0600 GMT 01 MAY 2012 SIG WEATHER	1200 GMT 01 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 01 May 2012.</b>                      It was wet and windy for much of England and Wales overnight, with outbreaks of heavy and sometimes thundery rain for many in central and southern areas.                      Through the early hours of the morning, there were thunderstorms in places, but these died out through the course of the night.                      As the day progressed, the band of showery rain weakened and moved north, reaching southern parts of Scotland by the evening period.                      For the remainder of Scotland, it remained fine and dry throughout the day, with warm spells of sunshine.                      To the south of the cloud band, it turned warm and sunny, but this triggered some isolated showers in the London area. For example, a thunderstorm affected Stansted airport through the evening.                      Temperatures were a little below average in the cloudy and wet central areas, but a little above in the sunnier far north and south.</p>

0600 GMT 02 MAY 2012 SIG WEATHER	1200 GMT 02 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 02 May 2012.</b>                      It was a relatively quiet day across the country, with much of the U.K. staying dry until the evening.                      There was a good deal of cloud, mist and fog around to start the day, and the cloudy conditions persisted across some central and eastern parts throughout the day, keeping temperatures suppressed here.                      The best of the sunshine was across western areas of the country, and much of Scotland enjoyed another warm and sunny day. The prolonged sunshine and light winds ensured that many western parts of Scotland saw daytime temperatures well above the May average. Similarly, other parts of the country that enjoyed some long sunny spells enjoyed warm temperatures.                      Through the evening, showers spread into south-eastern parts of England from mainland Europe and moved west, bringing heavy rain for many southern and central parts of England overnight, and thunderstorms in places.                      For northern parts of the country, it remained dry with clear periods in many north-western areas, leading to a chilly start to the night there.</p>
1800 GMT 02 MAY 2012 SIG WEATHER	0000 GMT 03 MAY 2012 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      19.9 Tulloch Bridge, Inverness-Shire  <b>Lowest Maximum:</b>                      8.0 Inverbervie No2, Kincardineshire  <b>Lowest Minimum:</b>                      0.3 Loch Glascarnoch, Ross-Shire  <b>Lowest Grass Minimum:</b>                      -3.3 Loch Glascarnoch, Ross-Shire  <b>Most Rain:</b>                      28.2 Andrewsfield, Essex  <b>Most Sun:</b>                      14.5 Stornoway Airport, Western Isles</p>

0600 GMT 03 MAY 2012 SIG WEATHER	1200 GMT 03 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Thursday 03 May 2012.</b>                      It was a day of contrasts across the U.K.                      Many southern, central and eastern areas were generally cloudy with outbreaks of rain, whilst most northern and north-western areas were dry, sunny and warm.                      Outbreaks of rain affected central and southern England, and Wales overnight, these becoming heavy in places. It remained cloudy during the day, with further light rain and drizzle in places, and some heavier rain across the Midlands, Wales and East Anglia. With fairly extensive cloud cover, temperatures were generally below average for the time of year.                      Scotland, Northern Ireland and northern England had a cloudy but generally dry night. It stayed dry into the day with cloud clearing most areas, although north-east England and the east coast of Scotland remained dull throughout. A band of rain moved south into Scotland during the evening.</p>
1800 GMT 03 MAY 2012 SIG WEATHER	0000 GMT 04 MAY 2012 SIG WEATHER	<p>Temperatures responded well under sunny skies in central and western Scotland, and it became warmer than the average for the time of year.                      Eastern Scotland and north-east England were much cooler under the cloud cover, with temperatures struggling to reach double figures Celsius.</p>
		<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      18.8 Tulloch Bridge, Inverness-Shire  <b>Lowest Maximum:</b>                      7.0 Inverbervie No2, Kincardineshire  <b>Lowest Minimum:</b>                      -1.7 Tulloch Bridge, Inverness-Shire  <b>Lowest Grass Minimum:</b>                      -4.9 Tulloch Bridge, Inverness-Shire  <b>Most Rain:</b>                      11.2 Pershore College, Hereford &amp; Worcester  <b>Most Sun:</b>                      13.0 Ronaldsway, Isle of Man</p>

0600 GMT 04 MAY 2012 SIG WEATHER	1200 GMT 04 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Friday 04 May 2012.</b>                      Most parts of the U.K. were rather cloudy overnight with outbreaks of rain in places.                      The rain was mainly concentrated in two bands, the first of these stretching from Lincolnshire to south Wales and the Bristol Channel. Rain in this area was generally light, but there were some heavier bursts at first. This band persisted into the day and drifted south with rain gradually easing as it moved into southern counties.                      The second band of rain moved southwards through Scotland and Northern Ireland overnight, and continued south across England and Wales during the day. Again, this rain was mainly light, but there were some heavier outbreaks at times.                      Colder air spread in behind this second band of rain, so, although Scotland and Northern Ireland saw some sunshine, it remained rather chilly. There were also showers across northern and eastern Scotland. Some of the showers were wintry, with sleet and snow reported in Orkney and Shetland.</p>

