# SUMMARY OF BRITISH WEATHER

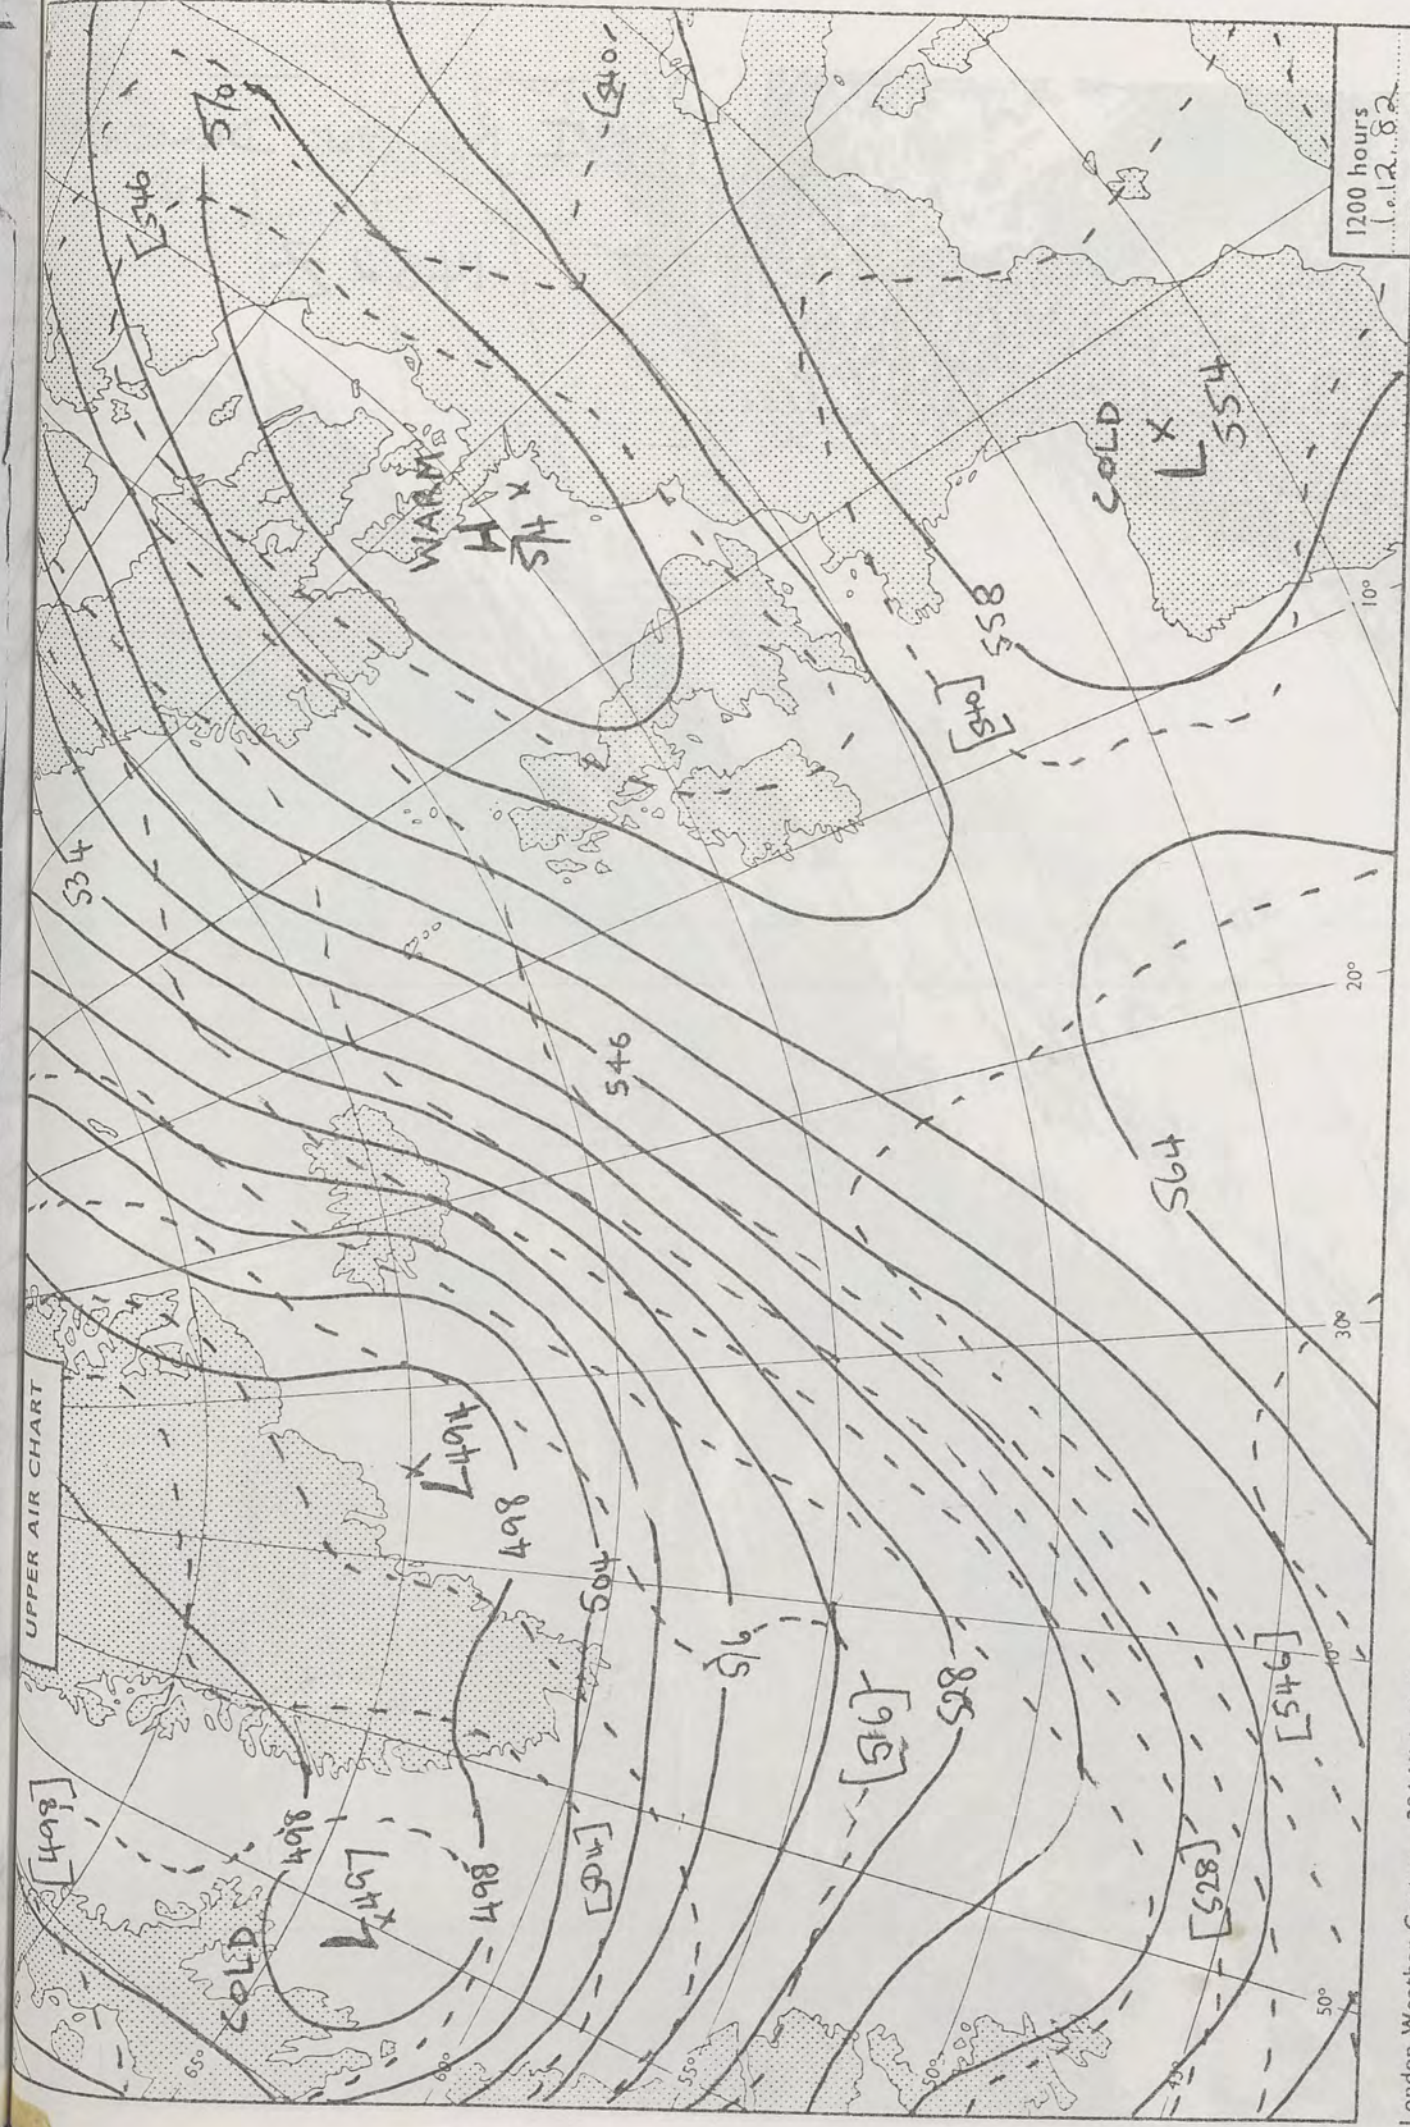

At midnight, fog was quite extensive in the Midlands, central southern and northeast England. A light northeasterly breeze had developed over SE England and it cleared the fog that had lingered all day Tuesday around parts of London. The northeasterly breeze spread west and north, and during the night it lifted the fog in most places into low cloud, at the same time raising temperatures above freezing. By dawn the only significant fog left was in Lincolnshire and Yorkshire and that lifted during the morning. Most of England and Wales had a dull cold day but cloud was well broken for much of the day in NW England, West Wales and SW England. Northern Ireland was dry and cloudy in the morning and had a sunny afternoon. Central and eastern Scotland had a dry day with sunny periods but northwest Scotland and the Northern Isles were cloudy with rain at times. Strong southerly winds accompanied the rain in the west and north. It was mild in most of Scotland and rather cold in much of England & Wales.

'Extremes' for Wednesday 1st December 1982

Highest maximum	: 11.0°C Inverness Airport
Lowest minimum	: -5.5°C Bastreet (Cornwall)
Lowest grass minimum	: -10.8°C Beaufort Park (Berkshire)
Most rain (24 hours from 0900 h)	: 2.8 mm Jersey Airport
Most sun	: 6.1 hrs Boulmer (Northumberland)

# SUMMARY OF BRITISH WEATHER

Much of England, Wales and Northern Ireland had a dull, cold and misty day. There were a few breaks in the cloud; early on in Cumbria, in the late morning and afternoon in the west country and in the evening in the East Midlands and East Anglia. Temperatures fell sharply in East Anglia and the East Midlands during the evening with frost and fog in places by mid-evening. Southern Scotland started with widespread frost and freezing fog, especially in the Central Lowlands. The fog cleared during the morning as it became cloudy from the south. Northern Scotland and the Northern Isles had a dry day with sunny periods. Most parts of the British Isles were dry but there was drizzle in the Channel Islands, southern and southeast England in the morning and in NE England in the afternoon and evening. It was rather cold or cold in most places.

