

THE DAILY WEATHER REPORT

(INTRODUCTION)

1st October to 31st December, 1968

Stations published in the Daily Weather Report

METEOROLOGICAL OFFICE
Bracknell, Berkshire

I. HISTORY

A brief history of changes in contents and format between 1st April, 1919, and December, 1949, will be found in the introduction to the British Section for 1st October to 31st December, 1949. On 1st January, 1950, the British and International Sections of the former Report, which had been issued in three sections since 1919, were combined in a single publication, the present Daily Weather Report. At the same time, the third section was published separately with the title of Daily Aerological Record. A number of changes in meteorological codes and specifications were introduced on 1st January, 1955, and incorporated in the Report. Changes in format introduced on 1st July, 1955, provided for the elements of station and ships' observations to be given in the order of the appropriate meteorological code and for some modification of the scales and projections of charts. On 1st January, 1961, the Celsius scale was adopted for reporting surface temperatures. On 1st January, 1967, the metric system was adopted for all references to heights and distances. Certain changes relating to position and wave groups in the Ship-Code (FM 21D) were introduced on 1st January, 1968.

2. FORM OF PRESENTATION

(i) **Observations.**—Pages 1 and 4 of the Daily Weather Report contain reports for the four main hours of observation from a representative number of stations in Great Britain and Ireland which provide full reports together with a selection of reports from ocean weather stations for the same hours. In addition, Beaufort letters (Table 20), mainly describing precipitation, are given for each of the four six-hourly periods, together with reports of maximum and minimum temperature, sunshine, rainfall and state of ground (Table 13), in respect of the land stations listed. Explanations of the codes and specifications used are given below.

(ii) **Charts.**—Page 2 contains a chart of the weather in a large part of the northern hemisphere for mid-day of the previous day. Incorporated in this chart is a line joining the approximate locations of civil twilight (i.e., Sun 6° below horizon) at 1200 h G.M.T. for the mid point of the month indicated. Page 3 contains charts of slightly larger scale, for the British Isles and Western Europe, for 1800 h. of the previous day and for 0000 h and 0600 h on the day of issue.

(iii) **General Synoptic Development.**—Below the weather charts on page 3 will be found a statement which describes the main features in the evolution of the synoptic situation over the United Kingdom during the preceding 24 hours together with an indication of the manner in which it is expected to develop.

4. EXPLANATION OF CODES AND SPECIFICATIONS

CODE FM 11C—Land Stations	VV ww W	PPP TT	Nh CL h CM CH	Td Td a pp	8Ns C hshs	RRT _x T _x E sss RRT _n T _n E T _g T _g	
N = Total amount of cloud in eighths (Table 1). dd = Wind direction on scale 01-36 (see also Table 2). ff = Wind speed in knots.	VV = Visibility (Table 3). ww = Present weather (Table 5). W = Past weather (Table 4).	PPP = Last three figures of pressure (reduced to M.S.L.) in millibars and tenths. TT = Temperature in whole degrees Celsius. Note.—In reports from ocean weather stations (FM 21D) only the tens and units figure of air temperature are reported. The tenths figure is reported by t ₁ .	N _h = Fraction of celestial dome covered by C _L (or C _M if no C _L). C _L = Form of low cloud (Table 6). h = Height above ground of base of lowest cloud (Table 9). C _M = Form of Medium Cloud (Table 7). C _H = Form of high cloud (Table 8).	T _d T _d = Dew point temperature in whole degrees Celsius. a = Characteristic of barometric tendency (Table 10). pp = Barometric tendency (change of pressure in last three hours in tenths of millibars).	8 = Indicator figure. N _s = Amount in eighths of individual cloud layer or mass (Table 1). C = Type of cloud (Table 11). hshs = Height of base of cloud (Table 12).	RR = Rainfall (Table 19) (Code 3577) (09h-21h) (21h-09h). T _x T _x = Maximum temperature in whole degrees Celsius (09h-21h). T _n T _n = Minimum temperature in whole degrees Celsius (21h-09h). E = State of ground (Table 13) (Code 0900) (09h-21h) (21h-09h).	
CODE FM 21 D—Ships	Q _c L _a L _a L _a	YYGGi _w	Followed by first four groups as in FM 11C above.	D _s v _s a pp	O T _s T _s T _d T _d	IT _w T _w T _w t _T 3P _w P _w H _w H _w d _w d _w P _w H _w H _w	
99=Indicator group. L _a L _a L _a =Latitude in tenths of a degree.	Q _c =Quadrant of the globe (Table 17). L _a L _a L _a =Longitude in tenths of a degree.	YY=Day of the month. GG=Actual time to the nearest whole hour G.M.T. i _w =Wind indicator (Table 18).	D _s =Direction of movement of ship (Table 14). v _s =Speed of ship in knots (Table 15). a =Characteristic of barometric tendency (Table 10). pp=Barometric tendency (change of pressure in last three hours in tenths of millibars).	O = Indicator figure. T _s T _s = Difference between air temperature and sea temperature in tenths of a degree Celsius. (If the air temperature is less than the sea temperature, 50 is added to the difference.) T _d T _d = Dew point temperature in whole degrees Celsius.	I=Indicator figure. T _w T _w T _w =Sea surface temperature in tenths of a degree Celsius. For negative temperatures 500 is added. t _T =The tenth figure of the air temperature.	3=Indicator figure. P _w P _w =Period of waves in seconds. H _w H _w =Height of the waves in units of 0.5 metre. This group refers to wind waves. If there is a swell with no wind waves this group is reported as 3/00.	d _w d _w =Direction (in tens of degrees) from which waves come. P _w =Period of waves (Table 16). H _w H _w =Height of the waves in units of 0.5 metre. This group is used to report swell when it is possible to make a clear distinction between swell and wind waves.

Table 1.—Code for Cloud Amount (N, N_h, N_s) (Code 2700)

- 0 = None.
- 1 = 1 eighth of sky covered or less, but not zero.
- 2 = 2 eighths of sky covered.
- 3 = 3 eighths of sky covered.
- 4 = 4 eighths of sky covered.
- 5 = 5 eighths of sky covered.
- 6 = 6 eighths of sky covered.
- 7 = 7 eighths of sky covered or more, but not 8 eighths.
- 8 = 8 eighths (sky completely covered).
- 9 = Sky obscured or cloud amount cannot be estimated.

Note.—"Trace" would be included under Figure 1, which should be used for amounts up to 1/8th (i.e., not up to 3/16ths). "Overcast but with openings" would be included under Figure 7, which should be used for amounts down to 7/8ths (i.e., not down to 13/16ths).

Table 2.—Degrees and Code Figures (dd) corresponding to compass directions (Code 0877)

Direction (Compass Points)	Exact dd	Code	Direction (Compass Points)	Exact dd	Code

S.	180	18	N.	360	36

Variable, or all directions, or unknown, or waves confused, direction indeterminate 99

Note.—The direction to be observed is "true" not "magnetic".

3. NOTES

- (i) **Standard of Time.**—Greenwich Mean Time is exclusively used throughout the Report.
- (ii) **Rainfall.**—Tr. = There has been precipitation, but amount less than 0.05 mm.
- (iii) **Temperature.**—On pages 1 and 4 temperature is specified in whole degrees Celsius, negative temperatures being coded by removing the minus sign and adding 50. Equivalent values in degrees Fahrenheit can be obtained by reference to the table printed between these pages.
- (iv) **Dew Point.**—The values of Dew Point are derived from the original readings of dry-bulb and wet-bulb temperature and are correct to 1° C. Prior to 1st January, 1949, values below 0° C gave the "Hoar Frost Point" that is to say, the temperature for which the actual vapour pressure is equal to the saturation pressure over ice. Since January, 1949, the true Dew Point and not the Hoar Frost Point has been included in synoptic reports in circumstances where the actual vapour pressure is lower than the saturated water vapour pressure of 0° C.
- (v) **Adjusted Readings.**—Where an instrumental reading is found to be in error and some adjustment is necessary, the adjusted reading is published in brackets thus (59).
- (vi) **Rainfall Readings in Eire.**—The rainfall totals for stations in Eire are for the periods 18h-06h G.M.T., reported at 0900h G.M.T.
06h-18h G.M.T., reported at 2100h G.M.T.
- (vii) Readers of the Report who are unacquainted with the method of construction and the use of weather charts are recommended to read "The Weather Map. An introduction to weather forecasting" (Fourth edition, Second impression 1959), which may be purchased from H.M. Stationery Office, 49 High Holborn, London, W.C.1, price 13s. 6d. post free.

Table 3.—Code for Visibility—(VV) (Code 4377)

First Code Figure	0		1		2		3		4		5		6		7		8		9	
5	5	*	*	*	*	*	*	*	*	*	6	7	8	9

Table 4.—Code for Past Weather (W) (Code 4500)

0 = Cloud covering 1/2 or less of the sky throughout the appropriate period.	3 = Sandstorm, duststorm or blowing snow.
1 = Cloud covering more than 1/2 of the sky during part of the appropriate period and covering half or less during part of the period.	4 = Fog, ice fog or thick haze.
2 = Cloud covering more than 1/2 of the sky throughout the appropriate period.	5 = Drizzle.
The code for W covers the weather occurring during the last six hours.	6 = Rain.
	7 = Snow, or rain and snow mixed.
	8 = Shower(s).
	9 = Thunderstorm(s) with or without precipitation.

In the range 01-50 the figures give actual visibility in tenths of kilometres. This table gives the meanings of higher code figures.

†Values not given may be obtained by interpolation.

* Code figures not used.

† Decade 90-99 is used when visibility cannot be determined with sufficient accuracy to justify lower code figures.

Table 5.—Code for Present Weather (ww) (Code 4677)

Table I0.—Code for Characteristic of Barometric Tendency (a) (Code 0200)

0 = Increasing, then decreasing; atmospheric pressure the same as or higher than 3 hrs ago.
1 = Increasing, then steady; or increasing, then increasing more slowly.
2 = Increasing (steadily or unsteadily).
3 = Decreasing or steady, then increasing; or increasing, then increasing more rapidly.
4 = Steady, atmospheric pressure the same as 3 hrs ago.
5 = Decreasing, then increasing; atmospheric pressure the same as or lower than 3 hrs ago.
6 = Decreasing, then steady; or decreasing, then decreasing more slowly.
7 = Decreasing (steadily or unsteadily).
8 = Steady or increasing, then decreasing; or decreasing, then decreasing more rapidly.