0600 GMT 06 MAY 2012 SIG WEATHER	1200 GMT 06 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Sunday 06 May 2012.</b></p> <p>It was an unusually cold night for early May in northern parts of the U.K., with clear spells leading to a frost in many rural areas by dawn. These clearer spells were occasionally interrupted by one or two showers, particularly in the far north.</p> <p>Further south, it was generally cloudier and milder, with south-eastern England lying under a slow-moving band of light rain and drizzle.</p> <p>Although the south-east was rather grey and damp, much of the country started the day in sunny spells. This was coupled in some western and northern areas by showers that became heavier and more numerous as the morning went on, though still separated by some sunshine.</p> <p>Showers continued in many northern and western parts into the afternoon, with the heaviest of these over Scotland.</p> <p>Further south there were fewer showers, and despite the cloudier skies most saw some sunny spells, with the exception of the far south-east, which remained rather cloudy with occasional drizzle throughout.</p> <p>By the evening, showers in northern areas gradually eased, leaving largely clear skies for many there, although western parts gradually became cloudier, ahead of rain approaching from the Atlantic.</p>

0600 GMT 07 MAY 2012 SIG WEATHER	1200 GMT 07 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Monday 07 May 2012.</b>                      It was a cold start to the day in northern and eastern areas, with an air frost as far south as the Home Counties, and a widespread air frost over north-east England and Scotland.                      A fragmented band of rain spread north-east across the country, with heavy and locally prolonged showers following. The rain reached northern Scotland by the evening, but with very little rain across Aberdeenshire and Moray.                      The north coast of Devon and Cornwall received a lot of rain, and there were reports of localised flooding. Showers and thunderstorms affected some other parts of south-west England and the south Midlands in particular. There were even reports of a tornado touching down in northern Oxfordshire.                      In Northern Ireland, after a very wet morning, heavy and thundery showers affected the area during the afternoon and evening.                      It was a warmer day than recently, with temperatures returning to the seasonal average in southern areas, but still saying rather below in the north.</p>

After early cloud and outbreaks of rain in south-east England cleared, the sunshine broke through to give a fine afternoon.                      A few showers developed elsewhere, mainly light in the south, but rather more in the way of showers affected northern England and southern and eastern Scotland. Cumbria and Northumberland were particularly affected, with some heavy showers and isolated thunderstorms. These tended to die away through the evening ahead of an approaching warm front and rain moving north-east across south-west England.                      Light winds allowed it to feel generally fairly pleasant, with temperatures widely reaching average values for the time of year, although Scotland and Northern Ireland were still on the cold side.</p>

0600 GMT 12 MAY 2012 SIG WEATHER	1200 GMT 12 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Saturday 12 May 2012.</b>                      England and Wales were generally dry overnight, with largely clear skies. The only exceptions to this were North Sea coastal areas and the area around the Cheshire Gap, both of which saw scattered showers.                      With largely clear skies it became cold, with an isolated air frost developing.                      The mainly dry theme continued throughout the day for most areas, with only isolated showers developing across northern England.                      There was plenty of sunshine, although a little cloud developed around the middle of the day in some areas. It was dry through the evening with further sunshine for most parts.                      Scotland and Northern Ireland saw some clear spells overnight, but there were also some scattered showers. These showers continued through the day, but there was a good deal of dry, sunny weather too.                      It became cloudier across the Western Isles, then northern Scotland during the evening, with outbreaks of rain arriving from the west.                      After the chilly start temperatures rose to around average for the time of year. It was warmest in the south, and was pleasantly warm in shelter from the northerly breeze.</p>

0600 GMT 13 MAY 2012 SIG WEATHER	1200 GMT 13 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Sunday 13 May 2012.</b>                      England and Wales had a largely clear and chilly night, with some rural parts in the south experiencing an air frost.                      Western Scotland and Northern Ireland in contrast were cloudier, with persistent rain arriving after dawn. Winds picked up considerably there, with gales across many parts of Scotland, and severe gales over the hills. Strong lee-gusts during the day resulted in a 53 knot gust at Kinloss.                      Across much of England and Wales however, it was a dry day with sunny spells mixed with fair-weather cloud. Light winds in the far south gave a very pleasant feel to the day there.                      The heavy rain and strong winds in the north slowly spread southwards into northern England during the afternoon, eventually reaching northern Wales and the Midlands through the evening.                      Sheltered eastern parts of Scotland and northern England saw little in the way of rain during the day, until showers followed behind the main band of rain through the evening, with gales persisting across Scotland.</p>