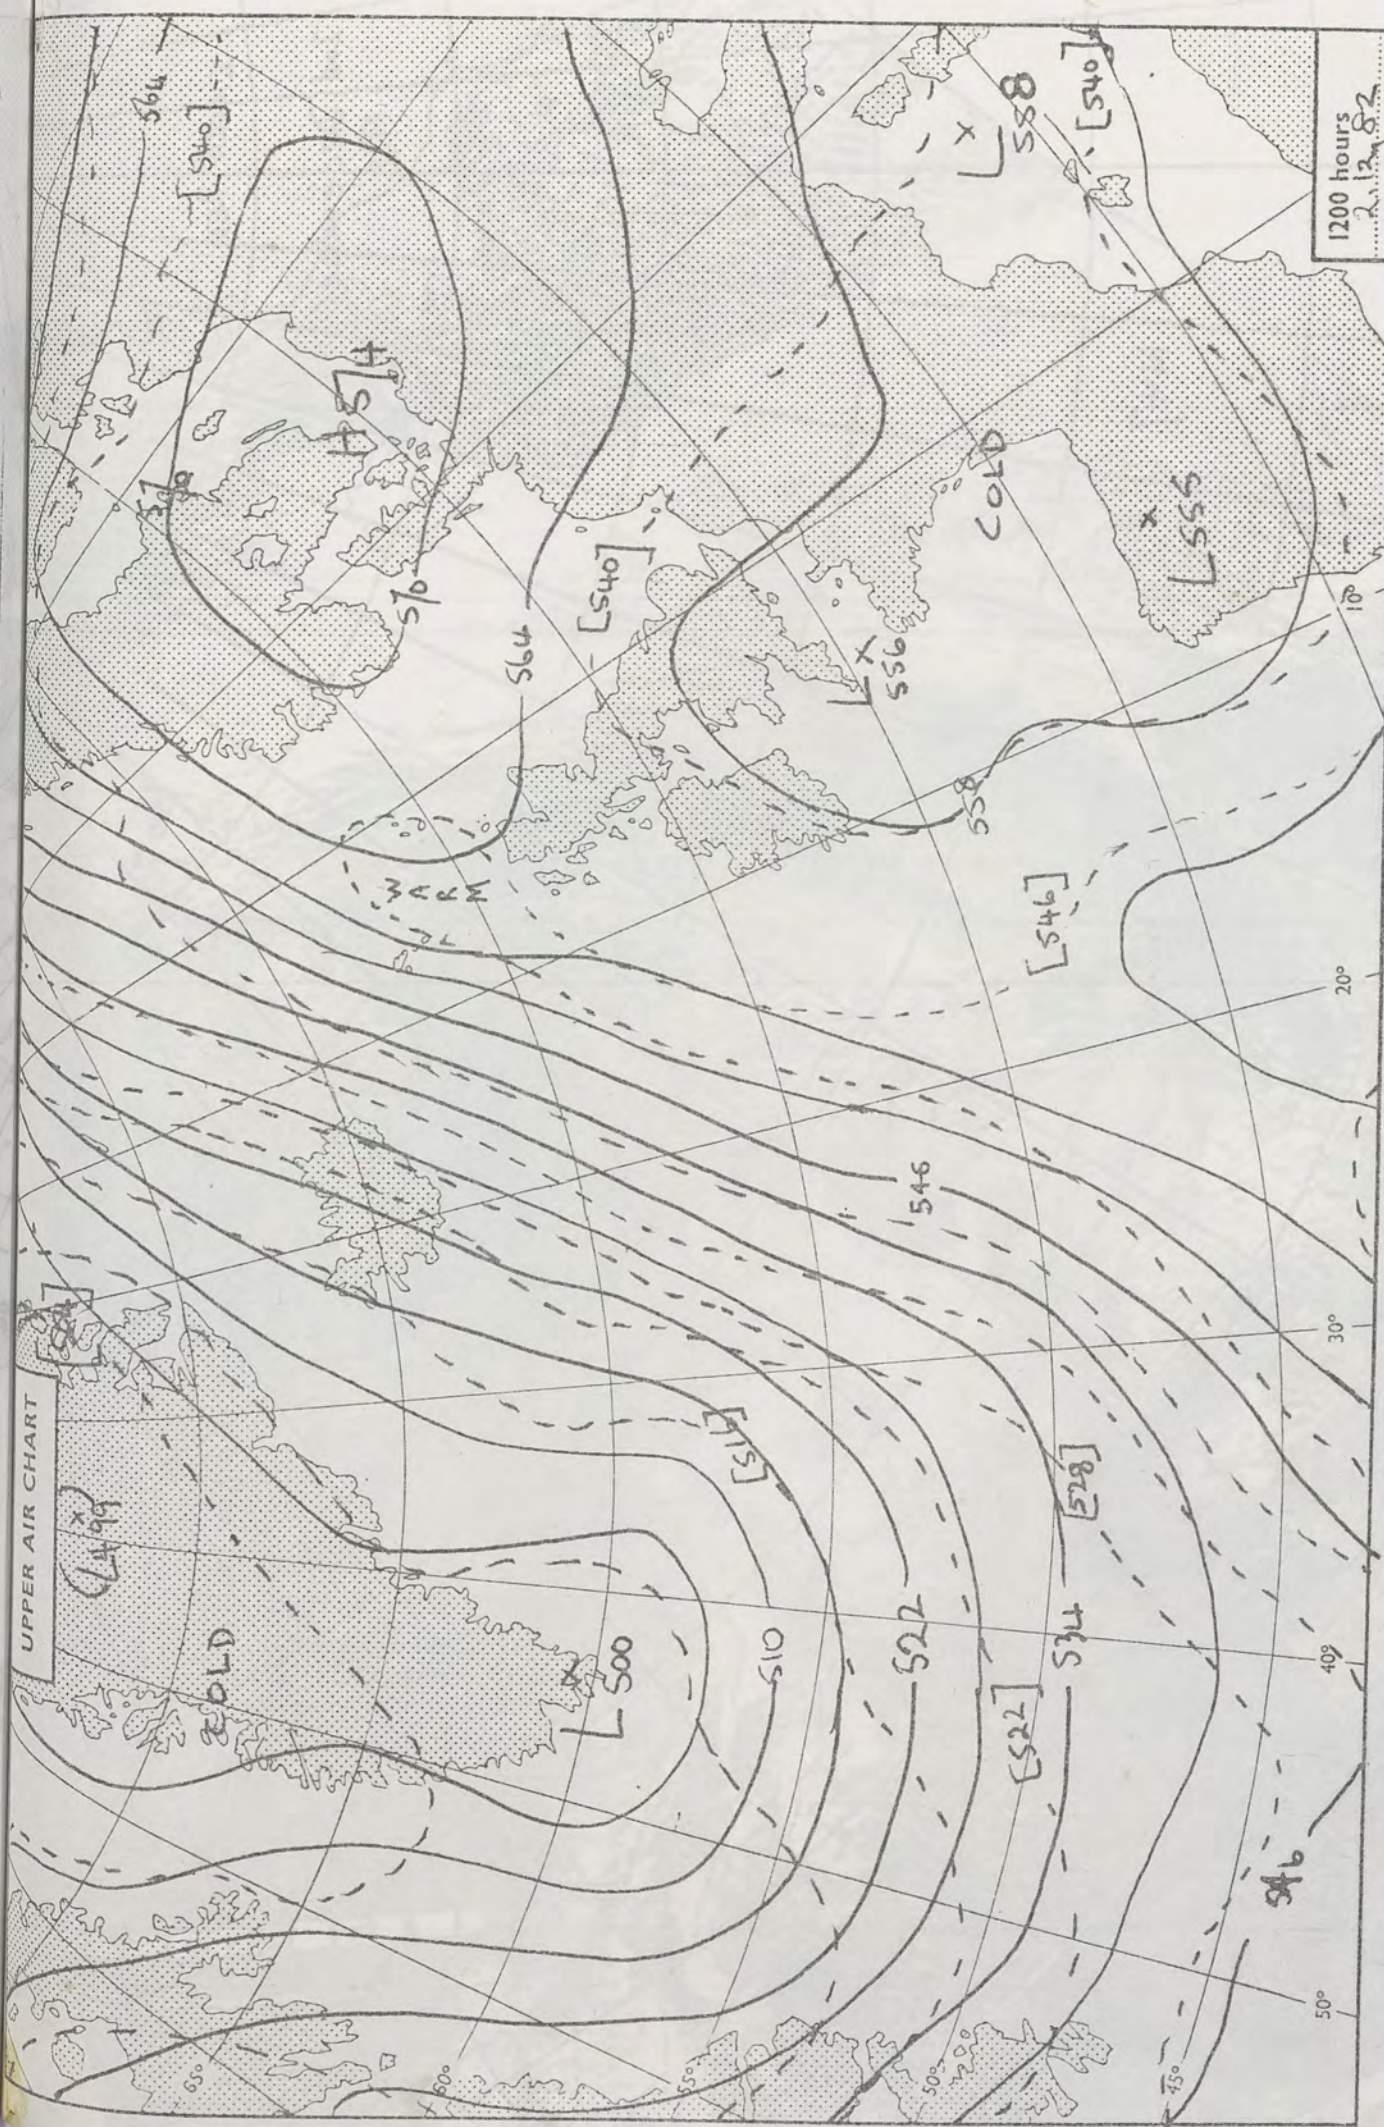

## CORRECTION

#### SUMMARY OF BRITISH WEATHER

Apart from a little light drizzle here and there, chiefly near the south coast, it was a dry night and a cloudy one in many places although Northern Ireland and the far north of Scotland were mainly clear and frosty. However in East Anglia, the East Midlands and Lincolnshire there was fog dense and freezing in places and it extended northward into Yorkshire around dawn. After dawn there was also thick fog in the northwest Midlands and in parts of London and the southeast of England fog formed rapidly as skies cleared, with frost in places. Much of the fog lifted during the morning and there was sunshine in inland parts of central southern and southeast England and in the south Midlands and East Anglia but some fog persisted over eastern England. Parts of western Scotland and N. Ireland also had some sunshine but most other areas were cloudy and mainly dry though with a little rain or drizzle chiefly near the south coast.

'Extremes' for **FRIDAY 3RD DECEMBER 1982**  
 Highest maximum : 11°C Penzance

### SUMMARY OF BRITISH WEATHER

Fog was widespread and dense and freezing to the east of the Pennines overnight but it lifted and had largely cleared by or soon after dawn as southerly winds brought cloudier weather generally and some rain to Northern Ireland and the Western Isles by dawn. During the day it was cloudy everywhere and rain spread on across Scotland during the morning and early afternoon with some moderate to heavy rain in places - but rather more slowly eastward over England and Wales so that by dusk it had only reached as far as northwest England, Wales and West Devon. In the late afternoon clearer weather with a few showers followed into western Scotland and had reached all of Scotland and Northern Ireland by late evening. Ahead of this the rain belt weakened and most of East Anglia and the southeast remained dry. Eastern areas of England were rather cold but in the west it was milder. There were gales in the north-west for a time at first.