Table II.—Code for Type of Cloud (C) (Code 0500)

0 = Cirrus (Ci).
1 = Cirrocumulus (Cc).
2 = Cirrostratus (Cs).
3 = Altocumulus (Ac).
4 = Altostratus (As).
5 = Nimbostratus (Ns).
6 = Stratocumulus (Sc).
7 = Stratus (St).
8 = Cumulus (Cu).
9 = Cumulonimbus (Cb).

Table I2.—Code for Height of Cloud (h_{sh}) (Code 1577)

Code figures 01-50: × 30 = height in metres.	
CODE FIGURES 81-89	CODE FIGURES 56-80: — 50 × 3 = height in hundreds of metres.
Code figures	Metres
81	= 10,500
82	= 12,000
83	= 13,500
84	= 15,000
85	= 16,500
86	= 18,000
87	= 19,500
88	= 21,000
89	= >21,000
90	<50
91	= 50-100
92	= 100-200
93	= 200-300
94	= 300-600
95	= 600-1,000
96	= 1,000-1,500
97	= 1,500-2,000
98	= 2,000-2,500
99	= 2,500 or more, or no clouds.

*Only used when cloud height cannot be determined with greater accuracy.

Table I3.—Code for State of Ground (E) (Code 0900)

0 ... Ground dry.
1 ... " moist.
2 ... " wet.
3 ... " frozen.
4 ... Glaze or ice on ground but no snow or melting snow.
5 ... Snow or melting snow (with or without ice) covering less than one half of ground.
6 ... Snow or melting snow (with or without ice) covering more than one-half of ground (but not completely).
7 ... Snow or melting snow (with or without ice) covering ground completely.
8 ... Loose dry snow, dust or sand covering more than one half of ground (but not completely).
9 ... Loose dry snow, dust or sand covering ground completely.

Table I4.—Code for Direction in which Ship has moved (D_s) (Code 0700)

0 = Stationary.
1 = North-east.
2 = East.
3 = South-east.
4 = South.
5 = South-west.
6 = West.
7 = North-west.
8 = North.
9 = No definite direction or unknown.

Table I5.—Code for Speed of Ship (v_s) (Code 4451)

0 = 0
1 = 1-3
2 = 4-6
3 = 7-9
4 = 10-12
5 = 13-15
6 = 16-18
7 = 19-21
8 = 22-24
9 = >24

Table I6.—Code for Period of Waves (P_w) (Code 3155)

0 = 10
1 = 11
2 = 12
3 = 13
4 = 14 or more
5 = 5 or less
6 = 6
7 = 7
8 = 8
9 = 9

Table I7.—Quadrant of the globe (Q_c) (Code 3333)

Latitude	Longitude
1 North	East
3 South	East
5 South	West
7 North	West

Table I8.—Wind Indicator (i_w) (Code 1855)

0 = wind speed estimated
1 = wind speed obtained by anemometer
3 = wind speed estimated
4 = wind speed obtained by anemometer

wind speed in metres per second
wind speed in knots

Table I9.—Code for Amount of Precipitation (RR) (Code 3577)

mm
56 Amount to the nearest whole millimetre.
56 60
57-90 Add 10 mm for each unit above 56 e.g., 73 = 230 mm
91 0.1
92 0.2
93 0.3
94 0.4
95 0.5
96 0.6
97 Trace
98 >400
99 Measurement impossible or inaccurate.

Table 20.—Explanation of Beaufort Letters (pages 1 and 4)

d = drizzle.
f = fog, visibility 200 metres, or more but less than 1 kilometre.
F = thick fog, visibility less than 200 metres.
h = hail.
ks = storm of drifting snow.

p = shower(s).
r = rain.
s = snow.
rs = rain and snow.
t = thunder.

Intensity is shown by capital letters ("heavy" or "thick") or suffix "o" ("slight"). Continuous precipitation is shown by repeating the letter and intermittent precipitation by the prefix "i". The prefix "j" indicates weather near but not at the station.

5. EXPLANATION OF CHARTS

BAROMETER. Isobars are drawn for intervals of four millibars.

WIND. Arrows fly with wind. A full length feather represents 10 Kt and a short feather 5 Kt. A solid pennant represents 50 Kt. Calm is indicated by circle outside weather symbol.

TEMPERATURE is given in degrees C., and is shown on the charts by means of figures alongside the Station circle.

CLOUD SYMBOLS

- Clear sky.
- ① Sky ½ covered.
- ② Sky ⅓ covered.
- ③ Sky ⅔ covered.
- ④ Sky obscured.
- ⊗ Missing or doubtful data.

WEATHER SYMBOLS

- | | | | | |
|-----------|-----------------|---------|------------------|---------|
| ● Rain. | ■ Drizzle. | ✖ Snow. | ✖ Rain and snow. | △ Hail. |
| ▽ Shower. | □ Thunderstorm. | — Fog. | — Mist. | |

ALTITUDES OF STATIONS:—The altitudes, in metres, of British and Irish stations are given below. These refer in each case to the datum level of the ground beneath or nearly beneath the thermometer screen. Where the official name of the station differs, this is given in brackets.

Boscombe Down	126	Chivenor	6	Tynemouth	29	Sule Skerry	13
Hurn (Bournemouth/Hurn Airport)	11	Mount Batten (Plymouth/Mount Batten)	27	Carlisle	26	Cape Wrath	105
Thorney Island	3	St. Mawgan	103	Valley	8	Stornoway	3
Gatwick (London/Gatwick Airport)	60	Scilly, St. Mary's	48	Ringway (Manchester Airport)	77	Benbecula	7
Kew	18	Culdrose	82	Squires Gate (Blackpool Airport)	11	Tiree	10
Heathrow (London/Heathrow Airport)	25	Guernsey Airport	104	Ronaldsway (Isle of Man/Ronaldsway Airport)	18	Aldergrove (Belfast/Aldergrove Airport)	66
Mildenhall	5	Elmdon (Birmingham Airport)	97	Mull of Galloway	78	Main Head	25
Wattisham	89	Cardington	28	Eskdalemuir	239	Belmullet	10
Gorleston	2	Wittering	66	Prestwick (Prestwick Airport)	10	Birr	72
West Raynham	76	Watnall	117	Abbotsinch (Glasgow Airport)	10	Dublin (Dublin Airport)	81
Aberporth	115	Shawbury	72	Leuchars	11	Shannon (Shannon Airport)	7
Ross-on-Wye	68	Finningley	10	Dyce (Aberdeen/Dyce)	59	Roches Point	41
Filton (Bristol/Filton)	59	Kilnsea	12	Lerwick	82	Valentia (Valentia Observatory)	14
Rhoose (Glamorgan/Rhoose Airport)	67	Leeming	32	Wick	36		

FRONTS or boundaries between masses of air of different origin are indicated, wherever their characteristics are well pronounced, in the following way—

Warm Front on the surface. Occluded Front.

Cold Front on the surface. Cold front frontogenesis.

Stationary Front. Cold front frontolysis.

DAILY WEATHER REPORT OF THE BRITISH METEOROLOGICAL OFFICE

No. 155

MONTHLY SUMMARY

For NOVEMBER 1968

CLOUDY APART FROM THE HEBRIDES - MAINLY DRY BUT RATHER WET IN NORTHEAST ENGLAND

Low pressure over southern England during the first two days receded to the south and east as it was replaced by a high pressure area which moved from south of Iceland to Scotland and thence to Norway by 6th whilst pressure remained low over the eastern Atlantic. A strong southeasterly flow was established over the British Isles which persisted with some variation of intensity until 18th giving southerly gales in places from 13th to 15th. On 19th a wave near the Azores moved north and deepened rapidly affecting western districts as high pressure slowly declined from the west. From 21st to 23rd further troughs crossed western and northern areas giving rise to southwesterly gales in parts of southwest Scotland. Pressure rose temporarily on 24th and 25th before a deep depression in the Atlantic moved northeastwards with associated troughs which crossed the country on 26th and 27th.

Rain was heavy in many places on 1st and 2nd. Over 2 inches in 24 hours was reported from the Isle of Man and falls approaching two inches were recorded in Scotland and Northern Ireland. 8.7 inches were recorded in the 24 hours prior to 4 p.m. on 1st near Newcastle, County Down.

After a mild wet start in England and Wales the cold weather which brought sleet and snow to Scotland and Northern Ireland extended south bringing temperatures everywhere below the early November average by 3rd. It was dry generally with bright intervals during the next two days but cloud and drizzle covered all districts on 6th to 7th. Northern England had sunny intervals with showers whilst sleet fell in Scotland on 8th and temperatures dropped below freezing in many parts of the country overnight. Parts of southern England remained in fog during the 9th with

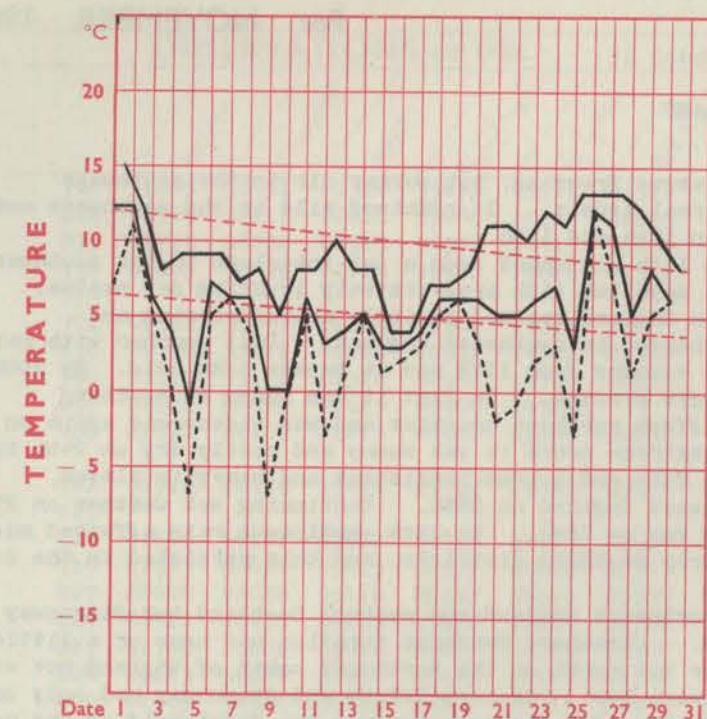

day temperatures only a little above freezing, but warmer air in the southwest raised temperatures there to normal levels. It remained mild in the southwest and most places had rain at times on 10th and 11th.

