THE BEAUFORT SCALE OF WIND FORCE.

Beaufort Number.	Admiral Beaufort's General Description of Wind.	Specification for use on Land, based on observations made at Land Stations.	Limits of Mean Velocities Statute Miles per Hour.
0	Calm ..	Calm; smoke rises vertically	Less than 1
1	Light air ..	Direction of wind shown by smoke drift	1-3
2	Slight breeze ..	Wind felt on face; leaves rustle..	4-7
3	Gentle breeze..	Leaves and small twigs in constant motion; wind extends light flag ..	8-12
4	Moderate wind	Raises dust and loose paper; small branches are moved	13-18
5	Fresh wind ..	Small trees in leaf begin to sway; crested wavelets on inland waters	19-24
6	Strong wind ..	Large branches in motion; whistling heard in telegraph wires	25-31
7	High wind ..	Whole trees in motion; inconvenience felt when walking against wind	32-38
8	Gale ..	Breaks twigs off trees; generally impedes progress	39-46
9	Strong gale ..	Slight structural damage occurs (chimney pots and slates removed) ..	47-54
10	Whole gale ..	Seldom experienced inland; trees uprooted	55-63
11	..	Very rarely experienced; accompanied by widespread damage	64-75
12	Hurricane		Above 75

BEAUFORT NOTATION.

b blue sky (not more than a quarter covered).
bc sky partly cloudy (one half covered).
c generally cloudy (three quarters covered).
o overcast sky. d drizzle.
f fog. h hail.
KQ line squall. l lightning.
m mist. p passing showers.

BEAUFORT NOTATION.

q squalls. r rain.
rs sleet, i.e., rain and snow.
s snow. t thunder.
v unusual visibility.
w dew. x hoar frost.
y dry air; humidity less than 60 per cent.
z dust haze; the turbid atmosphere of dry weather.

WEATHER SYMBOLS.

Clear sky ○ Sky 1/2 clouded ○
Sky 3/4 clouded ○
Overcast sky ● Rain falling ○
Snow * Sleet *
Fog ≡ Hail ≡
Thunder T Mist ≡
Lightning ⚡ Thunderstorm ⚡

Capital letters indicate intensity, and x or o indicates slight, and repetition of letters continuity, thus:-
R=heavy rain. rr=continuous moderate rain. ror=continuous slight rain.

NOTES ON THE INFORMATION CONTAINED IN THE BRITISH AND INTERNATIONAL SECTIONS OF THE DAILY WEATHER REPORT.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500–2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart (160 miles) in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are $\frac{1}{2}$ inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10⁷ Charts.
or 2 mb " " 1 : 10⁷ " "
or 1 mb " " 1 : 5 × 10⁶ " "

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 283° A = 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Weather.—In describing the distribution of weather over a district or during an interval of time such as a day, descriptive adjectives are used with the following meanings:—

Fine—mainly b and bc of the Beaufort notation (see previous page).

Fair or fair generally—mainly bc and c.

Cloudy—combinations of bc, c and o, c predominating.

Overcast—mainly c and o.

Dull—overcast with low heavy cloud.

Varying or variable cloud—combinations of b, bc, c, and o.

Precipitation when occurring is specifically mentioned.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

Upper Air Temperature.—The actual observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute. The lines marked "Anti-cyclonic," "Cyclonic," "Summer," and "Winter," indicate the normal fall of temperature with pressure under the conditions indicated. The oblique line marked "Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10a per kilometre. A lapse rate greater than this value indicates instability of the atmosphere.

The new tables for computing relative humidity from readings of dry and wet bulb thermometers exposed on aeroplanes, are based on the

formula $e' = e - A(t - t')$ where $A = 0.37$, which differs from the old formula used previously to the 19th September, 1921, only in having a constant 0.37 instead of 0.278. Considerable difference exists between the values for relative humidity given by the two formulae when the humidity is low: when it is high the differences are slight. The following tables indicate the actual value of these differences, the new formula invariably giving smaller humidities:—

Dry Bulb. °F.	Air pressure 400 mb.					Dry Bulb. °F.	Air pressure 600 mb.				
	Depression of 5°	10°	15°	20°	25°		Depression of 5°	10°	15°	20°	25°
20	6	10	—	—	—	20	7	15	—	—	—
40	2	4	6	9	—	40	3	6	10	—	—
60	1	2	3	4	5	60	2	3	4	7	7
80	0	1	1	2	2	80	0	2	2	3	4

* e' = actual pressure of water vapour in the air expressed in the same unit as B.
 e' = saturation pressure of water vapour at wet bulb temperature.
 t = dry bulb temperature in degrees F.
 t' = wet bulb temperature in degrees F.
B = barometric pressure.

Dry Bulb. °F.	Air pressure 800 mb.					Dry Bulb. °F.	Air pressure 1000 mb.				
	Depression of 5°	10°	15°	20°	25°		Depression of 5°	10°	15°	20°	25°
20	10	—	—	—	—	20	12	—	—	—	—
40	4	9	13	—	—	40	6	11	—	—	—
60	2	4	7	—	—	60	3	6	8	11	—
80	2	2	4	4	5	80	2	3	4	6	6

The new formula is based on experiments in the wind channel at South Farnborough, which indicate that A is practically independent of the speed of the wind at speeds above 20 m.p.h. In the old formula, the value of A was obtained by extra-polation from the curve giving its actual values at different wind speeds up to 12 m.p.h.

