SUMMARY
OF
BRITISH WEATHER

Rain was heavy at times during the night over England and Wales and most places had a dull day with rain or drizzle at times and some sleet in northeast England. In the west it turned brighter with scattered showers in the afternoon and this clearer weather spread to central and eastern England later.

In Northern Ireland it was a dull day with patches of light rain followed by a mainly dry evening.

In Scotland it was mainly dry at first but rain and sleet spread from the south and turned to snow in places; over high ground the snow was heavy and drifted in strong east winds. In the extreme northeast of Scotland and the Northern Isles there were bright spells and one or two wintry showers.

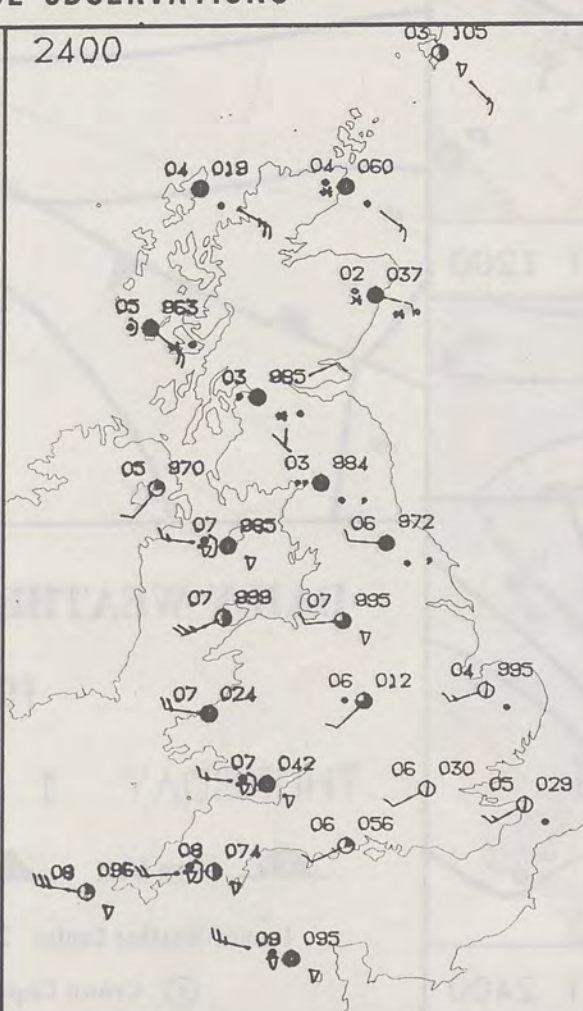

It was mild or very mild in the south but in the north of England and northwards temperatures were near normal and in parts of northeast Scotland it was rather cold.

SUMMARY
OF
BRITISH WEATHER

In southern and central parts of England and in Wales it was mainly cloudy with scattered light showers but during the evening showers were mostly confined to East Anglia.

In northern England, Northern Ireland and southern Scotland there were patches of rain and sleet with snow on hills at first; brighter weather spread from the north during the day leaving only isolated wintry showers near northeastern coasts.

In northern Scotland it was mainly dry with broken cloud and only isolated wintry showers.

Temperatures were near or rather below normal. A gust of 68 knots was reported from Brixham (Devon) during the afternoon.

SATURDAY
3 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

Much of the country had a dry night, with a widespread frost, severe in places in the north. However, persistent cloud cover in the southeast prevented a frost until late in the night, and in parts of western Scotland cloud produced a little light rain and drizzle.

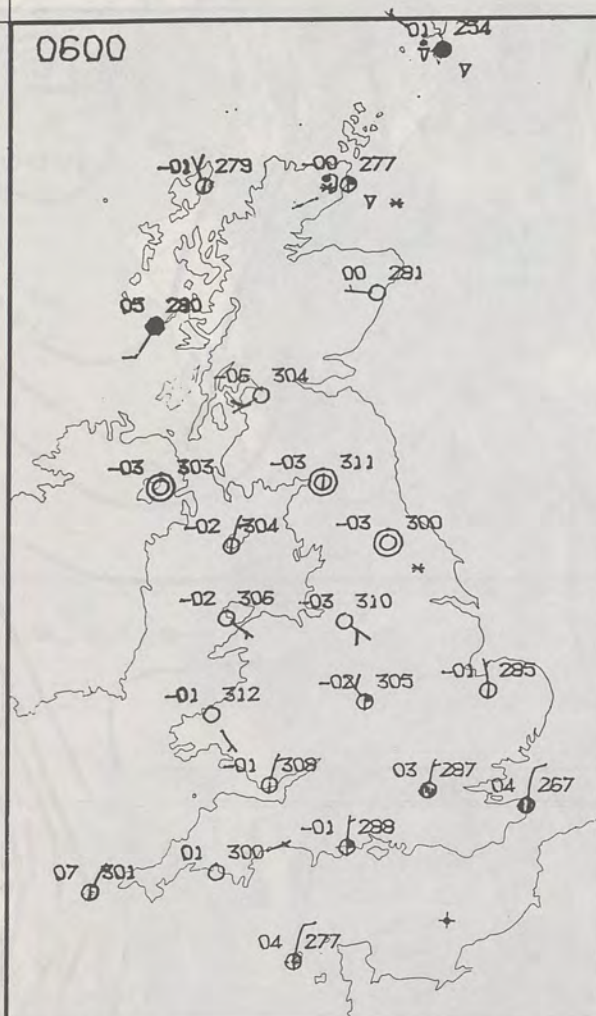

The day was clear and dry over much of the United Kingdom, however, cloud spread to Northern Ireland and the far west of Scotland, bringing a little rain during the afternoon. After night-fall, cloud spread on to most northern and western areas, with rain preceded by sleet and snow, more especially over higher ground, but snow was reported from low level stations in northeast England, and eastern Scotland as well.

Most places had a rather cold day.

PLOTTED SURFACE OBSERVATIONS

SUNDAY
4 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had a wet night with heavy rain at times. Some sleet and snow was reported for a short time in eastern and central areas. Soon after dawn, brighter showery weather reached the northwest, and by midday this weather had swept across the remaining area. The showers were frequent and heavy at times in the north and west, with sleet or snow.

Northern England, north and west Wales had mild and wet weather until late in the day, followed by well broken cloud and scattered showers near coastal districts.

Remaining central and southern areas of England and southeast Wales had a cloudy night and day, with a little rain or sleet overnight, and dawn temperatures near freezing in the extreme east. During the day, the rain turned heavy and persistent before clearing southward later in the evening.

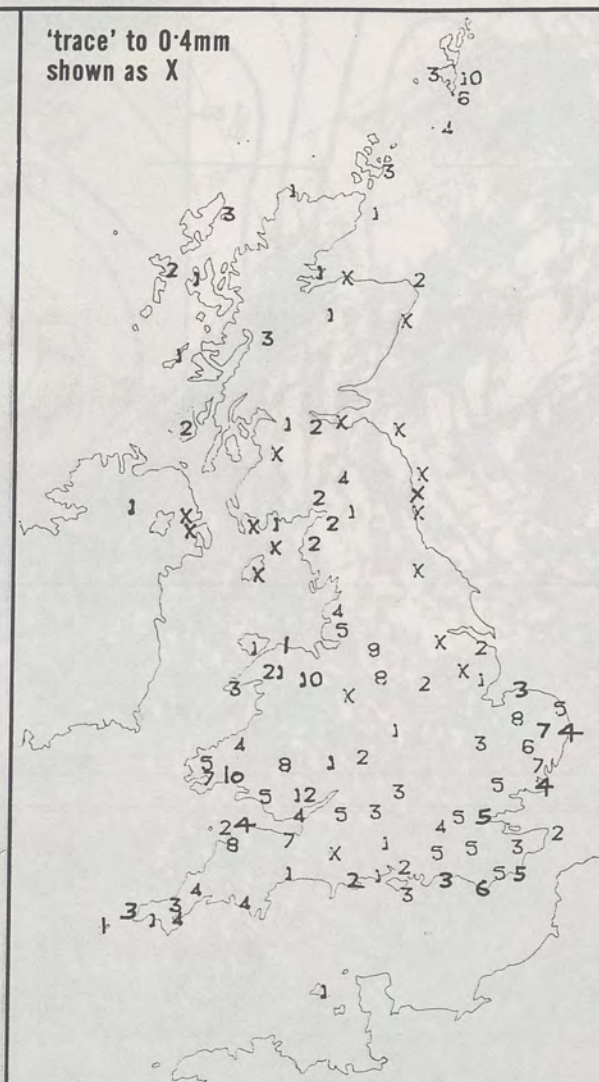

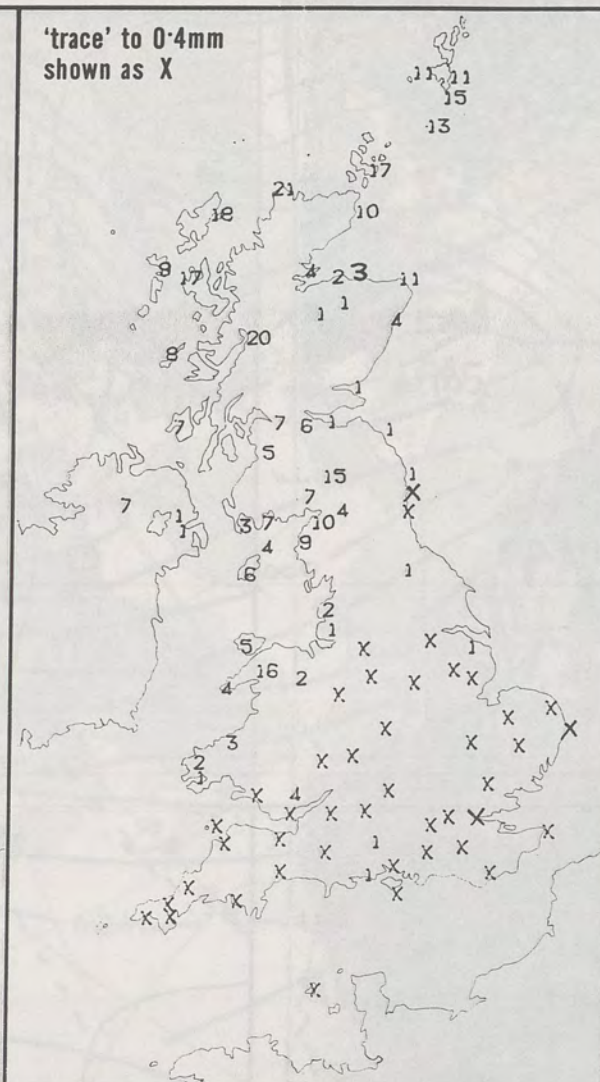

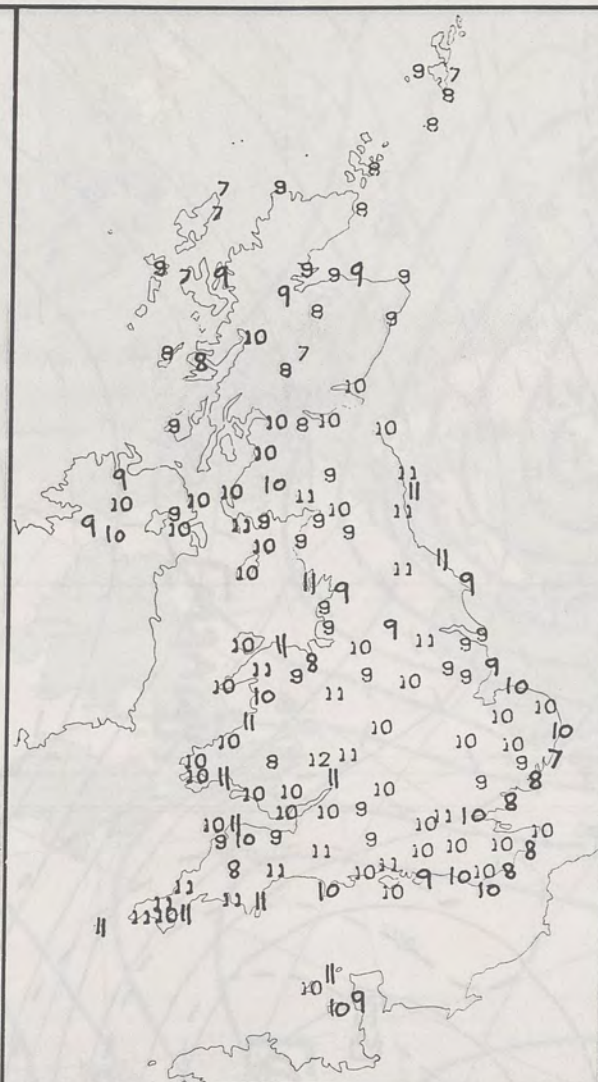

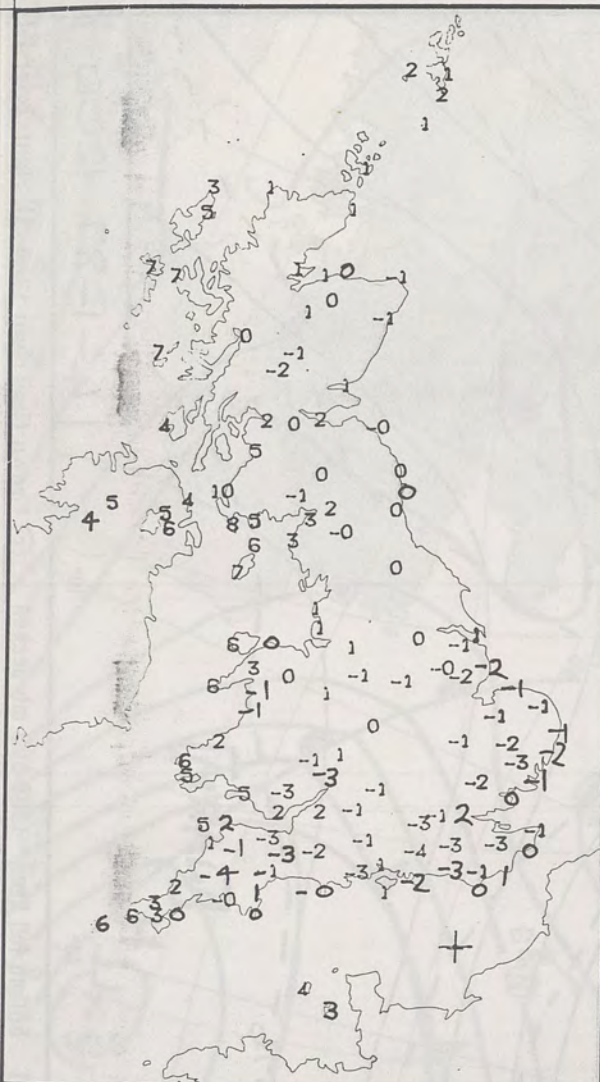

It was mild or very mild at first in most places, but with the arrival of the showery weather in northern Britain, afternoon temperatures fell to near normal in most places, while northern Scotland became decidedly cold.