It became dry generally on 12th and apart from a wet interlude in the southwest on 13th remained so for several days but with progressively lowering day maxima. By 16th temperatures in southern England reached a little above freezing and occasional sleet or snow was reported in southeast England. Dull weather with rain or drizzle affected much of the country from 17th and it became less cold. By 20th day maxima in all areas were above average. On 21st it was sunny in southern England but rain continued to affect northern counties and was widespread again on 22nd and 23rd. Except in the extreme south it was sunny and mostly dry on 24th but rain spread to all districts on 25th and became persistent and heavy in places, particularly in Wales and southwest England on 26th. Continuing wet weather on 27th was followed by a dry but foggy day on 28th. On 29th continuous rain affected much of England and Wales; particularly southern districts, and this persisted in the south for part of 30th.

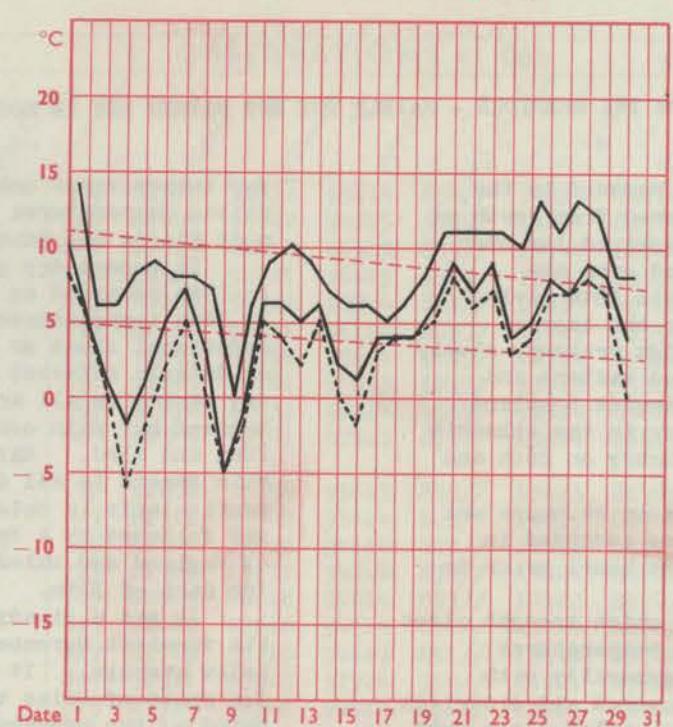

It was a cloudy month in northeast England and eastern Scotland but Stornoway had its sunniest November on record. Elsewhere sunshine duration was near or a little below average. It was a rather wet month on the northeast coast of England but except for parts of Wales total falls were low. Thorney Island and Stornoway had only one third of the average November fall. For rather more than the first half of the month it was cold generally but mild weather for the following ten days kept mean maximum temperatures only a little below average.

PLACE	TEMPERATURE								SUNSHINE								RAINFALL								Days with thunder	Days with snow or rain and snow	Days with fog (Vis. < 200 metres) at 09 h.)						
	Mean maximum °C	Difference from average °C	Mean minimum °C	Difference from average °C	Highest maximum °C	Date	Lowest minimum °C	Date	No. of days with grass minimum below 0°C	No. of air frosts	Days of no sunshine	Maximum duration hrs.	Total for month hrs.	% of average	Highest and lowest totals on record for month	First year of record	Highest hrs.	Year	Lowest hrs.	Year	Days of no rainfall (0.1 mm. or less)	First year of record	Highest mm.	Year	Lowest mm.	Year

LONDON (Kew)

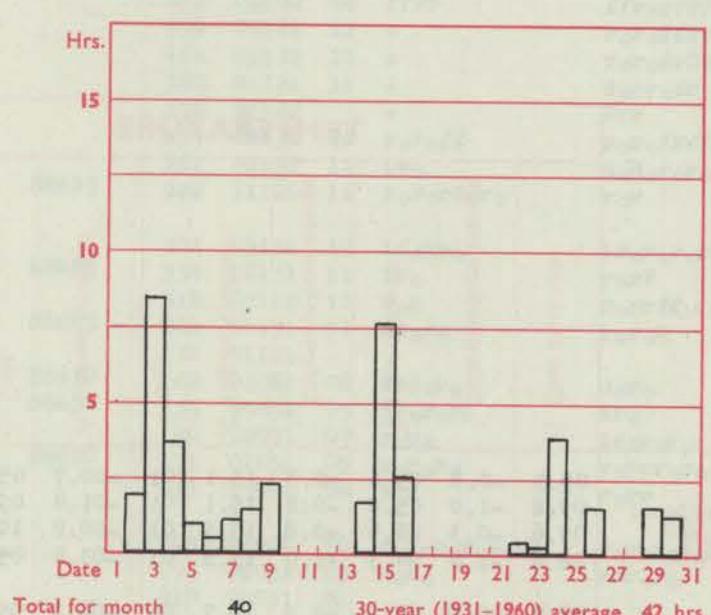

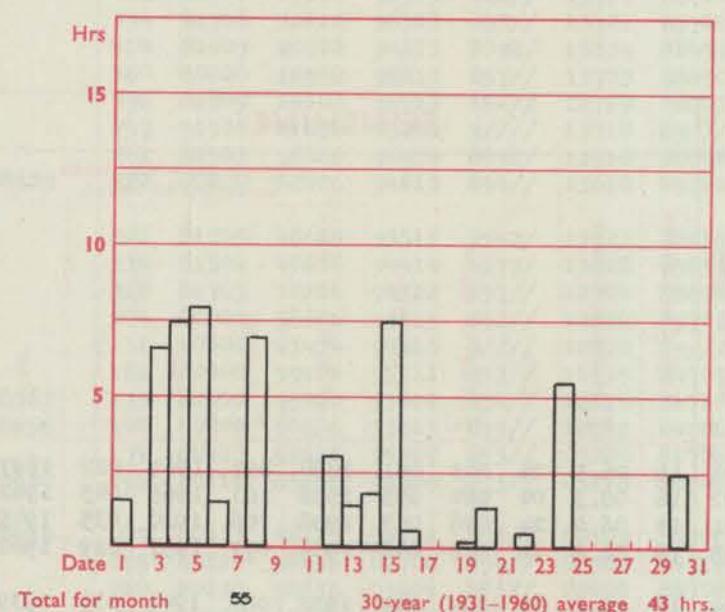

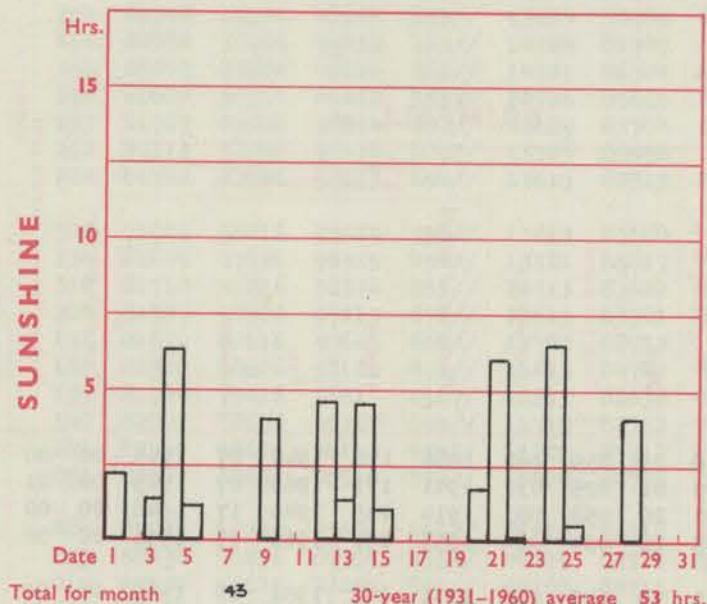

MANCHESTER (Ringway)

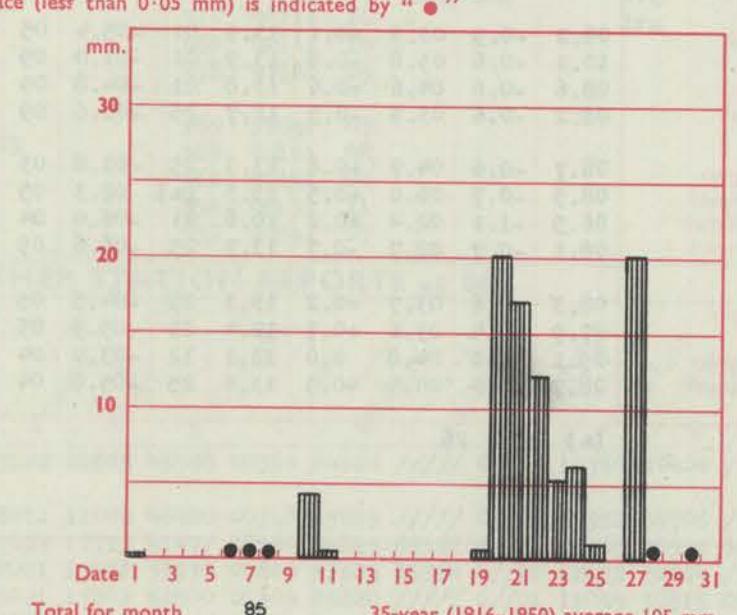

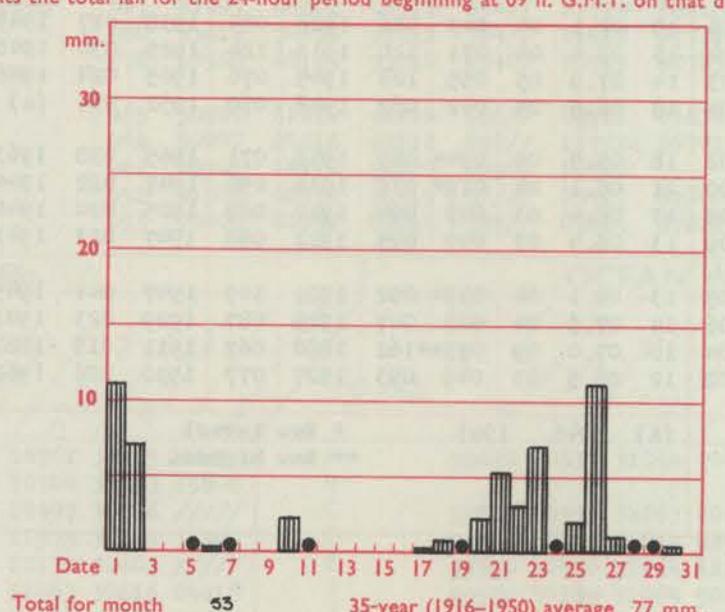

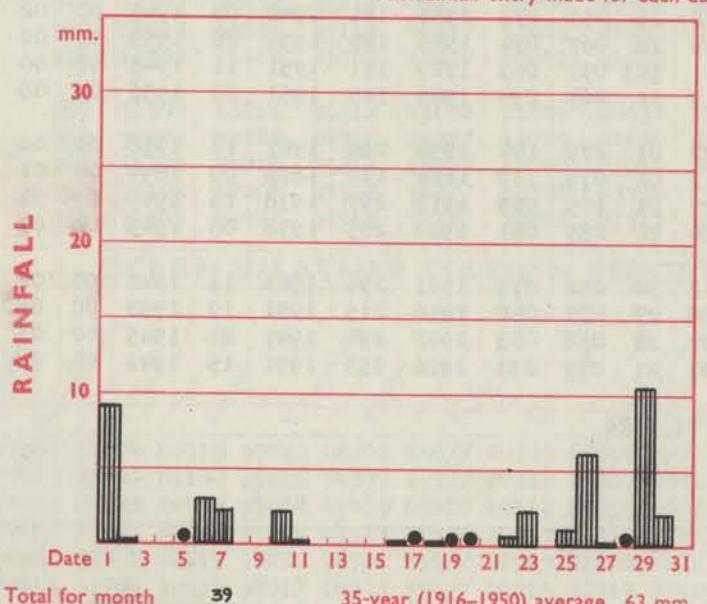

GLASGOW (Abbotsinch)

