FRIDAY
1 JUNE 1984

SUMMARY
OF
BRITISH WEATHER

In Northern Ireland after over-night rain the day was dry with sunny intervals. In southwestern counties of both England and Wales there was rain in places at first but brighter weather extended eastward during the morning and there were sunny periods and isolated showers. Over the rest of Wales, southern England, East Anglia and the Midlands rain spread to all parts during the night and early morning. The rain was heavy at times with isolated thunderstorms before brighter, dry weather followed during the afternoon and evening.

PLOTTED SURFACE OBSERVATIONS

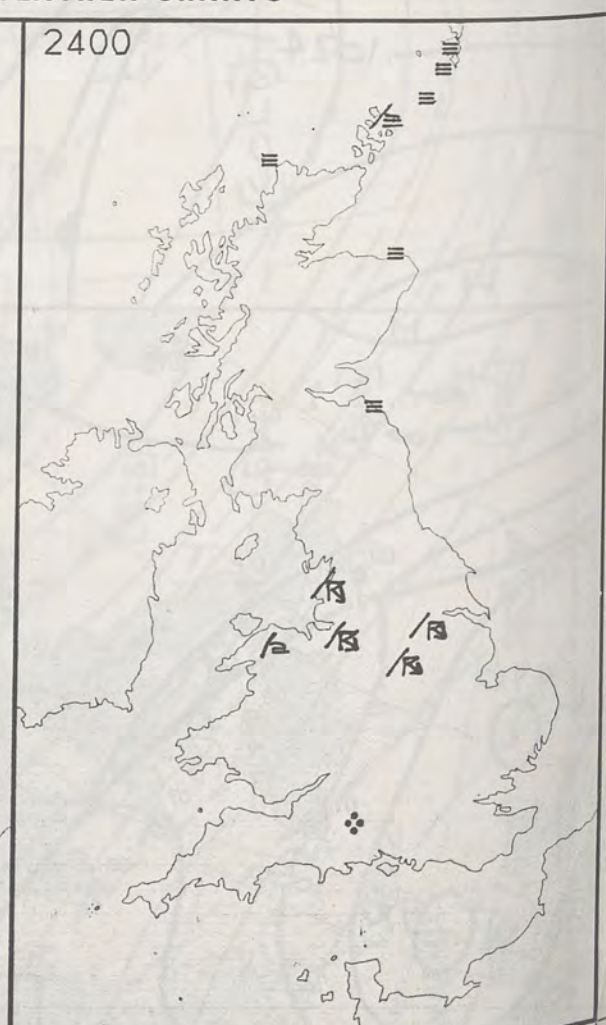

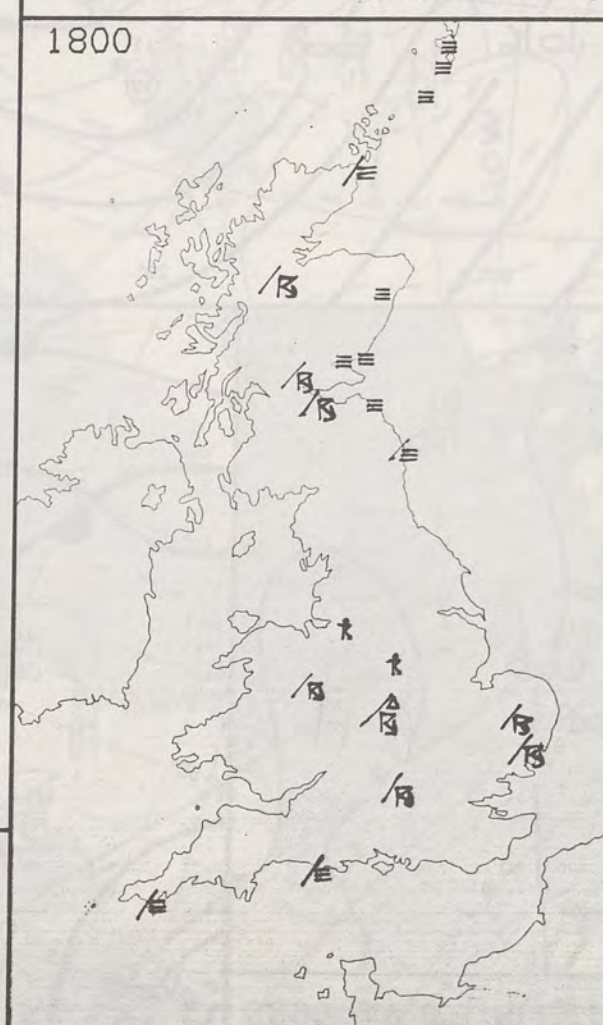

In northern England and Scotland it was a mainly cloudy day with outbreaks of rain. The rain was heavy in places with thunder, especially around the southern Pennines and in southeast Scotland. Parts of northeast Scotland remained dry but in the Northern Isles and near eastern coasts it was dull and misty.

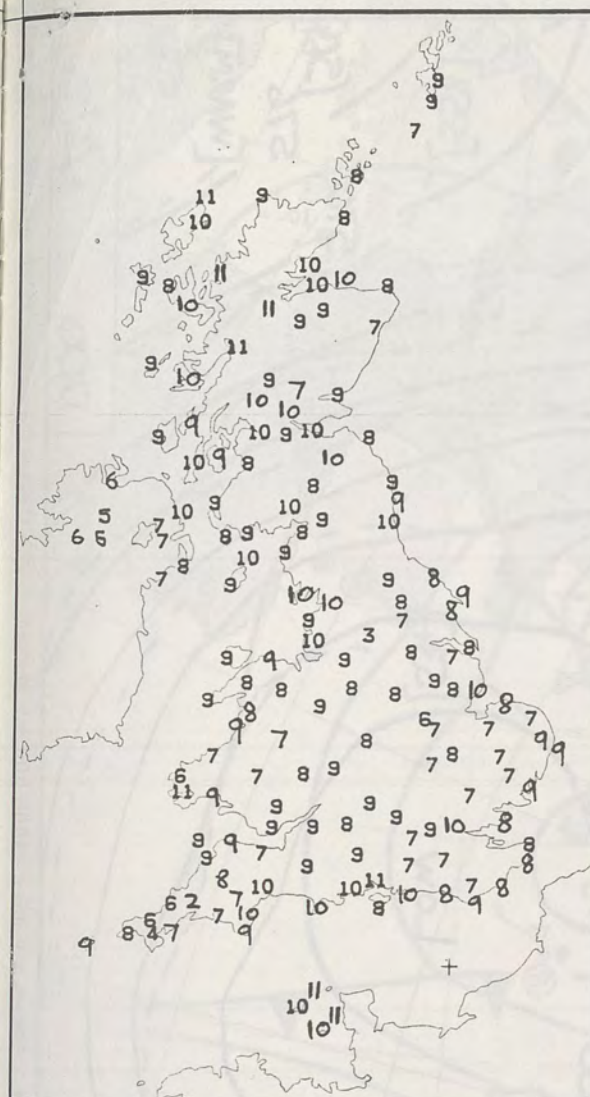

It was cool in many regions but in Northern Ireland and north and northwest Scotland temperatures were near normal, while around the Moray Firth it was warm.

2 JUNE 1984SUMMARY
OF
BRITISH WEATHER

After early rain in central and eastern counties of England, most of England and Wales had a dry day with long sunny periods but one or two light showers. Further rain reached West Cornwall around midday, spreading to the Channel Islands, Wales and southern and western areas of England during the late afternoon and evening. The rain was heavy at times, accompanied by thunderstorms.

Northern Ireland was dry and sunny for much of the day but there were thunderstorms during the evening and more persistent rain later.

Scotland started overcast with rain, moderate at times and fog in the east and north. The rain cleared away northeastwards then the afternoon was dry with some sunshine.

Most areas of Britain had near normal temperatures but much of southern England was rather cold.

SUNDAY
3 JUNE 1984

SUMMARY
OF
BRITISH WEATHER

Over England and Wales there were several hours of rain, heavy at times and accompanied by thunder, crossing southern counties overnight and reaching northern England by daybreak. This was followed from the south by sunshine. There were showers and an occasional thunderstorm over Wales and western counties, the east stayed dry.

In Scotland the day started dry with some early sunshine in the northwest, low cloud and fog in the northeast. Rain reached southern Scotland during the morning and spread to all areas through the day, heavy at times and accompanied by thunder.

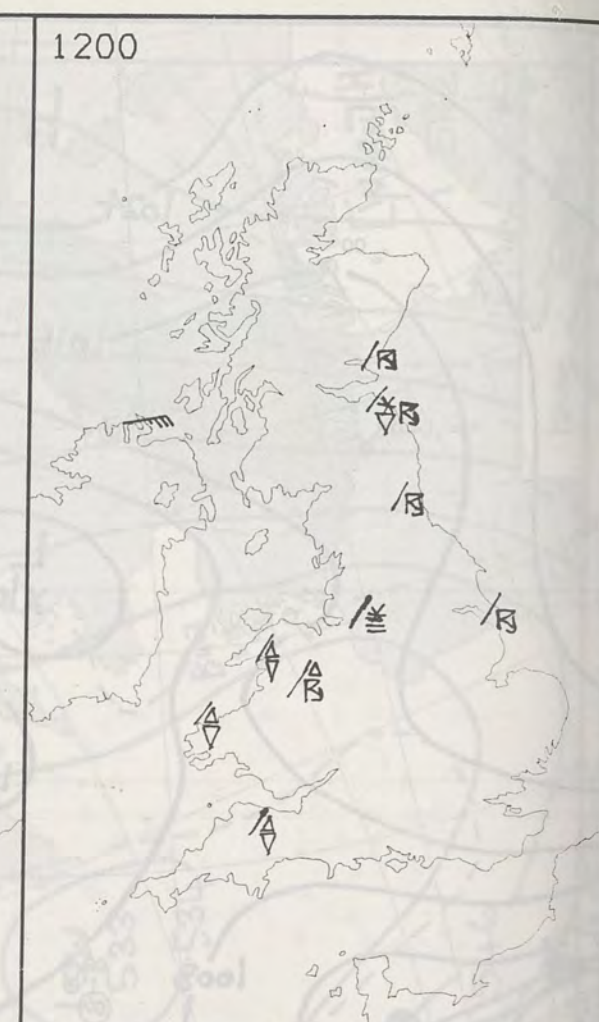

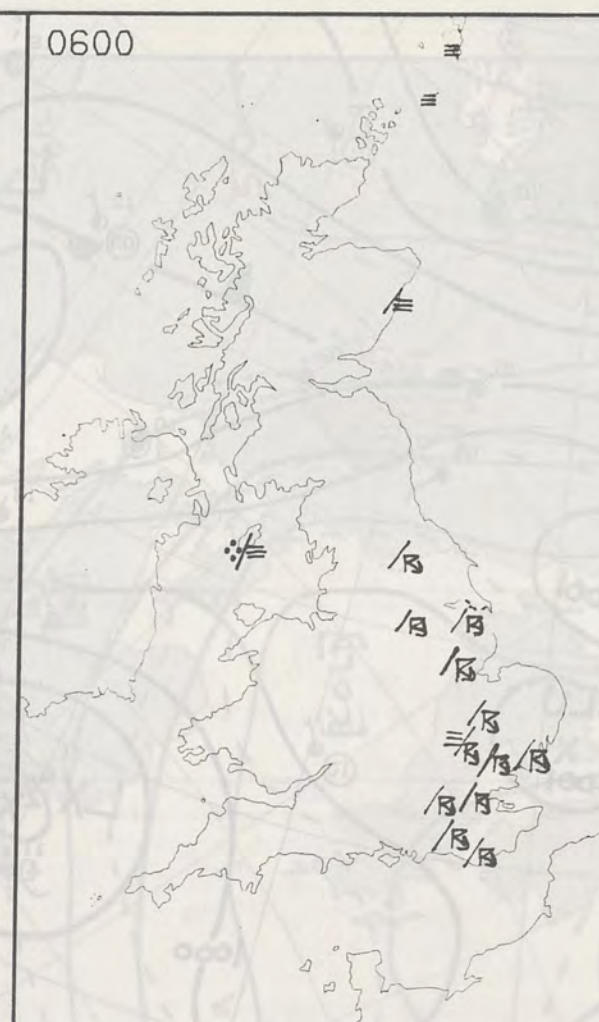

Clearer weather spread from the south to all but the Northern Isles by evening, followed by scattered showers. Northern coasts and the Northern Isles were affected by fog late in the evening.