### 'Extremes' for SATURDAY 4TH DECEMBER, 1982

#### SUMMARY OF BRITISH WEATHER

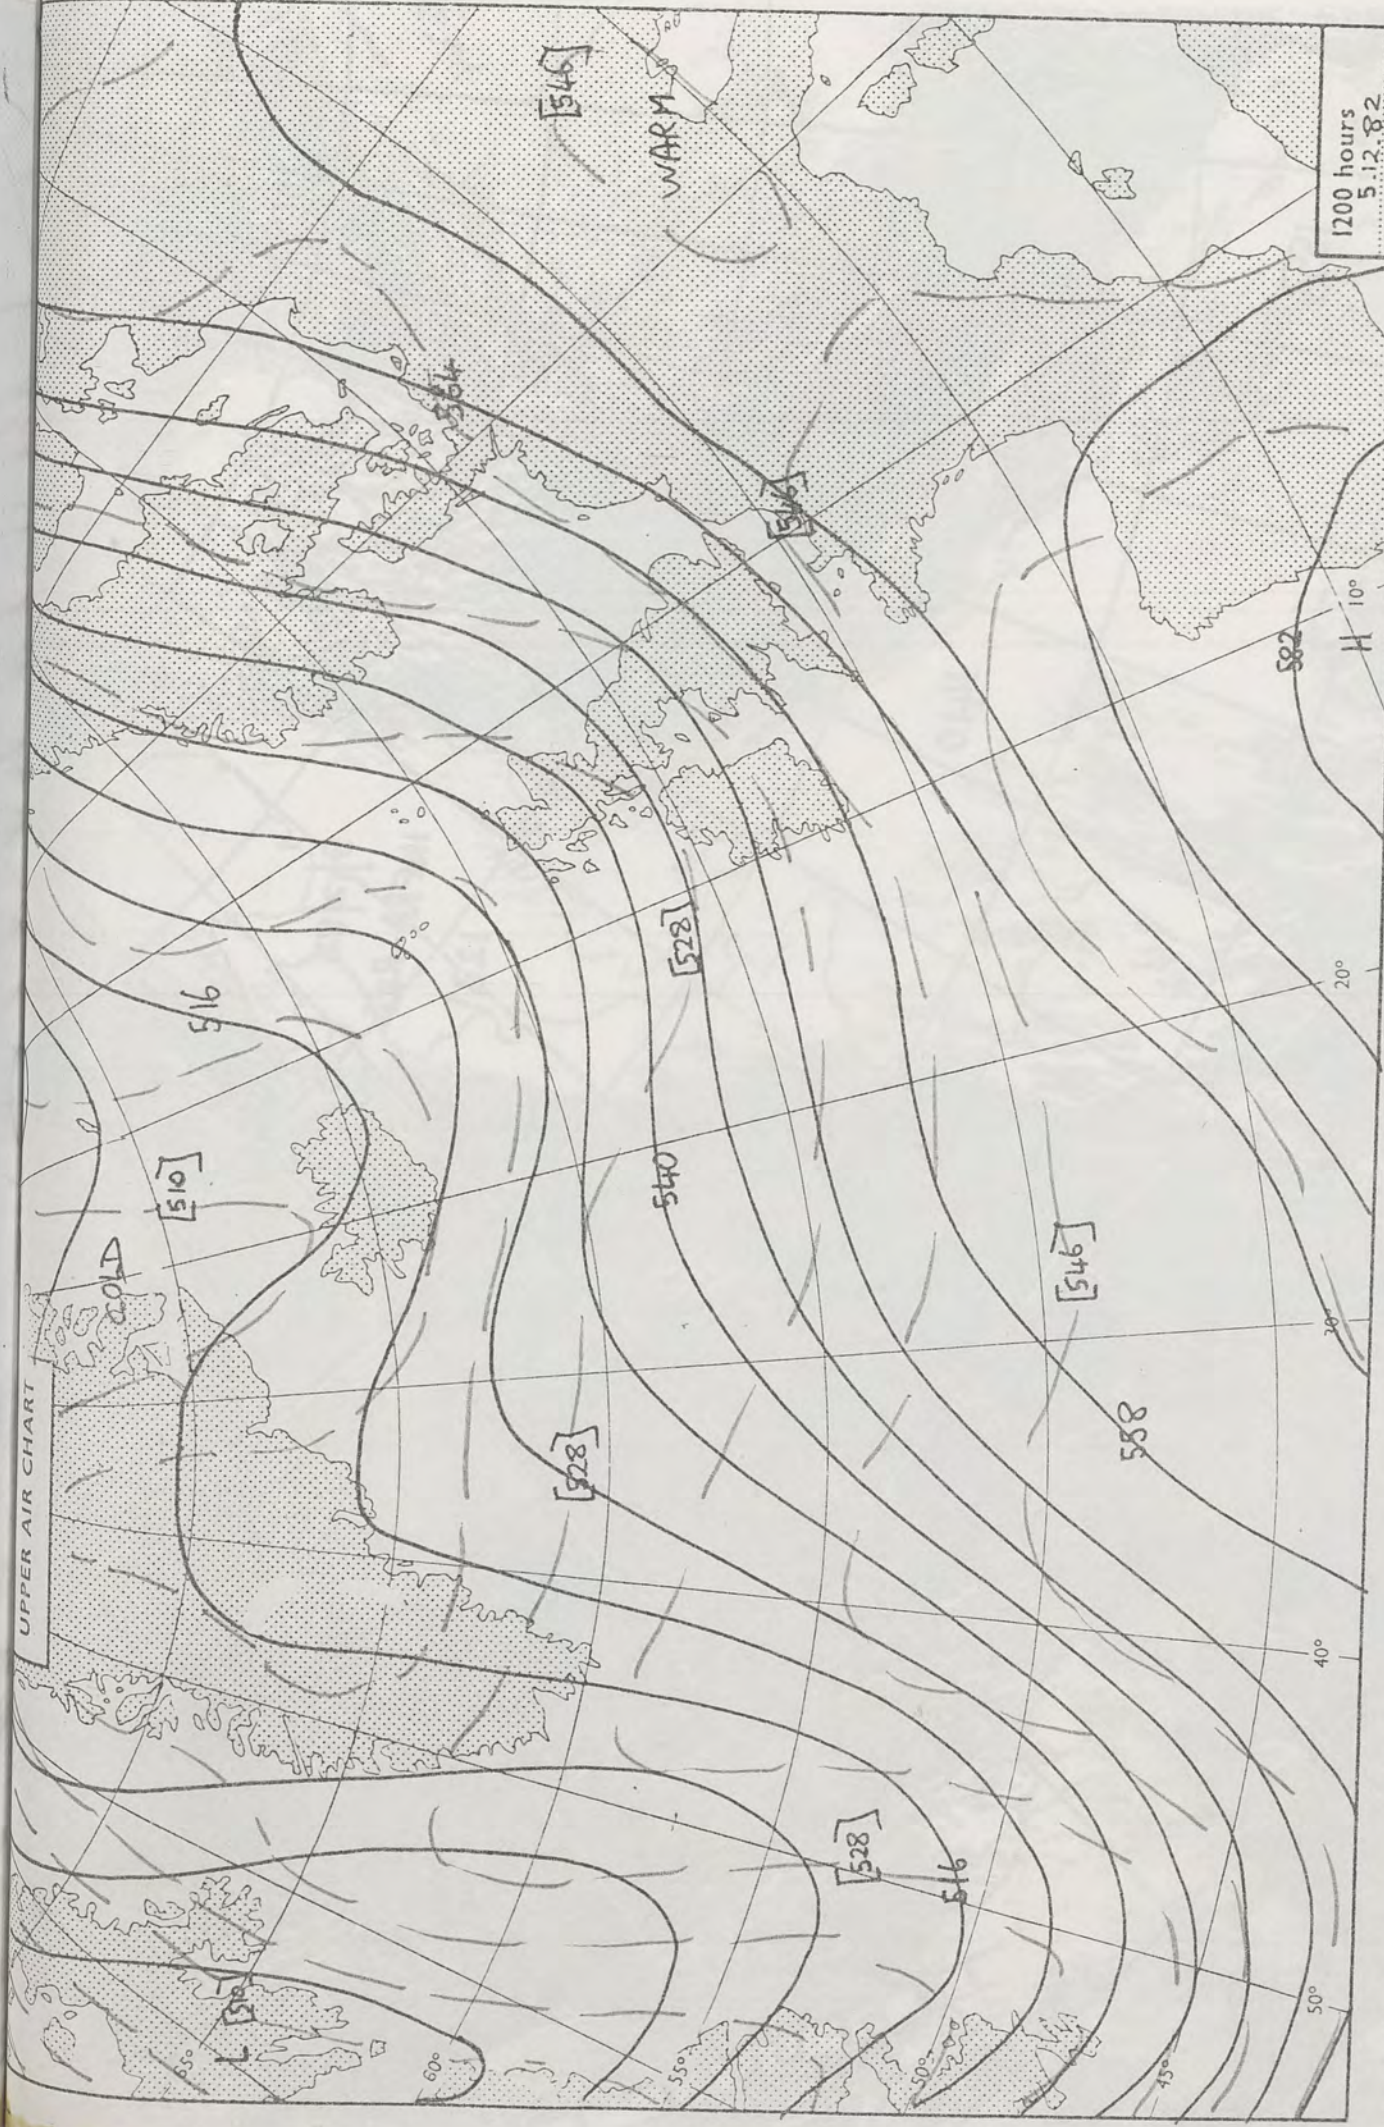

In England and Wales it was a mild night with mostly light rain or drizzle at times, but drier weather reached most northern and western regions by daybreak. During the day it remained dry over much of central and northern England and Wales with a few bright intervals, though in the far northwest there was rain around midday. In all southern counties of England there were outbreaks of rain; in regions bordering the Channel the rain was heavy at times. In Northern Ireland and southern Scotland it was cloudy but mainly dry overnight. In the morning there was rain in places then most districts were brighter with isolated showers. In central and northern Scotland there were clear or sunny intervals and scattered showers with hail in places. Temperatures were near the early December average in the north, but the south was mild. Fog and frost formed in the evening in parts of central and eastern England.

#### SUMMARY OF BRITISH WEATHER

In England, Wales, Northern Ireland and southern Scotland it remained dry in most places with mainly clear skies; exceptions were in southeast England and the Channel Islands where rain cleared away during the early hours. Fog developed overnight in East Anglia, central and northern England and Northern Ireland. In parts of northwest England, the Midlands and East Anglia fog persisted most of the day, dense in places. In northern Scotland there were isolated wintry showers at first but most of the day was dry and bright. In the evening southwest England and the Channel Islands had rain and drizzle, and fog affected the Edinburgh area. It was rather cold in most regions with a frost early and late in the day but in the extreme southwest, the Channel Islands and many western coastal areas temperatures were mostly near normal.

# SUMMARY OF BRITISH WEATHER

In England and Wales fog, thick and freezing in central and eastern areas was replaced by rain, heavy at times moving northeast, reaching the east by mid-afternoon. Northern Ireland had rain, occasionally heavy until late afternoon with showers in the evening. Scotland was generally dry at first but rain reached southwestern areas during the afternoon with snow over the mountains and sleet for a time at lower levels. Northeast Scotland had wintry showers in the afternoon. In the late afternoon and evening thunderstorms and hail developed in Wales and moved northeastwards into northwest and northern England. In the late evening central and southern areas of England and East Anglia were mostly clear and dry apart from a few showers while the rain reached northeast Scotland. Winds reached gale force in places mostly along the south coast and in the west. (The highest gust reported was 68Kts at Fairlight, Nr. Hastings). It became very mild in the south.

# SUMMARY OF BRITISH WEATHER

In southern England, Wales and northwest England, there were showers, some heavy with hail and occasional thunder. A period of more persistent rain occasionally heavy, moved across southern England during the late evening. Central and eastern England had a good deal of dry sunny weather with a few scattered showers. In Northern Ireland, persistent rain early, was replaced soon after dawn by clearer weather with a few showers and many places were dry in the afternoon and evening. In Scotland persistent rain, with sleet and snow over the mountains, was steadily replaced from the south by showers some of hail and snow, but the far north and Shetland remained dull until evening. Winds reached gale force in the north of Scotland and southern England in the morning. The highest gust reported was 63Kt at Fair Isle. Temperatures were mostly near normal.

#### SUMMARY OF BRITISH WEATHER

Northern Ireland and Scotland were mostly dry overnight with clear periods but there were a few showers in western and southern Scotland. After a dry but cloudy start, rain reached Northern Ireland around midday and parts of western, central and southern Scotland by evening with sleet or snow in parts of southern Scotland. Northeast Scotland remained dry with sunny periods. Overnight there was rain in many parts of England with some heavy rain in parts of southern England. West Wales and western areas of England had clear intervals and showers. Many areas were then dry for a time and some eastern areas of England had quite a sunny morning but thickening cloud brought rain to Wales and southwest England by midday and all remaining areas of England and Wales by evening. Some of the rain was heavy with strong to gale force southwesterly winds. The highest reported gust was 68kts at Prawle Point (Devon). It was mild in the south.

'Extremes' for THURSDAY 9TH DECEMBER 1982  
Highest maximum : 12°C Several places in southern England  
Lowest minimum : -2.9°C Perth  
Lowest grass minimum : -9.1°C Edinburgh  
Most rain (24 hours from 0900 h) : 40.4mm Mumbles

#### SUMMARY OF BRITISH WEATHER

Rain and gales cleared from south-east Britain in the early hours. Most places remained fairly cloudy, however, with some showers, and more persistent rain or snow affected central and eastern Scotland and Northumberland. Elsewhere, the heaviest showers - and the strongest winds - were in south-west Britain, where there was hail and thunder in places. The best of the sunshine, and the fewest showers, were over Northern Ireland, south-west Scotland and parts of northern England. Temperatures were near or rather below normal.

#### D.W.S. CHRISTMAS POSTINGS

We hope to meet the following schedules:

Date of Posting	Summaries Posted
Tue 21 Dec	14-19 Dec inc.
Thu 30 Dec	20-27 Dec inc.
Thu 6 Jan	28 Dec-4 Jan inc.
Wed 12 Jan	5-11 Jan (ie return to normal).

'Extremes' for FRIDAY 10TH. DECEMBER 1982

Highest maximum	: 8.8°C St Catherine's Point (IOW)
Lowest minimum	: -1.1°C Long Kesh (nr Belfast)

#### SUMMARY OF BRITISH WEATHER

Apart from a few showers in the extreme south and west of England, and west and north Scotland, where some were wintry, most of the country had a dry day with sunny spells. However, fog was persistent in the Carlisle area. It was mostly rather cold. During the evening fog patches developed in many places for a time with some dense freezing patches. However, cloud spread across most of Wales, and the south-western half of England, with rain in the far southwest by midnight.