0600 GMT 14 MAY 2012 SIG WEATHER	1200 GMT 14 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Monday 14 May 2012.</b>                      A band of rain across Wales, the Midlands and south Lincolnshire moved southwards through the early hours, giving wet weather from south-west England across to East Anglia through the morning. This became confined to south-east England by the evening.                      To the north of this rain band, heavy showers developed, affecting northern Scotland and Northern Ireland at first, spreading to northern England and northern Wales through the afternoon, with isolated thunderstorms. Some of these became organised into bands of heavy thundery showers, one moved from the Wash to the Severn Estuary, through the evening.                      There were north-westerly gales in exposed parts of Scotland at first, which eased through the morning, although it remained blustery across all parts throughout the day.                      Through the start of the night, the rain across south-east England cleared away, but further showers continued, mainly across northern and western parts. Some of these were heavy and wintry in nature across higher ground in the north.                      It was generally a rather cold day across the U.K., with temperatures below the seasonal average across most parts.</p>

0600 GMT 15 MAY 2012 SIG WEATHER	1200 GMT 15 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 15 May 2012.</b>                      Showers affected many parts of the U.K. overnight. Many of the showers were focussed across north-west England and parts of Wales at first, but drifted south-eastwards through the night. Heavy showers across southern Scotland also moved south.                      It was a cold night across parts of Scotland, with temperatures falling close to freezing in any prolonged clear spells.                      Showers continued across much of the country through the day, with lightning and hail frequently reported, particularly across central and south-east England. Some of the showers were wintry over higher ground, and temporarily fell as wet snow at low levels across the midlands and in north-east England. This was short lived as temperatures increased through the morning.                      Much of south-west England remained largely dry however, with some good spells of sunshine.                      It was a cool and breezy day across the country, with temperatures generally below the seasonal average.                      Through the start of the night, the showers largely died away across much of the country, away from the far north-east of Scotland. Elsewhere, cloud broke up, leading to a cold night.</p>

0600 GMT 18 MAY 2012 SIG WEATHER	1200 GMT 18 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Friday 18 May 2012.</b>                      It was a largely cloudy and mild night across the U.K., although there were some clear spells across the south of England, and the far north of Scotland. Rain and drizzle affected many central and northern locations at times.                      Dry but rather cloudy conditions persisted across the south for much of the day. It became warm in the brighter spells in south-east England and East Anglia, although during the afternoon a few light showers developed.                      Further north, outbreaks of rain or drizzle continued, and this combined with a brisk north-easterly wind made for chilly conditions, particularly along the north-east coast.                      Meanwhile, the far north of Scotland had a rather cold day for the time of year, however it was much brighter with just a few light showers.                      During the afternoon some more persistent rain developed over south-eastern Wales and across some parts of central England. This rain spread slowly north, with some heavier bursts developing through the evening.</p>

0600 GMT 21 MAY 2012 SIG WEATHER	1200 GMT 21 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Monday 21 May 2012.</b>                      It was a dry night across the U.K., leading to a chilly start in parts of Scotland.                      Extensive low cloud covered most eastern and central parts of the country at dawn, but slowly cleared from most areas through the day. It remained cloudy, however, through the Vale of York and over East Anglia, and also in a narrow strip along many stretches of the east coast. This kept temperatures suppressed in eastern parts of the country, with many places, especially near the coast, in the cool category for the time of year.                      The low temperatures were exacerbated by brisk northerly winds in south-eastern parts of the country.                      Away from the area of low cloud, it was a dry and largely sunny day with light winds.                      Maximum temperatures were generally around average, but western parts of the U.K., which saw the most prolonged sunshine, were warm.</p>

0600 GMT 24 MAY 2012 SIG WEATHER	1200 GMT 24 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Thursday 24 May 2012.</b></p> <p>It was a mild and humid night for many, particularly in the south-east. Mist, fog and low cloud developed quite widely, mainly across Wales and western England.</p> <p>This low cloud and fog generally cleared through the morning, but it took until early afternoon to clear completely in the Welsh Marches and over the Somerset Levels.</p> <p>It was then a largely fine day with largely unbroken, strong sunshine.</p> <p>A scattering of small, but heavy and thundery showers developed in the late afternoon, mainly over the Grampians, Cumbria and the Pennines. These eased off through the evening to leave a dry end to the day, with plenty of sunshine, although patches of mist and low cloud reformed after dusk.</p> <p>Temperatures were well above average in all areas.</p>