MONDAY
5 JANUARY 1987SUMMARY
OF
BRITISH WEATHER

There were showers overnight, most of them in Scotland and Northern Ireland, and in Scotland there was hail, sleet and snow as well as rain showers. It wasn't a cold January night over much of Britain but in Scotland many places had a frost.

During the day there was at least a little sunshine nearly everywhere and some places had a dry day with a fair amount of sunshine, but there were quite a few showers.

Over England, Wales and Northern Ireland with temperatures a little above normal there were rain showers, but Scotland was a little colder and here there was hail, and snow as well.

It was a fairly windy day, the wind reaching gale or severe gale on coasts and hills, and at Corsewell Point near Stranraer the wind gusted to 65 knots in the afternoon.

TUESDAY
6 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

Much of the United Kingdom had a dry, clear night but in Scotland, especially the north, there were showers of rain, hail, sleet and snow and over England there were a few rain and snow showers. Temperatures were generally a few degrees above freezing, but there was a frost in northern Britain.

During the day, in the south and west of England, the Channel Islands, Wales, the Isle of Man, Northern Ireland and southern and central Scotland, most places had a dry, sunny day but there were one or two showers. East Anglia, northeast England and northern Scotland were more cloudy but here too most places had at least a little sunshine. However, there were showers of rain, hail, sleet and snow in many places.

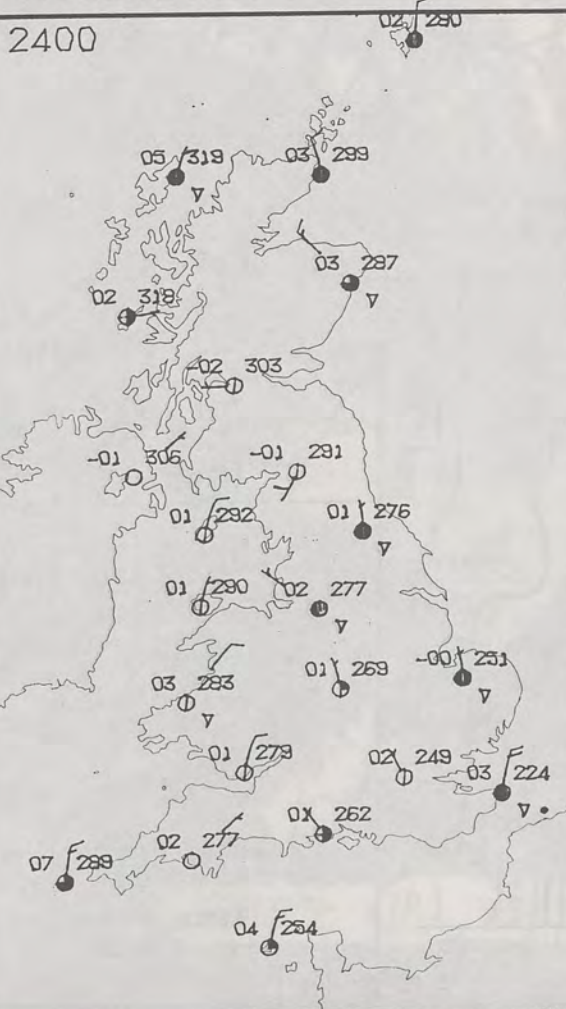

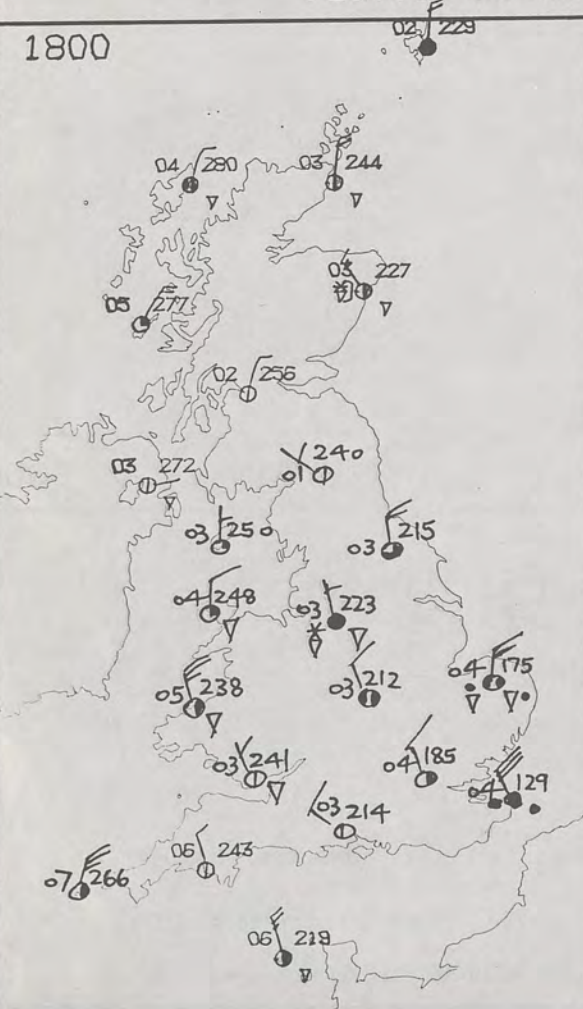

It was mostly rather cold with a strong northwesterly wind in many places.

PLOTTED SURFACE OBSERVATIONS

WEDNESDAY
7 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

Overnight, northern and eastern parts of Scotland together with eastern counties of England were rather cloudy with some light sleet and snow showers keeping coastal places just above freezing. The rest of Britain had a dry and mostly clear night with a widespread slight to moderate frost.

During the day eastern parts of England and Scotland were rather cloudy at times with further light showers of rain or snow. The far north of Scotland stayed cloudy through the day with some light showers. Central and western parts of England and Scotland, Wales and Northern Ireland were dry and mainly sunny.

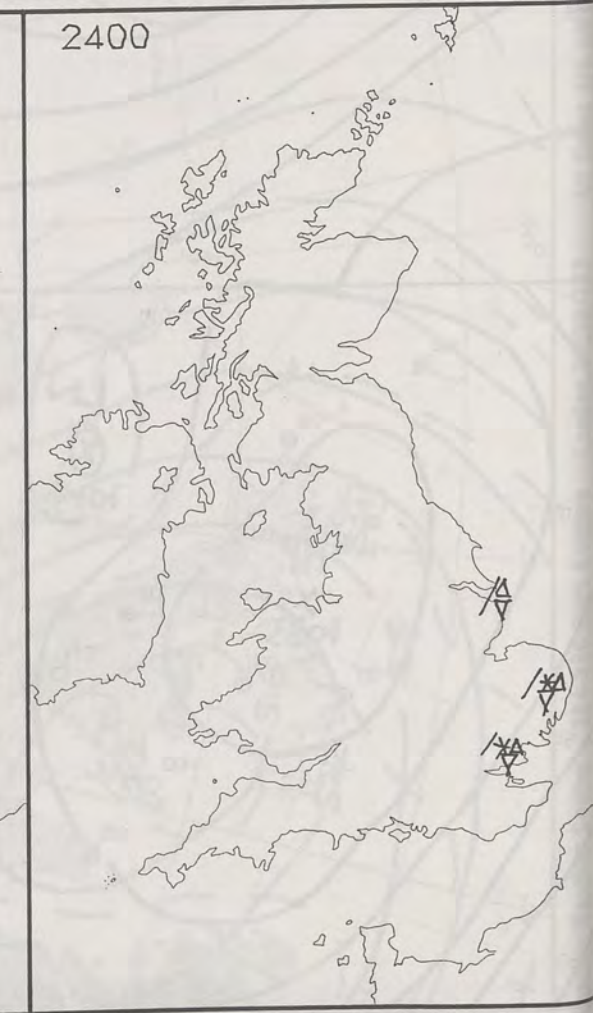

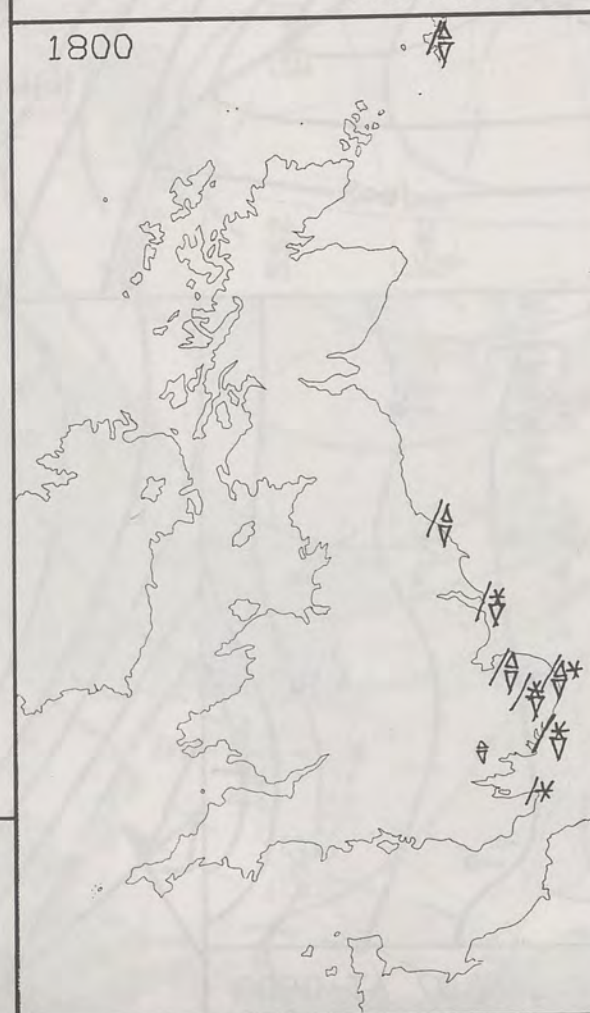

It was a cold day over much of Britain, though in the Northern Isles temperatures reached the average for early January. Western areas were generally in the rather cold category.

THURSDAY
8 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

It was a frosty night over most of Britain, severe in many inland places, only the far north and west of Scotland and the west of Cornwall escaping. Freezing fog formed in many southeastern regions later in the night and persisted all day in places with temperatures remaining below freezing.

It stayed dry over England and Wales with variable amounts of sunshine - the sunniest areas being in northern England, the Sussex coast and the Channel Isles. Southwestern parts of England and Wales became cloudy during the day.

Scotland was mostly dry, though there were a few showers in the Northern Isles. Some eastern parts of Scotland were quite sunny but there were persistent patches of cloud elsewhere. Northern Ireland had a dry but mostly cloudy day.

It was a cold day over much of Britain - very cold in some central and eastern parts of England and Scotland where temperatures stayed below freezing all day. However, temperatures were near to the average in the far north of Scotland.

Winds were generally light but became fresh during the afternoon and evening over southwestern parts of Wales and England.

FRIDAY
9 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

Most regions had a dry frosty night, the frost severe in places, especially in central Scotland. In Northern Ireland and southwestern parts of England and Wales there were outbreaks of rain.

During the day it remained dull and wet in Northern Ireland. Patches of rain and sleet extended to southwest Scotland. All of Wales, southwest and parts of central England, and over high ground there as light snow. In Cornwall and west Devon it became brighter with sunny intervals and isolated showers.

Over most of Scotland, together with eastern England it was a dry day and in Scotland there were sunny intervals. Freezing fog patches were slow to clear from some eastern parts of England and there were a few flakes of snow in south Yorkshire and Nottingham in the evening.