Maximum temperatures read at 21 h. G.M.T. daily, and minimum temperatures, read at 09 h. G.M.T. daily, are shown in full lines.
Grass minimum temperatures, read at 09 h. G.M.T. daily, are shown by a pecked line. Pecked lines in red show normal values. (1931-1960)

The rainfall entry made for each day represents the total fall for the 24-hour period beginning at 09 h. G.M.T. on that day. Trace (less than 0.05 mm) is indicated by "●".

RATES OF SUBSCRIPTION: Single copy 3d. or post free 5d.; one year 5/-

Apply to Director-General, Meteorological Office, London Road, Bracknell, Berkshire.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

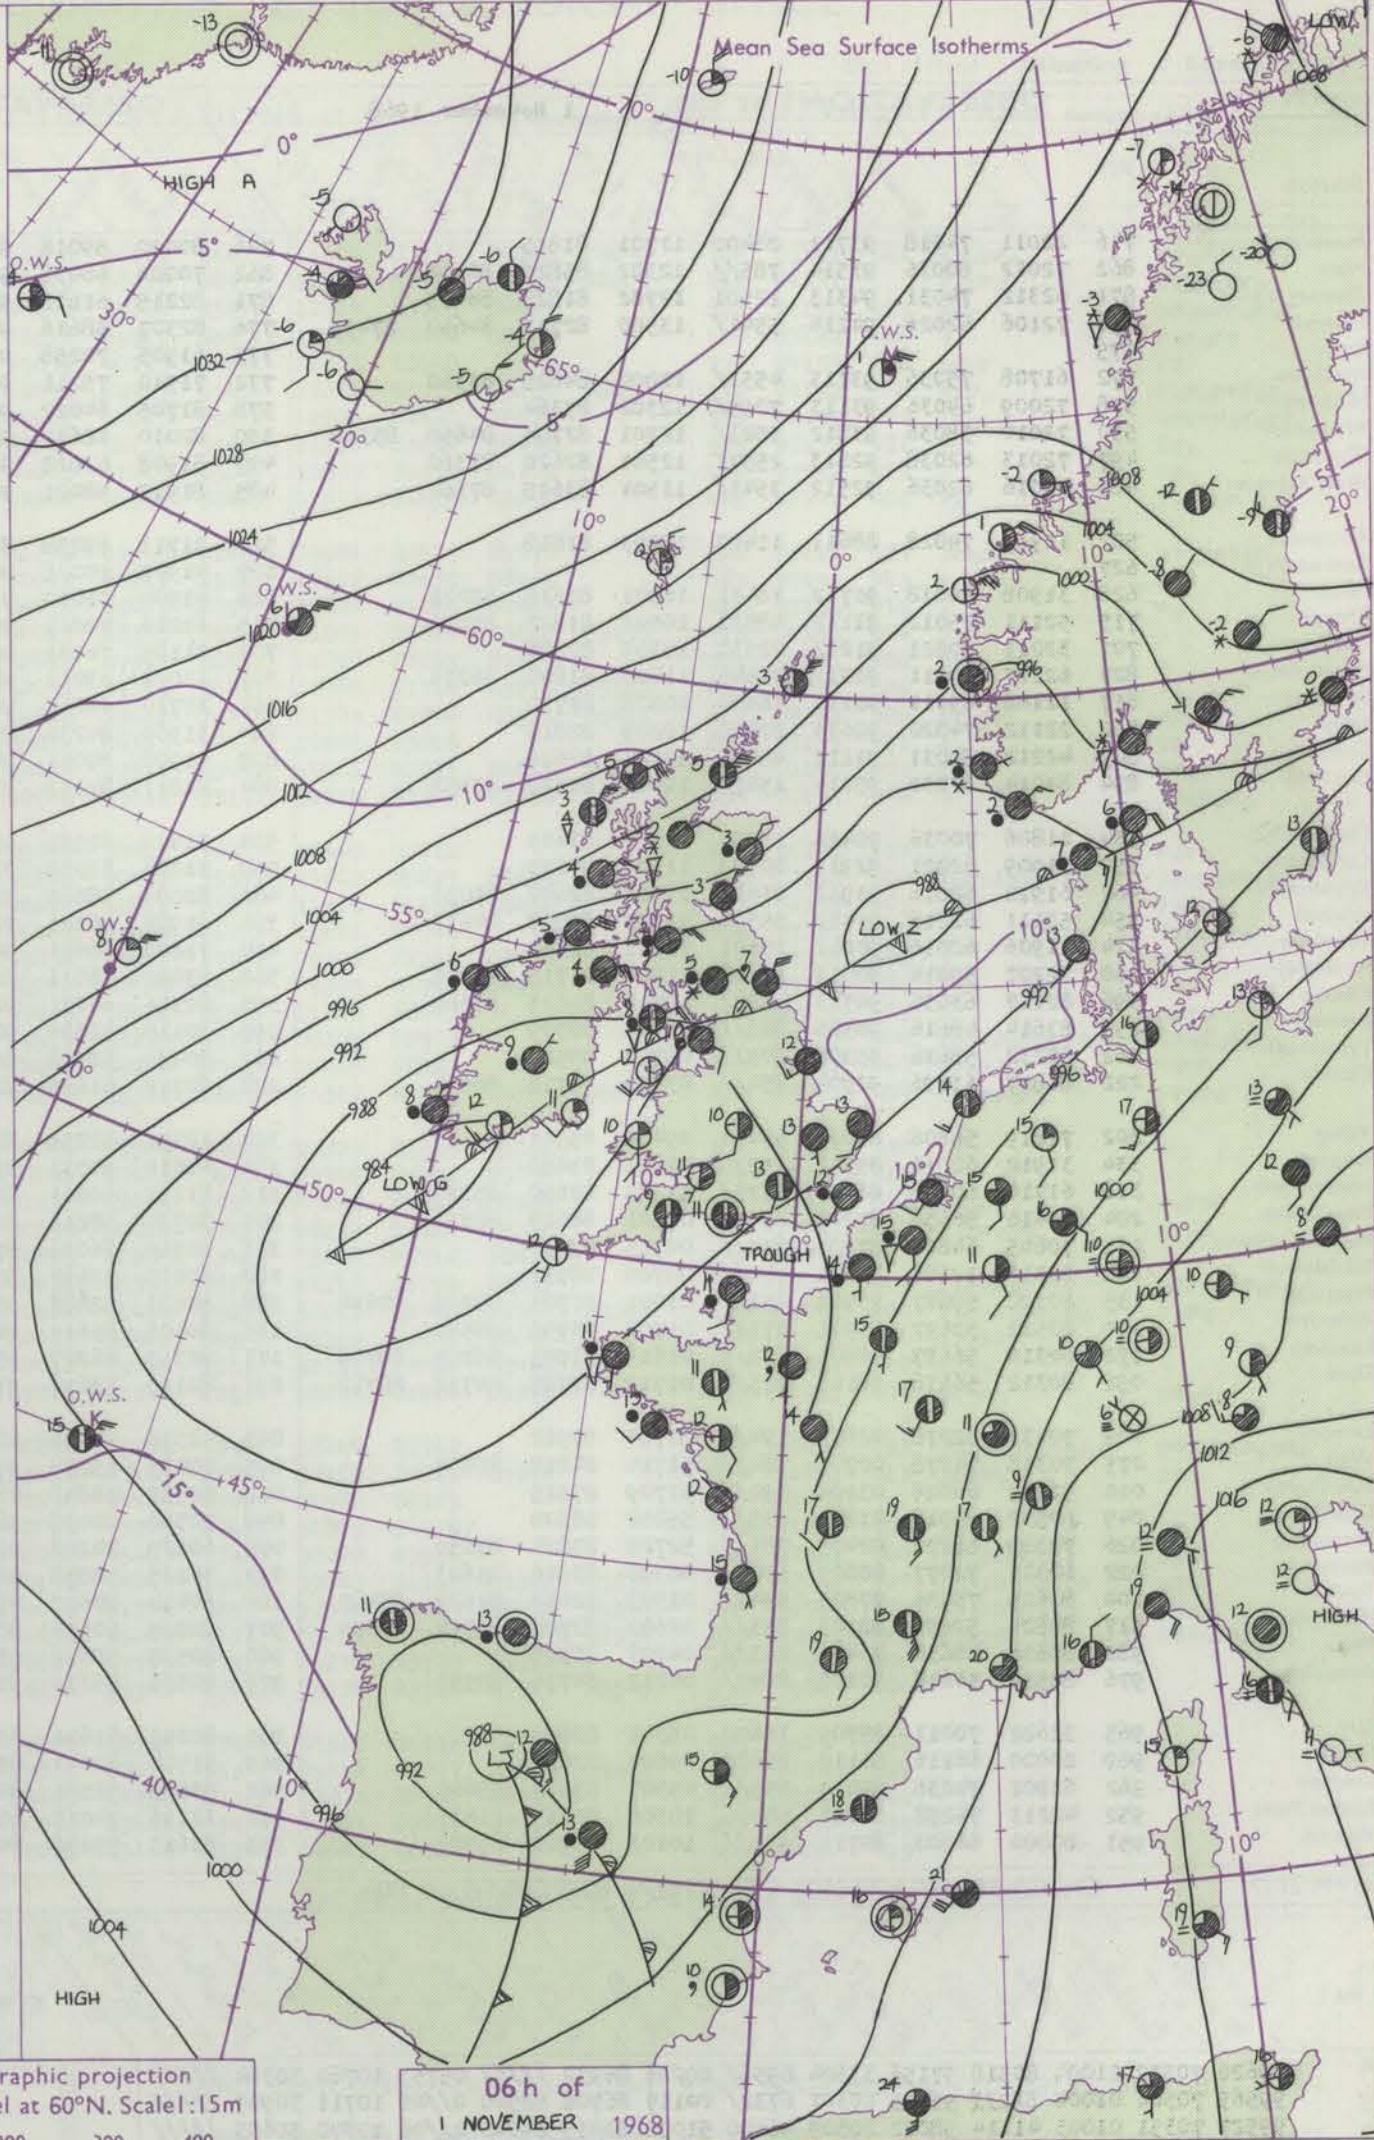

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A large anticyclone persists over the Denmark Strait. The low over southern Ireland is moving slowly southeast. Another low over Spain is deepening and moving northeast. In the vicinity of the British Isles a frontal trough extends from southern Ireland across northern England to north Denmark with a warm south-

Issued at midday Friday 1 November 1968

westerly airflow south of the front and a very cold northeasterly airstream north of the front. The front is expected to move slowly south over western districts during the next 24 hours.