# SUMMARY OF BRITISH WEATHER

Frost and freezing fog affected many areas at first, whilst rain spread slowly from the south-west into southern England, Wales and parts of Northern Ireland. During the morning, the rain turned to snow as it spread on into the Midlands and North Wales, but little, if any, snow settled.

Scotland had some sunshine, with showers of rain, hail and snow in the north and east. Many parts of northern England (and a few places in southern Scotland) had a dull, misty day with some areas of persistent freezing fog. The south-west of England and South Wales brightened up and were fairly mild, with a few showers.

The evening saw the rain and snow area weaken, though light rain persisted in the English Midlands.

'Extremes' for SUNDAY 12TH DECEMBER 1982

Highest maximum : 11°C Guernsey  
Lowest minimum : -7.4°C Tummel Bridge (cent Scotland)  
Lowest grass minimum : -11.0°C Edinburgh Airport  
Most rain (24 hours from 0900 h) : 10mm Epping Forest (Essex)  
Most sun : 4.7 hr Benbecula

#### SUMMARY OF BRITISH WEATHER

Overnight the rain and a little sleet over the Midlands died out and most places were dry. There were a few showers in the south and southwest of England and northerly winds brought wintry showers to eastern Scotland and later to northeast England. Fog was only very patchy and had mostly cleared by dawn. Frost was fairly widespread away from the south and southwest of Britain. By the morning many places were clear and remaining cloud soon broke up to give most places a dry sunny rather cold day with just a few coastal showers. During the evening there was a frost in quite a few inland places and in England and southern Scotland fog had formed in many places by midnight.

'Extremes' for Monday 13th December 1982

Highest maximum	: 10°C Guernsey (L'Ancrese)
Lowest minimum	: -7.5°C Crawfordjohn (nr Lanark)
Lowest grass minimum	: -10.6°C Glasgow/Abbotsinch
Most rain (24 hours from 0900 h)	: 13.2 mm Prabost (Skye)
Most sun	: 5.9 hr Cromer, Benson.

#### SUMMARY OF BRITISH WEATHER

Overnight in Wales, England and eastern Scotland it remained dry and in many areas there was a frost and some thick fog. During the morning fog lifted quickly and there were bright spells in eastern England but in Wales, western England and eastern Scotland there was rain before midday. The rain spread to central and eastern England during the afternoon and evening. Much of the rain was light but in southwest England and Wales it was heavy at times. In Northern Ireland and western Scotland it was cloudy with rain or drizzle at times. Although it was cold at first in central and eastern Britain, much milder conditions spread from the west during the day.

#### SUMMARY OF BRITISH WEATHER

All districts started the day cloudy, very mild and windy. In parts of central, east and north-east England temperatures were unusually high for mid-December. During the day the wind increased further with a widespread westerly gale during the afternoon. A gust of 71 knots was recorded at Leeming (North Yorkshire). The wind moderated somewhat in the evening.

It stayed generally cloudy; much of the south and east of England had a dry day, apart from a little drizzle. There was rather more in the way of rain or drizzle in the west and north, before colder, showery weather spread from northern Scotland later in the day. Snow and hail showers became general over Scotland in the evening.

'Extremes' for Wednesday 15th December 1982

Highest maximum	: 15.5°C Finningley (nr Doncaster)

#### SUMMARY OF BRITISH WEATHER

In Wales and central and southern England it was a reasonably mild night, but it was colder farther north, with a frost in parts of Scotland. In Scotland and Northern Ireland there were snow showers and a few thunderstorms, but in England and Wales, only some rain showers.

Scotland and Northern Ireland had quite a cold day with snow showers in many places and several inches of snow on the Scottish mountains.

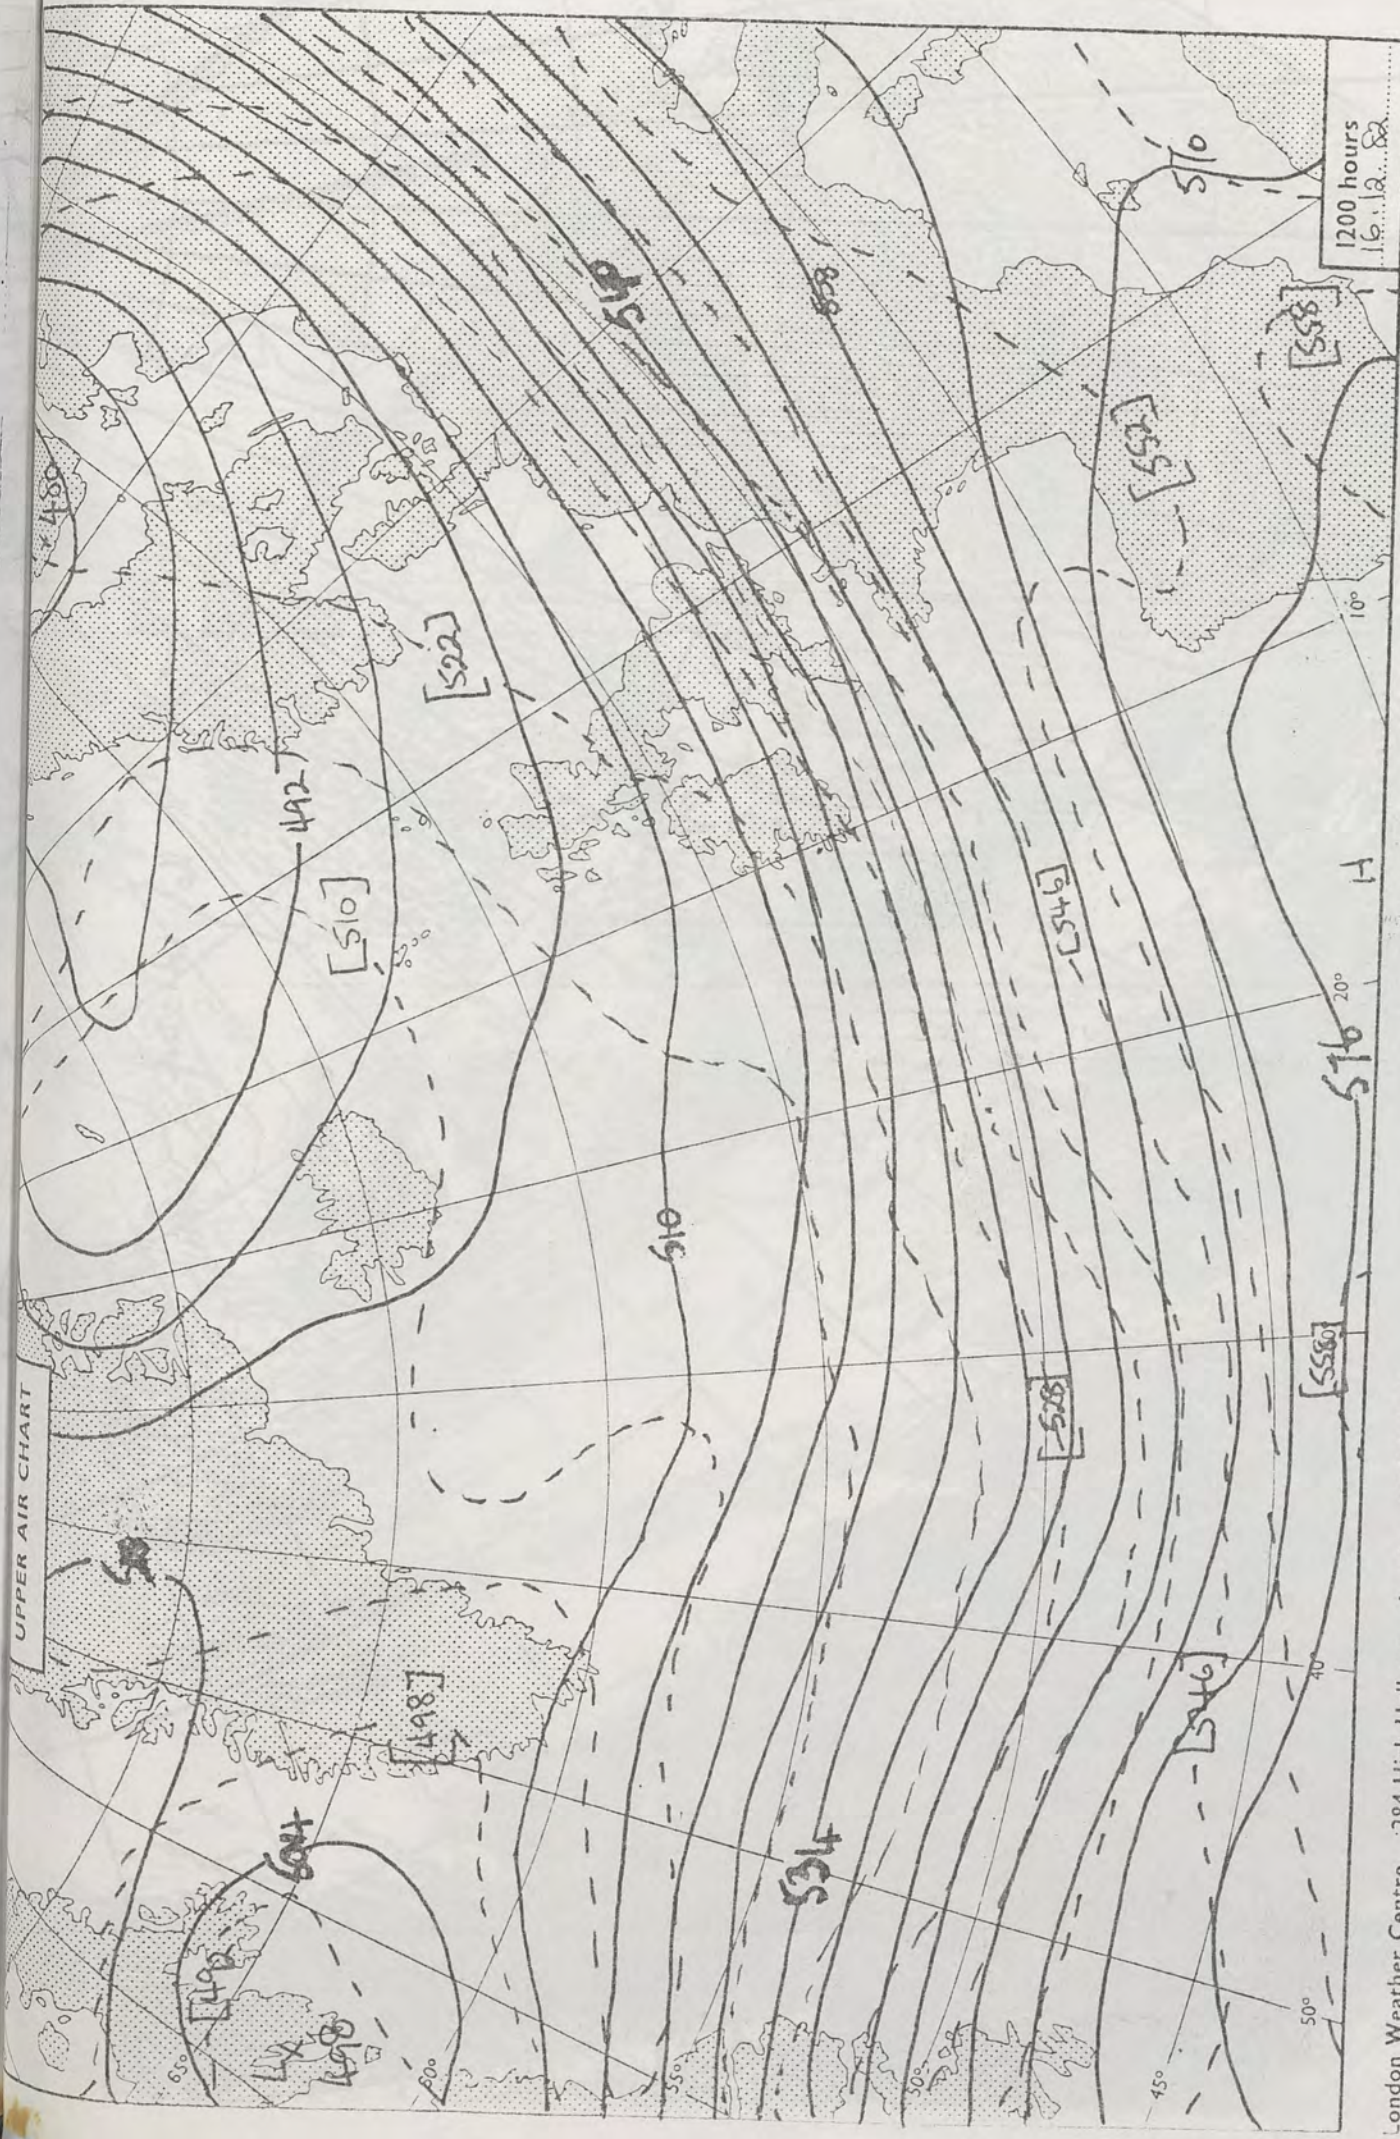

In England and Wales some places were dry and bright, but there was a lot of cloud. There were showers too, with snow showers on the Welsh mountains and later in northern England and the Midlands. There were a few hours more continuous rain in southwest England in the morning and in the Channel Islands in the afternoon.