Radio Disturbances (Atmospherics) at Croydon.—In the table under the above heading, information is given concerning atmospherics heard at Croydon. The term "atmospherics" is used to denote the clicks and crashes which are commonly heard in a wireless receiver, the intensity of which varies greatly at different times. Observations at Croydon are made 4 times daily at 1h., 7h., 13h. and 18h. G.M.T.

The second column indicates the type of sound heard, by the following abbreviations:—

C—Uniform clicks and normal quiet distribution.

C₁C₂—Clicks of two obviously different orders of intensity.

Cg—Clicks predominant but a few grinders.

G—Grinders predominant.

GG—Continuous grinders whose minimum direction can be found by estimation of intensity without counting.

CK—Clicks with a few loud crashes.

CKK—Clicks with numerous crashes.

KK—Very loud atmospherics.

In the third column the number of atmospherics per 4 seconds is shown. This number is obtained with the receiving coil set in a direction to give the maximum number.

Fourth column. Strength. (Not at present recorded.)

Fifth column. Direction. This indicates the direction from which the maximum intensity of atmospherics is proceeding. Directions are given in degrees (see diagram below).

It is to be noted that there is an ambiguity of 180° in the determination of direction.

Rainfall.—The site of the raingauge at Grain was changed on 4th. February, to one with a better exposure.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

Upper Winds.—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 1,000 feet, 3,000 feet, and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360° (See diagram below.)

SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.

SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

Notes on the Weather of MARCH, 1922.

Mild, wet and windy at first, March 1922 was subsequently rather cold in some Eastern districts with little rain generally. For about a week temperature rose above the normal, rain fell in considerable quantities and the wind reached gale force repeatedly. Precipitation in some southern districts, including the London area, exceeded during this period half or even threequarters of the average for the whole month. On the morning of the 8th an unusually violent disturbance swept across the South of England causing much structural damage. In the South-west the velocity of the wind exceeded 100 miles per hour in gusts: at Pendernis Castle the maximum was 103 mph. equalling the record for England obtained there in March 1905 while in the Scilly Isles a speed of 108 mph was attained, the second highest value recorded by anemometers in the British Isles.

After the 10th. frequent high pressure to the West-ward or North-ward caused cold Northerly or Easterly winds to predominate over England. Apart from occasional rain in the South-west associated with depressions near the Bay of Biscay there was little or no precipitation between the 11th and 19th but towards the end of the month showers of rain, sleet, snow or hail fell repeatedly though the measurements were generally small. The coldest weather was experienced after the 20th. with day readings between 35° and 40° about 20th. 22nd and some sharp frost on some of the following nights. A minimum of 20° was registered at Grain on the 24th and of 22° at Shoeburyness on the 26th.

Local thunderstorms occurred on the 2nd. and again about the 27th. or 28th. in Southern England.

NOTES ON CHART OF ISOPLETHS (p. 4).

The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb pressure intervals intersect this line at 1h., 7h., 13h. and 18h. are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 66° N., Long. 15° W. in the north, at Lat. 44½° N., Long. 4° E. in the south.

— = 1,020 mb. — — — = 1,000 mb. — — — — — = 980 mb. — — — — — = 960 mb.

* Based in part on reports made by telegraph in which the daily falls are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

PRESSURE: ICELAND TO GULF OF LIONS. MARCH, 1922.
ISOPLETHS* BASED ON SIX-HOURLY OBSERVATIONS.

* For explanation see page 3.

GENERAL INFERENCE.

A secondary depression centred off the Hebrides is moving Northeastward and a temporary improvement is likely to follow in the rear of the rain due to this disturbance. Our area will however soon be affected by a very deep and intense depression far to the Westward of Ireland which will cause very unsettled weather and a fall of temperature.

Districts.

Forecasts for the 24 hours commencing 15h. GMT. Friday 3rd March 1922.

SEA DISTURBANCE.		0 = no swell			1 = mod. swell			2 = heavy swell			3 = no swell			4 = mod. swell					
The BRAUFOUR SCALE OF WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers is the speed at about 30 feet above the ground.		5 = rough sea			6 = heavy swell			7 = rough sea			8 = rough sea			9 = rough sea					
Capital letters indicate intense, suffix o indicates slight and repetition of letters continually, thus:-		10 = very rough sea			11 = rough sea			12 = rough sea			13 = rough sea			14 = rough sea

SYNOPTIC CHART FOR MORNING OF Saturday, 7th March, 1922.

Scale - 1:10,000,000
Nautical Miles 100 200 300
Statute Miles 100 200 300

EXPLANATION

Isobars are drawn for intervals of two millibars.
Force, on the scale 0-12, is indicated by the number of feathers.
Direction is shown by arrows flying with the wind.
Temperature is shown in miles per hour by figures in small circles.
TEMPERATURE is given in °F.

WEATHER SYMBOLS: ○ clear sky; ○ sky & clouded; ○ sky & rain; ○ sky & snow; ○ sky & hail; ○ sky & fog; ○ sky & mist; ○ sky & thunder.

Nautical Miles.
Statute Miles.

EXPLANATION

Isobars are drawn for intervals of two m.
Direction is shown by arrows flying with the wind.
Force on the scale 0-12, is indicated by the number of feathers.
Velocity is shown in miles per hour by figures in small circles.
Temperature is given in ° F.

Clouds: ☉ clear sky; ☉ sky & clouded; ☉ sky & overcast sky; ☉ rain falling; ☉ sleet; ☉ hail; ☉ fog; ☉ mist; ☉ thunder.

Direction: ~~~~~ Rough. ~~~~~ High.