It was very cold in most places with persistent frost in parts of central Scotland. In Northern Ireland and parts of southwest Britain, temperatures were near normal.

PLOTTED SURFACE OBSERVATIONS

1800

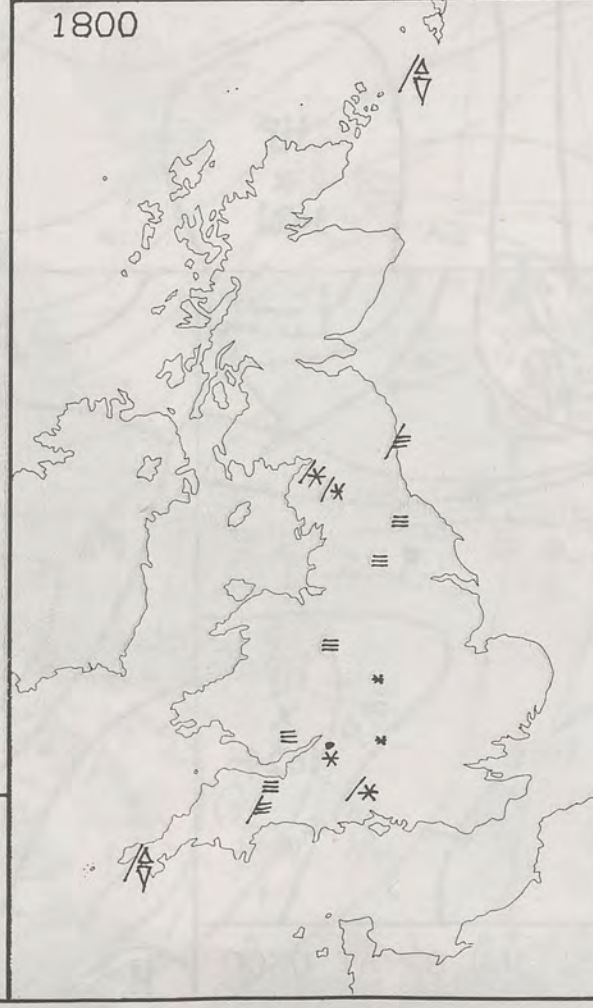

2400

SATURDAY
10 JANUARY 1987

There was frost overnight over most of central and eastern Britain. An area of slight snow in the West Midlands and parts of central southern England died out well before dawn, however outbreaks of sleet and snow began to affect all eastern counties of Britain during the early hours. There were some significant falls in eastern parts of Scotland, northeast England, and in particular Shetland.

The day was cloudy almost everywhere with hail and snow showers continuing in eastern parts of England, but with no significant falls. In eastern Scotland and Shetland snowfall was again heavier with significant accumulations. Light snow affected other parts of Scotland later. In the Western Isles rain commenced mid-afternoon not changing to snow till late evening.

Winds were southeasterly over much of Scotland and Northern Ireland (mostly light to moderate) but gale force for much of the time in Shetland, and strong later in the Western Isles. Over England and Wales winds were mostly light to moderate north easterly.

It was cold or very cold in most places, although western regions and Northern Ireland were only rather cold at first, but in these places by midday temperatures had fallen markedly. In eastern England and East Anglia temperatures stayed below freezing all day.

SUNDAY
11 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

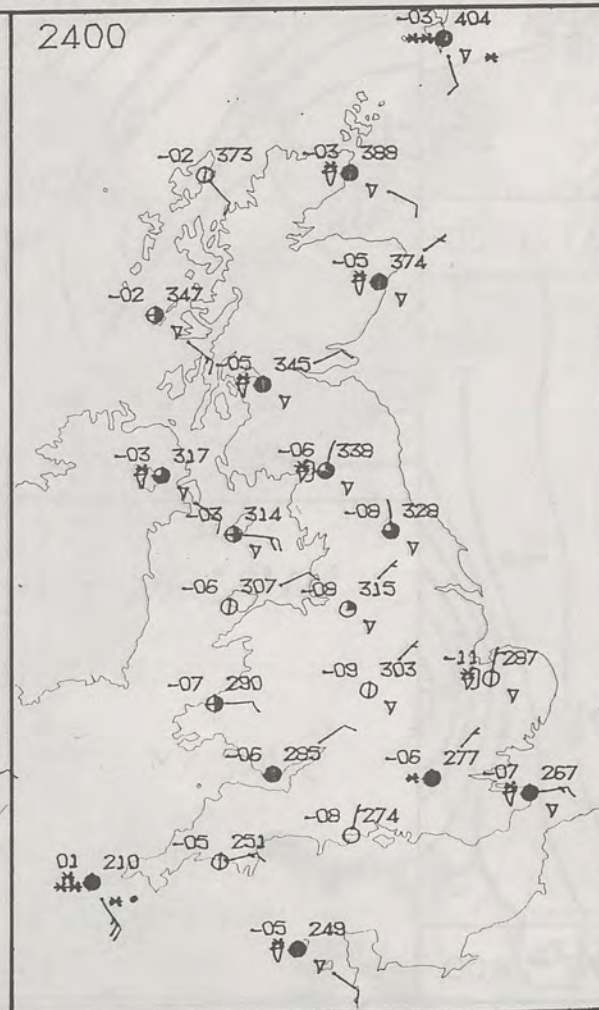

After a widespread severe or very severe frost, a very cold day followed across the United Kingdom, with day temperatures well below freezing in most areas, except in the far south-west and Western Isles. Eastern coastal areas were subject to frequent and sometimes heavy snow showers, and in parts of south-east England, East Anglia, Lincolnshire and Yorkshire, heavy snow showers produced considerable snowfall, causing traffic dislocation, particularly in Kent and Essex. Away from these areas, snow showers were well scattered, with good spells of wintry sunshine, and many districts well sheltered from the east wind stayed dry and bright, but **VERY COLD**.

PLOTTED SURFACE OBSERVATIONS

MONDAY
12 JANUARY 1987

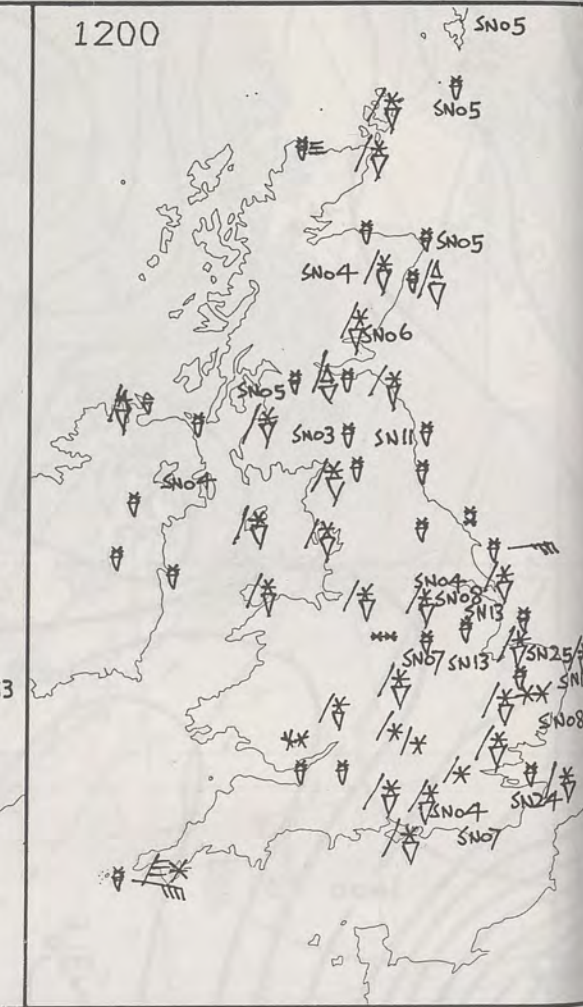

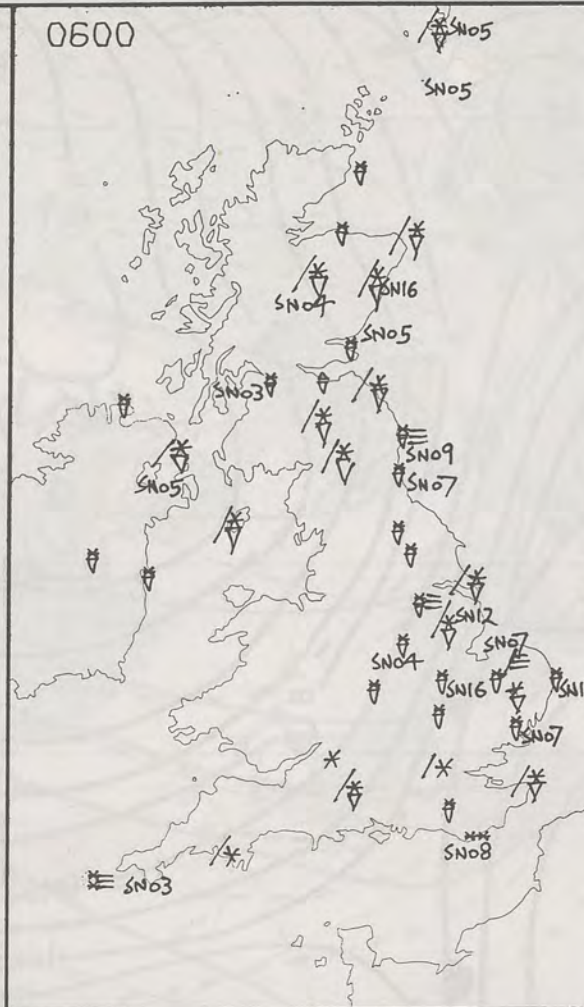

SUMMARY
OF
BRITISH WEATHER

A widespread severe frost affected all areas of the United Kingdom during the night, the frost persisted making it an exceptionally cold day with temperatures up to 14 degrees below normal. Record low day maxima were reported from several stations, especially those with new snow cover. Snow showers, heavy and prolonged affected most coastal districts of eastern Britain and some of these showers came inland in central and northern areas. Showers of snow affected other coastal areas, especially in Cornwall where significant accumulations of snow fell with drifting in the strong east winds. Sheltered western areas of Britain and Northern Ireland stayed dry and sunny all day and other areas had some sunshine.

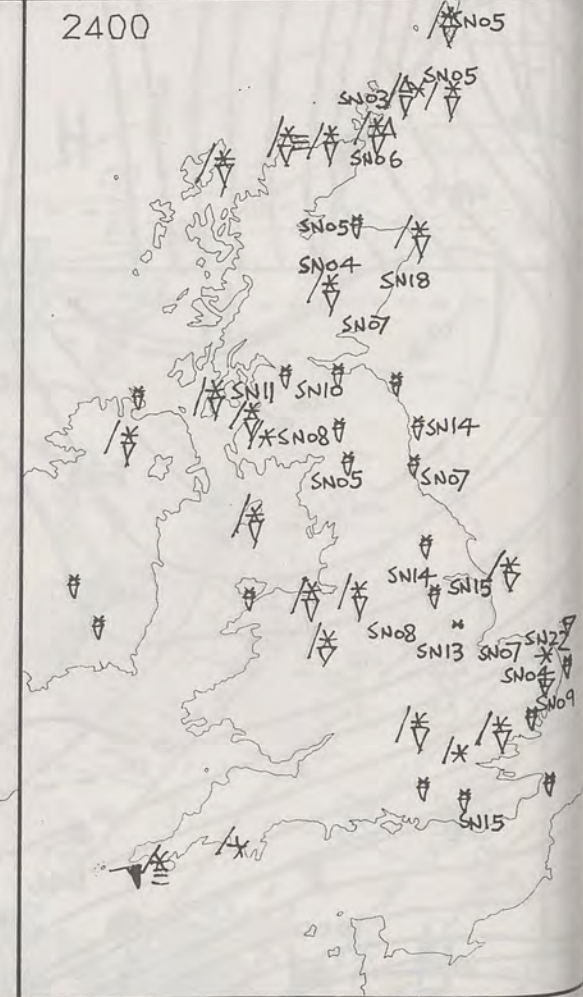

Highest snow depths reported were 39 cm at Penzance, 30 cm at Falmouth, 38 cm at Shoeburyness (near Southend) and 37 cm at Jubilee Corner near Tenterden in Kent.

TUESDAY
13 JANUARY 1987

SUMMARY OF BRITISH WEATHER

The severe weather continued with temperatures falling to record levels overnight in a number of places. During the day it remained sub-zero over most parts of Britain but the far north of Scotland did lift above freezing by a few degrees.

Heavy falls of snow occurred at Glasgow, and many other eastern parts of both Scotland and England had frequent snow showers overnight and through the day. There was more persistent snow in Surrey and Kent and also across from Norfolk to the Midlands during the day and evening.