0600 GMT 25 MAY 2012 SIG WEATHER	1200 GMT 25 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Friday 25 May 2012.</b>                      It was a mild, humid night with temperatures over south Wales and south-west England remaining in the mid-teens.                      It became rather misty across central and western parts, with some fairly extensive fog also in north-east England and eastern Scotland.                      South-east England, however, dawned clear and dry, and this drier and fresher air pushed west across the U.K. through the day.                      Thereafter, much of the country saw improved visibilities and unbroken sunshine.                      However, it took until well into the afternoon for the mist conditions to clear from the Firth of Forth and the Moray Firth, and fog continued to plague the Shetland Isles through the day.                      It was once again the warmest day of the year so far, with temperatures widely into the mid to high twenties Celsius.                      Into the evening it remained dry, warm and largely cloud-free across much of the country, although it remained foggy across Shetland.</p>

0600 GMT 26 MAY 2012 SIG WEATHER	1200 GMT 26 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Saturday 26 May 2012.</b>                      It was a dry and clear night generally for the U.K., with brisk easterly winds across southern and some central parts. It was also a mild night for most, with temperatures across many southern areas failing to fall below the low teens Celsius.                      However, parts of north-east Scotland saw a markedly cooler night, with temperatures dropping into low single figures, allowing some fog to form.                      Daylight hours were mainly sunny and very warm, with any early fog in the north-east quickly clearing, and winds slowly easing across southern parts.                      During the evening a narrow band of thundery showers moved across the Isles of Scilly and into Cornwall. Despite the thundery nature of the showers, rainfall amounts, on the whole, were fairly small.                      Elsewhere, it remained largely fine and dry, although increasing amounts of mist, fog and low cloud developed once again in the extreme north-east of the country.                      Daytime temperatures were once again widely into the mid to high twenties Celsius, with the highest temperatures recorded in north-west Scotland.</p>

0600 GMT 28 MAY 2012 SIG WEATHER	1200 GMT 28 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Monday 28 May 2012.</b>                      It was a relatively mild night with temperatures in many parts remaining in double figures Celsius. However, it was cooler further north and along some of the east coast, where low cloud, mist and sea fog moved onshore at times.                      Some light showers affected the far south-west of England and northern Scotland.                      It was another very warm day in many places, with plenty of sunshine, although a little more cloud than of late. Highest temperatures were recorded across eastern England, where this sparked some thundery downpours during the afternoon and evening. Some localised flooding was reported.                      Further north it was cooler and cloudier, as a weak cold front moved south over Scotland. Temperatures in north-east Scotland were as much as 10 degrees Celsius below the previous days figures.                      There was also some low cloud and haze around the south-west coast of England.                      Into the evening the showers in the east slowly faded, while low cloud and coastal mist and fog continued to edge slowly south along the North Sea coast.                      Most other places enjoyed some evening sunshine.</p>

0600 GMT 29 MAY 2012 SIG WEATHER	1200 GMT 29 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 29 May 2012.</b>                      It was a dry and mild night across the country, with much of the southern, central and western U.K. seeing some clear spells. Meanwhile, parts of the north and east saw mist and low cloud spread in from the North Sea, giving a murky start for some.</p> <p>During the day, the low cloud across many northern and eastern areas proved persistent, particularly over central and eastern Scotland as well as East Anglia. Temperatures here were nearer the seasonal average, with any sunshine being short-lived.</p> <p>Despite the cloud it stayed dry for the vast majority, with brief spells of light drizzle in parts of Scotland proving the main exception.</p> <p>Elsewhere, much of Northern Ireland, and southern and western areas of the mainland saw a much brighter day, enjoying the longest sunny spells. Some fair weather cloud formed in the afternoon. This cloud produced a few showers over southern England and southern Scotland before the end of the day. These were much lighter and less prevalent than earlier in the week, fading away after dark to leave the country largely dry into the night.</p>

0600 GMT 30 MAY 2012 SIG WEATHER	1200 GMT 30 MAY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 30 May 2012.</b>                      It was dry and mild for most overnight, although cloud over parts of Scotland gave a little light rain by dawn, and some sharper showers for Northern Ireland.                      Elsewhere, there were some early sunny spells, although much of the south-east was blanketed in low cloud and mist, with some fog patches, which cleared by mid-morning.                      Cloud persisted across much of Scotland and Northern Ireland throughout the day, the far north and the Scottish Isles being the exception, with showery rain becoming increasingly heavy throughout the day for central and southern areas of Scotland.                      Some localised thundery showers started to break out across parts of England and Wales around midday, which gradually moved eastwards through the afternoon. Some localised surface water flooding was reported in parts of the south-east.                      Heavy showers and thunderstorms persisted across the Midlands, parts of northern England and the south-east well into the evening.                      Temperatures across the U.K. were well above average for many places, with much of England reaching the low to mid-twenties, but temperatures were below average in the cooler north under persistent cloud.</p>