Temperatures in England and Wales were a little below normal in most places. Strong winds in many areas at first slowly moderated.

# SUMMARY OF BRITISH WEATHER

Most of southern England and parts of East Anglia were cloudy at first during the morning with some rain or sleet and a little snow in places. Many parts were then dry and became brighter. In southwest England though there were a fair number of wintry showers with snow in places, especially on the moors. Eastern areas of England and Scotland had a fair amount of dry weather with sunny intervals but there were some snow showers in southeast Scotland and northeast England. Wales, northwest England, Northern Ireland and most of Scotland had a few clear or sunny intervals but also snow and hail showers, frequent in places and heavy at times. In some hilly areas in the north, there was some heavy snowfall. All areas of the United Kingdom were cold and in parts of Scotland it was very cold with hard frost.

'Extremes' for FRIDAY 17TH DECEMBER 1982

# SUMMARY OF BRITISH WEATHER

Central, southern and eastern areas of England and Scotland were mostly dry and sunny with only a few mainly light snow showers here and there. Many parts were frosty overnight and during the evening. Wales and western areas of England had clear or sunny intervals but also wintry showers with snow in places especially on hills and near western coasts exposed to the quite strong northwesterly winds. The showers died out later and freshening southwesterly winds brought rain to some places by midnight. Northern Ireland, northern and western Scotland had clear or sunny intervals but also snow showers, heavy at times. During the evening western parts were cloudy with rain or sleet and strong to gale force southerly winds. It was mostly cold.

'Extremes' for SATURDAY 18TH DECEMBER 1982

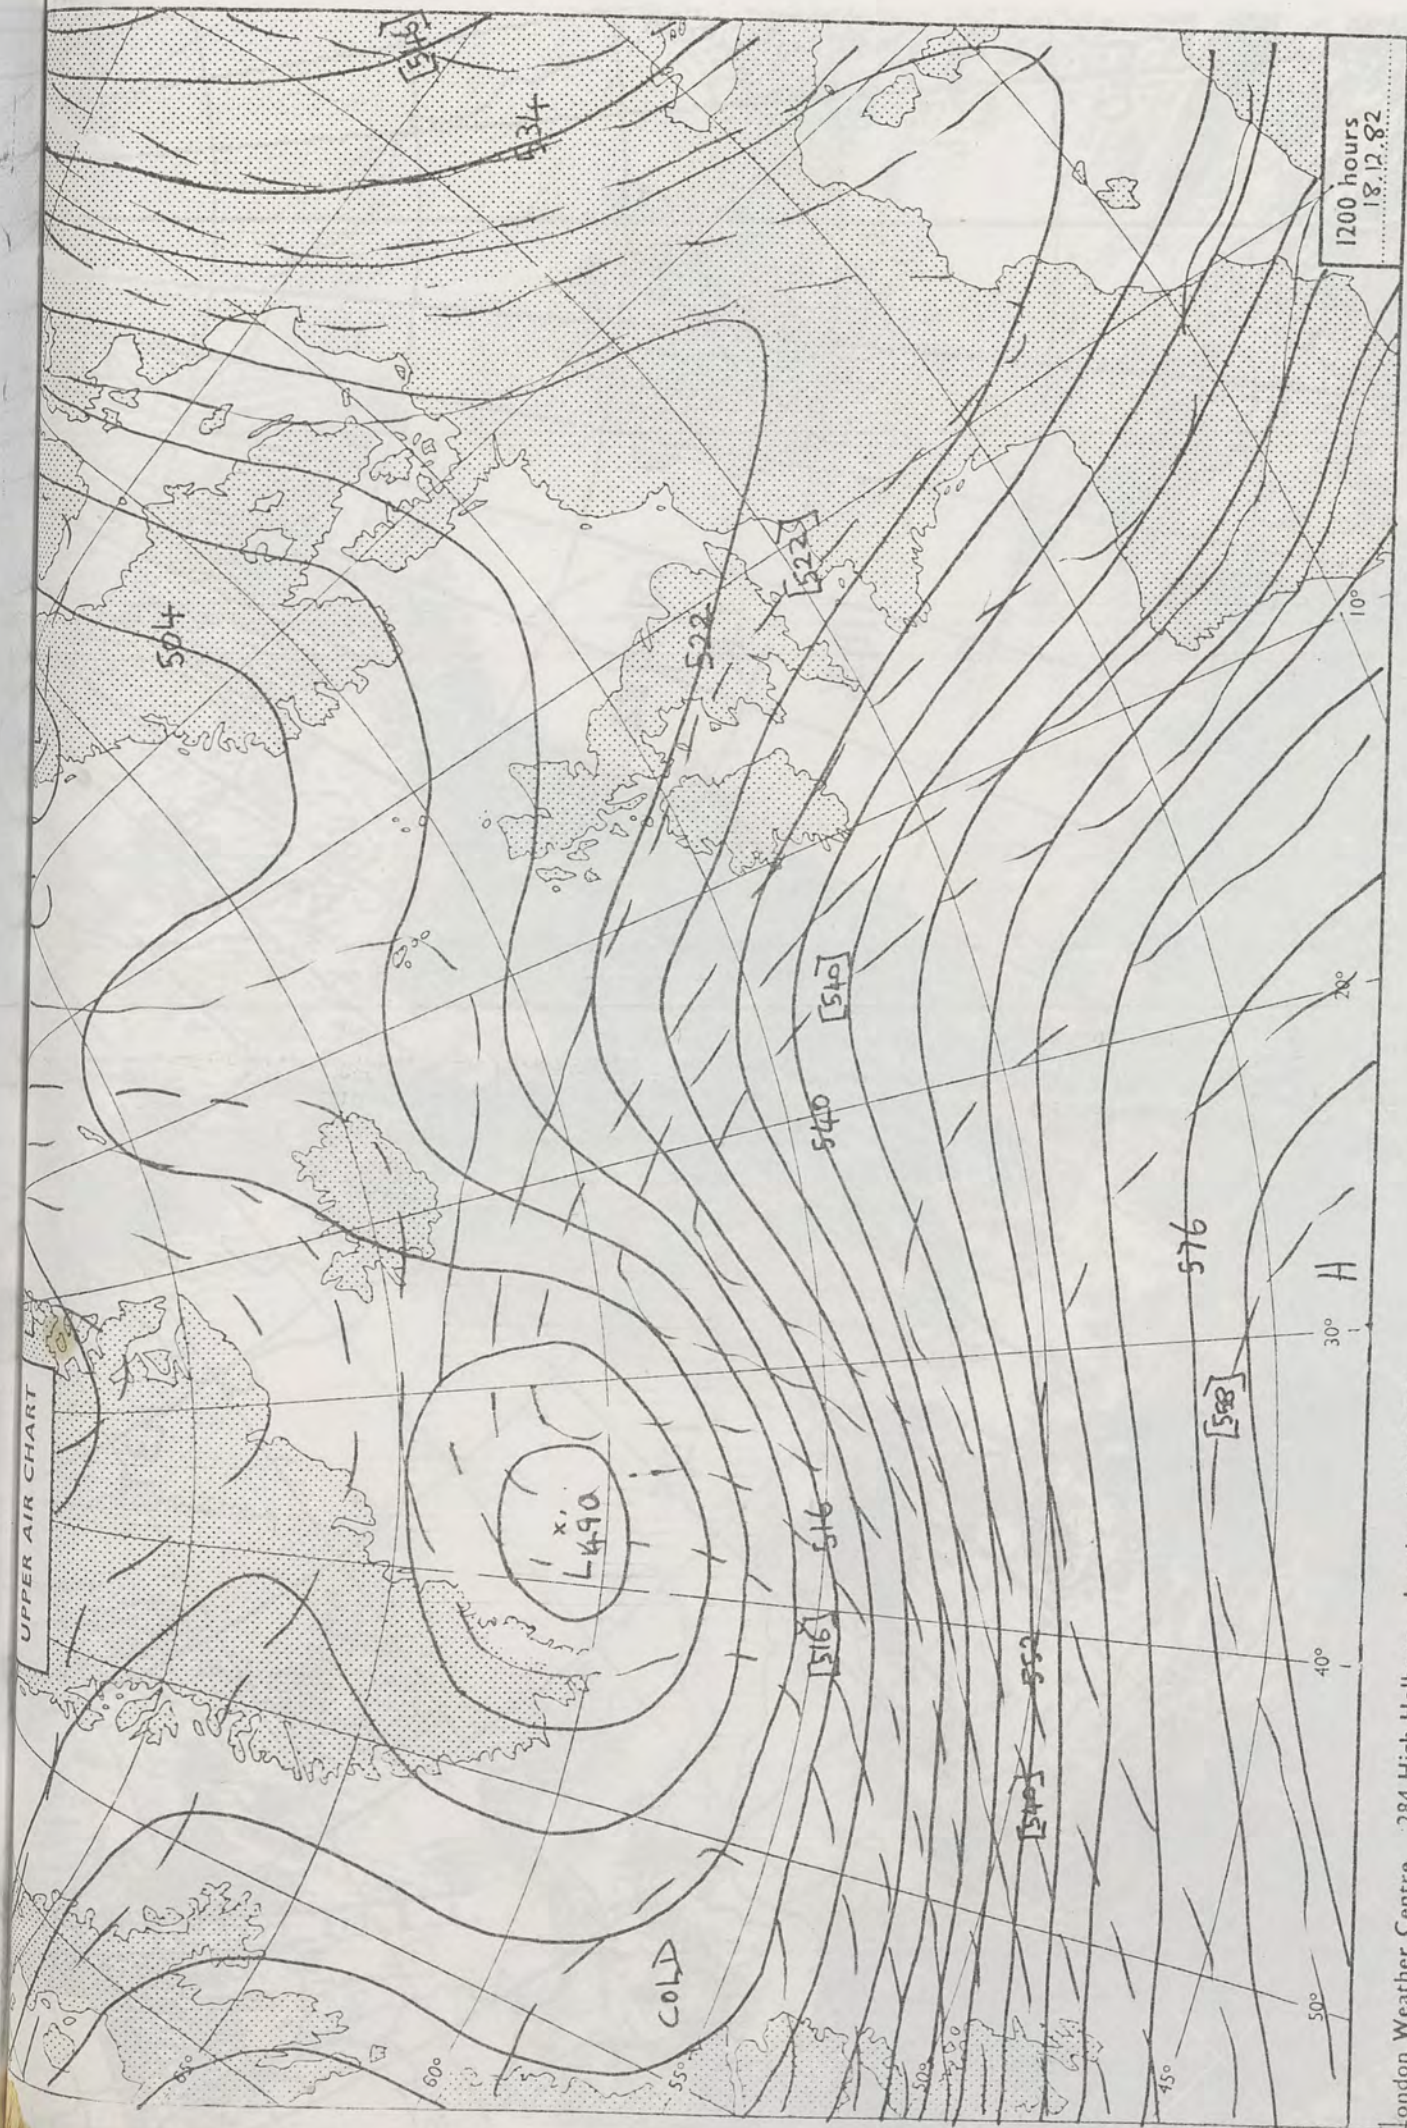

Highest maximum	: 7°C parts of extreme southwest
Lowest minimum	: -7.8°C Tummel Bridge (Central Scotland)
Lowest grass minimum	: -11.9°C Aviemore
Most rain (24 hours from 0900 h)	: 39.8mm Glenlee (Dumfries & Galloway)