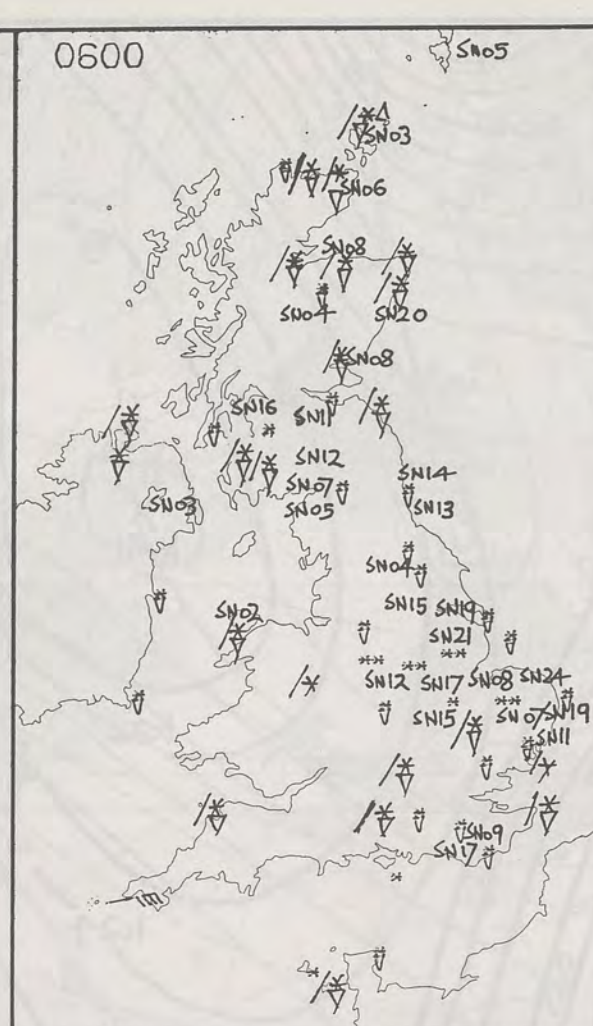

After a mainly dry, bright day in western Scotland, another area of snow spread from the east after dark. Western areas had the best of the sunshine with southwest England having a generally dry, sunny day.

Freshening northeasterly winds over eastern Britain caused much of the lying snow to drift and enhanced the severity of the frost.

PLOTTED SURFACE OBSERVATIONS

1800

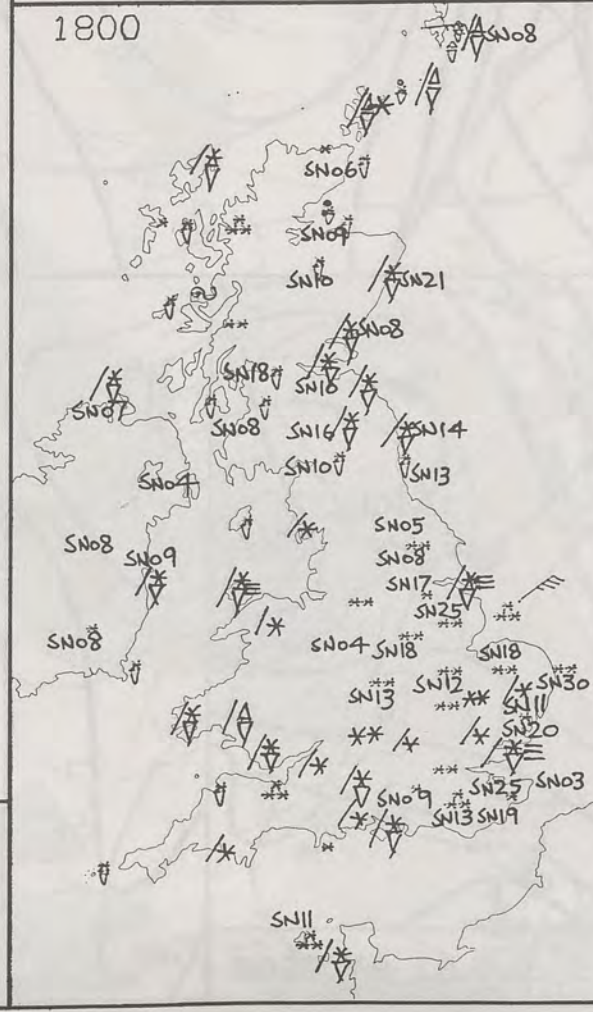

2400

WEDNESDAY
14 JANUARY 1987

Severe frost again occurred widely over the United Kingdom.

Snow fell heavily overnight across the Midlands and East Wales with several inches of fresh snow, indeed the first significant snow for many of these areas so far. Snow also became more persistent in southern counties of England during the night giving heavy falls in places. Scotland, Northern Ireland and northern England had snow showers on east facing coasts otherwise it was mostly fine.

The snow over southern Britain extended north and west to the rest of Wales and southwest England by daybreak and into northern England, Northern Ireland and southern Scotland in the morning giving heavy falls in many places. Dry conditions followed from the east through the day but a strong northeasterly wind only served to drift the lying snow.

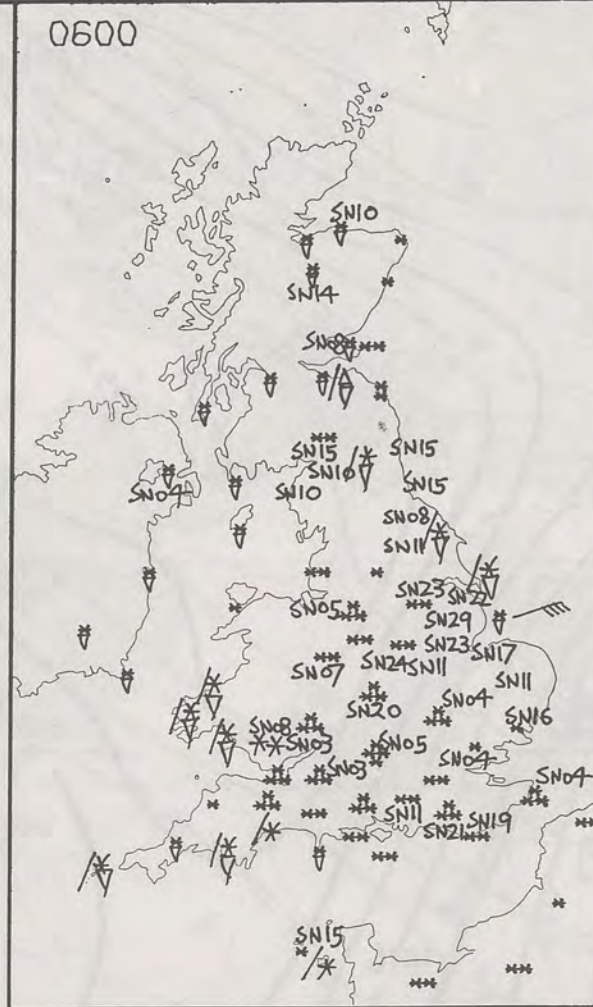

Northwest Scotland again had the best of the sunshine and only a few snow showers.

Temperatures remained sub-zero over most of England and Wales and inland in Scotland during the day, the wind enhancing the severity of the frost. A gust of 61 knots was reported from the Inner Dowsing Lighthouse off the east coast of England during the early afternoon.

THURSDAY
15 JANUARY 1987SUMMARY
OF
BRITISH WEATHER

Most of the United Kingdom had cloudy skies throughout, though there was a little brightness along the south coast of England and in the Channel Isles. Shetland had a mainly sunny day.

Southern counties of England and Wales were mostly dry but in northern England, Northern Ireland and Scotland the cloud produced some outbreaks of light rain, sleet and snow and freezing drizzle in some places.

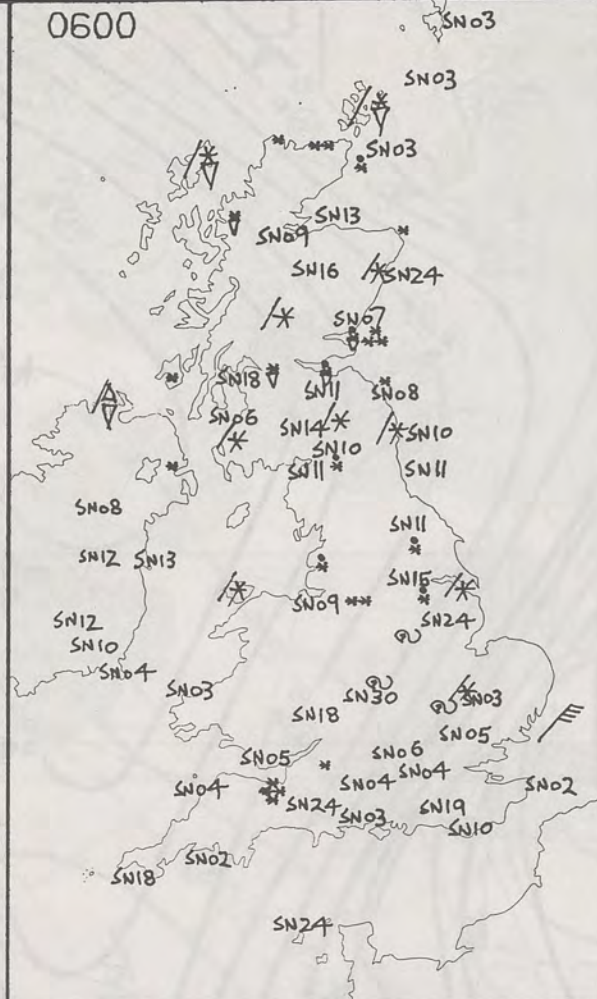

It was a cold day generally (following general overnight frost) but with temperatures just above freezing in the north a slight thaw of lying snow commenced in lowland regions.

Northeast winds were strong in southern parts of England and Wales with drifting of the lying snow over hills.

FRIDAY
16 JANUARY 1987SUMMARY
OF
BRITISH WEATHER

The night was cloudy over most of Britain and many places stayed dry. The cloud prevented temperatures from falling much and many northern regions had a frost-free night.

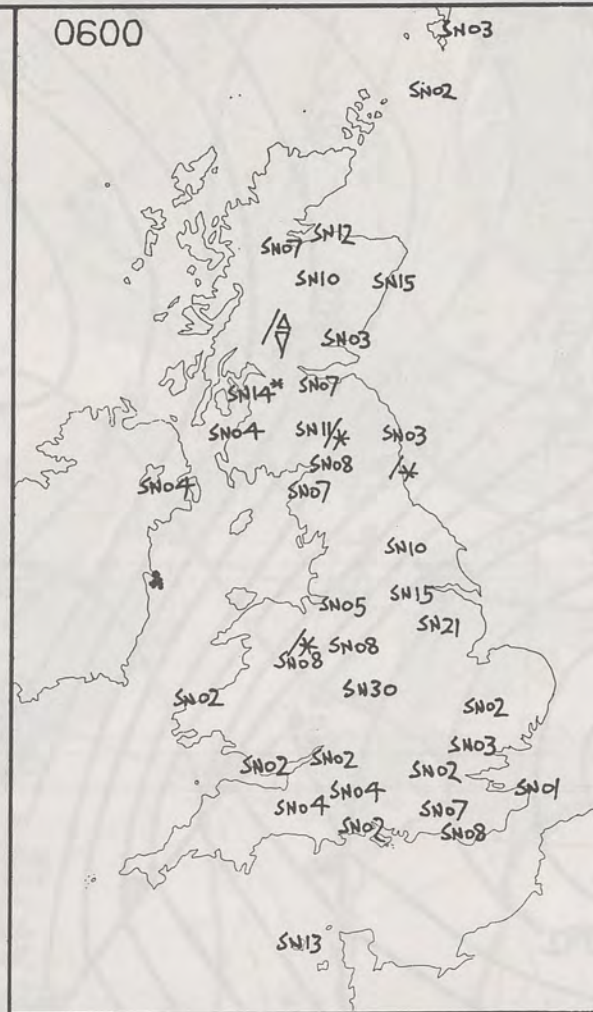

During daylight hours the cloud cover remained persistent and was thick enough to give some light sleet or snow in places - more especially in central and eastern parts of England and Scotland. There were a few breaks in the cloud giving some sunshine in parts of East Anglia and along the south coast of England. In Scotland too there was some sunshine in a few places.

It was a cold day over most of Britain. In the Northern Isles temperatures approached the average for mid-January.

SATURDAY
17 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

Over most of England and Wales it was cloudy but mainly dry; there were a few grains of snow and some patches of freezing drizzle, especially in southeastern parts of England. In West Wales there was light rain or sleet later in the day.