GENERAL SYNOPTIC DEVELOPMENT

The depression centred just south of Eire has moved little during the past 24 hours and a marked frontal trough has persisted northeasterwards from the centre across northern England to Denmark. Cold northeasterly winds have continued north of this front with severe gales in places, while a warm southwesterly airstream has persisted over southern districts of Britain. The depression which was over Spain yesterday

morning moved quickly eastnortheast over southeast England. It is now expected to move away northeastwards over the North Sea while the low south of Eire drifts southeast over the English Channel during the next 24 hours. Pressure will remain relatively high south of Iceland.

Issued at midday Saturday 2 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The cold northerly airstream on the western side of the complex low pressure area covering the North Sea, France and Biscay has gradually extended eastwards to affect all parts of the British Isles. The anticyclone south of Iceland is moving

southeast but is decaying. The gale force winds over the British Isles will moderate from the west.

Issued at midday Sunday 3 November 1968

OCEAN WEATHER STATION REPORTS at 12h.

OCEAN WEATHER STATION REPORTS at 18h.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The strong northerly flow which yesterday was affecting eastern districts of the British Isles has now moved away eastwards and the anticyclone which was moving slowly southeast from the Iceland area is now centred over Northern Ireland. This

small anticyclone will continue to move slowly southeast. A mild southerly flow will spread gradually into western districts of the British Isles as an intense Atlantic depression drifts slowly east.

Issued at midday Monday 4 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

A deep depression remains slow-moving in central Atlantic. The ridge of high pressure extending southwards over the British Isles yesterday has now moved east into the North Sea cutting off the cold northerly flow over eastern districts.

A weak trough approaching Ireland will only make very slow eastward progress and as pressure builds over the North Sea the warmer southerly flow already in the west will become established over most areas.

Issued at midday Tuesday 5 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The deep depression in mid-Atlantic is moving only slowly northeastward whilst the anticyclone over the Norwegian Sea is moving slowly east and building a little. The shallow frontal trough over Biscay is moving very slowly north and may reach

the western English Channel; meanwhile the southeasterly gradient over the British Isles is increasing slowly.

Issued at midday Wednesday 6 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The anticyclone from the Norwegian Sea has moved over Norway and intensified a little. Pressure remains low over the North Atlantic. A strong east to southeast airstream covers the British Isles and is likely to persist for a

day or two. The frontal trough to the south and west of the British Isles will move little.

Issued at midday Thursday 7 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The large deep depression in mid-Atlantic is moving rather slowly eastnortheast and will partially fill a little in the next 24 hours. The occluding frontal system of this depression is approaching the British Isles and will move in over Ireland and southwest England tonight. The ridge of high pressure over Scandinavia and the

Norwegian Sea will persist though with some drop in pressure, while an extension of this ridge southwards over Britain will move east as a small low now over the North Sea moves away northwards and fills up.

Issued at midday Saturday 9 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The deep depression in central North Atlantic will remain slow moving and gradually fill. A deepening depression off the American seaboard yesterday, has moved rapidly east to the area of Weather Ship Delta and is already becoming engaged in the circulation of the old Atlantic low from which it will take over as a dominant

centre in due course. A frontal system with waves off Ireland yesterday is now moving into western districts and its eastward movement will now accelerate considerably. The small depression in the North Sea yesterday has already almost disappeared.

Issued at midday Sunday 10 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The depression which has persisted over the central North Atlantic during the past 24 hours is expected to fill gradually. The deepening depression which was near O.W.S. 'D' yesterday morning has moved northeast and will continue to deepen slowly. By tomorrow morning this depression will be centred near O.W.S. 'J'

and the associated fronts will move northeastwards over western and northern parts of the British Isles. The frontal system with waves which was over Ireland yesterday has moved slowly eastwards and weakened. This front and the weak ridge of high pressure over the North Sea will both continue to move slowly east.