TABLE SHOWING THE GREENWICH TIMES OF SUNRISE, NOON, AND SUNSET FOR STATIONS IN THE UNITED KINGDOM.										BEAUFORT NOTATION OF WEATHER.										SEA DISTURBANCE.									
11 th & 12 th MARCH 1922										With present weather is combined, whenever possible, the general character of the weather. A "h. m. s." divides actual existing weather from preceding conditions, thus: h. m. s. = fair weather after rain; i. m. s. = increasing; d. m. s. = decreasing; or "h. m. s. or rain and hail". Capital letters indicate intensity, suffix e indicates slight and repetition of letters continuity, thus: h. m. s. = heavy rain, rr = continuous moderate rain, fofo = continuous light rain.										The BEAUFORT SCALE of WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.

TABLE SHOWING THE GREENWICH TIMES OF SUNRISE, NOON, AND SUNSET FOR STATIONS IN THE UNITED KINGDOM.				THE BRAUPT SCALE OF WIND.				SEA DISTURBANCE.			
12 & 13 TH MARCH, 1922.				With present weather is combined, whenever possible, the general character of the weather. A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r= fair weather after rain; i= intermittent; -="decreasing"; += "increasing"; h(r)= "half" or "rain and hail".				The BRAUPT SCALE of WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.			
STATIONS.	Sunrise.	Noon.	Sunset.	Capital letters indicate intense, small o indicates slight and repetition of letters continuity, thus: -				0=no swell

Scale - 1:10,000,000
Nautical Miles 100 0 100 200
Statute Miles 160 0 160 320

EXPLANATION

Isobars are drawn for intervals of two millibars.
Direction is shown by arrows flying with the wind.
Force on the scale 0-12, is indicated by the number of feathers.
Rain velocity is shown in miles per hour by figures in small circles.

TEMPERATURE is given in ° F
CLOUDS: ○ clear sky, ○ sky & clouded, ○ sky
snow: * sky, * clouded, * overcast sky, * rain falling
fog: = fog, = mist, = thunder

b	blue sky (not more than a quarter covered).	With present weather is combined, whenever possible, the general character of the weather.	0	calm	0	no swell	
bc	sky partly cloudy (one half covered).	A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r= fair weather after rain; i= intermittent; - = "decreasing"; + = "increasing"; h(r) = "hall" or "rain and hall".	1	light breeze	1	mod. swell	
c	generally cloudy (three-quarters covered).	Capital letters indicate intense, suffix o indicates slight and repetition of letters continuity, thus: -	2	breeze	2	heavy swell

SYNOPTIC CHART FOR MORNING OF TUESDAY 14TH MARCH, 1922.

Scale - 1:10,000,000

Nautical Miles
Statute Miles

EXPLANATION

Isobars are drawn for intervals of two millibars.
Direction is shown by arrows flying with the wind.
The scale 0-12, is indicated by the number of feathers.
The speed is shown in miles per hour by figures in small circles.
The temperature is given in °F.

Cloud symbols: ○ clear sky, ○ sky 1 clouded, ○ sky 2 clouded, ○ sky 3 clouded, ○ overcast sky, ● rain falling, ▲ hail, = fog, = mist, T thunder

Barometer: Rough, High

GENERAL INFERENCE.

Conditions remain anti-cyclonic but the highest pressure is now over Iceland, while a fall of pressure over Scandinavia is causing a strengthening of the Northerly wind over the North Sea. No important change over our area is indicated and weather will continue dry with Easterly wind and a good deal of cloud in the East and South.