Northern Ireland started dry but there was rain, sometimes heavy, from soon after dawn until mid-afternoon with showers following.

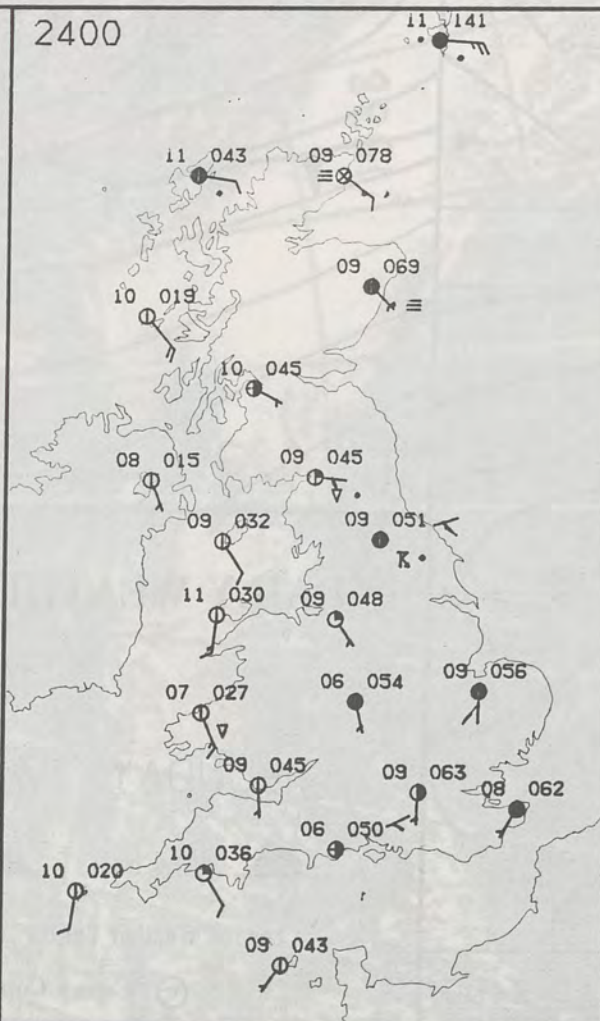

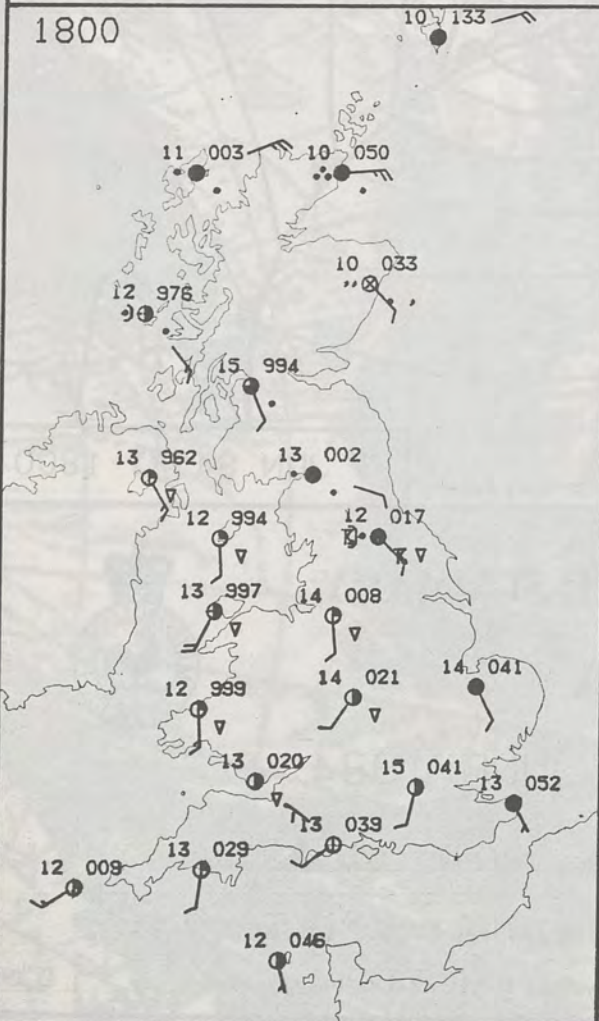

Most places had a rather cool day.

MONDAY
4 JUNE 1984

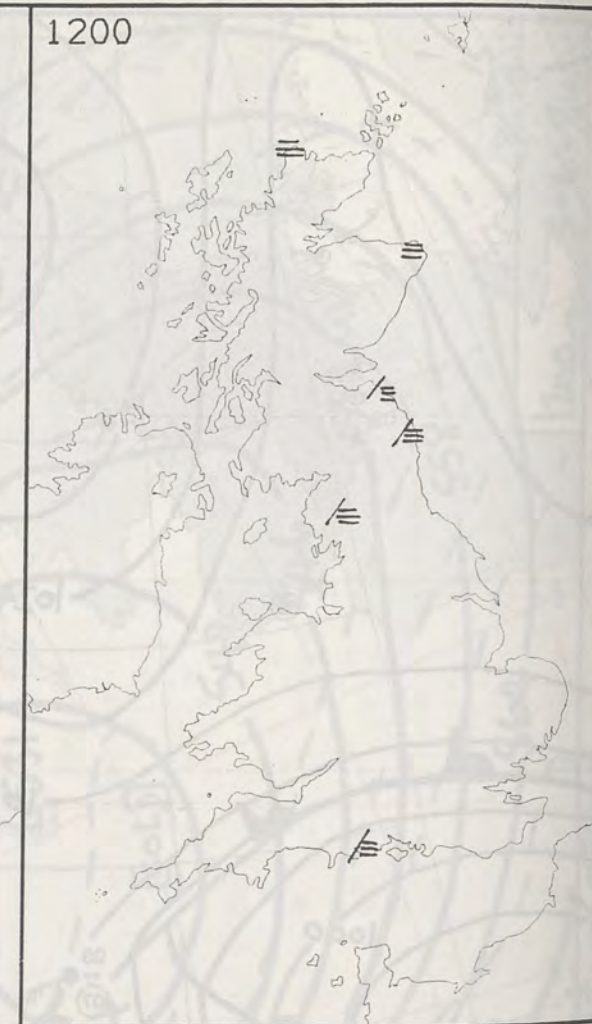

SUMMARY
OF
BRITISH WEATHER

Northeast Scotland was mostly dull and wet. Thickening cloud, followed by rain, gradually moved west into other eastern districts of the British Isles during the day. However, much of eastern England was dry until late in the day. Heavy rain and thunderstorms affected southeast Scotland and northeast England during the late afternoon and evening. It also became foggy over hills and coasts in the northeast and all these eastern and northeastern areas were cool. Shetland, however, became brighter and warmer during the day and it became drier over the mainland of northeast Scotland in the evening.

1200

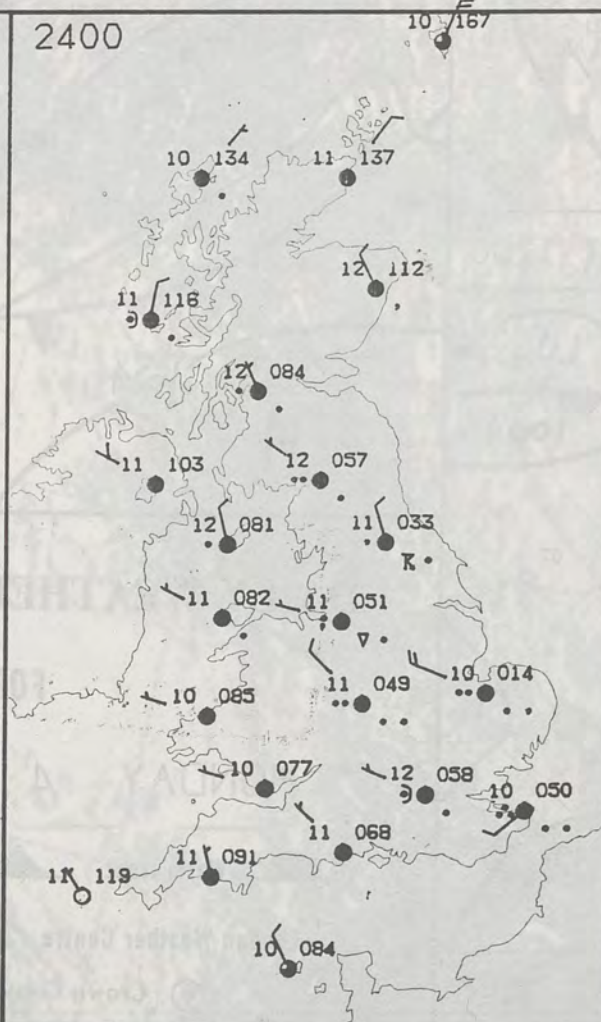

PLOTTED SURFACE OBSERVATIONS

1800

2400

Western and southern Scotland, northwest England, the Midlands and southeast England had a mostly dry, bright day, after a chilly night. It clouded over later, with rain in many places in the evening. Daytime temperatures approached normal.

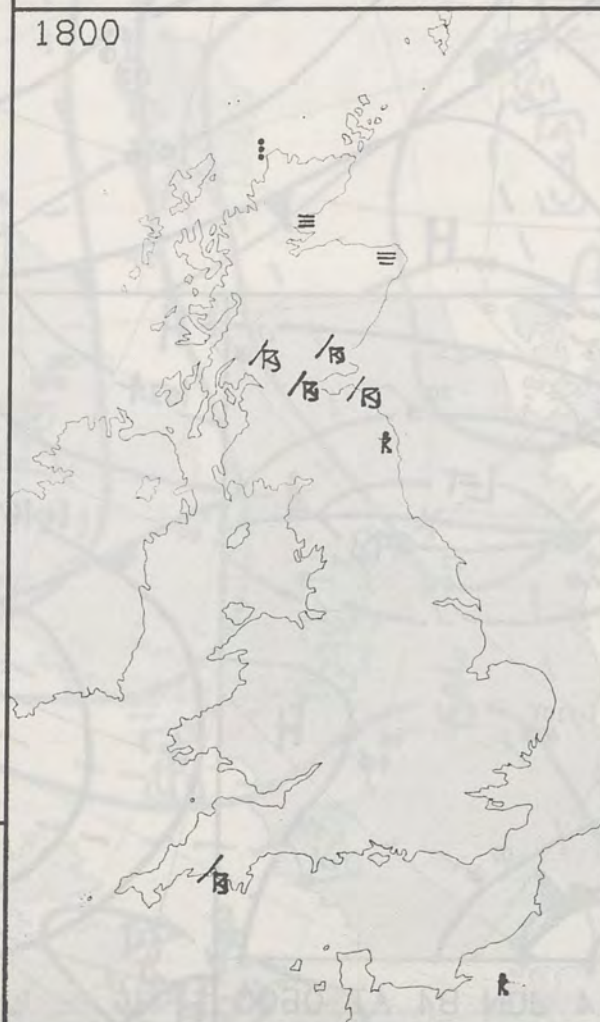

Northern Ireland, Wales, central southern and southwest England were mostly dry and quite sunny with temperatures rather below normal. However, there was a thunderstorm near Plymouth in the late afternoon, and most places became cloudy in the evening.

