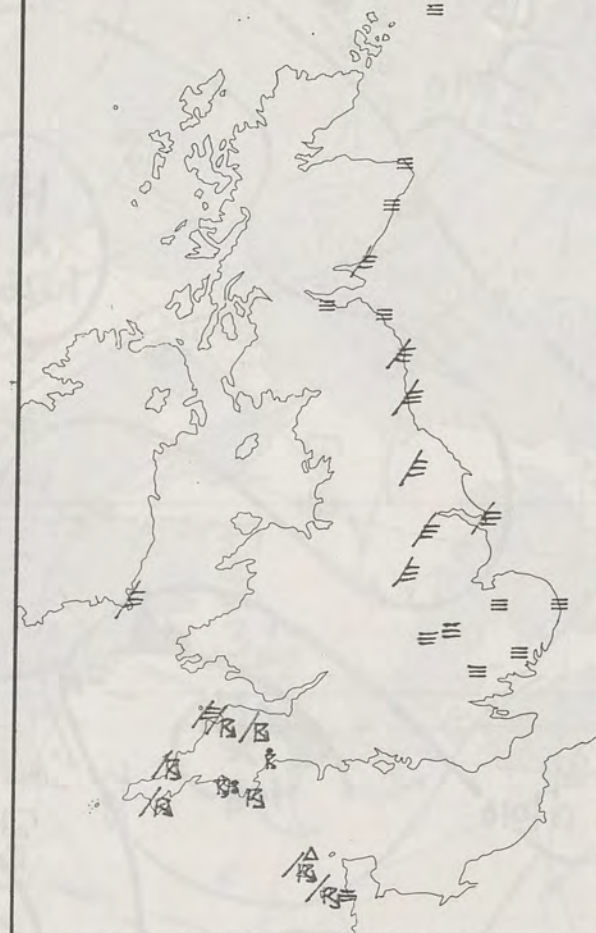

During the morning, the sun burnt off the misty low cloud, with the most inland regions clearing first. However, it was well into the afternoon before much of east and northeast England cleared, and parts of the coast had a dull, chilly day. For much of the country, though, it was another very warm or hot, sunny day - exceptionally hot in central and northwest Scotland.

The thundery outbreaks in southwest England cleared by mid-morning, but moved on into south and west Wales, where they had mostly died away by mid-afternoon. However, a band of cloud moved northeast across much of the British Isles during the afternoon and evening, with some rain in parts of the west.

Clearer skies and cooler weather followed from the southwest later; Devon, Cornwall and southwest Wales had a rather cool day generally.