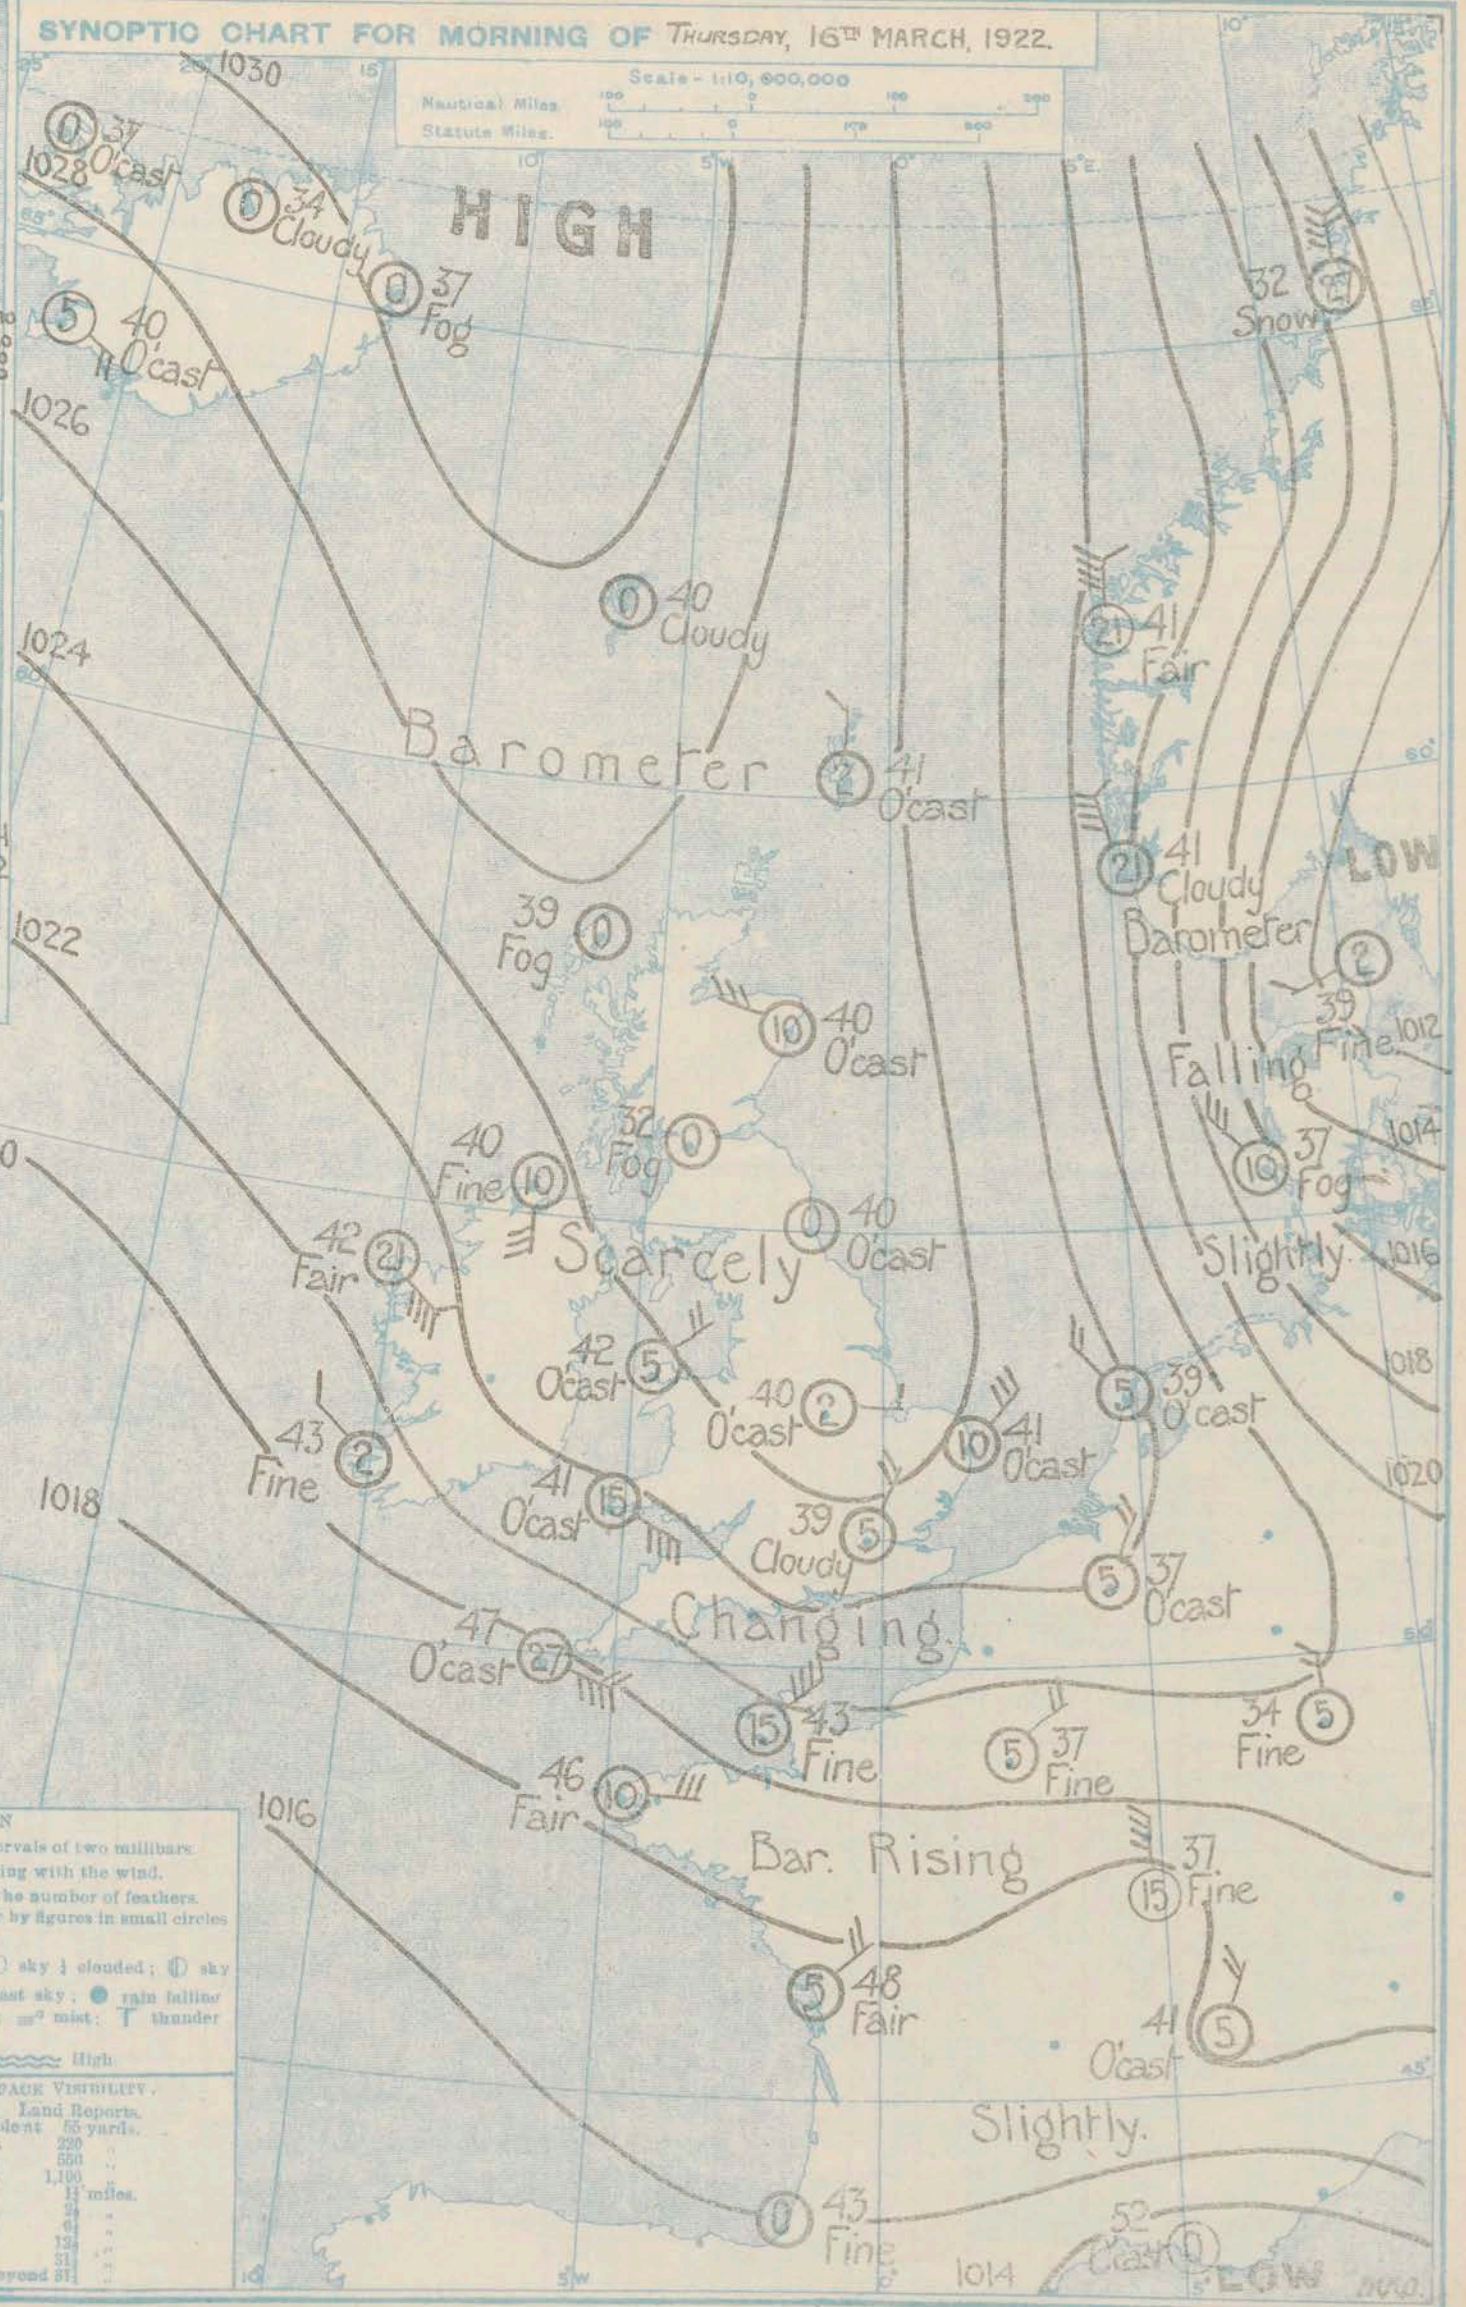

Further Outlook.

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T. Thursday, 16th March, 1922.

RADIO DISTURBANCES (Atmospheric) AT OYDON.		TABLE SHOWING THE GREENWICH TIMES OF SUNRISE, NOON, AND SUNSET FOR STATIONS IN THE UNITED KINGDOM.							HEAUFORT NOTATION OF WEATHER.					THE BEAUFORT SCALE OF WIND is used only for surface observations. In the accom- panying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.					Beau- fort No.		Statute miles per hour.											
		18 th & 19 th MARCH. 1922.							b blue sky (not more than a quarter covered). bc sky partly cloudy (one half covered). c generally cloudy (three-quarters covered). d drizzle, or fine rain. f fog. h hail. EQ line squall. l lightning. m mist. o overcast sky. p passing showers. r rain. rs sleet, i.e. rain and snow together. s snow. t thunder. v unusual visibility. y dry air. x dust haze; the turbid atmo- sphere of dry weather. jp precipitation within night.					With present weather is com- bined, whenever possible, the general character of the weather. A "solidus" divides actual exist- ing weather from preceding condi- tions, thus: -bc/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; h(?) = "hail" or "rain and hail".					Capital letters indicate intense, smaller c indicates slight and repetition of letters continuity, thus: - R = heavy rain. rr = continuous moderate rain. rco = continuous light rain. t thunder.

v unusual visibility. y dry air.

z dust haze; the turbid atmosphere of dry weather.

jp precipitation within night.

With present weather is combined, whenever possible, the general character of the weather.

A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; k(r) = "hail" or "rain and hail";

Capital letters indicate intense, suffix o indicates slight and repetition of letters continuity, thus: -

R = heavy rain.

rr = continuous moderate rain.

lcs = continuous light rain.

With present weather is combined, whenever possible, the general character of the weather.

A "solidus" divides actual existing weather from preceding conditions, thus:—bc/r = fair weather after rain; i = intermittent; — = "decreasing"; + = "increasing"; h/r = "hail" or "rain and hail".