TUESDAY
5 JUNE 1984SUMMARY
OF
BRITISH WEATHER

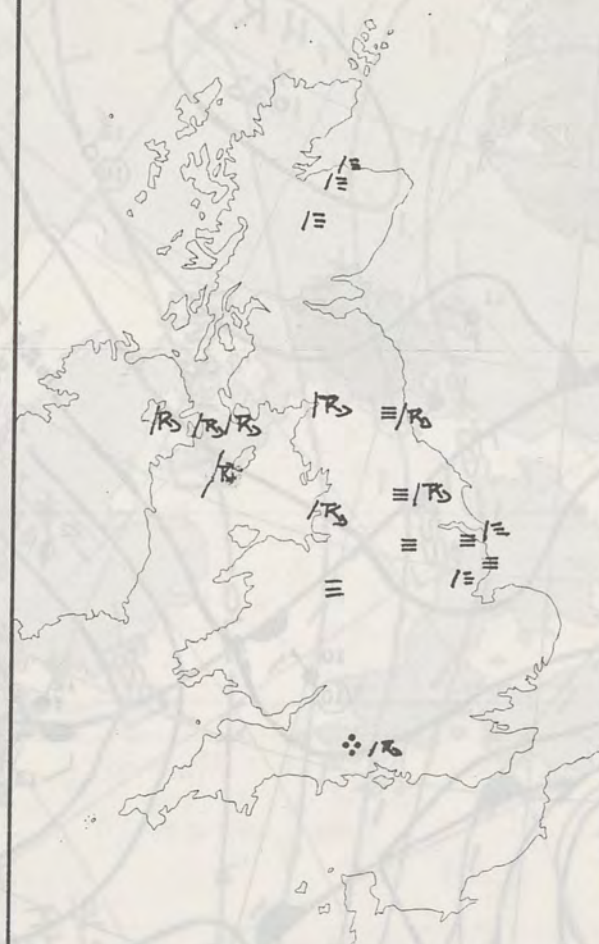

Rain moved west across England, Wales and Northern Ireland during the early hours. There was some heavy rain and thunderstorms occurred in the north. Southern coastal regions from Hampshire westwards had very little rain and some places here stayed completely dry. Hill and coastal fog became extensive over northeast England. During the morning, drier weather spread from the east to most places and areas towards the southeast and south coast became quite sunny. Parts of the coast of northwest England also turned much brighter. However, over most of England, Wales and Northern Ireland it remained quite cloudy with some further drizzle or showers in places. Heavier rain returned to parts of northern England during the evening. Most places had a fairly cool day, but temperatures were not far from normal in the brighter areas.

Much of southern Scotland had a dull, quite cool and rather damp day, but most of western, central and northern Scotland brightened up and many places were sunny and warm or locally hot.

WEDNESDAY
6 JUNE 1984SUMMARY
OF
BRITISH WEATHER

Other than one or two showers, the southern half of England and Wales had a dry but mainly cloudy night. However, North Wales, northern England, Northern Ireland, southern and eastern Scotland had some rain. Some of the rain was quite heavy with thunder reported in southeast Scotland and some eastern coasts and hilly areas were very misty. Northwest Scotland had a dry night with clear periods. During the day there were a few light showers in the south but most southern areas of England and Wales were dry and quite sunny. Further north it was a cloudy day and there was some rain in parts of northwest England and particularly in Northern Ireland, southern, central and eastern Scotland. During the evening there was still a little rain in eastern Scotland and further rain spread to many parts of eastern England, the Midlands and East Anglia. By contrast parts of central and western Scotland were dry, warm and quite sunny.

THURSDAY
7 JUNE 1984SUMMARY
OF
BRITISH WEATHER

Much of the Midlands, East Anglia, central southern and southeast England had a wet and misty night and there was some heavy rain in places but many parts of the Midlands, the London area and Norfolk were drier by morning. There was also a little rain in parts of Devon, Wales, Northern Ireland and southwest Scotland but most of Cornwall, northern England and Scotland had a dry night with clear spells. The coasts of northern and eastern Scotland and northeast England, however, were misty with some drizzle and there was also some fog in the Central Lowlands of Scotland. During the morning drier and brighter weather spread to remaining parts of southern England and apart from a few spots of rain in southeast England and some thundery showers over Wales and northern England, many parts of England and Wales had a dry day with sunny periods. Rain did not clear the Channel Islands until the afternoon and many northeastern coasts were misty. Northern Ireland and Scotland also had a dry day with a good deal of sunshine. Much of Scotland was very warm but some northern and eastern coasts of Scotland were again cooler and misty in places. Northern Ireland was very warm. England and Wales were mostly warm, however some places were also very warm. It was rather cool though in Cornwall and the east coast of England.

FRIDAY
8 JUNE 1984

SUMMARY
OF
BRITISH WEATHER

In eastern counties of England together with parts of eastern and northern Scotland it was a cloudy start and in some coastal regions it remained cool and cloudy all day. Further inland cloud became well broken and much of the day was sunny but rather cool in the fresh northerly breeze.

Over the rest of Britain and Northern Ireland early mist patches quickly cleared and the day was sunny and generally warm. In Northern Ireland, parts of western Britain and southern and central parts of Scotland it was very warm.

SUMMARY OF BRITISH WEATHER

In northern and eastern Scotland it was rather cool and cloudy especially near the east and north coasts. In the Shetlands there was drizzle at times. It was also rather cool with patches of cloud in the Western Isles and along parts of the English east coast.

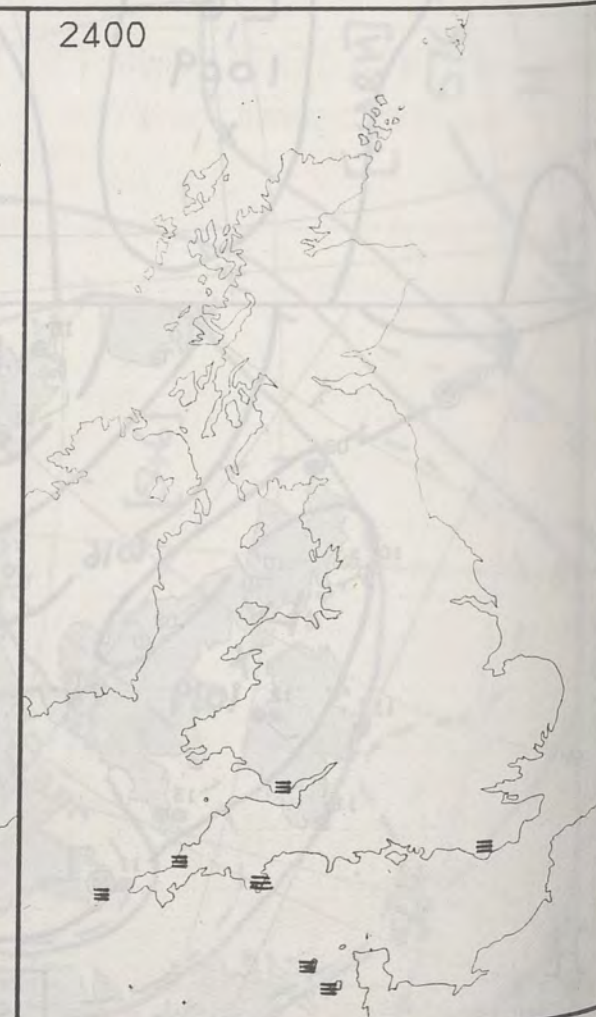

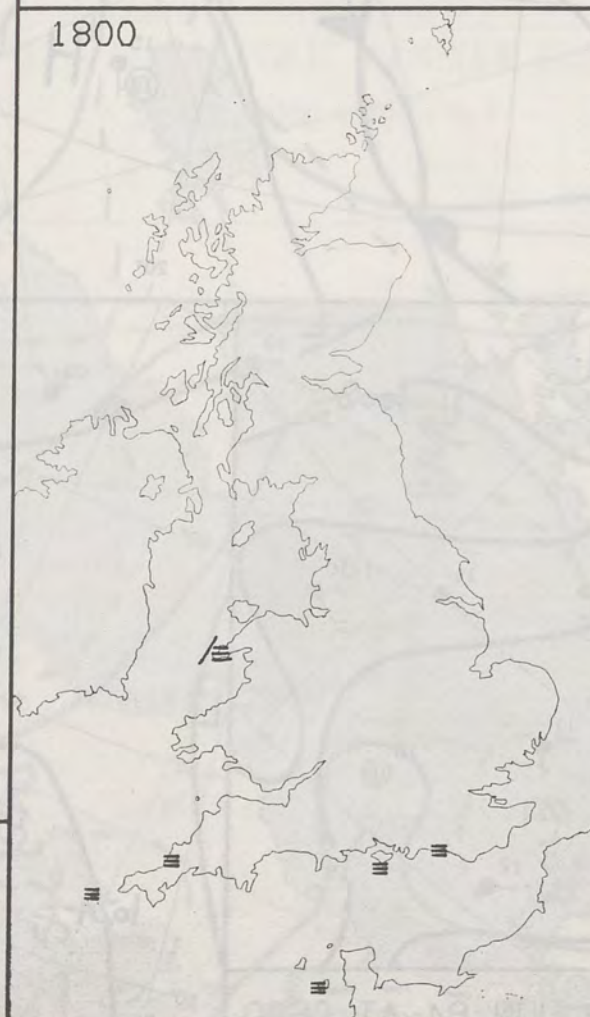

In many other regions it was a very warm, sunny day but isolated showers developed over the Pennines and high ground of the West Midlands and Wales. Along some southern and southwestern coasts there were a few patches of sea fog, chiefly on the coasts of Cornwall, Sussex and Hampshire.

SUMMARY
OF
BRITISH WEATHER

The night was dry but rather cloudy over a good part of the country. Broken cloud in Wales and western areas of England lead to the formation of a few fog patches. Sea fog also affected some coasts.

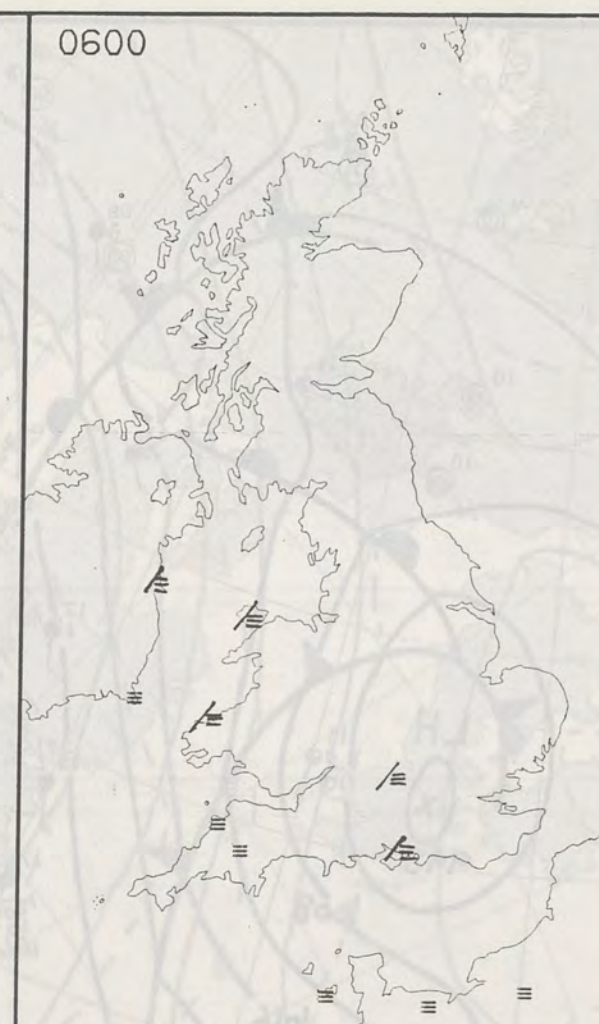

The day was dry but rather cloudy over much of the country. Some sunny intervals did, however, occur. Wales and southwestern England had the best of the sunshine. There were a few spots of rain in western Scotland and a little drizzle in the eastern Midlands.