Issued at midday Monday 11 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

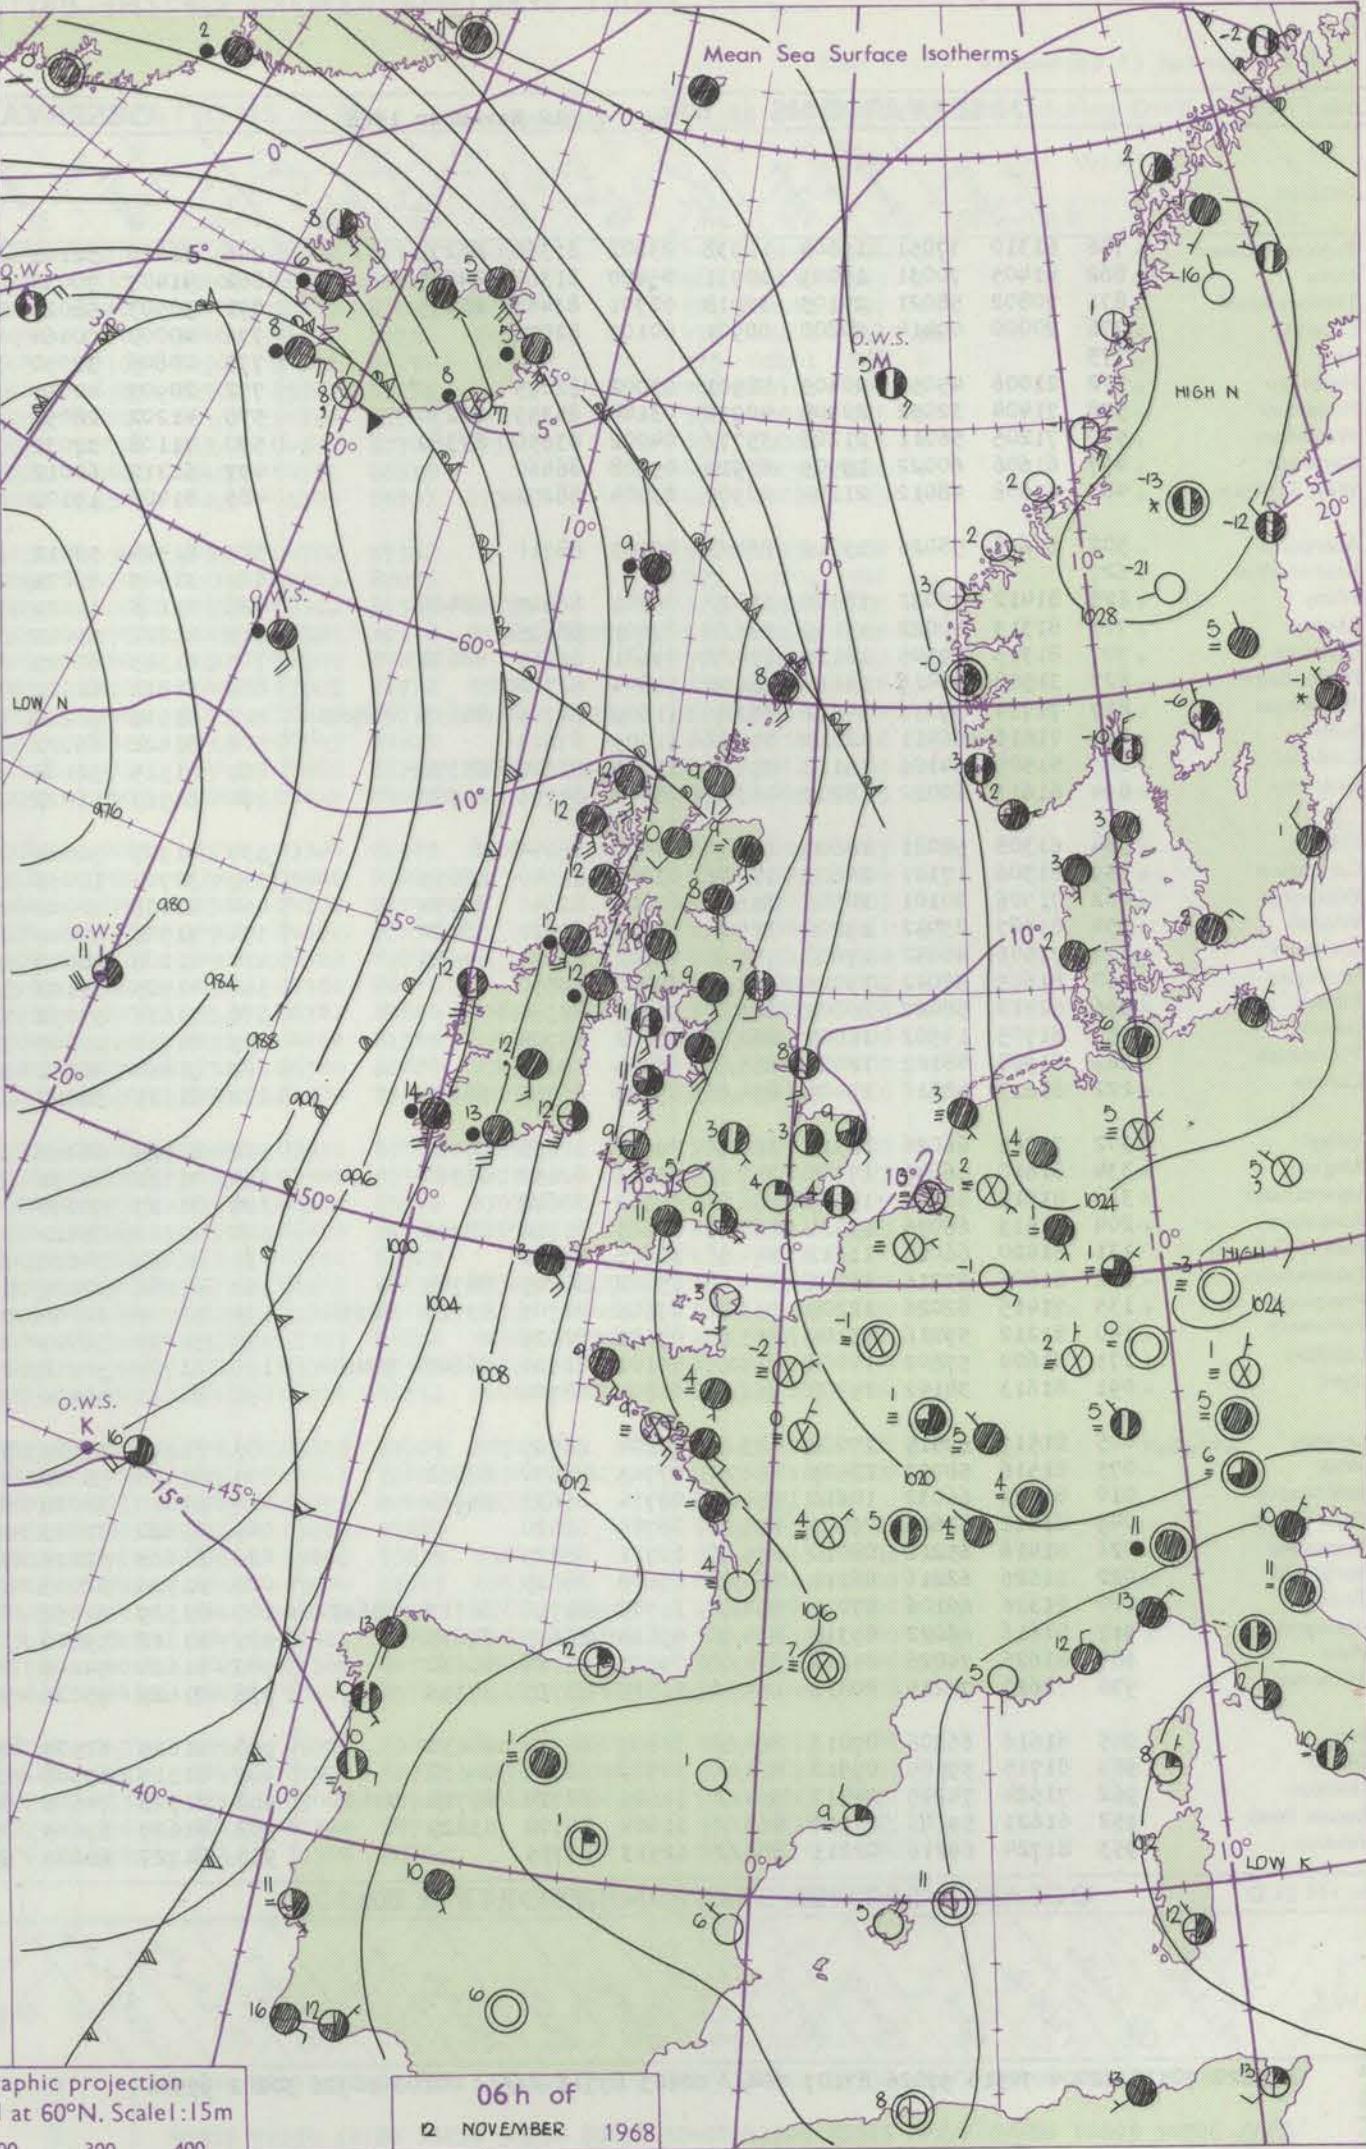

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The depression zone 500 miles west of Ireland has moved slowly north. The anticyclone over the Norwegian Sea has gradually extended a ridge southwards across Norway to Germany and France. Frontal troughs have approached the British Isles from the southwest but become slow moving near western Ireland. During the next

24 hours only gradual changes are expected near the British Isles. Low pressure will persist over the Atlantic and a southerly airstream will be maintained over the British Isles. Waves on the frontal trough near Ireland will move north and the trough will make a little eastwards progress into Ireland.

Issued at midday Tuesday 12 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The depression in the northwest Atlantic has moved northwest a little and is now filling. Another depression is moving quickly eastsoutheast in middle latitudes. The anticyclone over Scandinavia is persisting and has intensified a little and maintained the southerly airstream over the British Isles. This has increased to

strong to gale force. The frontal trough over western Ireland is making little progress eastward and minor waves are running northwards along it. Some eastward movement is expected over the Continent however and this will cause the front to be brought northeastwards over southwest England.

Issued at midday Wednesday 13 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The depression to the southwest of Iceland is expected to continue to fill and to move slowly southwestwards. The depression situated yesterday to the north of Azores moving quickly eastwards has now slowed and is expected to become slow moving near Ocean Weather Station Kilo by midnight tonight. The anticyclone over Scandinavia is expected to change little and, with the slow approach of the

depression to the southwest of the British Isles, the strong to gale southeasterly gradient at present affecting the eastern and northern parts of Britain will probably extend southwestwards to affect nearly all areas by midnight. The cold frontal trough from northwest Scotland to Switzerland has become very weak and is expected to have frontolysed during the next 24 hours.