Capital letters indicate intense, small o indicates slight and repetition of letters continuity, thus:—

R = heavy rain.
rr = continuous moderate rain.
fofo = continuous light rain.

Scale - 1:10,000,000
Nautical Miles 100 200 300 400
Statute Miles 100 200 300 400

EXPLANATION

Isobars are drawn for intervals of two millibars.
Direction is shown by arrows flying with the wind.
On the scale 0-12, is indicated by the number of feathers.
Velocity is shown in miles per hour by figures in small circles.
TEMPERATURE is given in ° F.

SYMBOLS: ○ clear sky, ○ sky & clouded, ○ sky & rain falling, ○ sky & snow, ○ sky & hail, ○ sky & fog, ○ sky & mist, ○ sky & thunder.

SYMBOLS: ~~~~~ Rough, ~~~~~ High.

Fresh North-East to North winds; much cloud, some rain; visibility moderate to good; cold.

Fresh North-East to North winds; much cloud, some rain or sleet; visibility moderate to good; cold.

Moderate to fresh Northerly winds; much cloud, sleet or snow showers; visibility mainly good; cold.

Same as 7 - 10.

Cold weather with winds from some Northerly points in all districts for the next few days. Much cloud is probable over Eastern England, but in the West good records of sunshine are not unlikely.

SYNOPTIC CHART FOR MORNING OF MONDAY, 20TH MARCH, 1922.

EXPLANATION

Isobars are drawn for intervals of 2 millibars.

Direction is shown by arrows flying with the wind.

Force on the scale 0-12, is indicated by the number of feathers.