Temperatures in many places were close to normal but it was cool in most of eastern England. In contrast many inland parts of Scotland were warm.

SUMMARY
OF
BRITISH WEATHER

Much of Scotland and Northern Ireland were cloudy with outbreaks of rain, some of this rain was heavy, especially over the north and west of Scotland. During the late afternoon it became brighter and drier from the west.

England and Wales also started the day generally cloudy, with some patchy fog for a while around dawn. There was some drizzle near west facing coasts. During the day a few outbreaks of rain spread to other northern and central parts.

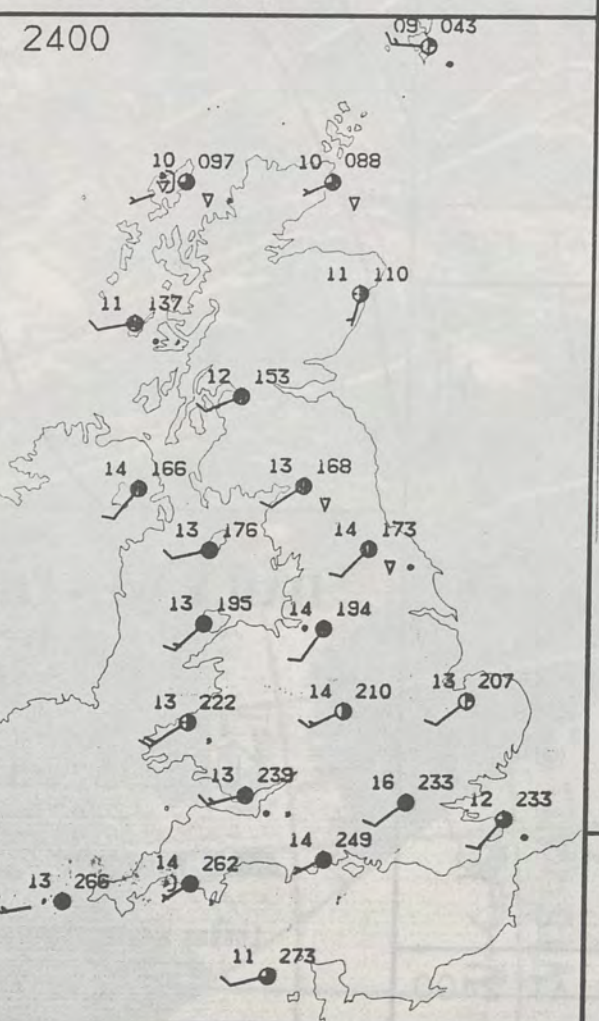

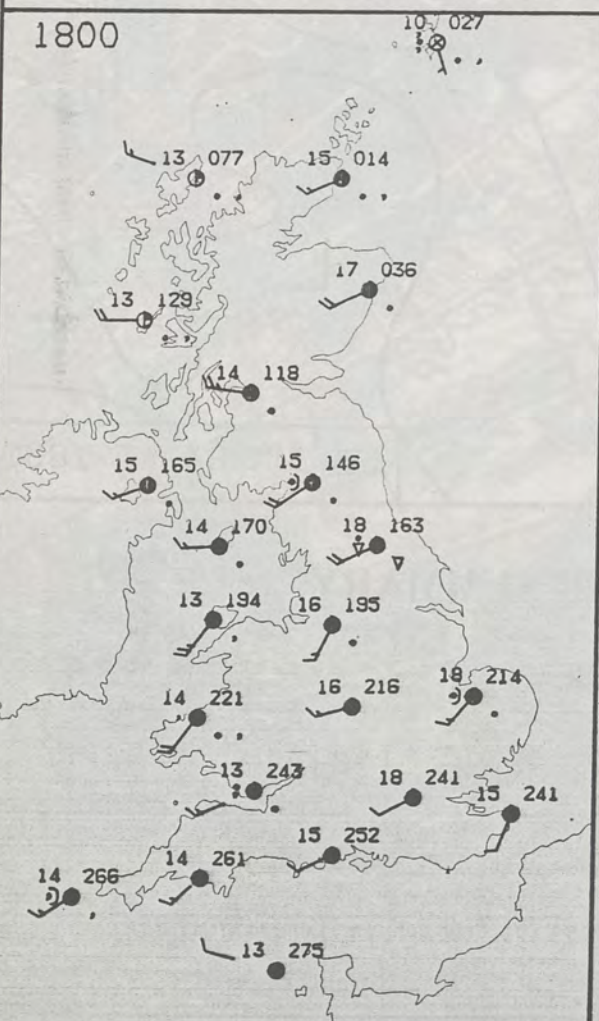

Despite a good deal of cloud, most areas had near normal temperatures. The winds were quite strong in the north.

WEDNESDAY
13 JUNE 1984

SUMMARY OF BRITISH WEATHER

Many southern parts of England and Wales had a dry day, but it was mostly cloudy at first. Central and eastern counties of southern England became quite sunny at times during the afternoon. The southwestern coasts stayed generally dull and misty all day.

North Wales, northern England, Northern Ireland and southern Scotland were dull and wet for much of the time. The rain was heavy in places, especially over the hills.

Central and northern Scotland had some sunshine at times, but there were quite a few showers, however most of these were fairly light.

It was rather windy in many areas with a fresh southwesterly.

Much of England was warm, south-west England, however, and Wales were rather cool, remaining areas of the UK had near normal temperatures.

SUMMARY
OF
BRITISH WEATHER

Over much of Britain it was a cloudy night, and many places were dry, although in England and Wales there was some rain and drizzle and northern and western Scotland had a few showers.

There were further showers in northern and western Scotland during the day, but most places in Scotland were dry, with some sunshine.

Northern Ireland and the Isle of Man had a dry day with some afternoon sunshine, while northern England was dry with quite a lot of sunshine.

Wales, central and southern districts of England and the Channel Islands were cloudy early and there was a little rain and drizzle here and there. In most places the weather brightened up with some sunshine, but the Channel Islands and parts of southwest England and West Wales stayed cloudy with drizzle and coastal fog patches.

Much of England, Northern Ireland and central Scotland were rather warm (very warm in places in the home counties). Most remaining places had normal temperatures but Cornwall and the Outer Hebrides were rather cool.

FRIDAY
15 JUNE 1984SUMMARY
OF
BRITISH WEATHER

Much of Britain had a dry night with clear skies, but the Channel Islands, parts of southwest England, west Wales, the Isle of Man, Northern Ireland and northern and western Scotland were cloudy with some drizzle and coastal fog.

The Channel Islands and many places in England had a sunny day, but the Isle of Man and parts of northern England and the Midlands were rather cloudy. Most places in Wales were fairly cloudy and there was some drizzle and coastal fog. However, parts of South Wales were sunny.

Northern Ireland had a cloudy day, with drizzle in the morning and in northern and western Scotland, too, the weather was cloudy, with some drizzle and coastal fog.

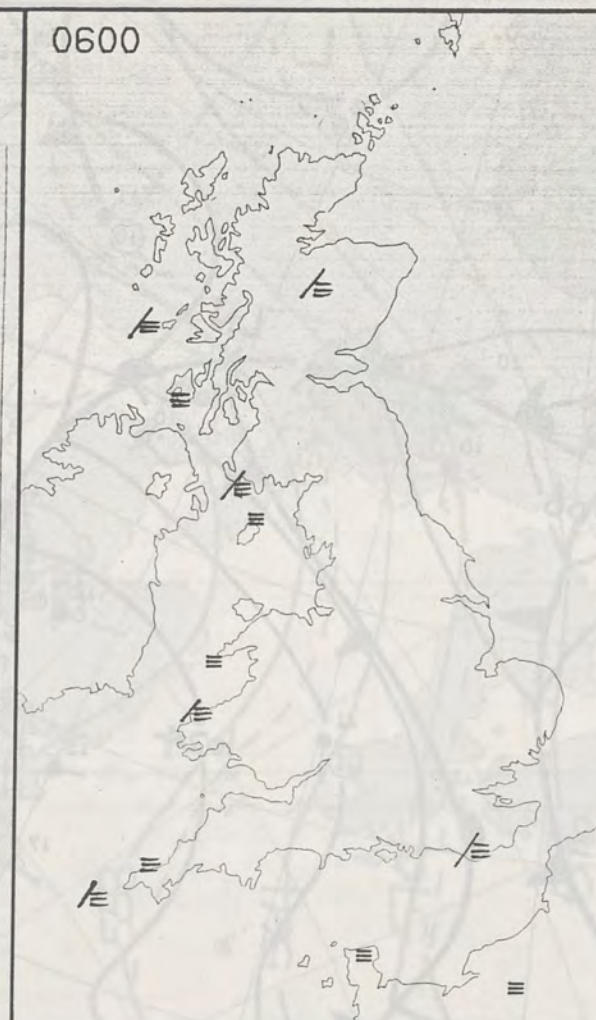

Central and eastern Scotland stayed dry with some sunshine.

Much of Britain was warm, very warm in central southern England and central Scotland, but many coastal districts had temperatures below normal.

SATURDAY
16 JUNE 1984

SUMMARY OF BRITISH WEATHER

Most regions had a dry day with variable amounts of cloud and sunny periods. The sunniest parts were regions bordering eastern and southern coasts of England. In Northern Ireland, southwest Scotland along with northwestern counties of England and Wales, cloud was more persistent and sunny intervals were generally brief. Isolated thunderstorms developed during the afternoon and evening in Wales, northern England, Northern Ireland and Scotland. On some western coasts and in the Northern Isles there were patches of mist and drizzle.

SUNDAY
17 JUNE 1984

SUMMARY
OF
BRITISH WEATHER

In Northern Ireland, northern and western Scotland it was mainly cloudy with patches of drizzle or light rain. During the afternoon and evening cloud became well-broken at times in northeast Scotland and Northern Ireland.

In the Channel Islands, Wales and western counties of England it was a dry day, mainly sunny in the Channel Isles and southern coastal regions and there were sunny periods in most places. On some western coasts however, low cloud and mist persisted.

In northeast England and southeast Scotland there were isolated thundery showers but most places remained dry with sunny periods.

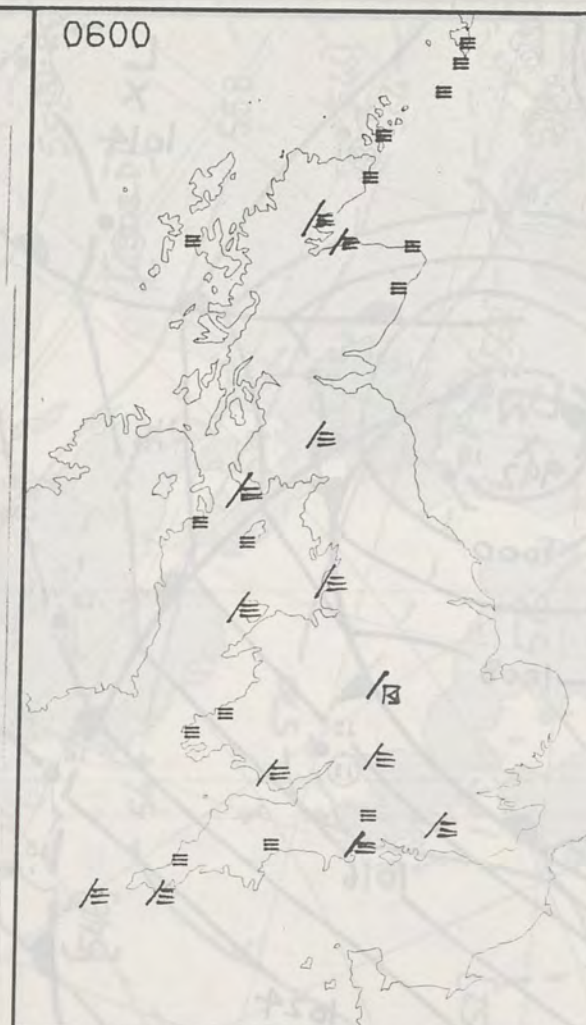

After a fairly sunny start much of southeastern England had thunderstorms during the afternoon and evening. Hail was also reported from St. Albans (Hertfordshire). Preliminary reports suggest that there was a considerable variation in the amount of rain that fell, the heaviest being along the Thames Valley and over the Chilterns. The large variation over a short distance is well illustrated by the 60 mm report from Luton compared with less than 1 mm recorded at Whipsnade.