Issued at midday Thursday 14 November 1968

Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

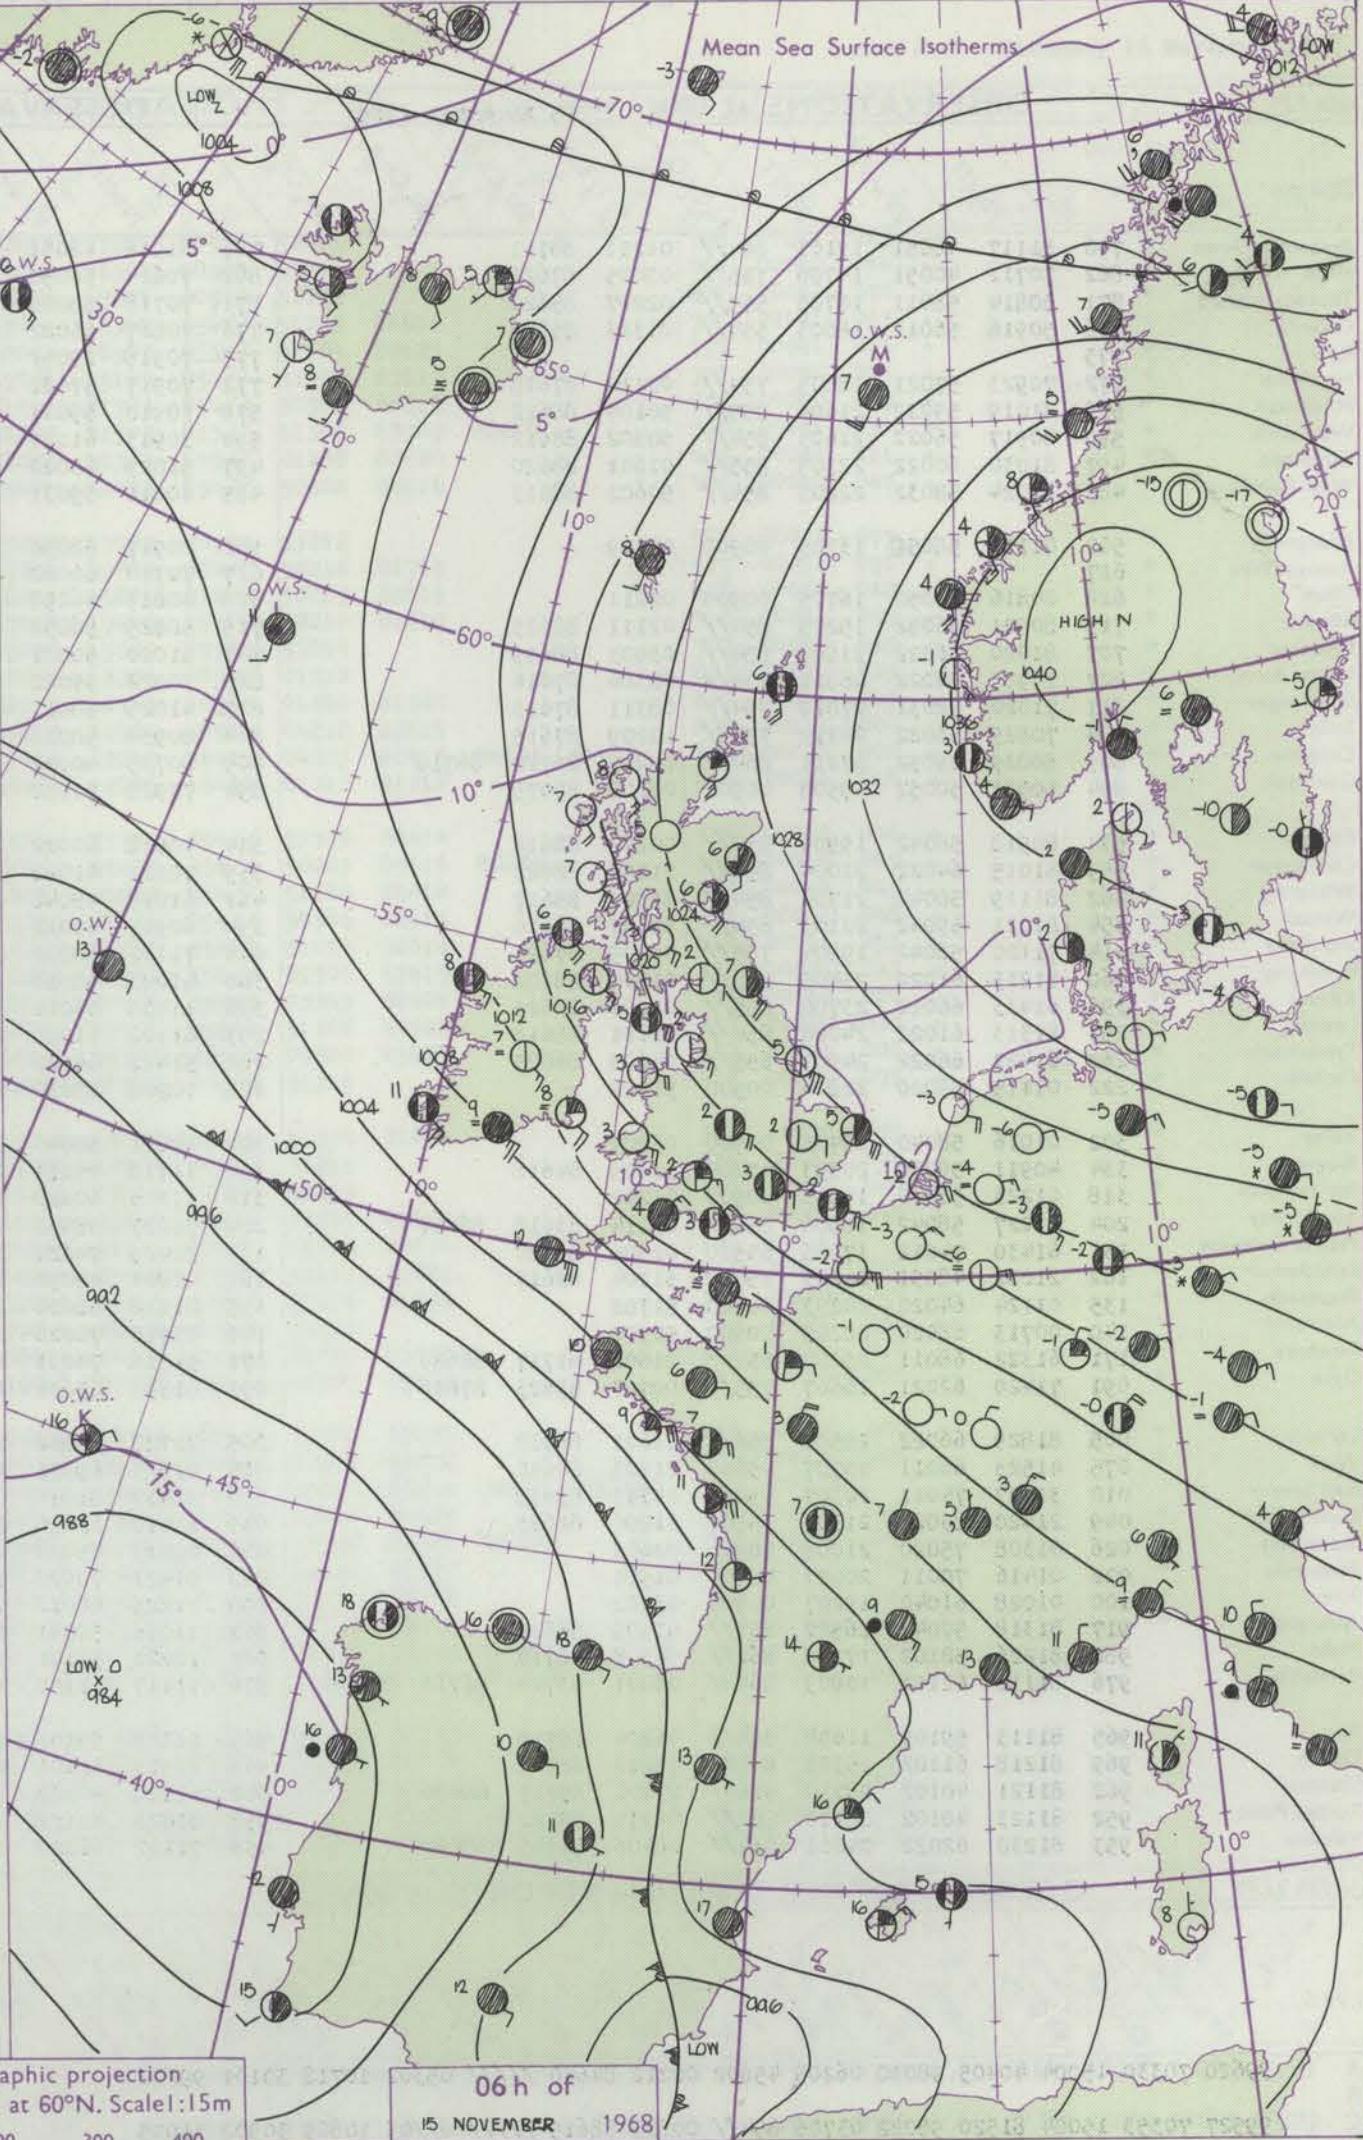

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The large anticyclone centred over southern Scandinavia is expected to persist. The depression to the southwest of the British Isles is complex, with the northwestern centre filling at present and a new centre forming west of Portugal and expected to deepen. These two systems will maintain the strong southeasterly

Issued at midday Friday 15 November 1968

flow over the British Isles, with the occlusion over Biscay making only slow progress northeast, but with the possibility of minor troughs moving westward from the Continent.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The anticyclone over Scandinavia has moved little whilst declining slowly. A complex area of low pressure over Spain has extended into the western Mediterranean and strong southwesterly winds have brought warmer air into southern Italy. An active warm front is situated across Southern France, into northern Italy

and is expected to move north into central Europe during the next 24 hours. The easterly airstream across northwest Europe will back northeasterly and strengthen to gale force across the southern North Sea and southeast England.

17 NOVEMBER 1968

GENERAL SYNOPTIC DEVELOPMENT

A ridge from southern Scandinavia to Ireland has persisted and extended south to the Bay of Biscay. A depression remains over southern France. An associated trough has swung northwest across Southeast Europe and into Germany. As a

consequence winds over the North Sea and southeast England have backed to north-easterly and the air arriving at the surface over southeast England has become slightly less cold. Little change is expected over the next 24 hours.

Issued at midday Sunday 17 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The ridge of high pressure from the anticyclone over Scandinavia has persisted over the British Isles. An area of low pressure over western Europe has very cold air associated with it but this has just skirted the extreme southeast of the British

Isles. A complex area of low pressure covers the northern Atlantic. Little change is expected in the next 24 hours.

Issued at midday **Monday 18** November 1968.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The ridge of high pressure from the anticyclone over Scandinavia declined slightly as a weak trough of low pressure from the Continent extended westwards towards southeast England. With the large depression in the North Atlantic

becoming slow-moving, the British Isles is in an area of slack pressure gradient. The only change expected in the next 24 hours is the slow eastward movement of a trough of low pressure into the west of the British Isles.

Issued at midday Tuesday 19 November 1968

Polar Stereographic projection
one standard parallel at 60°N. Scale 1:15m

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

Pressure continues high over the Continent. The depression which was off northwest Spain yesterday morning moved northward to the west of Ireland and by tomorrow morning is expected to the west of northern Scotland, with a mild southerly flow

continuing over the British Isles. The associated cold front is expected to become slow-moving over Wales and western Scotland. Another low will be slow-moving to the west of Gibraltar.

Issued at midday Thursday 21 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