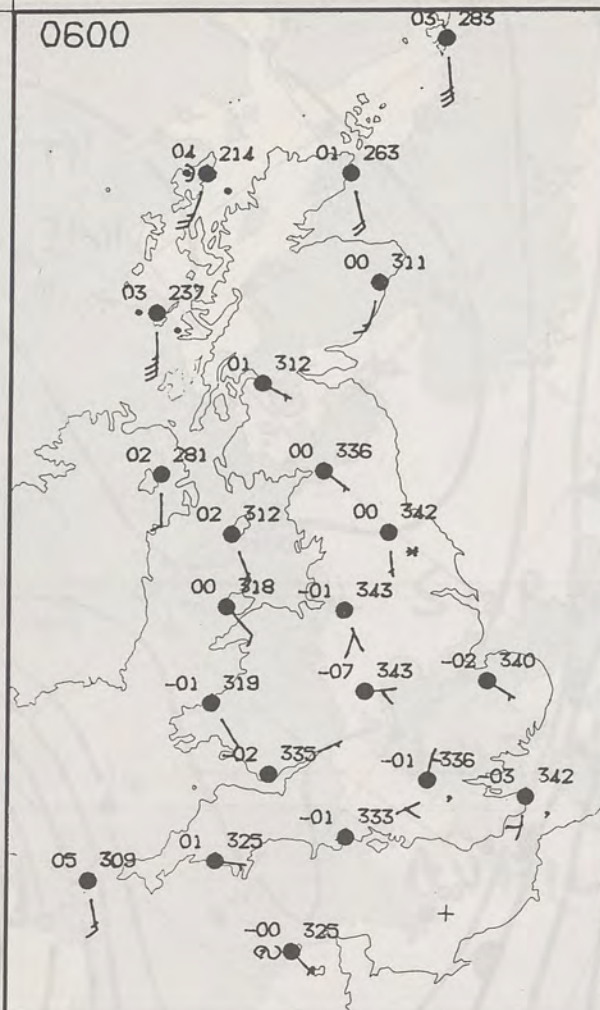

There was a severe frost in places overnight and frost persisted in most places during the day, making it very cold, but in West Wales and southwest England temperatures were two or three degrees above freezing.

In eastern Scotland it was dry with a few breaks in the cloud and after a sharp frost overnight the temperature rose a little above freezing during the day. In Northern Ireland and western Scotland it was rather cold with outbreaks of rain, sleet and snow, the snow chiefly over the highlands.

SUNDAY
18 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

Most of the United Kingdom had a cloudy, but generally dry night, though some rain fell in the far west of England and Wales, light flurries of snow grains were reported elsewhere in England.

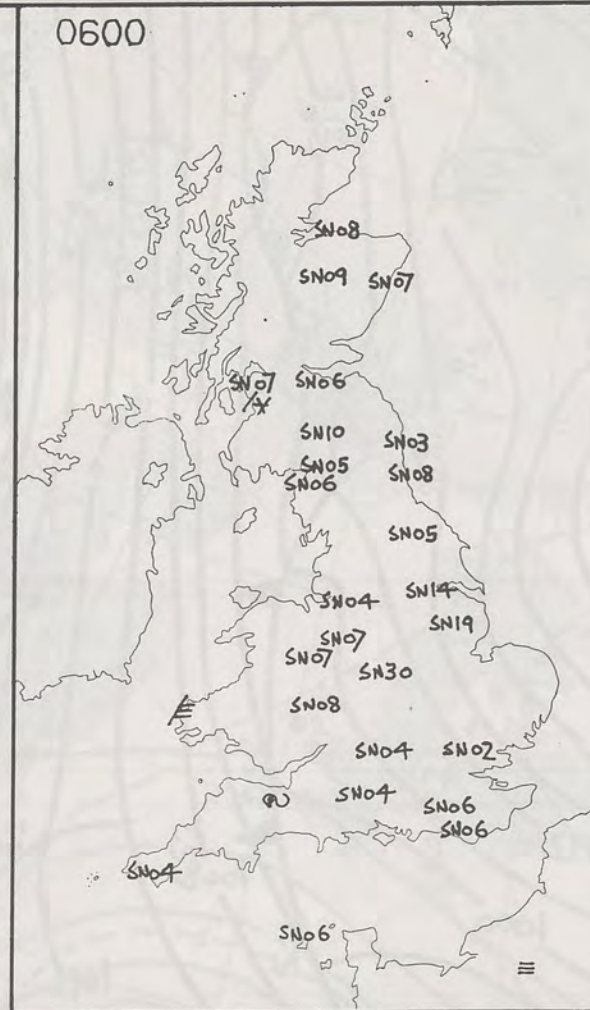

During the day, rain continued in the far west of England, West Wales and rain or sleet reached Northern Ireland and the west of Scotland too, with sleet and snow being reported as the rain area pushed eastwards against the colder air. Other areas of the United Kingdom remained cloudy, with further light flurries of snow or freezing rain.

Temperatures remained below freezing in eastern and central England making it another very cold day, and temperatures elsewhere were several degrees below the long term normal. Only in the extreme west and northwest did afternoon temperatures rise to near normal.

MONDAY
19 JANUARY 1987

PLOTTED SURFACE OBSERVATIONS

Northern Ireland, along with the far west, northwest and north of Scotland had a mild, cloudy day, with rain at times, some of it heavy and prolonged. Temperatures were well above normal in many places.

The remainder of Scotland started the day with temperatures close to freezing, but mostly dry. During the day the cloud thickened to produce rain, with snow over hills, again some of it heavy, and temperatures slowly rose to near normal values, except in the east and south-east.

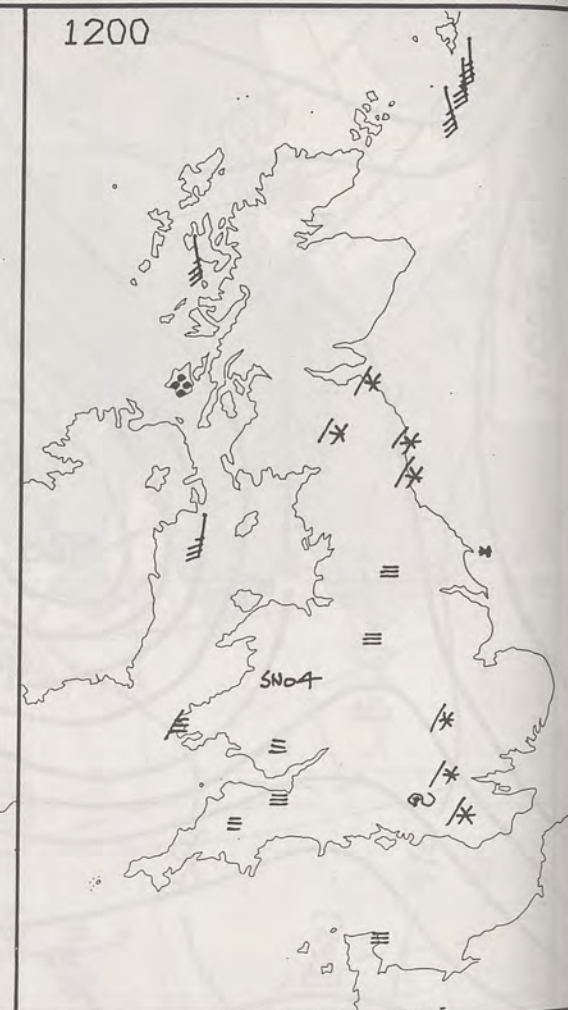

Northern England, Wales and southwest England had a cloudy day, with a little rain, sleet or snow at times, and some freezing rain caused icy surfaces quite extensively. The weather did turn mostly dry, but some heavy rain edged into the far west of Wales and the northwest of England during the evening. Temperatures were below normal in the west and stayed near or below freezing in central and eastern areas. The remainder of England had a dull, gloomy day, with some light snow or freezing rain in places, causing problems with icy roads.

A marked thaw of lying snow occurred in a belt from the Moray Firth, through the Central and Western Highlands to the Glasgow/Clyde Valley area and on to southwest England. Some places reported all snow melted by mid evening.

20 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

It was a cloudy night, with rain and drizzle in many places and over England a little freezing rain. Many western areas were mild but over England, East Wales and eastern Scotland it was cold, with a sharp frost in southern and eastern England.

Scotland had a lot of cloud during the day, with rain or drizzle in many places, but here and there the weather brightened up a little and a few places had a little sunshine.

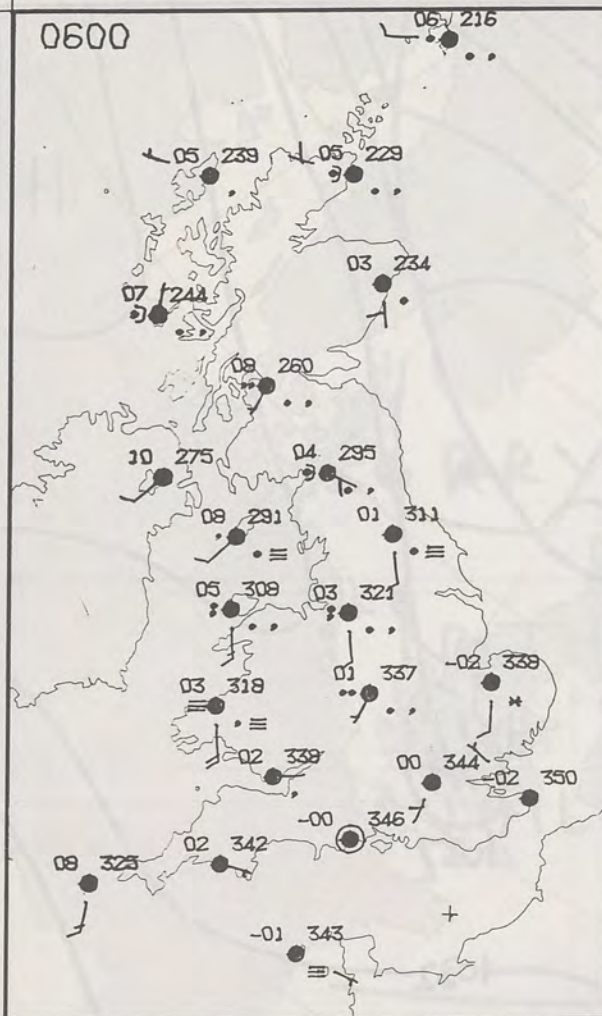

Northern Ireland, England and Wales were mainly dull and misty with fog, especially on hills and coasts. There was rain and drizzle in many places and in the morning a little freezing rain over England. In northeast England the weather brightened up a little in the afternoon.

Much of England and Wales was cold but parts of Scotland and Northern Ireland were very mild.

21 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

England and Wales were misty overnight with quite a lot of fog and some drizzle.

Norther Ireland was cloudy but, mainly dry, while many places in Scotland had rain and drizzle.

During the day most places in England and Wales stayed dull and misty with some drizzle and fog, especially on hills although in parts of northeast England and the Channel Islands the weather brightened up a little.

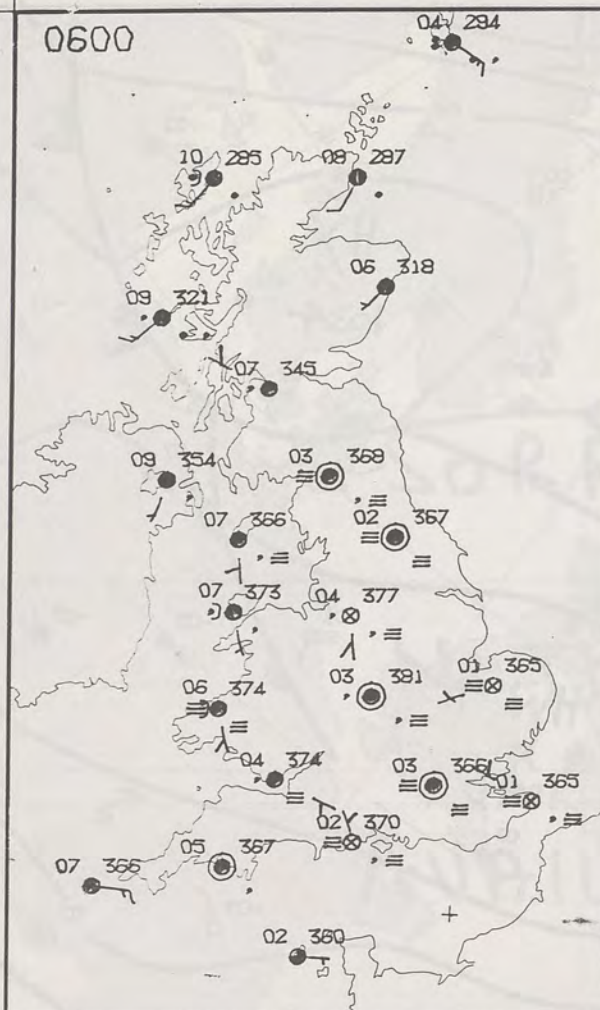

Northern Ireland was dry and cloudy and Scotland was cloudy too. There was rain and drizzle especially in western and northern Scotland and Shetland had a wet day. Central and eastern Scotland had a lot of dry weather and here the weather brightened up a little.

Temperatures in most places were close to or above normal, but some southeastern areas stayed rather cold.

PLOTTED SURFACE OBSERVATIONS

THURSDAY
22 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

Persistent rain cleared from the Northern Isles in the early hours but it turned foggy. The rest of Britain had a mostly cloudy night with fog, especially in East Anglia, southeast England and parts of northwest England.

During the day the southern half of England and Wales stayed dull and misty with drizzle, and in parts of Kent fog persisted all day. In northwest England fog was also slow to clear but many northern parts of England had some sunny spells as far south as Nottinghamshire and Lincolnshire.

The southern half of Scotland was dry and mainly sunny but further north it stayed cloudy with some drizzle. Northern Ireland had a dry and mostly cloudy day.

During the evening fog became more widespread again, especially in East Anglia, the Midlands and northwest England.