Northern Ireland and the western areas of England and Wales were mostly rather warm. The rest of England and Wales and central and southern Scotland were very warm. By contrast the Northern Isles and north and west Scotland had only average June temperatures.

SUMMARY
OF
BRITISH WEATHER

Western Scotland and the Northern Isles were affected by low cloud with patchy fog on coasts and hills, and occasional drizzle. Temperatures were slightly above normal.

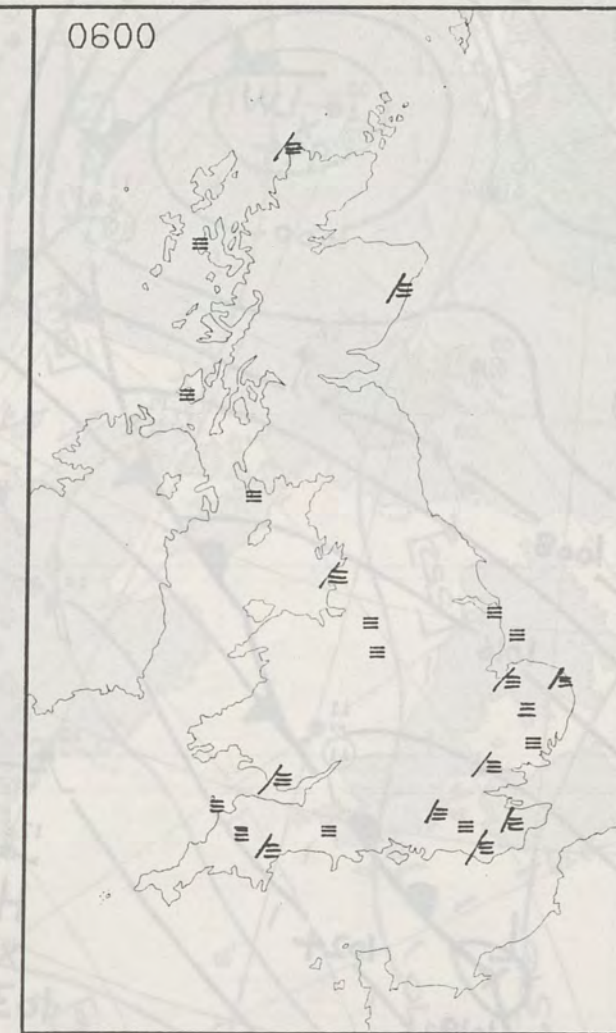

Eastern Scotland was dry with sunny intervals and it became very warm even hot in places.

Northern Ireland had drizzle early and then together with the northern half of Wales and the northern half of England had a very warm day with good sunny intervals.

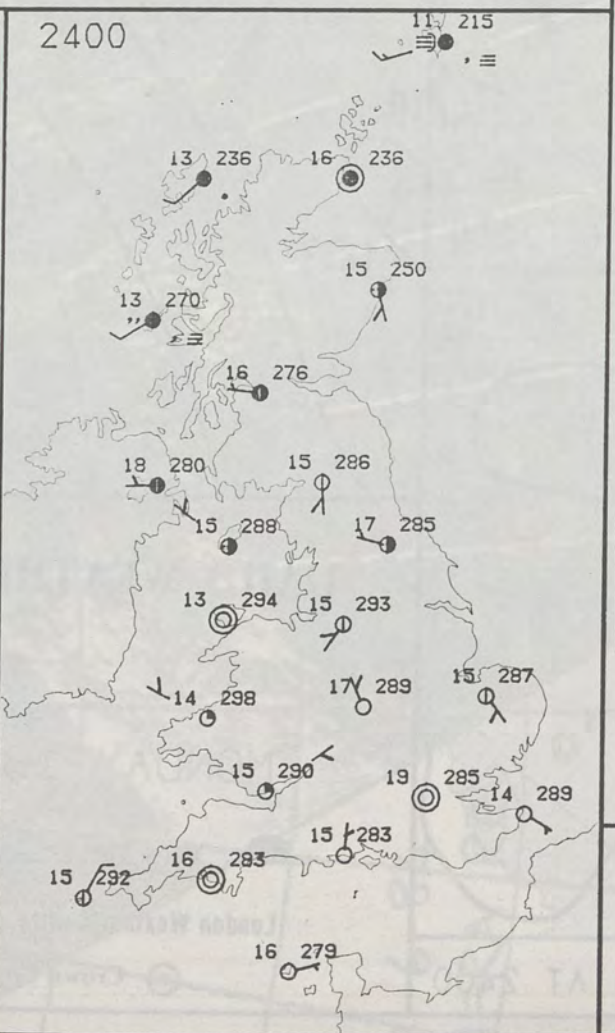

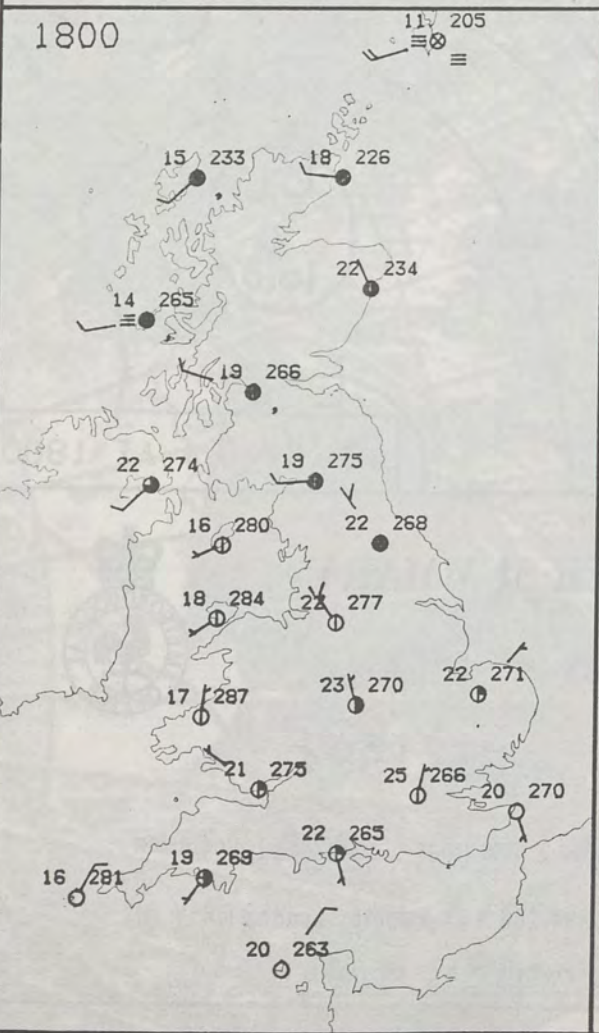

Southern England and South Wales were sunny and mostly very warm with a number of places becoming hot. There were a few scattered showers in the south and east of England late in the day.

TUESDAY
19 JUNE 1984SUMMARY
OF
BRITISH WEATHER

Northern and western Scotland had a cloudy day with occasional rain and drizzle and extreme hill and coastal fog. The far north became clearer during the evening. Temperatures were a little above average.

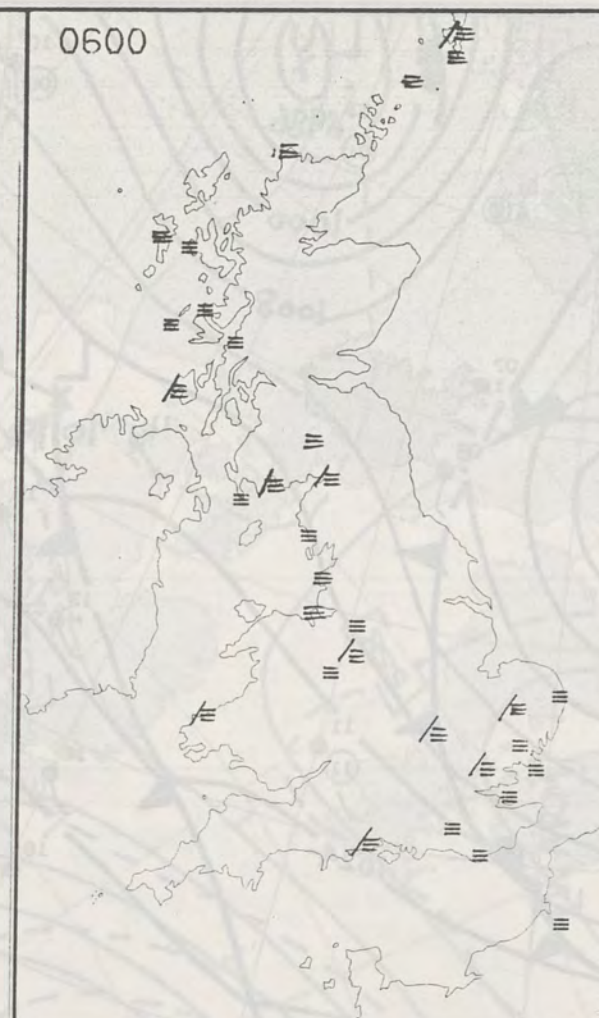

Northern Ireland, eastern Scotland and northern England were rather cloudy but there were good sunny intervals to the east of high ground. It became mostly very warm, even hot in the Vale of York.

Remaining inland areas of England and Wales were hot and humid, however coastal areas were a few degrees lower. After early morning fog there were long periods of sunshine, but a few light showers in one or two places during the afternoon and evening.

WEDNESDAY
20 JUNE 1984SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland were mostly warm. There was cloud and some rain over northern and western counties. This was followed by brighter and drier weather during the afternoon. Northwest Scotland and the Northern Isles had temperatures near normal.

Much of England and Wales was very warm and humid again and some extreme southern counties of England were hot. In many places it was a dry day, but the exceptions were quite notable. By the afternoon some heavy thunderstorms had developed over central and eastern England from Whitby in the north of Yorkshire down to Bracknell in Berkshire. Many roads were flooded, power failures occurred and a BBC transmitter in Suffolk was blacked out for a time. Locally some very heavy falls of rain were reported. At Honington in Suffolk 36mm fell in less than an hour with tents on a camp site near Ipswich flattened by the force of the rain. The storms gradually died out later in the evening to be clear of East Anglia before midnight.

SUMMARY
OF
BRITISH WEATHER

Much of England and Wales had a dry day. It was much cooler with temperatures mostly near or rather below normal making it feel fresher than recently. There were sunny intervals in most places, but by late afternoon some northwestern parts of England had clouded over giving a little rain during the evening in northern England and western Wales.