**SUMMARY OF BRITISH WEATHER**

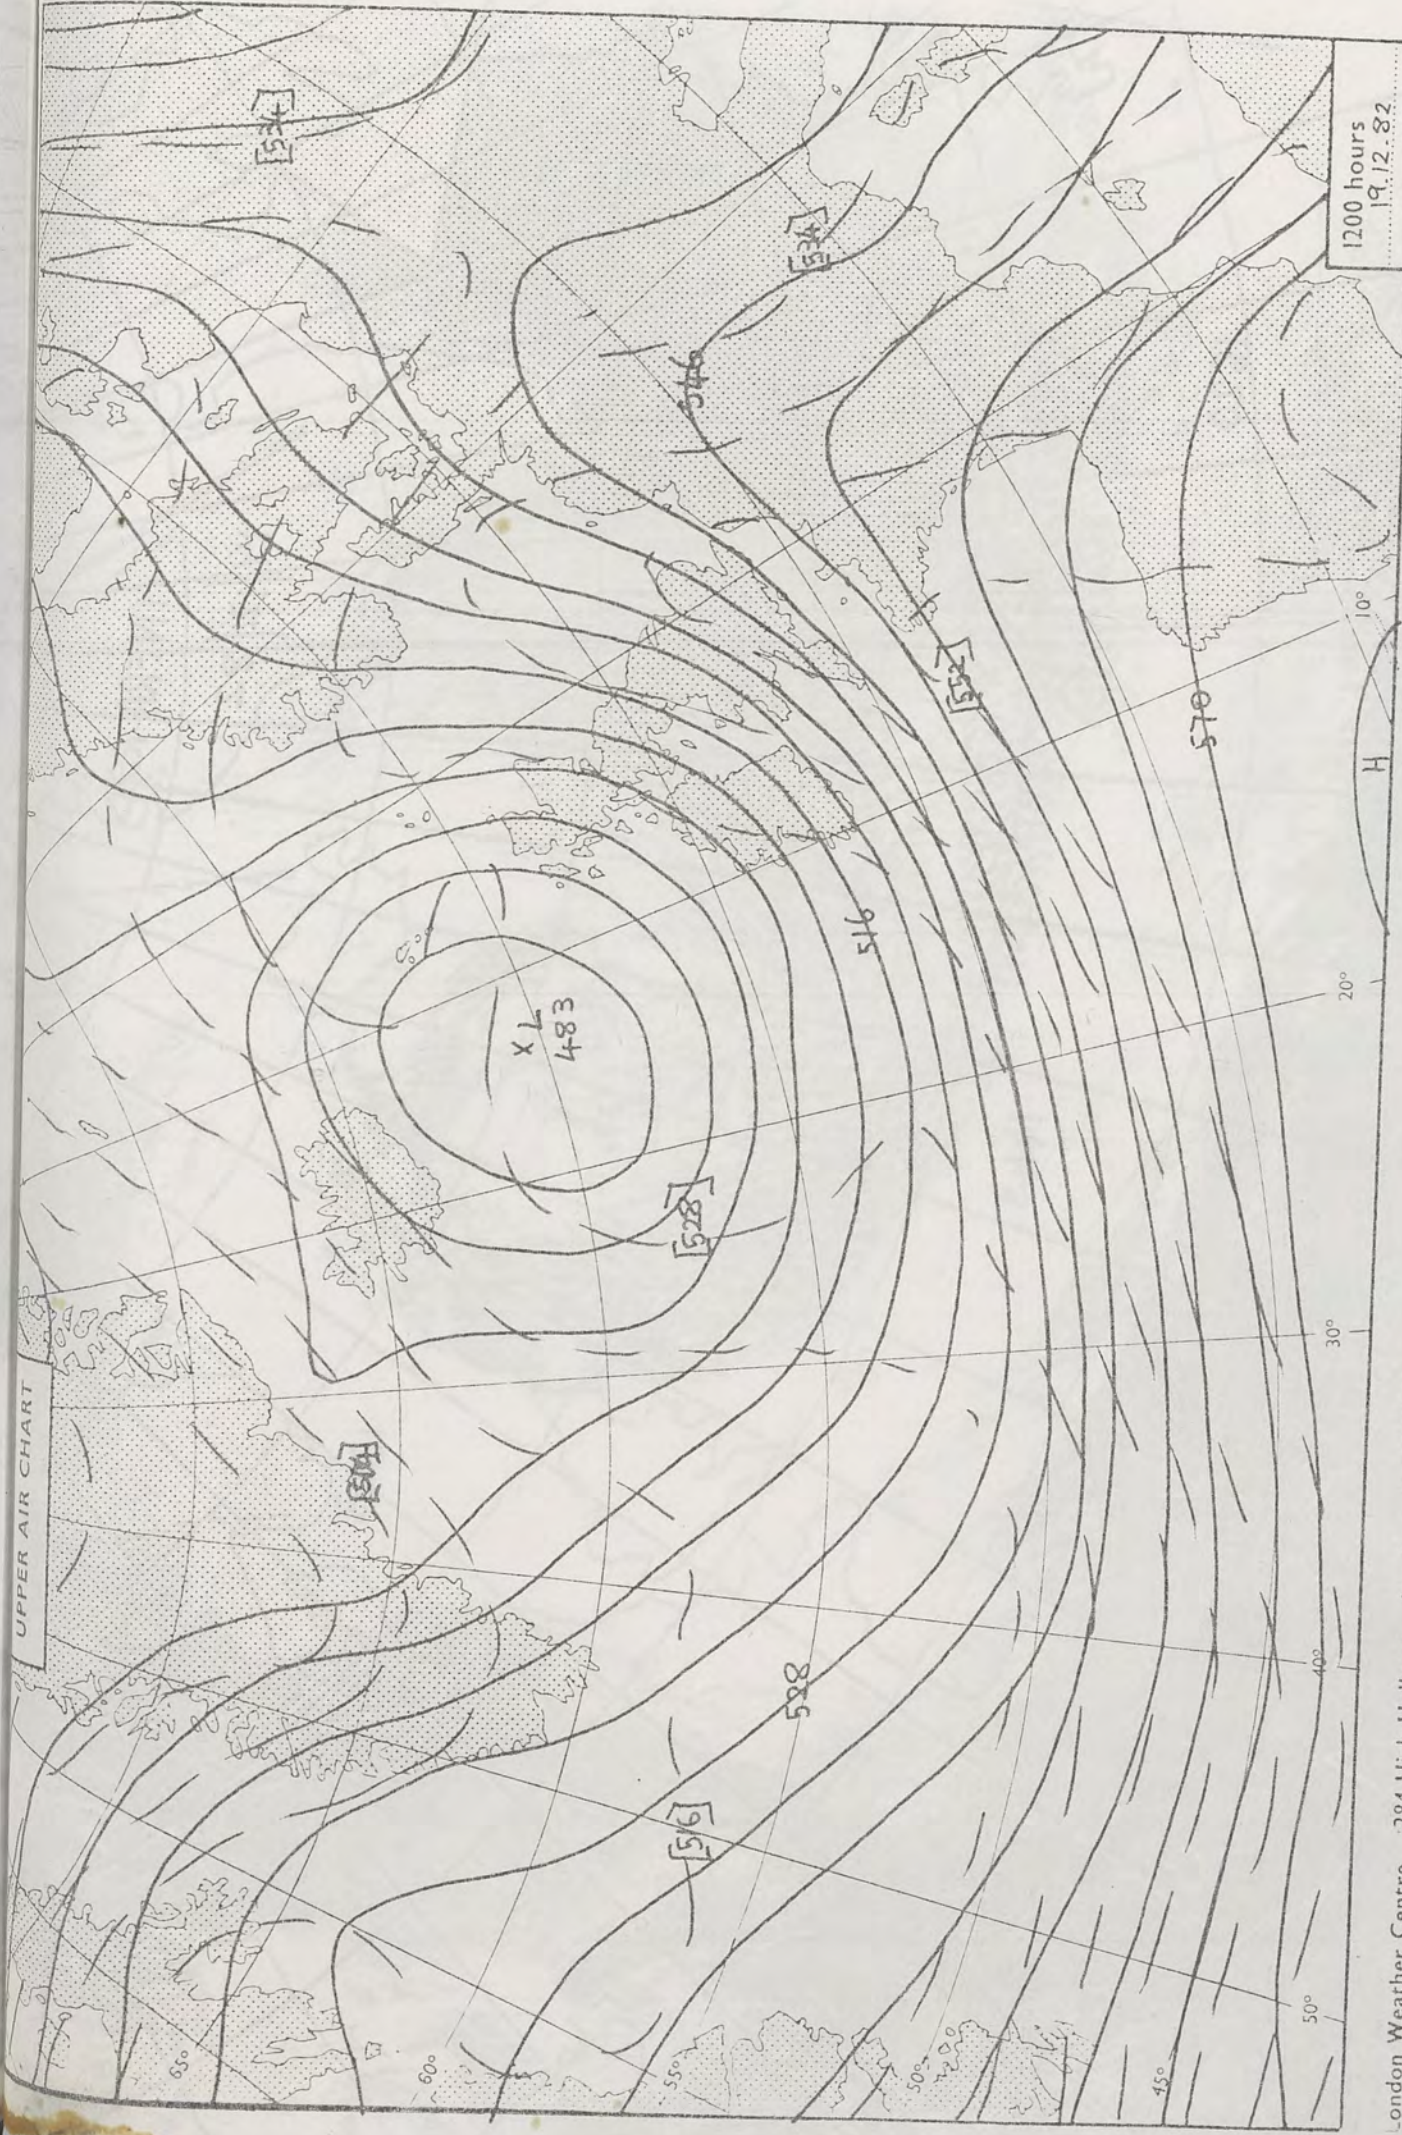

After a cold frosty start in eastern districts, very stormy weather spread to most of the British Isles by dawn. Quite a large area of rain moved across the country preceded by some sleet or snow for a while during the early hours of the morning, mainly in northern England and Scotland, but it soon turned to rain. It became mild in some southern districts for a time. Blustery showery weather followed into most of Britain by late evening with hail, snow and thunder in the north. The winds reached at least gale force in many areas with very strong gusts. At 2100Hrs the Mull of Kintyre reported a gust of 80Kts.

'Extremes' for **SUNDAY 19TH DECEMBER 1982**

Highest maximum : 13°C Bristol, Exeter, Guernsey  
 Lowest minimum : -7.7°C Tummel Bridge  
 Lowest grass minimum : -12.5°C Cwmbargoed (mid Glamorgan)

# SUMMARY OF BRITISH WEATHER

Over the British Isles as a whole it was a very windy day with gales in many places. There were frequent gusts to 50Kts or so. Blustery showers occurred as well, mainly in the north and west of the country, some of them gave hail, snow and thunder at times. Many places in east and southeast England stayed dry with a fair amount of sunshine. Temperatures were not far from normal.

The depression currently near the country is one of the deepest around our shores this century. The lowest pressure recorded at a British Weather Station from it appears to have been 938mb at Stornoway just after midnight.

#### SUMMARY OF BRITISH WEATHER

Overnight temperatures stayed mostly well above freezing with clear periods and scattered rain showers but there were a few hail and sleet showers over northern Scotland. During the day there were sunny intervals with further rain showers over England and Wales and temperatures were not far from normal but colder air reached northern Scotland around dawn and continued southwards on the fresh to strong north to northwest winds. Over Scotland and Northern Ireland showers soon turned wintry with hail and snow showers and isolated thunder but with sunny intervals as well. By the evening there were some snow showers over northern England, Wales and the Midlands but only very isolated ones inland and away from the exposed coasts most places were dry and clear but with enough wind to keep temperatures above freezing except in inland parts of Northern Ireland and Scotland.