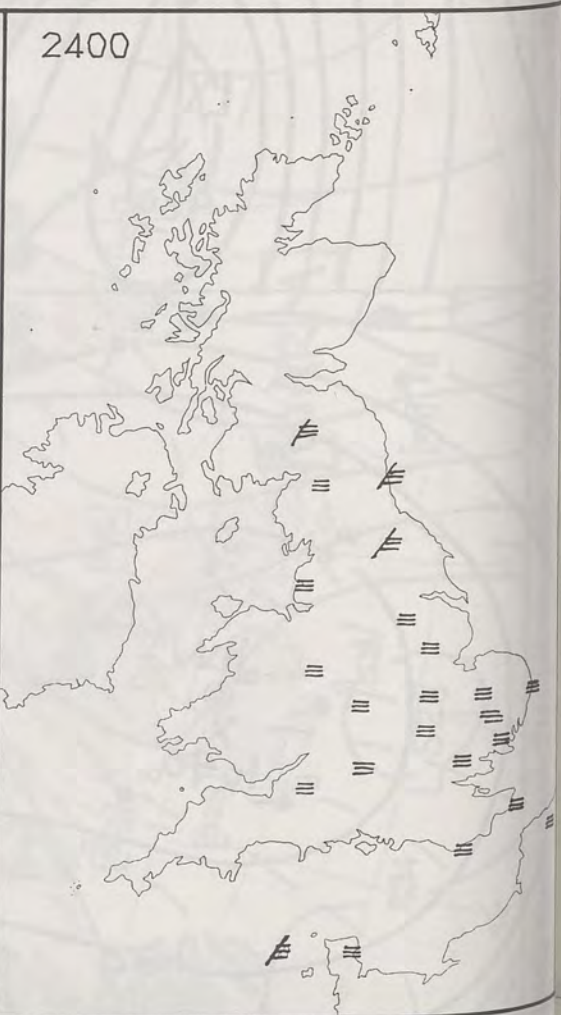

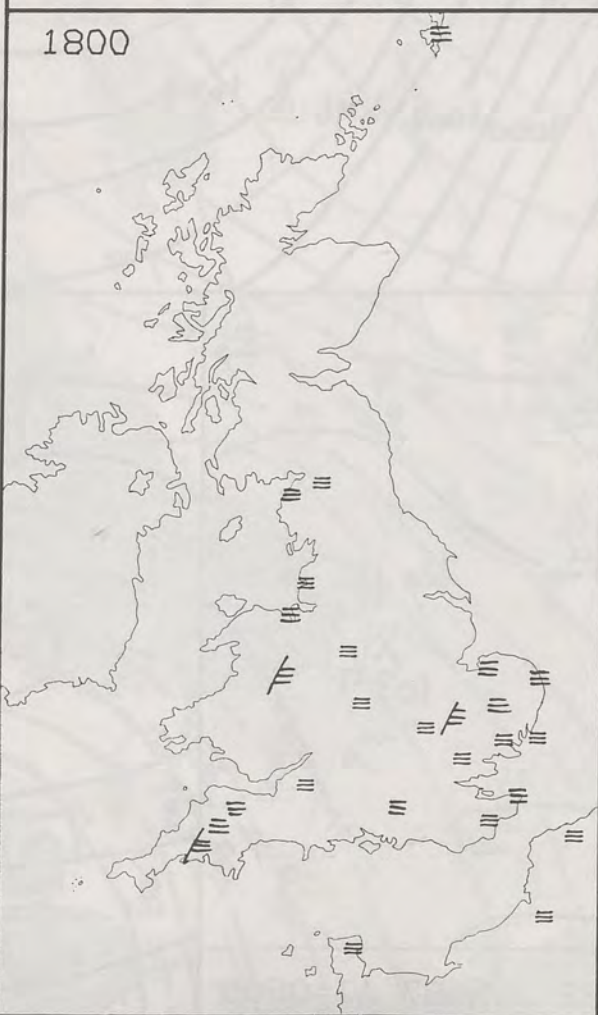

It was a mild day over much of Britain - but still rather cold in the extreme southeast of England.

SUMMARY OF BRITISH WEATHER

There was a good deal of fog at first over England and Wales; most of this cleared during the morning, though many areas stayed very misty. Over most of the British Isles the day was cloudy or dull, and there was some more drizzle, especially in the south. There were, though, some brighter areas in the north, especially in Northern Ireland.

It was generally mild - very mild in some northern areas. However, temperatures were not far from normal in the south.

In the evening there was some more patchy fog over England and Wales, as well as in parts of southern Scotland where local frost also developed.

0600

The map shows the British Isles, including Great Britain and Ireland. Various symbols are placed across the landmasses. These symbols include trigrams (three horizontal lines, some solid, some broken) and hexagrams (six horizontal lines, some solid, some broken). The symbols are distributed across the map, with a higher concentration in the central and eastern parts of Great Britain. Some symbols are placed near the coastlines, while others are in the interior. The symbols appear to be a form of geomantic or divinatory notation, possibly related to the I Ching or similar systems.

SUMMARY
OF
BRITISH WEATHER

Little change occurred in the general weather over the British Isles, with most places again cloudy and dry. There were some areas of drizzle, especially in the southeastern half of England. The cloud broke in some other areas, with quite a large area of clear skies over central regions of the British Isles in the early hours leading to patchy frost and fog.

There was quite a lot of sunshine over Greater Manchester, Merseyside and North Wales during the day, though these areas clouded over later. The evening was cloudy almost everywhere; with much of East Anglia becoming foggy.

Temperatures were mostly near normal but it was milder in parts of the north and very mild in North Wales.

SUNDAY
25 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

England and Wales had another cloudy day, apart from some sunshine in the far northeast of England. Patchy drizzle was reported from thicker cloud in some southern areas, though the day was mostly dry everywhere else. The Channel Islands had a cold day and temperatures elsewhere stayed in the rather cold category.

Across Scotland and Northern Ireland too, cloud proved very reluctant to break, but fairly small amounts of sunshine were reported from parts of Scotland. Rain, heralding colder weather, pushed into the north of Scotland during the day and patchy rain fell from thicker cloud elsewhere in Scotland and Northern Ireland during the evening. Temperatures were a little above normal, apart from Shetland where it turned cold in the afternoon.

MONDAY
26 JANUARY 1987

SUMMARY OF BRITISH WEATHER

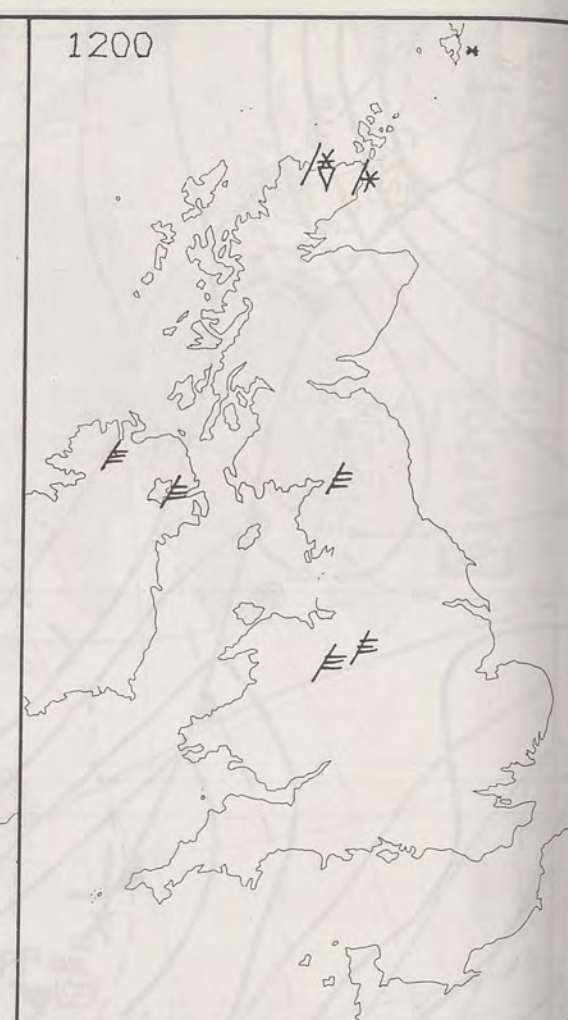

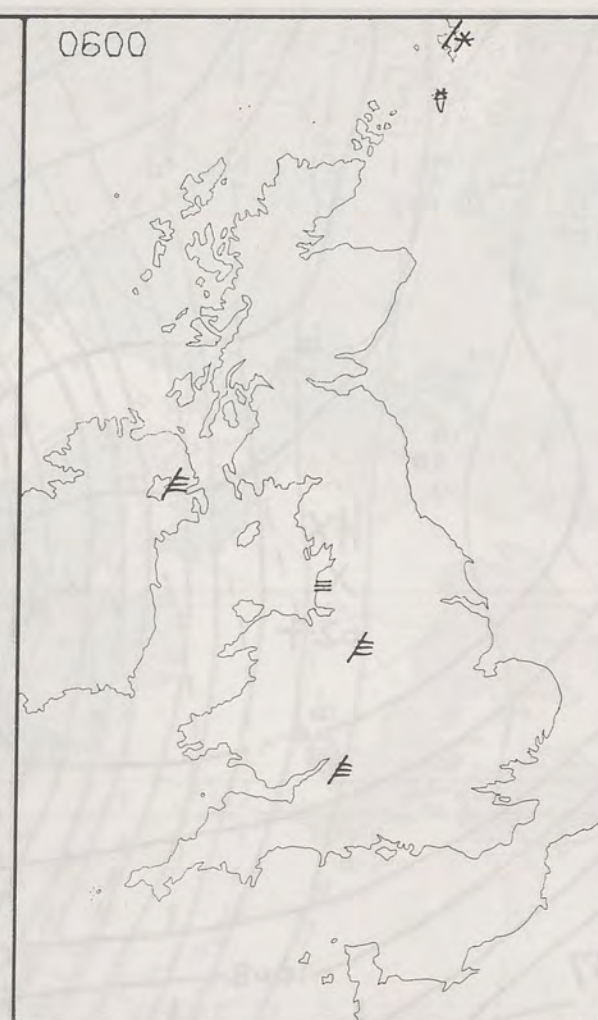

There were mostly large amounts of cloud across the country, giving patchy rain across northern Britain and Northern Ireland, and some rain or drizzle in eastern coastal and some Midland counties of England. Though amounts of rain everywhere were generally small, some sleet or snow showers were reported from the far northeast of Scotland, though amounts of any snow appear to be insignificant.

Much of western England and Wales had a dry day, the cloud cover did break in widely separated areas, the best of any sunshine being in Scotland and parts of the far north of England.

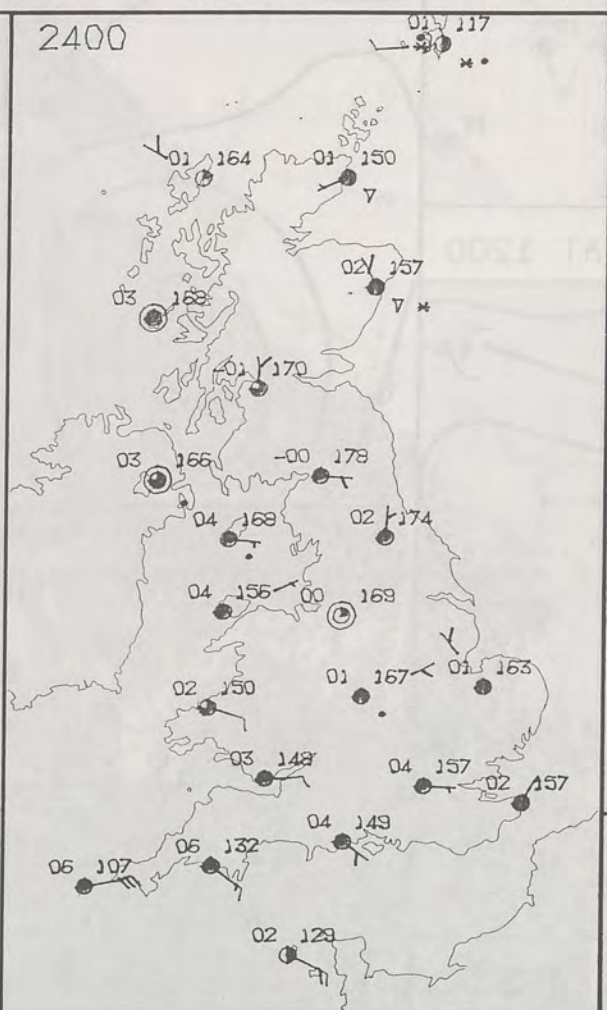

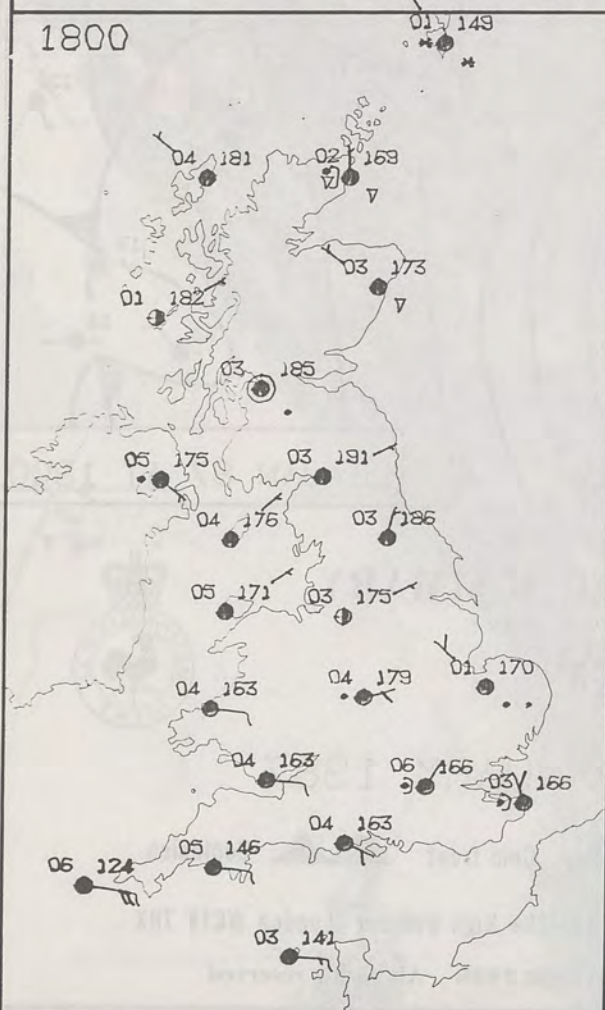

Temperatures broadly just about achieved the seasonal normal, but were a shade below in many eastern counties, and a shade above in some brighter western areas.