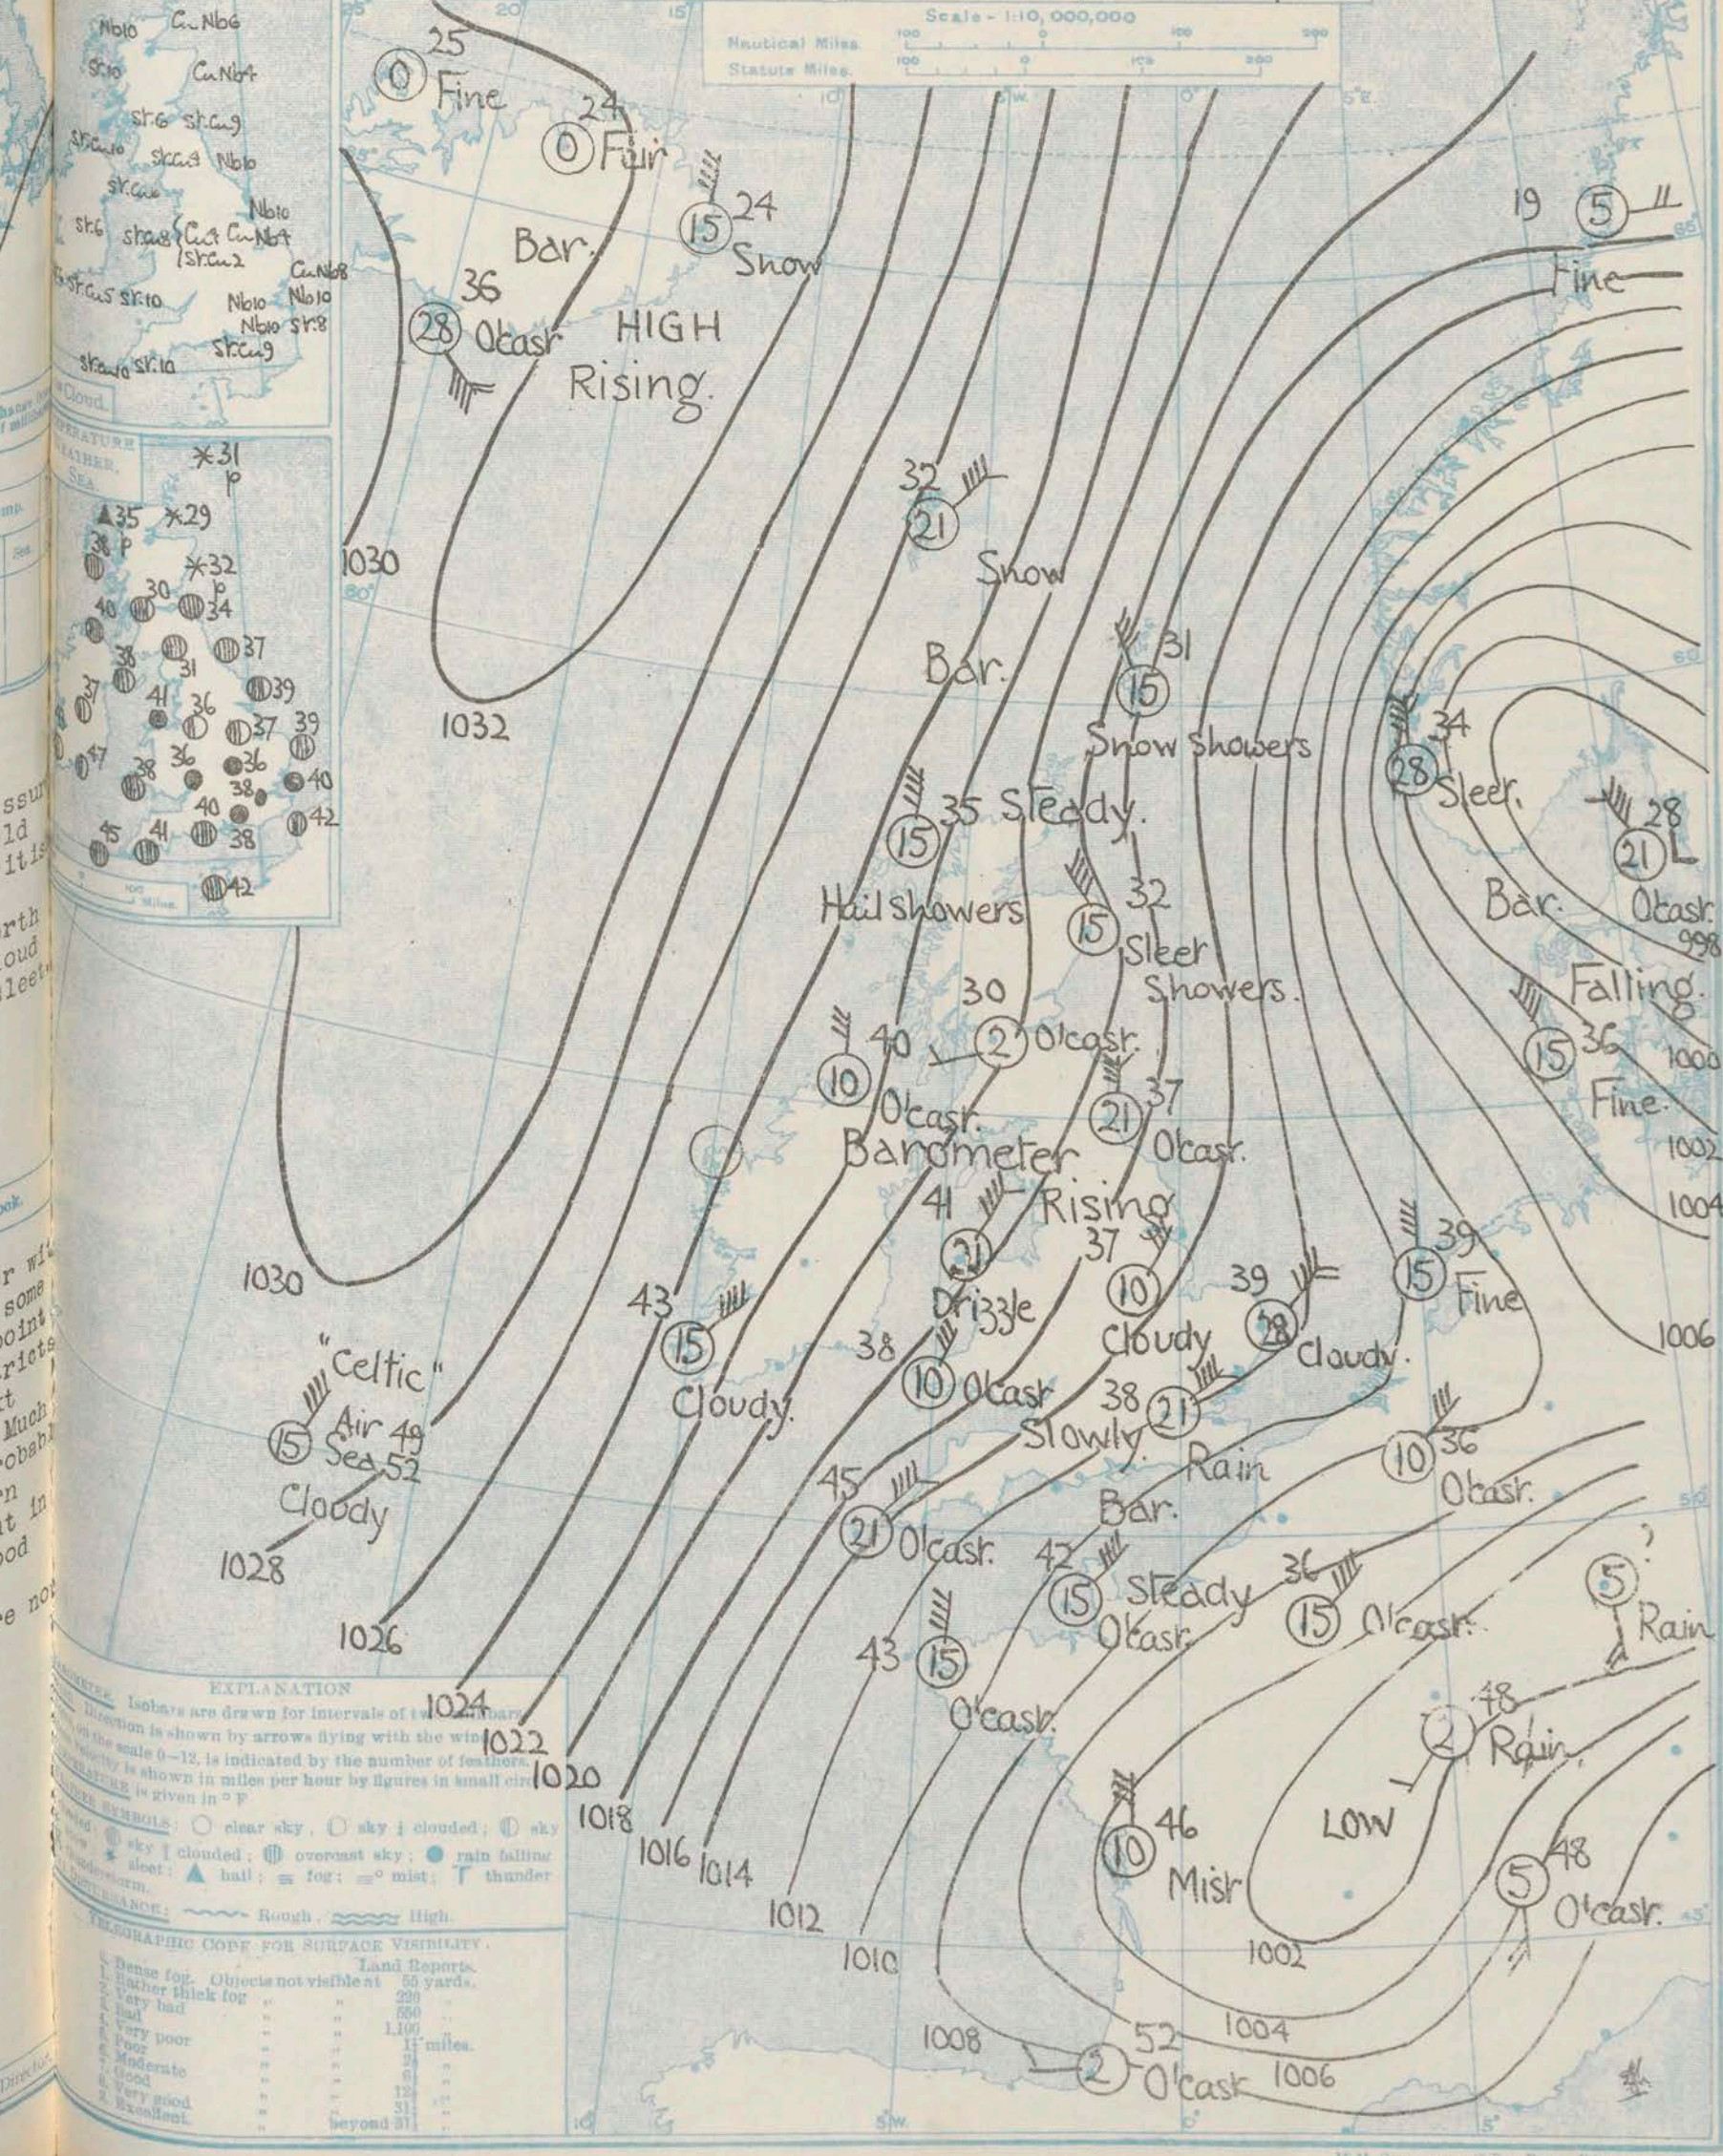

Temperature is shown in miles per hour by figures in small circles.

Temperature is given in °F.

SYMBOLS: ○ clear sky, ○ sky + clouded, ○ sky + overcast sky, ● rain falling, ● sleet, ▲ hail, = fog, = mist, T thunder

EXPLANATION

Isobars are drawn for intervals of two millibars.
Direction is shown by arrows flying with the wind.
Force on the scale 0-19, is indicated by the number of feathers.
Temperature is shown in miles per hour by figures in small circles.

SYMBOLS: ○ clear sky; ○ sky & clouded; ○ sky
● sky & clouded; ○ overcast sky; ● rain falling
* sleet; ▲ hail; = fog; = mist; T thunder

WIND: ~~~~~ Rough. ~~~~~ High.

GENERAL INFERENCE.

The anticyclonic band extending over Ireland from the South-Westward seems likely to move slowly Southward and the wind over all our Northern districts will become Westerly. In the Southern districts the cold North-Easterly wind will continue for the next 24 hours - probably longer - with further snow showers in many places.

Districts.	Forecasts for the 24 hours commencing 15h.G.M.T. Wednesday, 22nd. March 1922.	Further Outlook
1. S.E. England	Wind mainly North-East, moderate to strong or high; cloudy or overcast generally, some snow showers, fairer intervals; visibility moderate; very cold, frost at night.	Wind North-East-erly or Easterly in the Southern districts, with a low temperature.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales	Wind shifting to the Westward, light or moderate; mainly cloudy, some snow showers; visibility moderate; cold, frost at night.