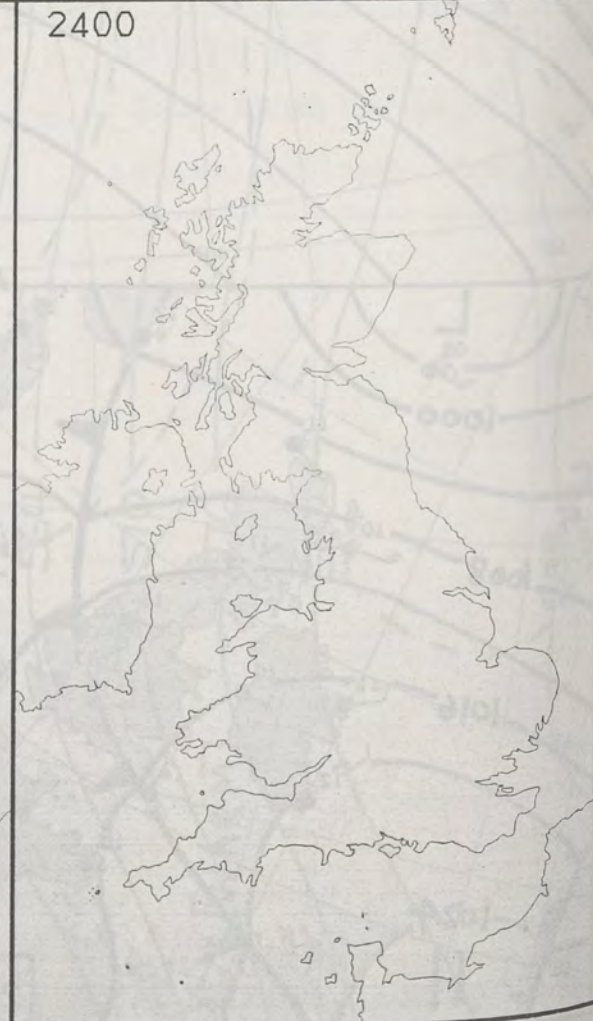

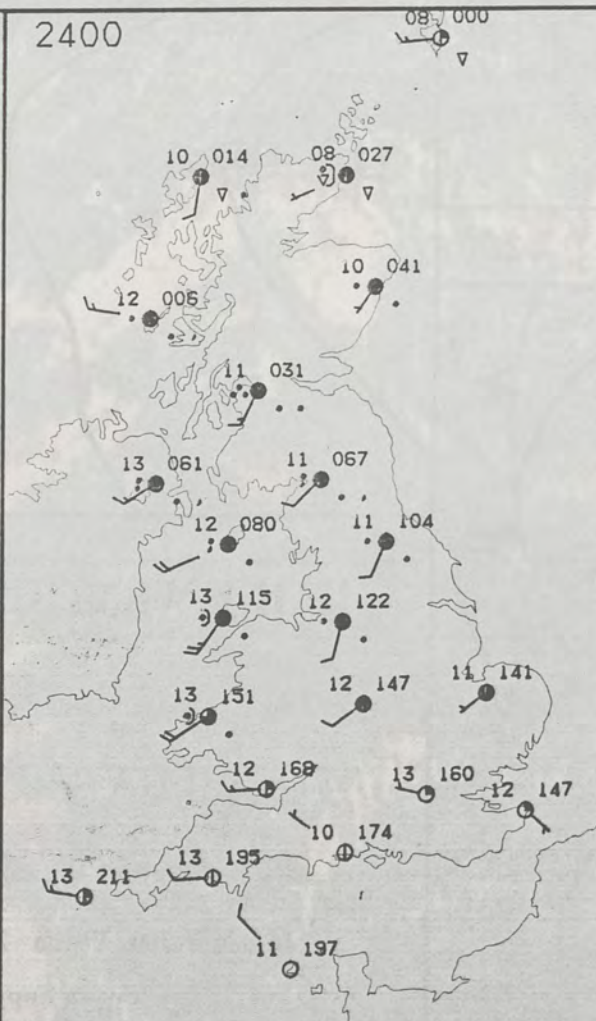

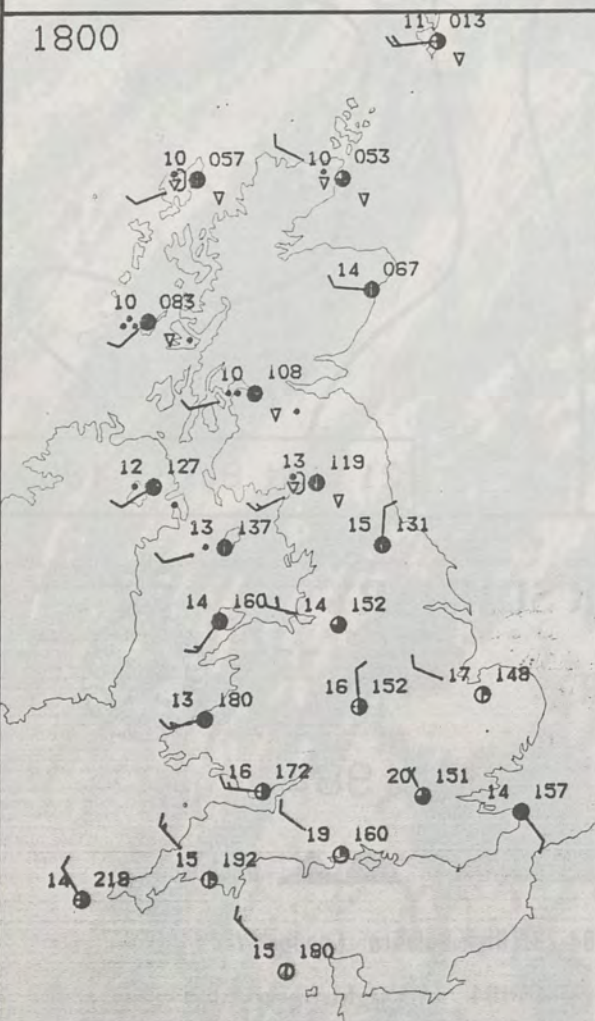

Scotland and Northern Ireland were rather cool and there were quite frequent showers. However, eastern Scotland stayed mainly dry with sunny periods. During the afternoon more general rain reached Northern Ireland and southwest Scotland. This rain became more widespread and affected all but the far north of Scotland by late evening. There was some heavy rain at times in places.

FRIDAY
22 JUNE 1984SUMMARY
OF
BRITISH WEATHER

The early part of the morning was clear over southern England, but it was cloudy elsewhere. Rain soon cleared Northern Ireland and southwest Scotland, but moved on steadily across southern Scotland, Wales and northern England during the early hours. Northern and western Scotland and Northern Ireland had some clear intervals and a few showers.

During the morning, most of England and Wales were cloudy with a little rain in places. Scotland and Northern Ireland had some sunshine and showers. The weather continued showery in these northern regions throughout the day, some of the showers being heavy with hail. Most of England and Wales kept a lot of cloud, but there were some brighter intervals, especially to the east of high ground. A little rain fell here and there with some heavier bursts in the evening and an isolated thunderstorm or two, before the weather turned fine, clear and cool from the northwest.

It was a rather cool day generally although many places southeast of a line Wash to Bristol Channel had temperatures around the seasonal normal.

SUMMARY
OF
BRITISH WEATHER

The early hours were clear and cool, with just one or two showers near northern coasts. The extreme southwest of England was mostly cloudy, and west Cornwall stayed fairly cloudy during the day with a little drizzle. The rest of southern and southeastern England had a mostly sunny day. Most other districts started dry and bright, but it clouded over steadily from the northwest. Rain reached Northern Ireland and parts of southwest Scotland by midday, spreading across southern Scotland, northern England, North Wales and the North Midlands during the afternoon, and the rest of central and southeast England in the evening. Northern and eastern Scotland stayed fairly bright with just a few showers, and this clearer air spread steadily south across the northern half of the British Isles in the evening. Except in parts of the extreme south, most districts were cool.

SUNDAY
24 JUNE 1984

SUMMARY
OF
BRITISH WEATHER

Southern England and the Channel Islands had rain early in the night, but the rest of England was dry, with clear skies.

Most places in Wales and Scotland were dry overnight too, but Northern Ireland had some occasional rain.

Much of Scotland had some sunshine especially in the morning but after a dry start nearly everywhere rain reached the west coast during the morning and then spread eastwards during the day. The rain was persistent and at times heavy.

Northern Ireland was cloudy with rain and drizzle at times and in Wales while there was a good deal of cloud most places stayed dry with some sunshine. The exception to this dry weather was the north coast of Wales where there was some rain and drizzle.

The north half of England started dry but rain reached the north-west during the afternoon and then spread to the northeast of England and the northern Midlands during the evening.

The south and east of England had a dry and fairly sunny day.

The temperatures over the whole UK were below normal for late June.

SUMMARY
OF
BRITISH WEATHER

Scotland, Northern Ireland and northern England had rain and drizzle overnight, but Wales, central and southern England stayed dry. In Scotland the weather in most places had cleared up by morning. Much of Scotland had a fairly bright day, with long sunny spells in eastern and southeastern areas. There were some showers, mainly in the north and west. Later on cloudy weather with drizzle and hill and coastal fog returned to the west. Northern Ireland had a cloudy morning and afternoon with a little rain and drizzle. Most places in England and Wales had a dry day, and away from the northwest and the Midlands there were long sunny spells.

In the northwest of England there was some light rain and drizzle.

In most places temperatures were in the warm category, but in parts of north and northeast Scotland it was rather cool, while in parts of extreme southern England it was very warm.

TUESDAY
26 JUNE 1984SUMMARY
OF
BRITISH WEATHER

Over most of England and Wales it remained dry with long sunny periods, but in the northwest of England it was a mainly cloudy morning with patches of drizzle especially on Irish Sea coasts, the afternoon and evening was sunny however.

In Northern Ireland, after a cloudy start with some drizzle, it soon became sunny then cloud increased during the afternoon.

In southern and eastern Scotland it was a dry day with sunny periods but in the west and far north of Scotland it was mainly cloudy with occasional light rain or drizzle.

It was a warm day in most regions and in parts of southern England, very warm. In the west and far north of Scotland temperatures were near or rather below normal.