TUESDAY
27 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

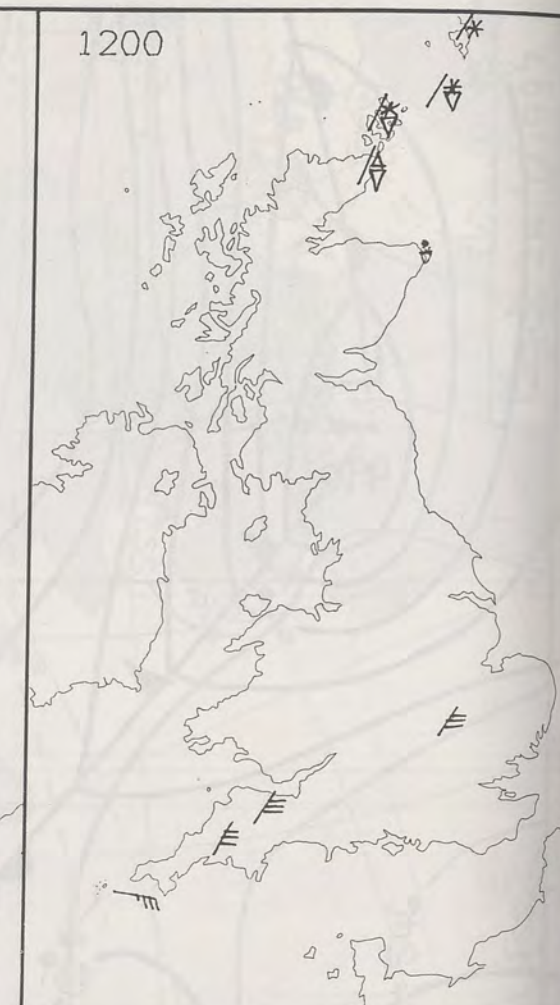

Most parts had a dry night but there were some rain or sleet showers on eastern coasts of England and around coasts in Scotland with one or two penetrating into central parts of Scotland. There were a few breaks in the cloud leading to a slight frost in parts of southwest Scotland and northwest England.

Most regions stayed dry and cloudy through the day though a few coastal places did have some glimpses of the sun. There were further showers of rain or sleet in Scotland, mostly around coasts - but in the northeast of Scotland showers were more frequent. During the evening a few showers moved south into Northern Ireland and northeast England. It was a rather cold day generally, but in parts of Scotland temperatures approached normal.

WEDNESDAY
28 JANUARY 1987SUMMARY
OF
BRITISH WEATHER

Overnight there were a few light rain, sleet or snow showers in eastern parts of Scotland and northeast England with a few snow flurries in parts of the Midlands and East Anglia before dawn. In western parts of Scotland and Northern Ireland skies were clear through the night with a widespread frost and by dawn this clearer weather had reached northwest England, North Wales and the West Midlands.

During the morning this brighter weather spread to many southern counties of Wales and England - only the far southwest remaining cloudy throughout the day. Eastern counties of England and Scotland and some central parts of Scotland had rather more in the way of cloud with some light sleet and snow showers running in from the North Sea.

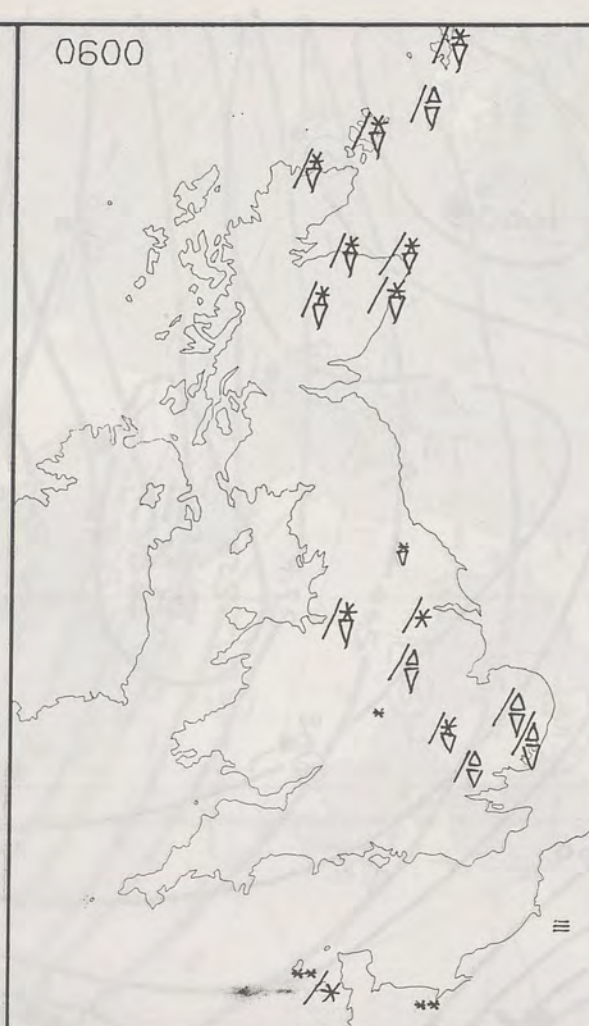

During the evening it was rather cloudy over Scotland, much of northern England and eastern counties of England - elsewhere skies were largely clear with a frost returning.

Temperatures were near or a little below average in most districts.

THURSDAY
29 JANUARY 1987

SUMMARY
OF
BRITISH WEATHER

There was frost nearly everywhere overnight, with a sharp frost in Wales and central and southern England. Most places had a dry night but in northern Scotland there were sleet and snow showers. Scotland, Northern Ireland and northern England were cloudy but Wales and much of central and southern England had clear skies, although there was freezing fog here and there.

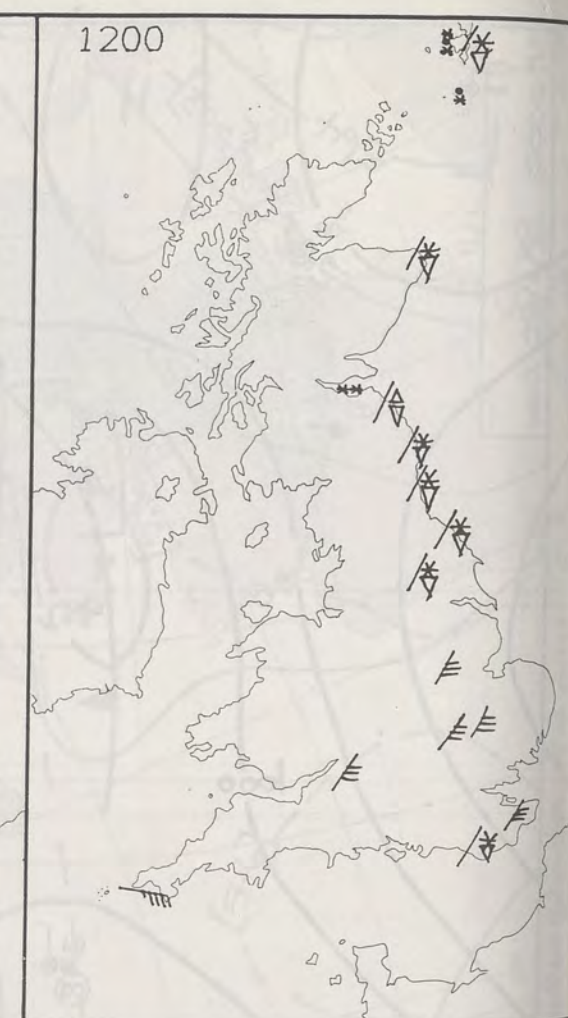

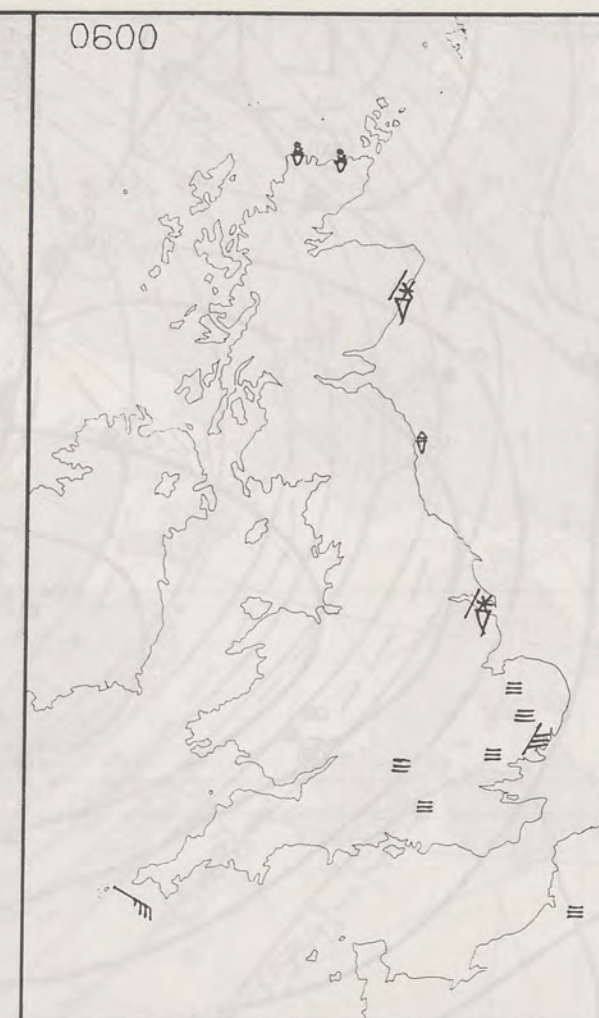

Scotland, Northern Ireland and much of northern England had a cloudy day, but most places stayed dry, although in northern Scotland and northeast England there were a few sleet and snow showers, and Shetland had a wet afternoon.

Wales was sunny and most places in central and southern England were sunny as well, although in parts of southern England it turned cloudy for a while in the afternoon and on the east coast there were one or two showers.

