

31/3/66

Remarks

A diminution of temperature has occurred on the northern & western coasts.

In a few places the winds are light from northeast but a westerly current is still

prevalent. chiefly

The production of

cloud & rain is a natural consequence of the intermingling of these currents.

Barometric pressure is ~~de~~ decreasing gradually over northern & western Europe.

NORTHERN = Scotland. WESTERN = Ireland, Wales, and adjacencies. SOUTHERN = English Channel and Bay of Biscay.
EASTERN = Eastward England and North Sea.

Barometer corrected and reduced to 32° at sea level. Thermometer exposed in shade. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder.
Rain-fall, snow or hail (melted), since last report.

Remarks

5/4/66

Since yesterday barometers have risen rapidly on our northern coasts and have fallen slightly on the southwest ^{coast} of England and the northwest coast of France: temperature generally has changed but little except on the east coast of England when it has risen about five degrees. The prevalent winds this morning are easterly but on the ^{French} ~~coast~~ coast the winds are still from the southward.

~~There was a~~
A heavy southerly gale was blowing yesterday morning in the Baltic, whilst in the west of Europe and in the Mediterranean the winds were light and variable.

Remarks

Sea.
1 to 9.

The wind increased on our southern and eastern coasts yesterday evening from the eastward.

Today there is less wind, and on the coasts of the Bay of Biscay ~~the west coast of France~~ a southwesterly current has appeared.

Over the British Isles an easterly current continues ~~to prevail~~ with overcast weather.

Where the two currents have met or ^{chiefly} ~~on~~ ^{interfered with} ~~most~~ ^{approached} each other the fall of rain has as usual been ~~heavy~~ considerable.

J.H.B.

SOUTHERN - Scotland. WESTERN - Ireland, Wales, and adjacencies. SOUTHERN - English Channel and Bay of Biscay.
EASTERN - Eastward England and North Sea.

Barometer corrected and reduced to 32° at sea level. Thermometer exposed in shade. Weather: b.—blue sky; c.—clouds
(heaped); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder.
Rain-fall, snow or hail (melted), since last report.

12/4/66

Remarks

The southerly current has gained ground since yesterday morning. As usually the case a first effect of its increased volume has been to ^{cause} ~~increase~~ barometer ~~pressure~~ on our southern coasts to rise as rapidly as they yesterday fell. A similar but far less considerable increase of barometric pressure has occurred over Scotland & Ireland, ~~but not~~ ^{and} ~~the~~ ^{these} ~~present~~ ^{morning} barometers in the north & west are again beginning to fall.

The winds were very strong on our southern coasts and in the Channel last night; elsewhere there does not appear to have been very much wind at present.

Remarks

Since yesterday (Sunday) evening barometers on our northern coasts have fallen considerably — with ~~high~~ increasing ~~weather~~ southwesterly winds, and high temperature. The increase of barometric pressure over the British Isles until yesterday morning was ^{almost} as rapid as the subsequent diminution. ~~has been~~

The present is ^a not ~~an~~ uncommon instance of ~~an increase of~~ ^{an increase of} ~~very strong~~ southerly ^{winds} being preceded by a sudden & rapid rise of the barometer and accompanying ^{equally} sudden ~~a~~ fall.

Cautionary telegrams ^{were} ~~have been~~ sent to the coasts this morning.

Remarks

northern and
On our eastern coasts the winds have freshened
from the southeast, while over France,
and on our southwestern coasts a southwesterly
current prevails.

Temperatures have changed but little
since yesterday. Barometric pressure is
decreasing.

An area of low barometric pressure
(below 29 inches) existed yesterday ^{in the neighbourhood of} ~~over~~ the
Gulf of Bothnia with strong southwesterly
winds over the Baltic.

~~Unhappily~~ Unfortunately ~~no~~ no
information has been received this morning
from our most western Station.

L.H.S.

SOUTHERN = Scotland. **WESTERN** = Ireland, Wales, and adjacencies. **SOUTHERN** = English Channel and Bay of Biscay.
EASTERN = Eastward England and North Sea.

Thermometer corrected and reduced to 32° at sea level. Thermometer exposed in shade. Weather: b.—blue sky; c.—clouds (attached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), since last report.

Remarks

20/4/66

On the Scottish coasts yesterday the weather generally was unsettled; - heavy and continuous rain, accompanied by strong southeasterly winds falling for some hours at Aberdeen. Barometers are rising this morning and temperatures generally have risen on ~~our~~ our north and east coasts.

Barometric pressure had increased, ^{yesterday} about six tenths of an inch over the Gulf of Bothnia, where ~~the~~ ^{strong} northerly winds prevailed, whilst in the Baltic ~~the winds were strong~~ ^{the winds were} ~~strong~~ ^{in force} southerly and westerly ~~winds~~ varying from strong to a gale. In the Mediterranean as well as in the ~~the~~ south west of Europe the winds generally were light and variable.

23/4/66

Remarks

A rapid and continued increase of barometric pressure over the Baltic and the north of Europe generally has been followed (or accompanied) by fresh easterly winds over the British Isles.

~~A diminution of pressure has occurred simultaneously in the south-west.~~ At Cornish the barometer fell about half an inch between Saturday and yesterday.

Barometers on our western and southern coasts are now falling and the easterly winds ~~will~~ appear likely to increase in strength. Cautionary telegrams have accordingly been sent to the eastern coasts of England and Ireland.

24/4/66

Remarks

Contemporaneously
~~coincidentally~~ with the high barometric
 pressure ^{of yesterday} over northern Europe & the British
 Isles, there existed over Spain and the
 Mediterranean a zone of comparatively
 low pressure, - barometers varying from
 29.8 to 29.9 inches. On the Spanish
 coasts the winds were southwesterly.

This morning barometric pressure over
 the north of Europe, though still high,
 has fallen from one to two tenths of an
 inch and a further diminution has
 occurred on the coast of the Bay of Biscay.
 There is nothing remarkable in the
 temperatures reported.

The winds continue strong from the
 eastward, with considerable evaporation.

26/4/66

Remarks

The winds over the British Isles and France as well as over the North sea, are still chiefly easterly and southeasterly. Barometers however continue to fall steadily and on the south-western coasts of England & Ireland some rain has fallen. Temperatures have increased.

Yesterday on the Spanish coasts the winds were rather strong from the southward, with ~~cloud~~ rain or cloud.

Over the Baltic & the Gulf of Finland strong northwesterly winds prevailed, — an area of low barometric pressure existing in the neighbourhood of St Petersburg.

(detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder.
Rain-fall, snow or hail (melted), since last report.

Remarks

27/4/66

Barometrie pressure ^{generally} has continued to decrease on the British Isles as well as on the west coast of Europe; in the north of Scotland where the winds have turned to the southward and ~~the~~ temperature has fallen slightly the decrease has been most rapid. Rain has again fallen on the south coasts of England and Ireland.

Yesterday in the Baltic and the Gulf of Finland light to moderate northerly winds prevailed and barometrie pressure had increased. In the Mediterranean the winds were light and variable.

1866.

12

Barometer corrected and reduced to 32° at sea level. Thermometer exposed in shade. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), since last report.

28/4/66

30 ¹⁴/₁₁

Remarks

The diminution of barometric pressure has continued. This decrease has been general, - extending over the greater portion of northern & western Europe.

The weather is in an unsettled state. Various ^{interfering} currents of wind of different temperature prevail.

At present neither the polar ~~nor~~ tropical current has any decided preponderance. There seems reason therefore to expect rain & probably thunder, - but ^{as to} whether or not there will be any great increase of wind it is at present ~~impossible~~ ^{difficult} to offer an opinion.