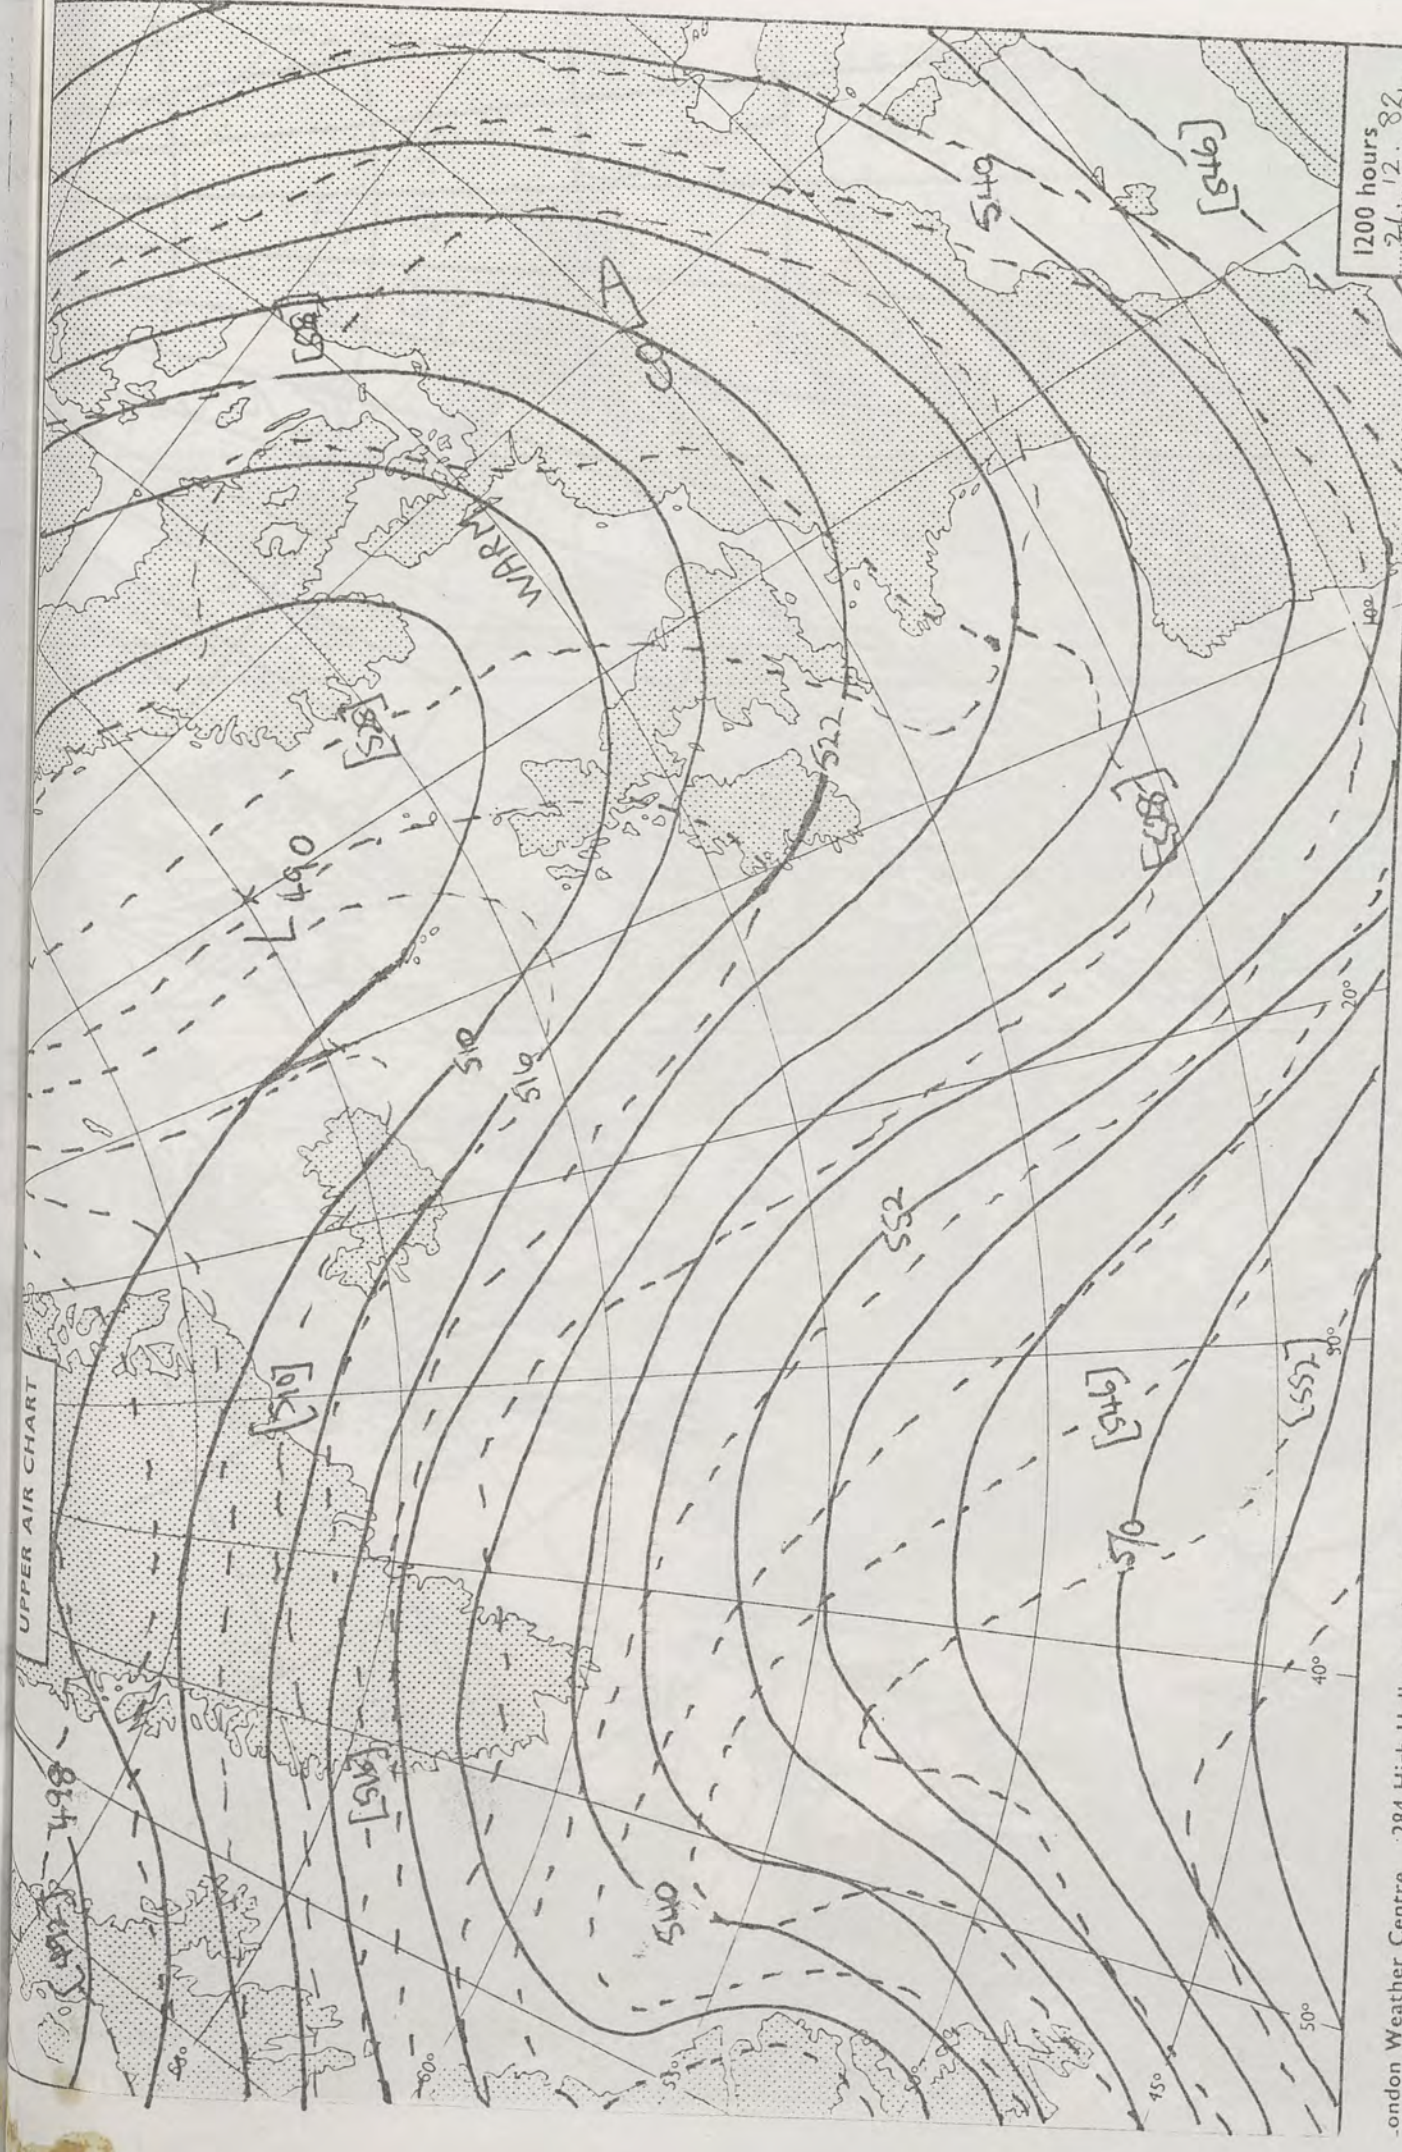

'Extremes' for TUESDAY 21ST DECEMBER 1982  
 Highest maximum : 9°C Channel Island, parts of South Coast.  
 Lowest minimum : 0.4°C Glenlivet  
 Lowest grass minimum : -1.3°C Eskdalemuir  
 Most rain (24 hours from 0900 h) : 8.2mm Trawsfynydd (Snowdonia)  
 Most sun : 5.6hr Poole (Dorset)

# SUMMARY OF BRITISH WEATHER

Most places had a dry mainly clear night and frost was widespread but wintry showers continued in northern Scotland, Northern Ireland and along western coasts of Britain; towards morning there were rather more widespread snow showers in Northern Ireland, North Wales and South Lancashire to Shropshire. During the morning the snow showers were prolonged for a time from Northern Ireland to the Northwest Midlands and gave an inch or two of snow in places but only a few light flurries were carried southwards into the South Midlands and central southern England. Most eastern and central areas of England and much of southern Scotland had a dry but cold day with sunny intervals. In northern Scotland, Northern Ireland and all western coastal areas of Britain showers, mostly of hail and snow, continued. During the evening, as frost became widespread, some patchy fog formed particularly around Greater Manchester and the Northwest Midlands.

# SUMMARY OF BRITISH WEATHER

Overnight there was a hard frost in most regions. It was a dry night apart from isolated wintry showers near some northern and western coasts. Freezing fog affected an area from Staffordshire to Lancashire. During the day it remained very cold in most regions especially in eastern England. In Northern Ireland, western Scotland, West Wales and southwest England outbreaks of rain or sleet arrived during the morning and mild weather followed with rain, heavy at times, during the afternoon. In central and eastern Scotland and northern England there was a period of sleet or snow in most places during the late morning and afternoon; this mostly turned to rain during the evening. In central and southeast England, Lincolnshire and East Anglia it was dry through daylight in most places with a few areas of freezing fog, but also some sunshine. Later in the afternoon and evening there was a little sleet, snow or freezing rain in most places.

#### SUMMARY OF BRITISH WEATHER

Mild, cloudy weather spread across most of England, Wales, southern Scotland and Northern Ireland with some rain or drizzle, most of which died out during the day. It was rather misty, with a few areas of thicker fog in the south - especially towards south-western coasts.

The northern half of Scotland had a little sunshine and a few rain or hail showers, but the cloudy, damp weather further south spread north during the evening.

#### SUMMARY OF BRITISH WEATHER

Over the whole country, temperatures were well above normal, although northern Scotland was a little colder early and late in the period. It was windy in the north. Much of Scotland, except for those eastern parts sheltered from the southwesterly wind, and Cumbria and the Isle of Man had outbreaks of mostly light rain throughout the day. A period of more persistent rain moving from the north, reached Northern Ireland during the evening, followed by clearer weather with a few showers in northern Scotland. Some coastal areas of South Wales and southwest England were affected by fog and occasional drizzle. Other parts of Wales and England were mostly dry; most areas were cloudy, but places to the east and north of high ground had some sunshine.

#### SUMMARY OF BRITISH WEATHER

Most places were cloudy and mild overnight with some occasional drizzle and patches of hill and coastal fog in the west but eastern England had good breaks at times and north of the Forth and Clyde Valleys it was clearer with scattered showers. Skies were also clear around Exeter, where fog formed. During the day most of England and Wales remained cloudy and mild and most southern, central and eastern areas of England remained dry with a few bright intervals. Occasional rain and drizzle with patchy hill and coastal fog persisted in the west and northern areas had some more persistent rain, heavy in Lancashire and Merseyside, in the late afternoon and evening. Central and northern Scotland had some sunshine and scattered showers but southern Scotland and Northern Ireland were rather cloudy with some rain, chiefly in the afternoon, before it became clearer during the evening.

#### SUMMARY OF BRITISH WEATHER

England, Wales and Northern Ireland had a mostly dry day with just a few scattered showers in western districts. There was quite a lot of sunshine especially in eastern parts.

Scotland had rather frequent showers which turned wintry in many places, especially over the central and northern areas, with some accumulations of snow in the Highlands. It was rather cold and windy in the north, but mild in the south.