WEDNESDAY
27 JUNE 1984

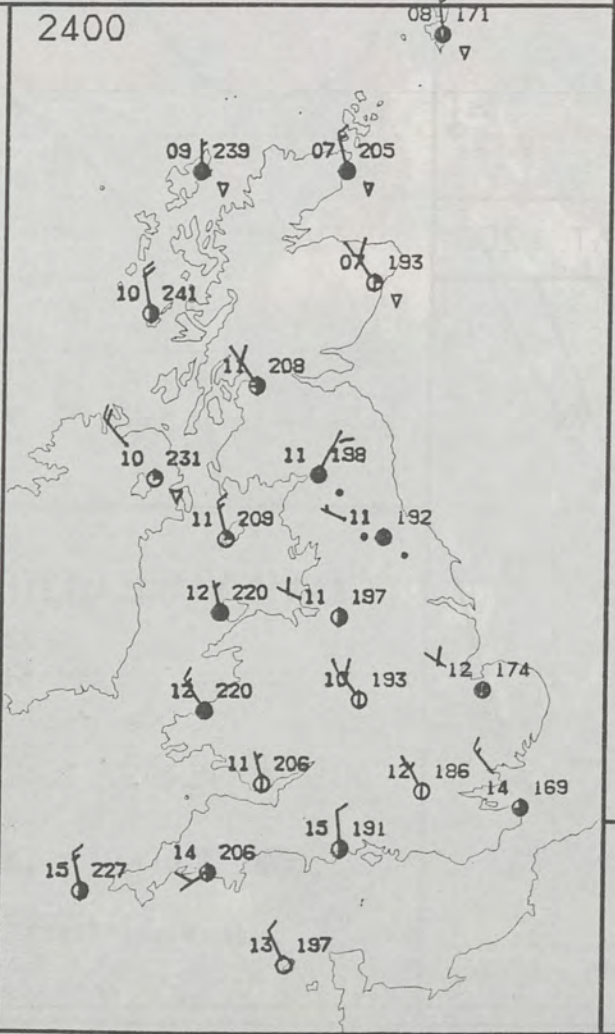

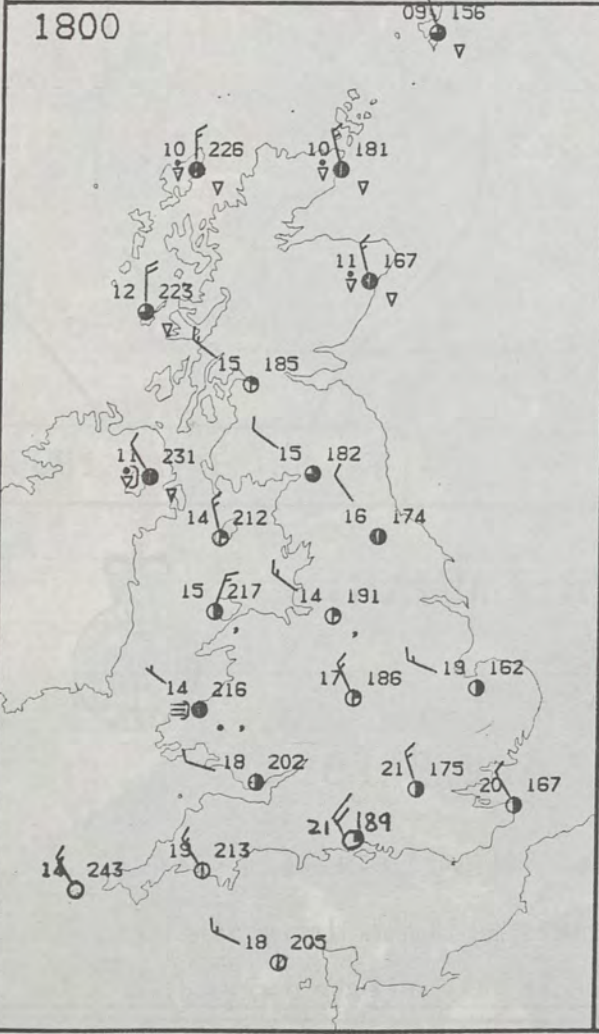

SUMMARY
OF
BRITISH WEATHER

In central and southern regions of England and Wales it was a dry day with a good deal of sun-shine.

In northern England, Northern Ireland and southern Scotland there were a few patches of light rain or drizzle in the morning but most places had a dry day with sunny periods. Scattered showers developed later, especially in northeast England.

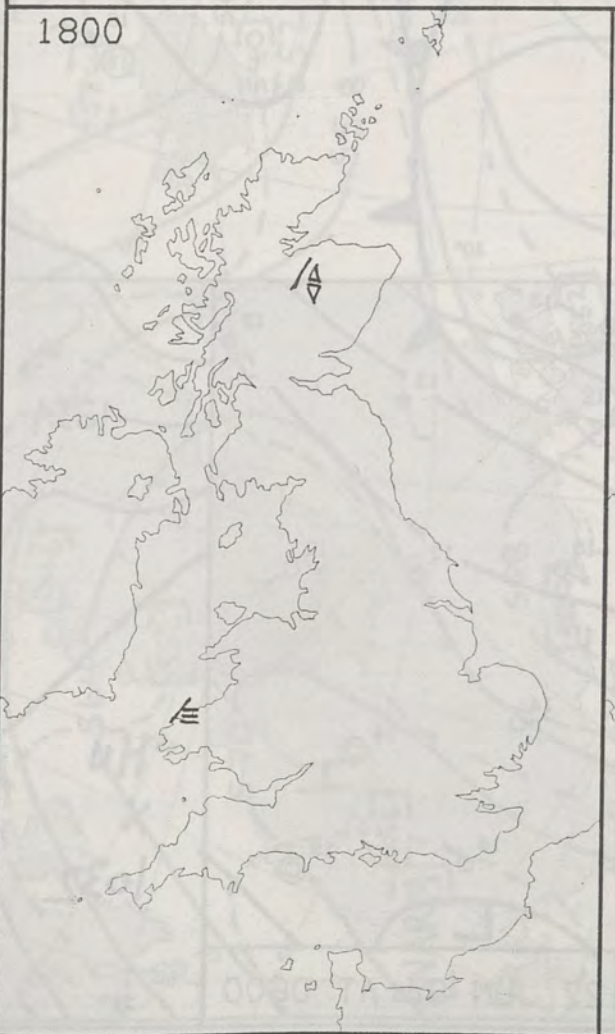

PLOTTED SURFACE OBSERVATIONS

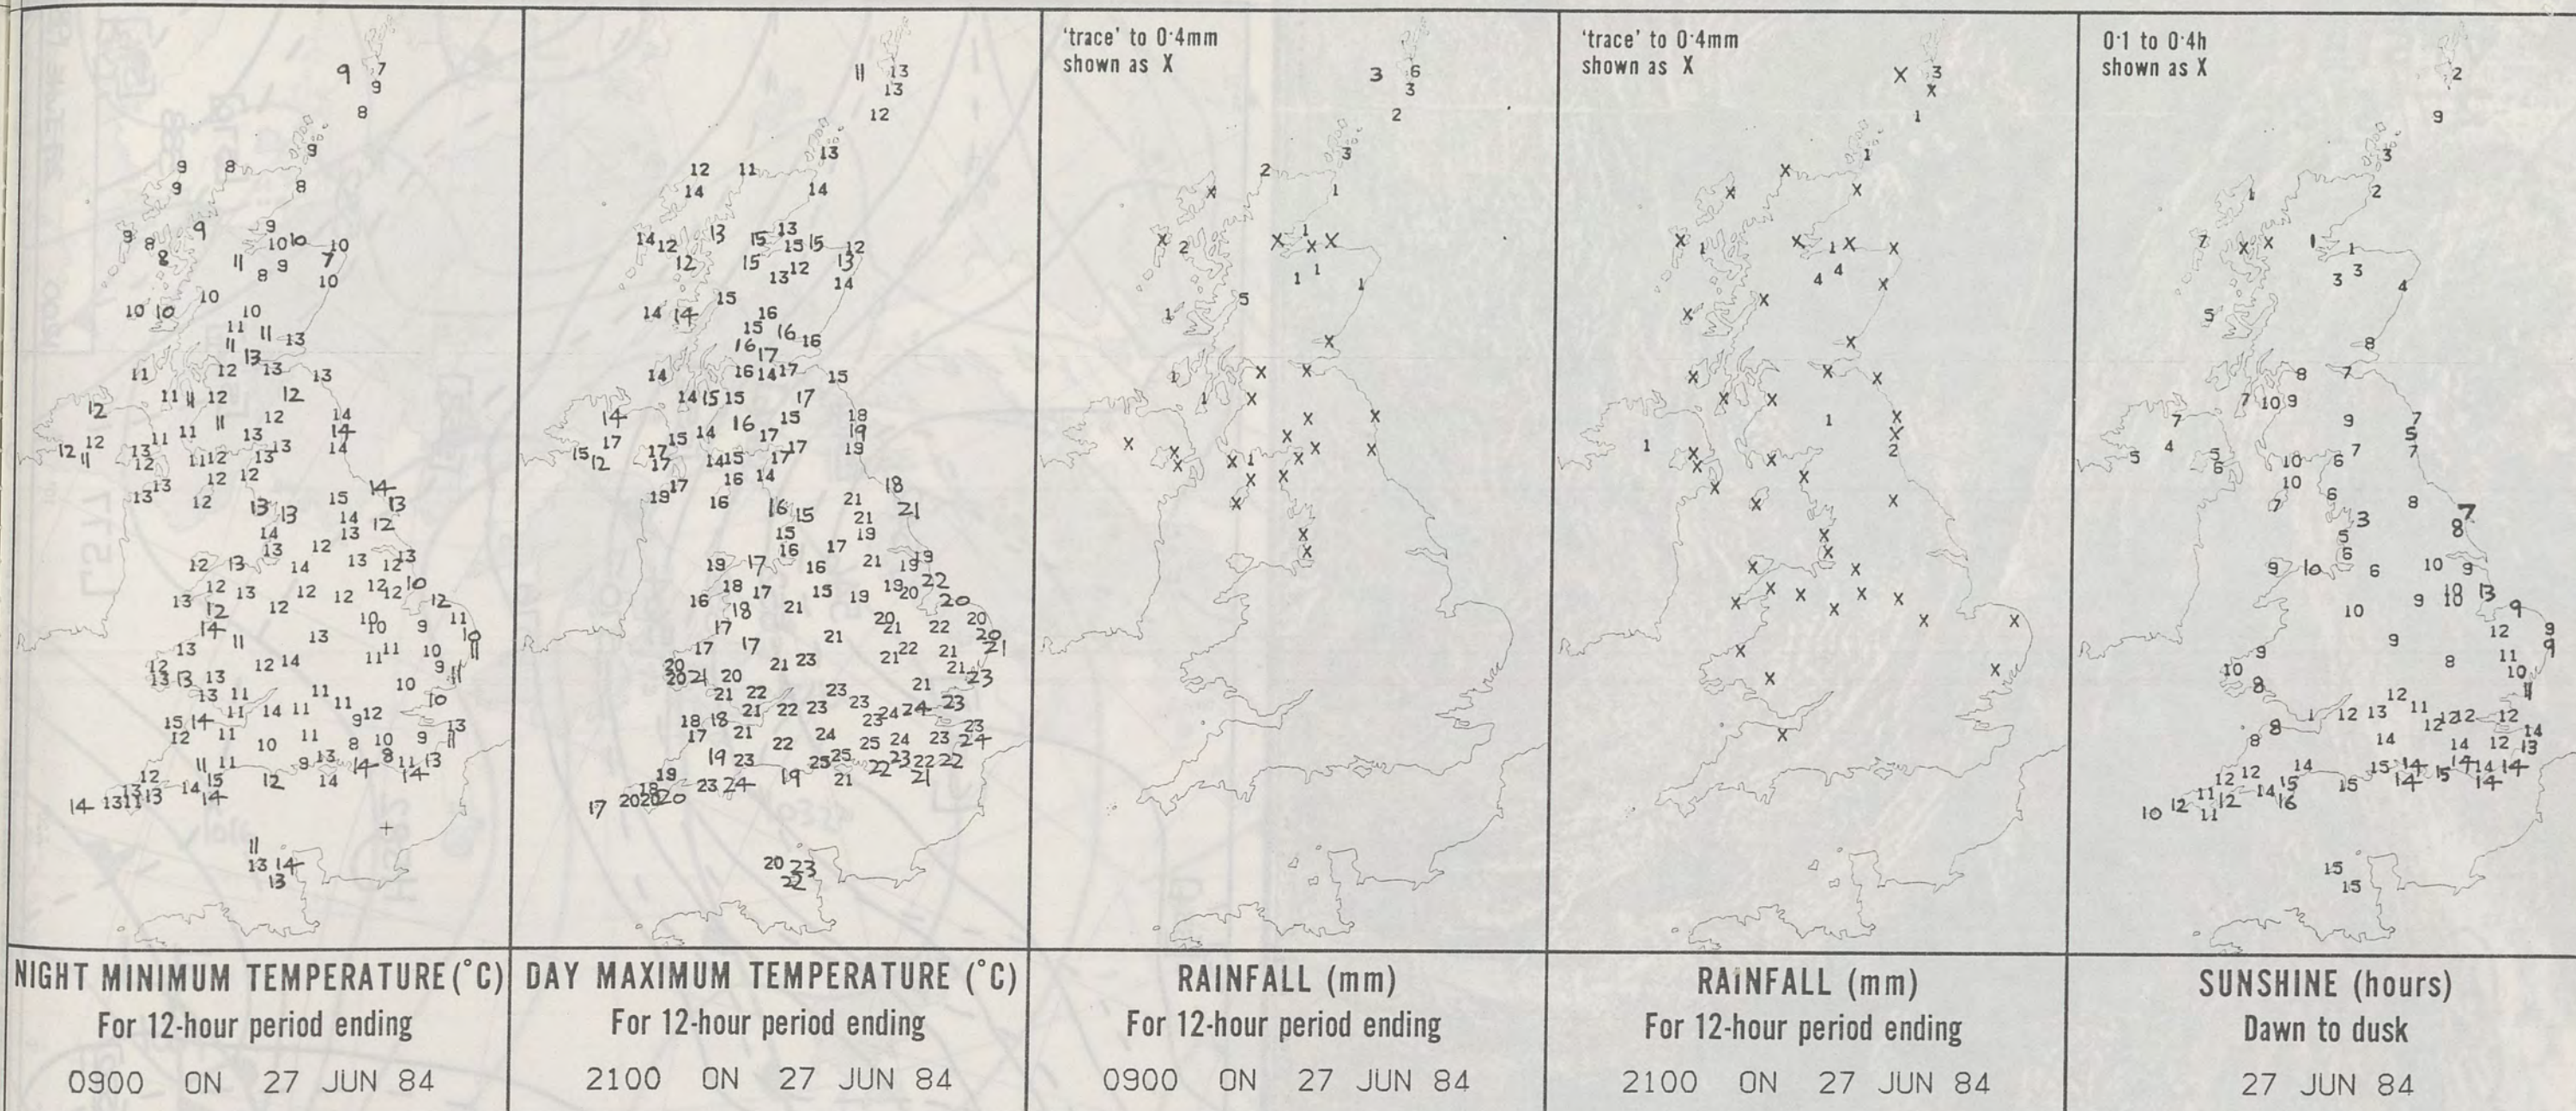

In northern Scotland it was mainly cloudy and there were several showers in most places.