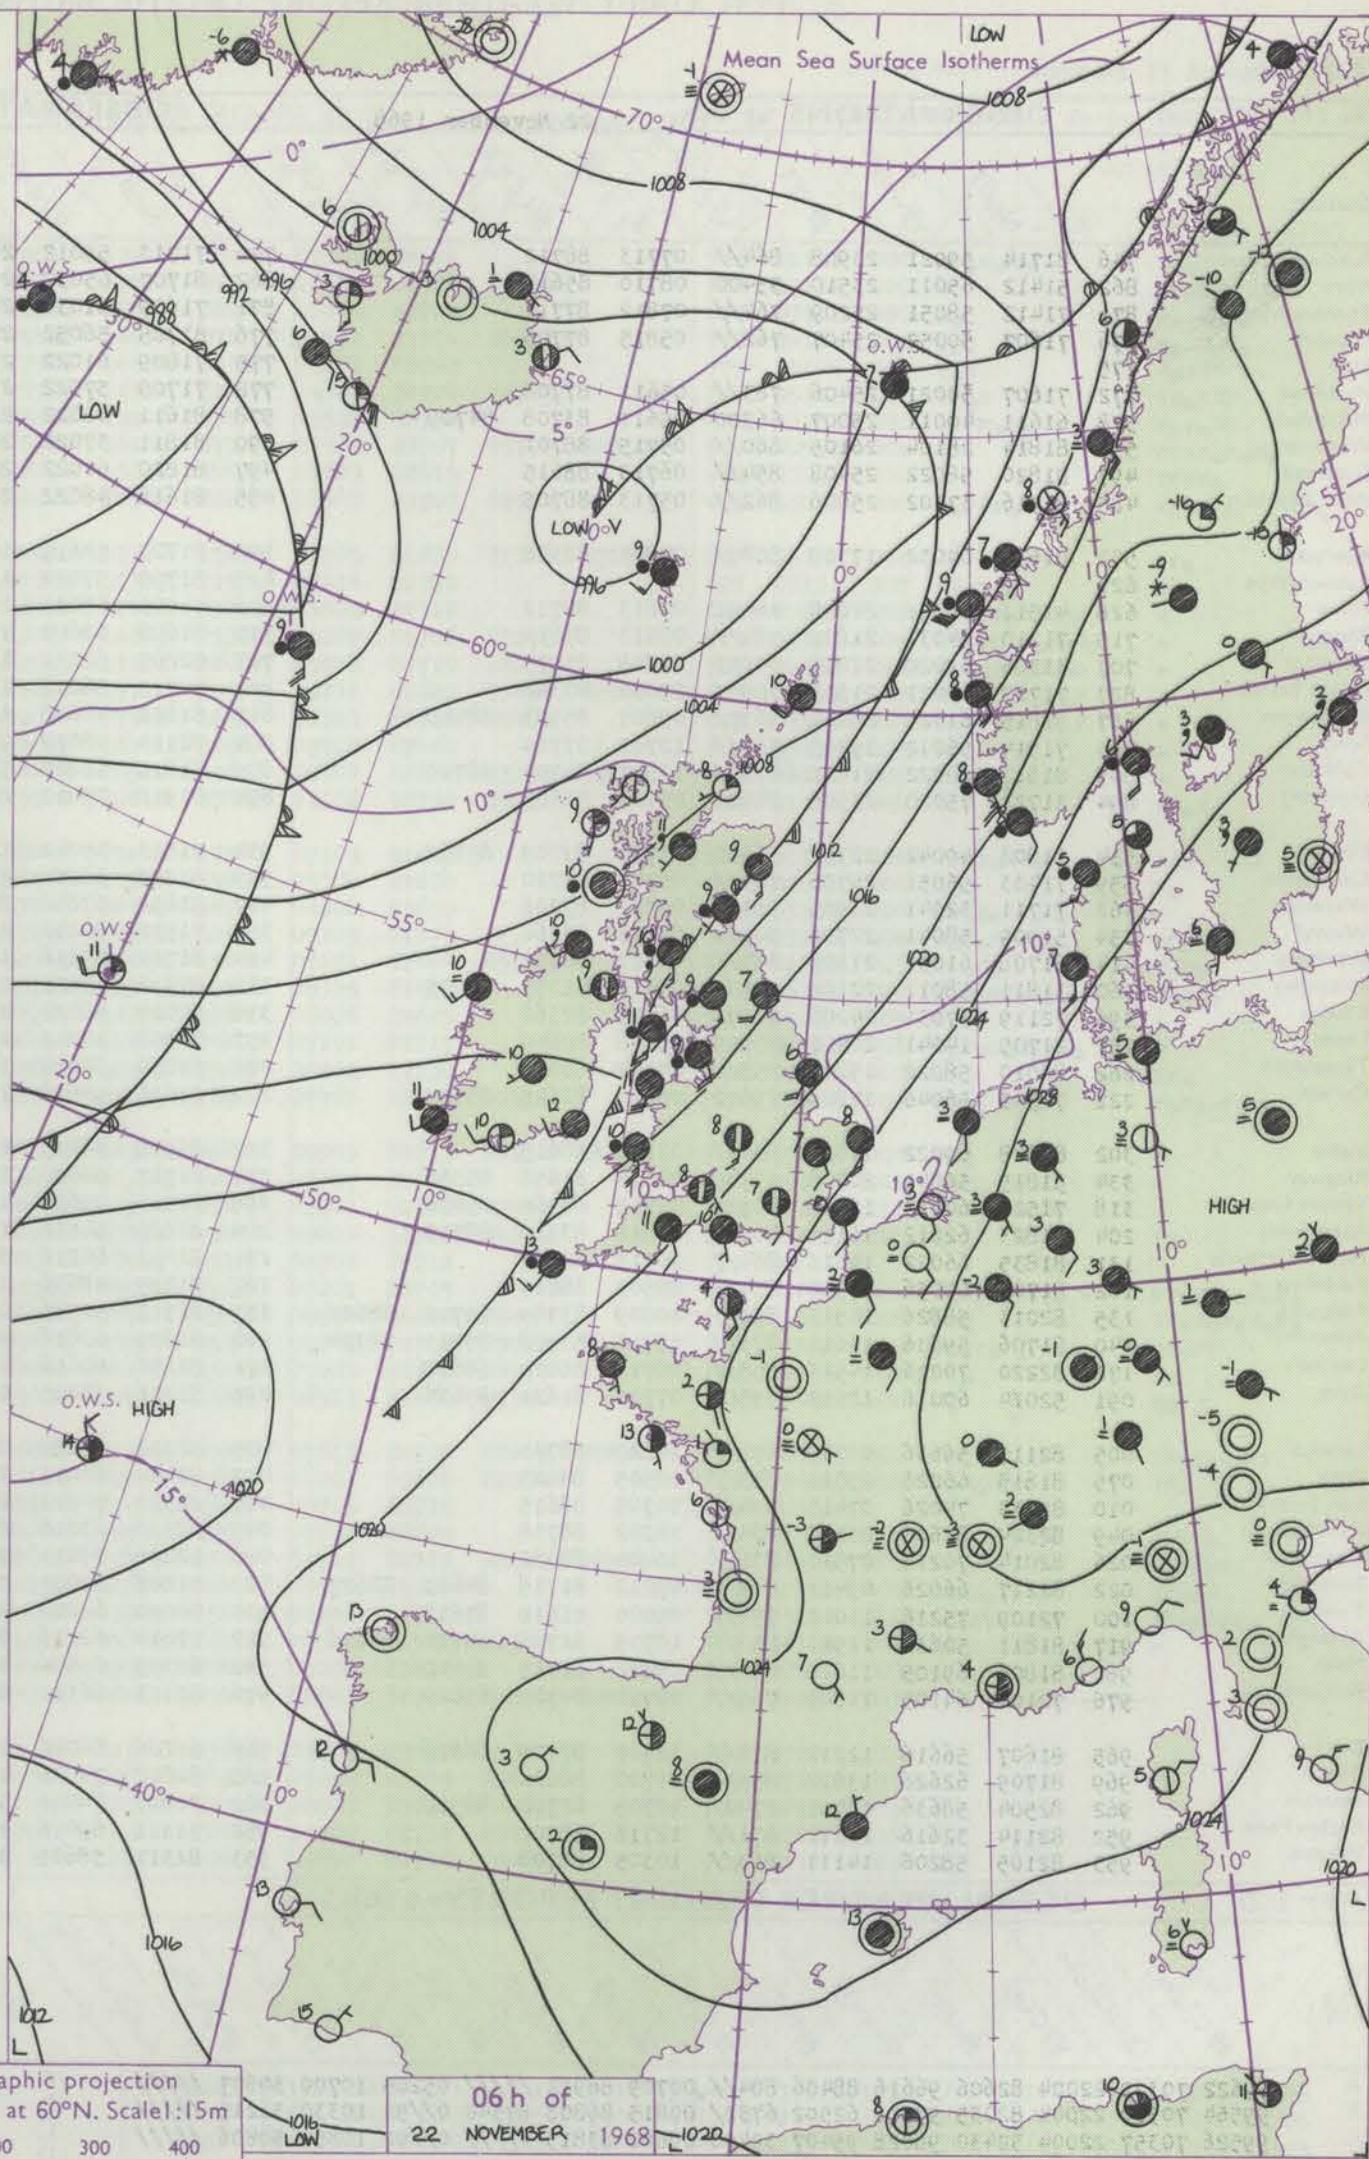

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The anticyclone has persisted over the Continent but has declined steadily during the past 24 hours. The cold front has remained almost stationary over the west of the British Isles with a series of small wave depressions moving northwards along it, maintaining the mild southerly flow over Britain with rain in western and northern areas. This front is expected to begin to move east-

wards as the Continental anticyclone declines and to make steady progress into Norway in the north but move slowly into southern England in the south. This will be followed by an occlusion, now in the eastnorth Atlantic, expected to have reached western Britain by midnight tonight.

Issued at midday Friday 22 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The anticyclone over the Continent has continued to decline and has receded eastwards. The frontal trough that was slow-moving over the west of the British Isles has moved eastwards into the North Sea and the further trough approaching from the Atlantic developed a further wave which is expected to cross the country

during today. By early tomorrow the trough is expected to have cleared all districts and the whole of the British Isles will then be in an unstable westerly airstream.

Issued at midday Saturday 23 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The ridge of high pressure over the Continent receded a little southeastwards yesterday as a trough of low pressure crossed the British Isles. The associated depression northwest of Scotland, although complex, moved steadily northeastwards. A weak ridge of high pressure over the Atlantic west of Ireland moved eastwards yesterday. During today this ridge of high pressure will cross southern areas of

the British Isles with the north remaining in a westerly airstream. Later today and tonight a developing depression with its associated frontal system will approach the British Isles from the west. The frontal system will cross many parts of Britain during tomorrow, the depression moving northeast towards Scotland.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The intense low with storm force winds approaching O.W.S. 'I' continues to move northeastward while the high pressure system over France is extending over eastern Europe. The warm front moving eastwards across England and Scotland is a weak and diffuse feature but the occlusion further north is active. A wave is ex-

pected to form on the cold front southwest of Ireland and this will probably move very rapidly northeastwards but the British Isles will remain in a strong to gale force southwesterly airflow during the next 24 hours.

Issued at midday **Monday 25** November 1968

06 h of
26 NOVEMBER 1968

Issued at midday Tuesday 26 November 1968

The deep depression just west of O.W.S. 'I' continued to move slowly northeastwards. Its associated weak, diffuse, warm front cleared northeast Scotland during the afternoon, whilst the cold front quickly cleared northern and western districts.

but wave development near O.W.S. 'K' prevented its progress across southern and central England. During the next 24 hours the cold front should clear all parts of the British Isles.

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The deep depression off southeast Iceland has continued to move northeast and is expected to weaken as it moves towards northern Norway during the next 24 hours. Its associated cold front from southwest Norway across southern England has become very slow-moving with wave depressions moving northeast along it and only a very slow eastward progression now seems likely but it is expected to have

cleared the extreme southeast of England later tomorrow. An anticyclone near the Azores will remain almost stationary with a ridge extending northwards to the Denmark Strait area, where it is possible that a new anticyclone will develop during the next 24 hours.

Issued at midday Wednesday 27 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The depression northeast of Iceland has continued to move northeastwards and is filling slowly. The complex depression over Biscay and Spain is almost stationary and the frontal trough from Biscay to the Irish Sea to southern Norway has become

very slow-moving. It is now expected to move little and progressively weaken. The ridge of high pressure from Iceland to the Azores has persisted with the slow development of an anticyclone over the Denmark Strait.

Issued at midday Thursday 28 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The anticyclone between Iceland and Scotland is intensifying and moving slowly southeast and is expected to be centred near Shetland tonight. With a considerable rise of pressure over the northern North Sea the frontal zone in that area has been forced southwards with a colder northeasterly flow spreading

south behind it. The front is expected to continue moving very slowly south. Meanwhile low pressure to the south of the British Isles is being transferred gradually to the western Mediterranean, though with another deepening depression further west in the vicinity of O.W.S. 'D' moving eastwards.

Issued at midday Friday 29 November 1968

CHART OF WEATHER IN PART OF NORTHERN HEMISPHERE

CHARTS OF WEATHER IN WESTERN EUROPE

GENERAL SYNOPTIC DEVELOPMENT

The anticyclone to the north of Scotland is slow moving and is likely to remain so during the next 24 hours with little change of pressure. The complex low pressure area from the Bay of Biscay to the eastern Mediterranean is expected to simplify to a single centre near Sardinia whilst another low to the northeast of the Azores moves east towards Portugal. An east to northeast gradient now covers the whole of

the British Isles. The cold front which was over south Wales and East Anglia yesterday morning is now almost stationary near the English Channel coast. The front is still active but activity is expected to die out slowly during the next 24 hours.

Issued at midday Saturday 30 November 1968