## SUMMARY OF BRITISH WEATHER

In England and Wales it was dry with mainly clear skies overnight and much of the day was sunny. In parts of the north and west it was rather cloudy. In Northern Ireland, after a fine night it was a rather cloudy day but mostly dry. During the evening there was occasional drizzle. In Scotland there were scattered showers overnight with hail and sleet in places. By morning showers were isolated and many places had a dry, though cloudy, day. There was light rain in a few places, and in the extreme northeast rain was more persistent for a time. It was generally quite mild.

'Extremes' for TUESDAY 28TH DECEMBER 1982

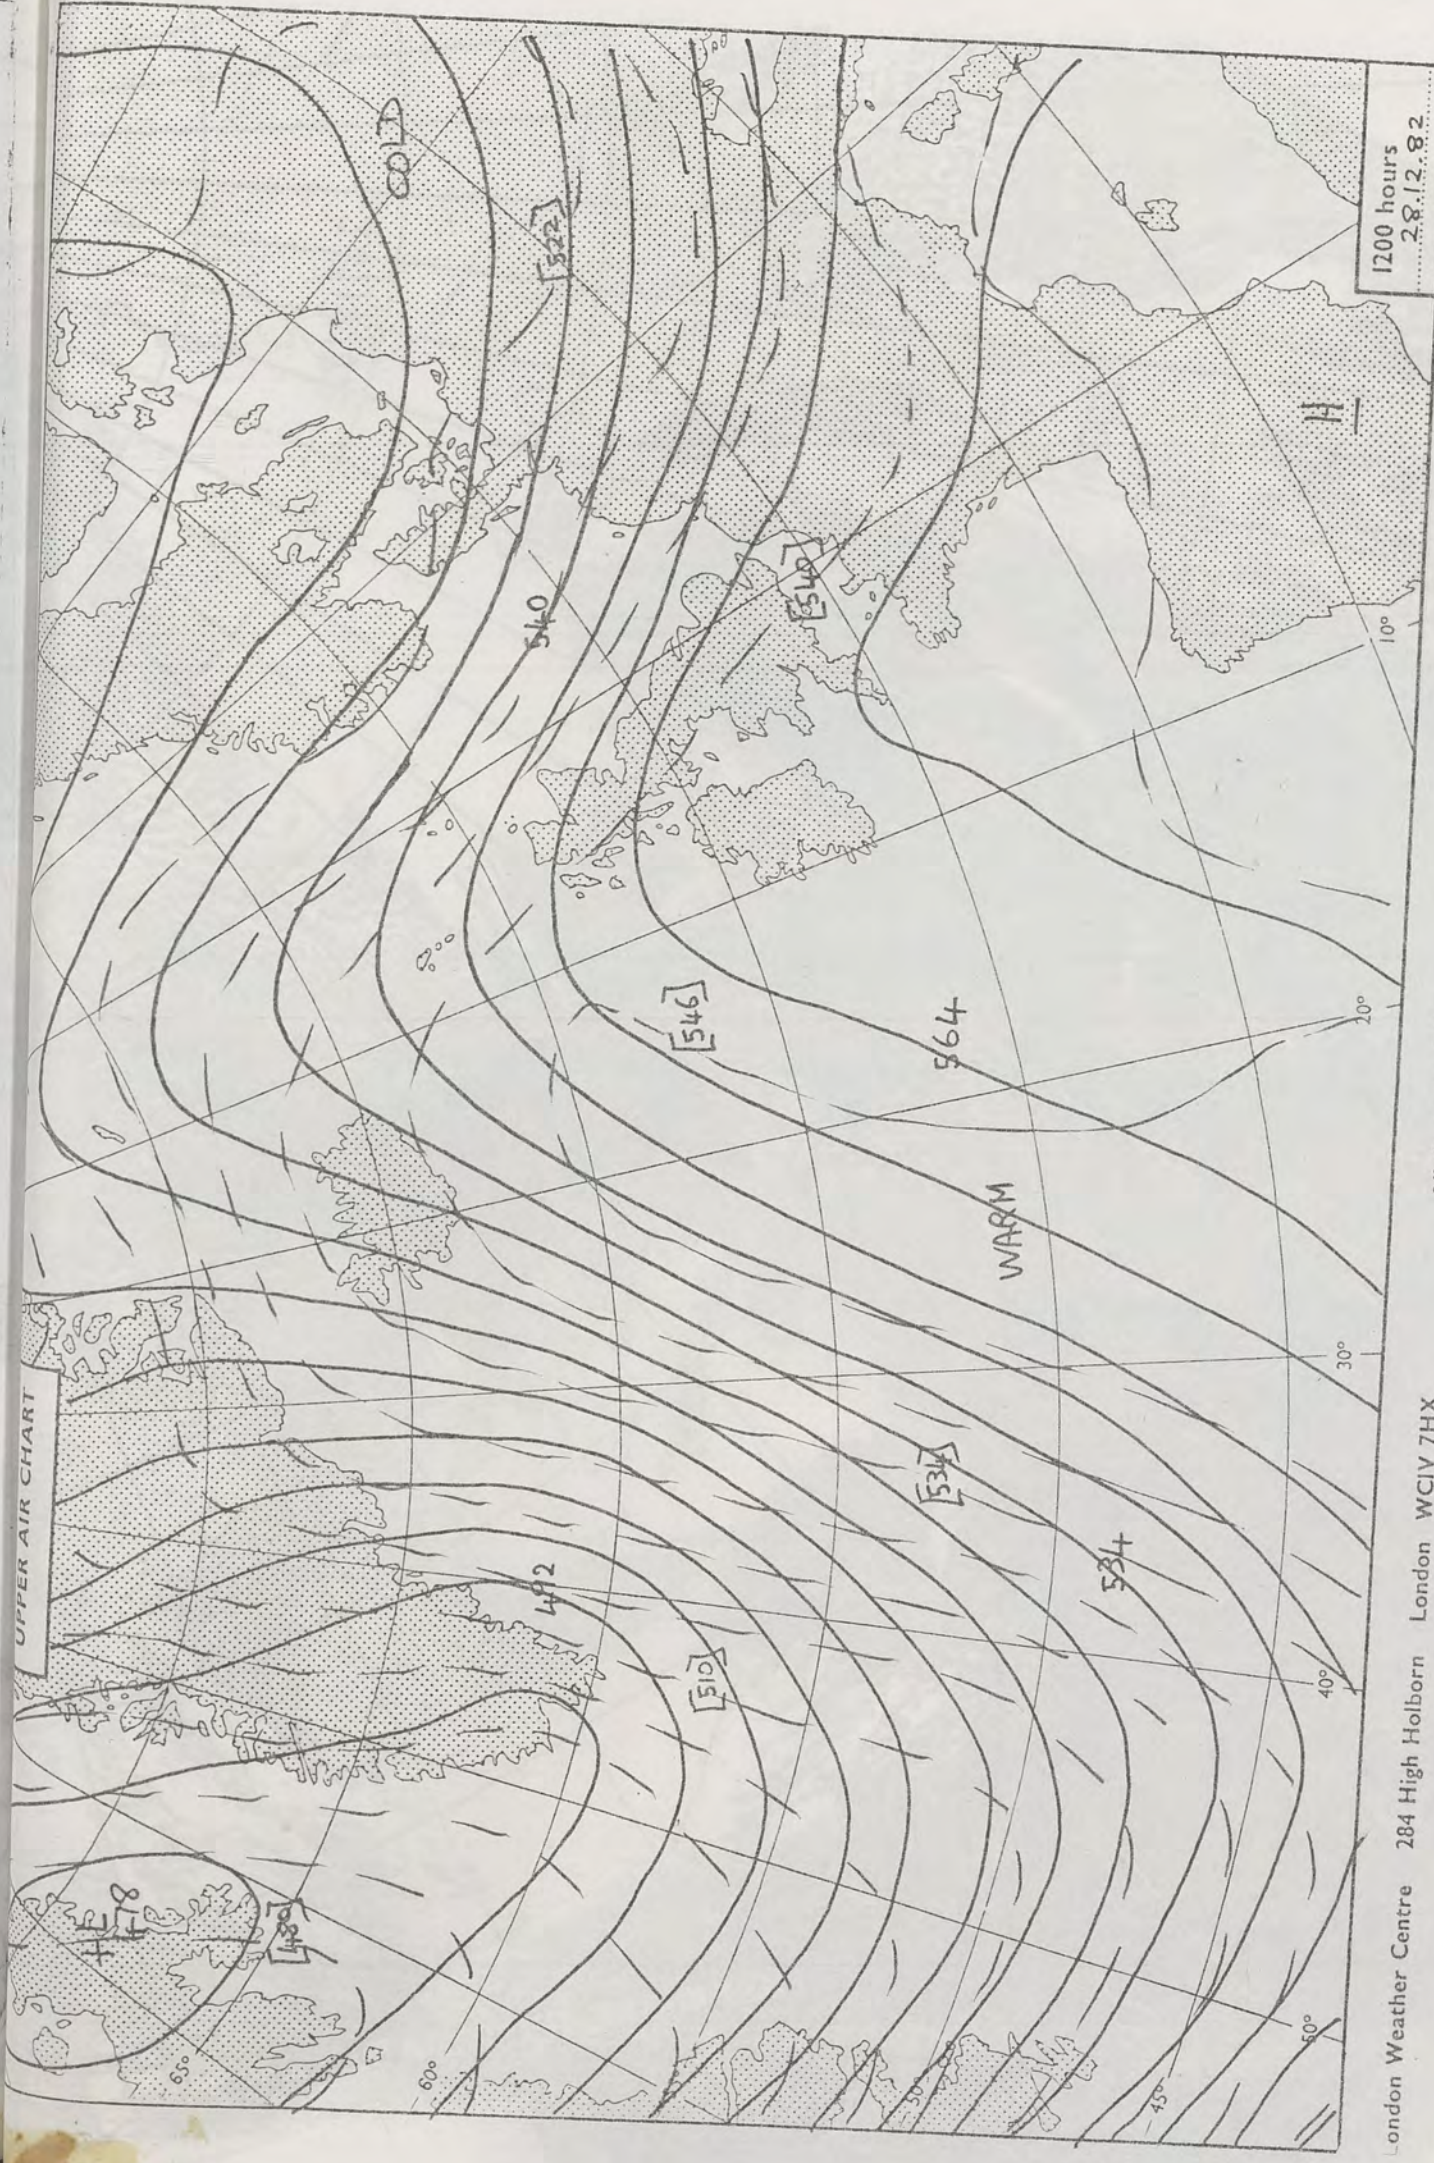

- Highest maximum : 10°C Parts of south-west.
- Lowest minimum : -1.8°C Yeovilton (Somerset).
- Lowest grass minimum : -6.7°C Boscombe Down (Wilts).
- Most rain (24 hours from 0900 h) : 9.9mm Trawsfynydd (Snowdonia)
- Most sun : 6.2 hr Shanklin, Bournemouth A/P.

### SUMMARY OF BRITISH WEATHER

During the morning, western Scotland, Wales and most western areas of England were affected by persistent drizzle, with patchy fog on the coasts and over the hills. Eastern Scotland and the eastern half of England, after early frost in some areas and a few fog patches, were mostly dry during the morning. Northern Ireland had a little drizzle before dawn. During the afternoon most parts of the country were dry, apart from some outbreaks of light drizzle in eastern England. There was sunshine in places, chiefly in the south-east and south-west. Most places were mild.

# SUMMARY OF BRITISH WEATHER

Most of England and Wales had a dry, rather cloudy night but a cold front brought rain to northern and western parts of Scotland and Northern Ireland before dawn. England and Wales were dry during the day and although mostly cloudy there was some sunshine, especially to the east of high ground in Wales, the Midlands and Yorkshire and also in the east of Kent and along parts of the south coast. Temperatures were just a little lower than on Wednesday. During the evening rain spread south-eastwards over northern England and North Wales. Much of Scotland and Northern Ireland had a rather wet day as rain continued to spread slowly southeastwards to reach southeast Scotland in the late afternoon. Most places were mild but colder and clearer weather followed to the north and west of Scotland by evening.

# SUMMARY OF BRITISH WEATHER

Northern England and North Wales started cloudy with a little rain or drizzle which edged south into parts of the Midlands, South Wales and eastern England before largely dying out by evening. The rest of England and Wales remained mostly cloudy and dry. It was quite mild over the country as a whole. Scotland and Northern Ireland started out mostly dry and quite clear at times too but soon after dawn cloudier weather with outbreaks of rain or drizzle spread into western areas and gradually into central and northern districts during the rest of the day. It was quite mild here too and became rather windy as well.