GENERAL INFERENCE.

A great change in the pressure distribution has been brought about by the arrival of a large depression over the Icelandic region and the movement southwards of the anticyclonic band. South-Westerly to Westerly or North-Westerly winds are now probable over the British Isles with occasional rain and a moderate temperature.

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T. Friday, 24th March, 1922.	Further Outlook.
1. S.E. England	Wind South-West to West or North-West, moderate or fresh, stronger at times locally; much cloud generally, some rain, fairer intervals; visibility moderate; becoming much less cold than of late.	Wind mainly Westerly, weather unsettled, temperature moderate.

EXPLANATION
Isobars are drawn for intervals of two millibars
The direction of the wind is shown by arrows flying with the wind.
The force of the wind is indicated by the number of feathers.
The direction of the current is shown by arrows pointing in the direction of the current.
The force of the current is given in "P".

EXPLANATION

Isobars are drawn for intervals of two millibars.
Direction is shown by arrows flying with the wind.
The scale 0-12 is indicated by the number of feathers.
Speed is shown in miles per hour by figures in small circles.
Temperature is given in °F.

SYMBOLS: ○ clear sky; ○ sky 1 clouded; ○ sky 2 clouded; ○ sky 3 clouded; ○ overcast sky; ● rain falling; ▲ hail; = fog; = mist; T thunder.

WIND: ~~~~~ Rough. ~~~~~ High.