In southern England it was a warm day. In other areas of England, Wales and Northern Ireland temperatures were near normal. Much of Scotland had a rather cool day.

THURSDAY.
28 JUNE 1984

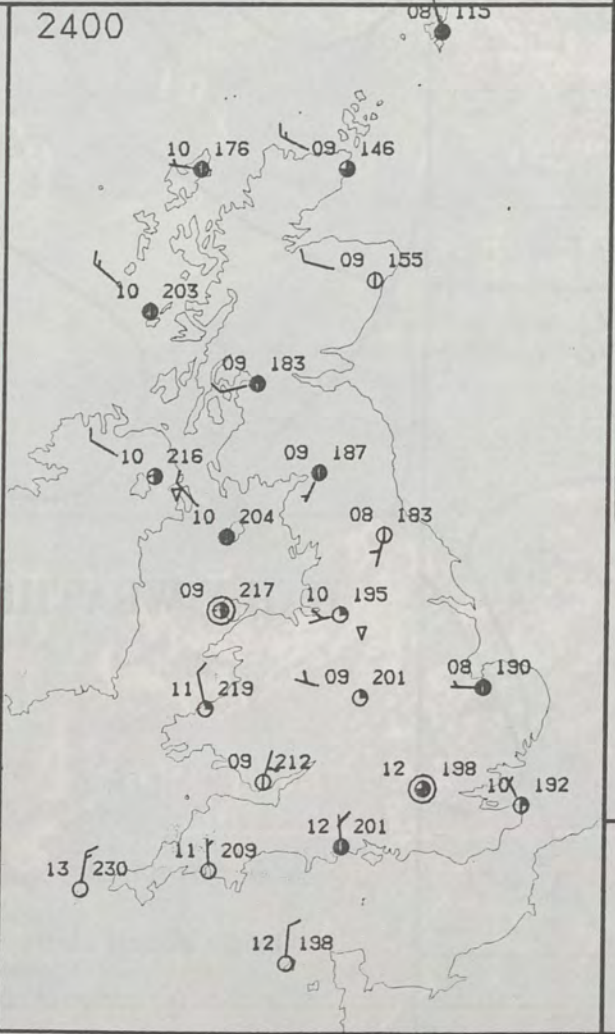

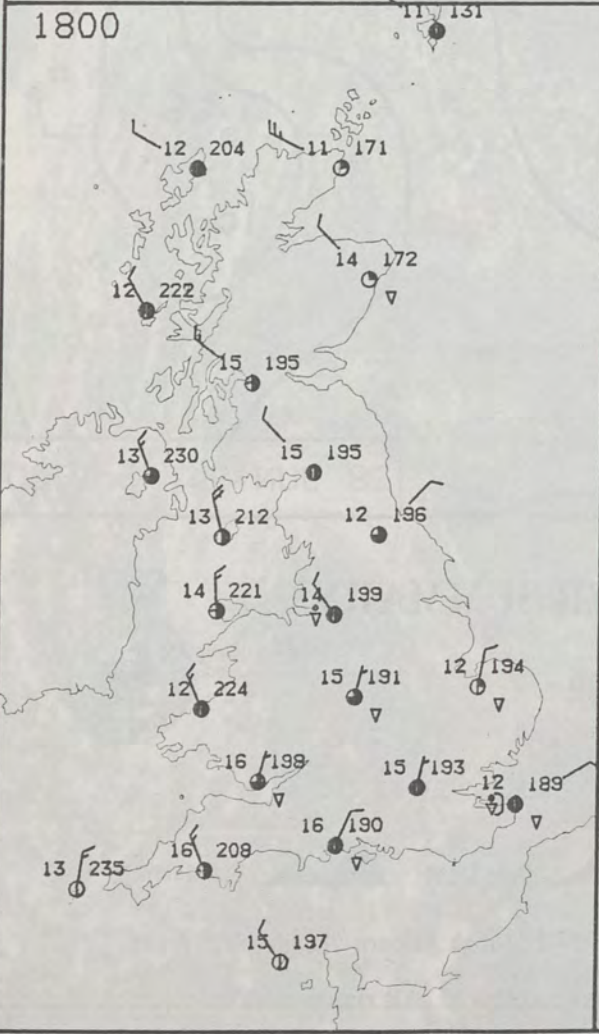

SUMMARY
OF
BRITISH WEATHER

Many places had a dry night and in southern and western parts of Britain and Northern Ireland there were clear periods. In northern and eastern Scotland and eastern counties of England, however, the weather was cloudy in many places with showers, and overall it was a much cooler night.

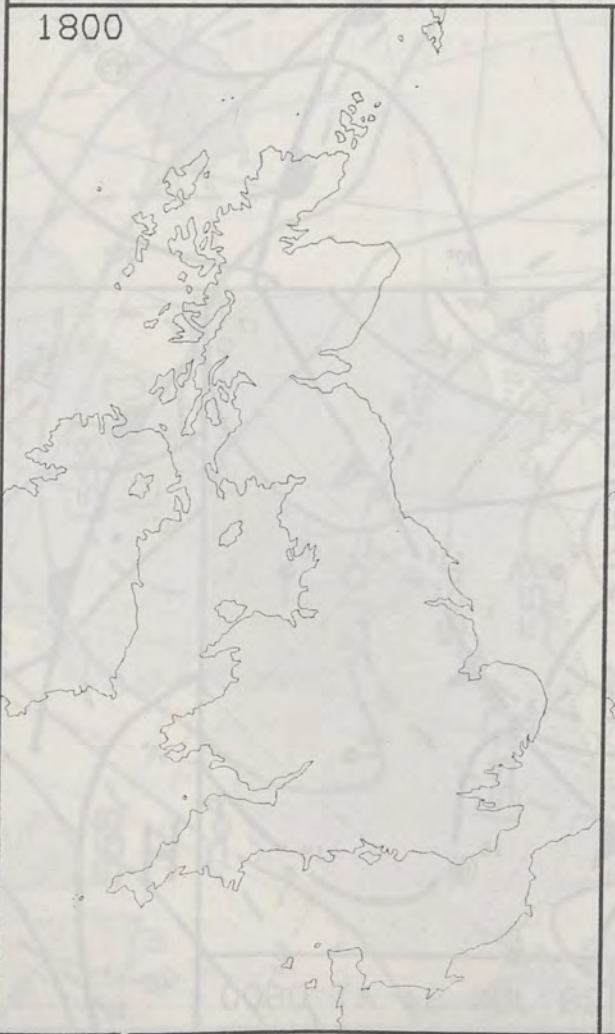

During the day some places had a dry, bright start but many inland areas had a fairly cloudy day with only a little sunshine at times and in eastern counties of England and Scotland there were some showers; most of them light but in some places a few heavier ones. The sunniest areas generally were coastal regions and many southern and western coasts and the Channel Islands had a dry, sunny day. Over the UK it was generally a cool day and the southern half of England and Wales were noticeably cooler than for several days past.

FRIDAY
29 JUNE 1984SUMMARY
OF
BRITISH WEATHER

Most places in the British Isles had a dry night with clear periods, but northern and western Scotland and Northern Ireland became cloudy with a few light showers. It was quite a chilly night with a touch of ground frost in parts of England and Wales and in central Wales a slight air frost was recorded.

During the day most places remained dry with some sunshine and many coastal regions, especially in the southwest and the Channel Islands had quite a sunny day. Despite the sunshine though, it was generally cool and in many northern and eastern areas the weather was cloudy at times with a few light showers.

An aerial photograph of a rugged, mountainous terrain. A grid of dashed lines is overlaid on the image. In the top left corner, there is handwritten text: "29-6-84", "VISUAL", and "1500". The terrain is marked with numbers: "50" appears twice on the left side, "10" appears twice in the center, and "50" and "10" appear on the right side. The terrain is highly textured with various ridges and valleys.

SATURDAY
30 JUNE 1984SUMMARY
OF
BRITISH WEATHER

The early hours were mainly rather cloudy in many places, with a few light showers in the east. There were some clear areas particularly around the England-Scotland border, mid-Wales and parts of southern England. Where skies were clear it was a cold night with a frost in a few places.

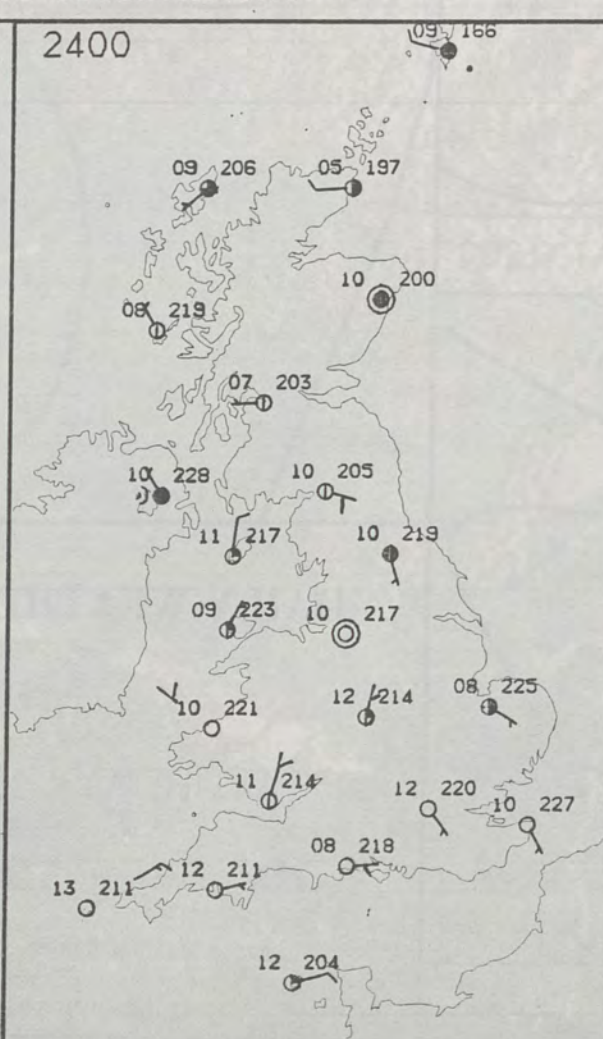

During the day, most places were quite sunny, though mostly rather cool, with only light winds. Some eastern and northern areas were fairly cloudy and cool with a rather fresh northwesterly wind. Sea breezes affected some southern and western coastal areas. Temperatures in South Wales, central southern England and southwest England were not far from normal.