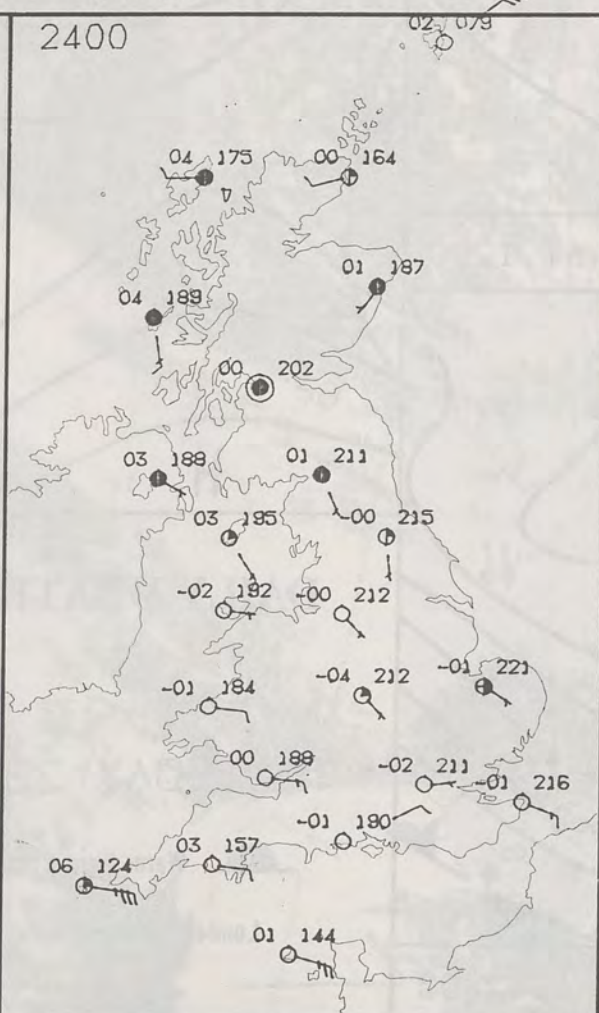

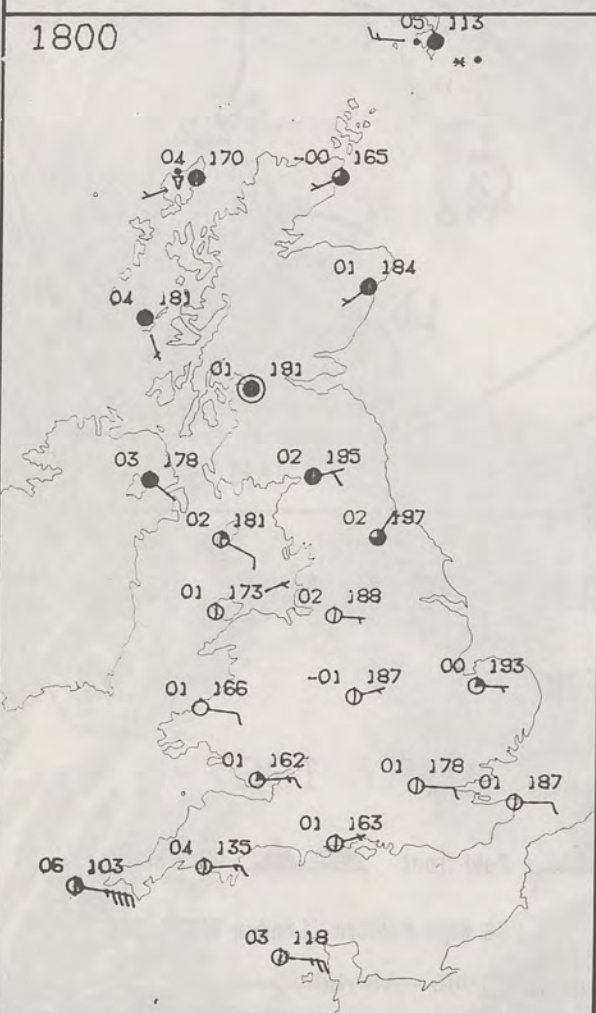

It was a rather cold day almost everywhere.

FRIDAY
30 JANUARY 1987

**SUMMARY
OF
BRITISH WEATHER**

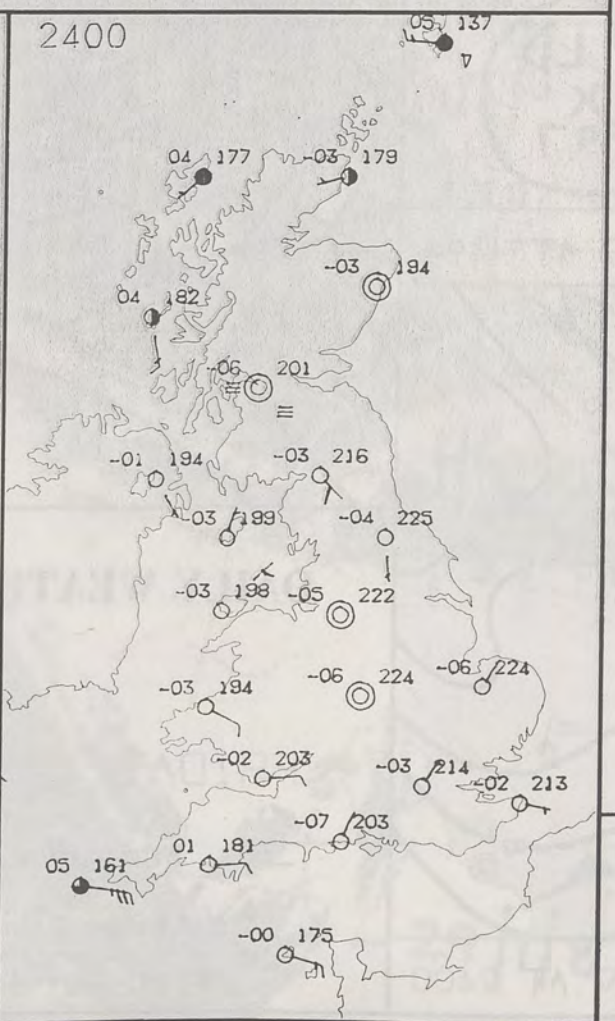

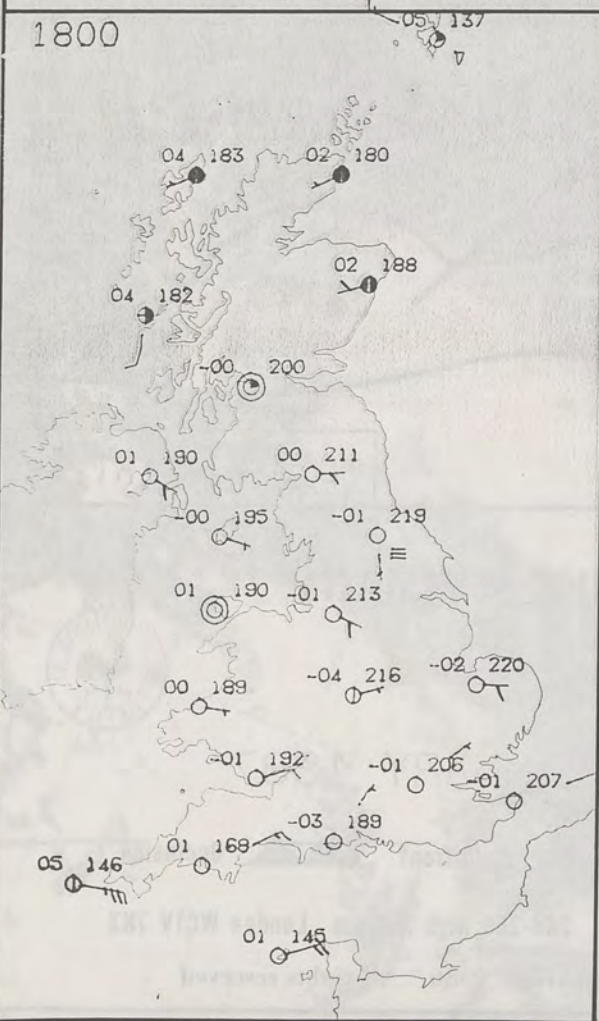

Over England and Wales the sky was clear and after a sharp frost overnight it was a sunny cold day. Frost returned to most places by dusk.

In Northern Ireland, after a cloudy night the day was mainly sunny with near normal temperatures but it turned colder later with frost in the evening.

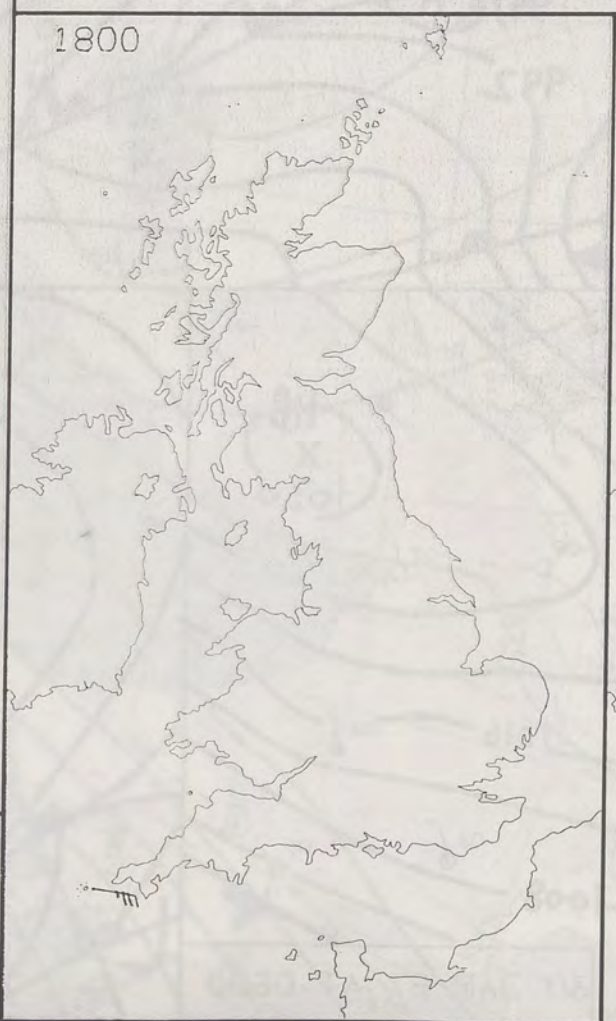

Over much of Scotland there was a lot of cloud and it was mostly rather cold, and apart from a few showers in the Northern and Western Isles it was dry. In southern and eastern Scotland most of the cloud dispersed later and there was frost in places by early evening. Temperatures were near normal in the Northern Isles.

SUMMARY
OF
BRITISH WEATHER

After a clear night with wide-spread frost, severe in places, the day was sunny and rather cold in most places.

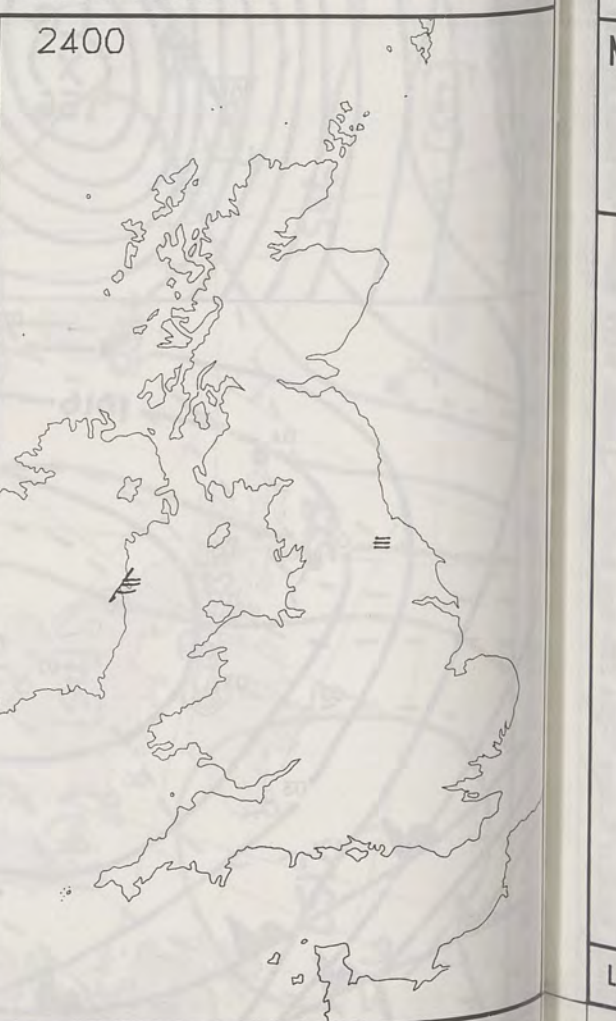

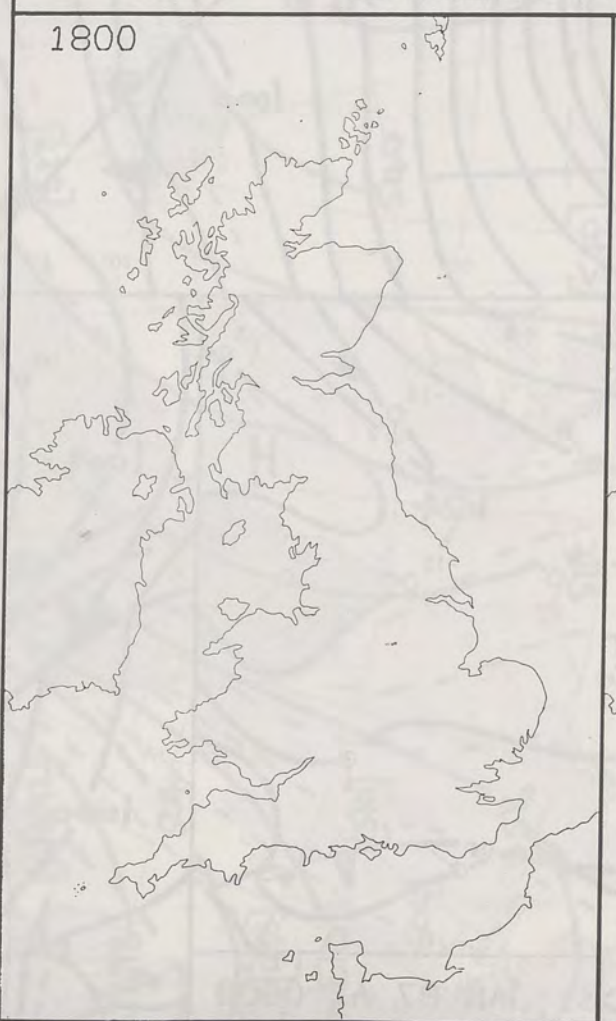

In northern Scotland it was mainly cloudy at first but the cloud became well broken during the day and the temperature was near normal generally and a little above normal in the Northern Isles where there were one or two showers.
