TUESDAY
1 MAY 1984SUMMARY
OF
BRITISH WEATHER

Over much of the British Isles it was another sunny day, although there was rather more cloud than recently in many areas. Quite a few places from London to the West Country had a brief shower or two in the afternoon. Thunder was reported at Swindon.

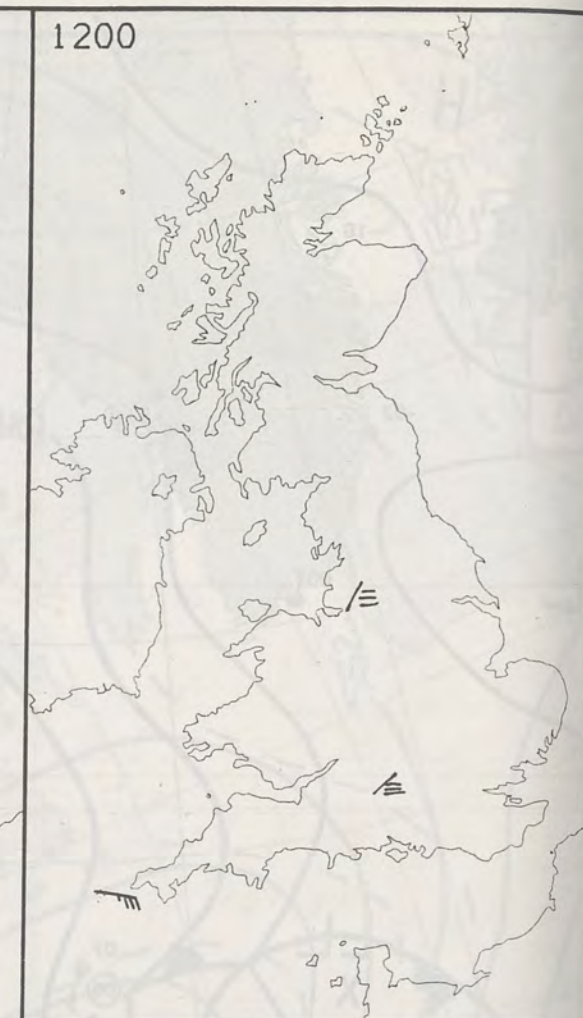

It was mainly rather warm, after the clearance of local ground frost and some patchy low cloud and fog. Once again, winds off the North Sea kept most eastern coastal districts on the cool side.

Parts of northwest England, West Wales, southwest England and central Scotland were warm.

WEDNESDAY
2 MAY 1984SUMMARY
OF
BRITISH WEATHER

The night was dry and mostly clear, although low cloud affected many eastern districts by the morning. This low cloud cleared readily from the northeast, but was much slower to clear away from parts of the southeast and east Kent remained dull and rather cold. Most remaining parts of the UK had long sunny spells, with many inland places becoming rather warm or warm.

An area of mostly high cloud extended northeast over southern-most counties of England and on the northern edge of this cloud sheet thunderstorms broke out in the afternoon and drifted slowly southwestwards with many places from northwest London to Bristol southwards affected in the late afternoon or early evening. A few thundery showers also broke out for a time further north. In the evening, sea fog affected some coasts of northeast England, with low cloud spreading back to many other eastern counties.

PLOTTED SURFACE OBSERVATIONS

**THURSDAY
3 MAY 1984**

**SUMMARY
OF
BRITISH WEATHER**

In southeast England and East Anglia it remained dull and rather misty. In East Sussex, Kent and eastern areas of East Anglia there was also some light rain at times.

In central southern England, the Midlands and Lincolnshire it was dry but mostly cloudy until the late afternoon and evening, when cloud became broken in central counties.

In western England, Wales, Northern Ireland and Scotland overnight mist and patchy fog cleared from most places during the morning, but in the Northern Isles and some coastal regions of east Scotland, low cloud persisted. Elsewhere there was a good deal of sunshine. Scattered showers developed by afternoon with isolated thunderstorms.

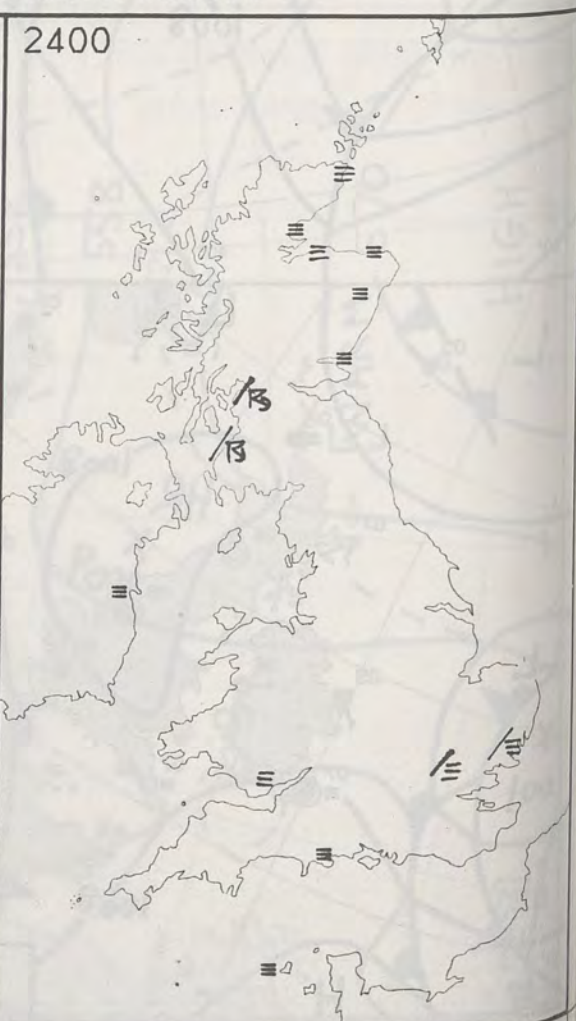

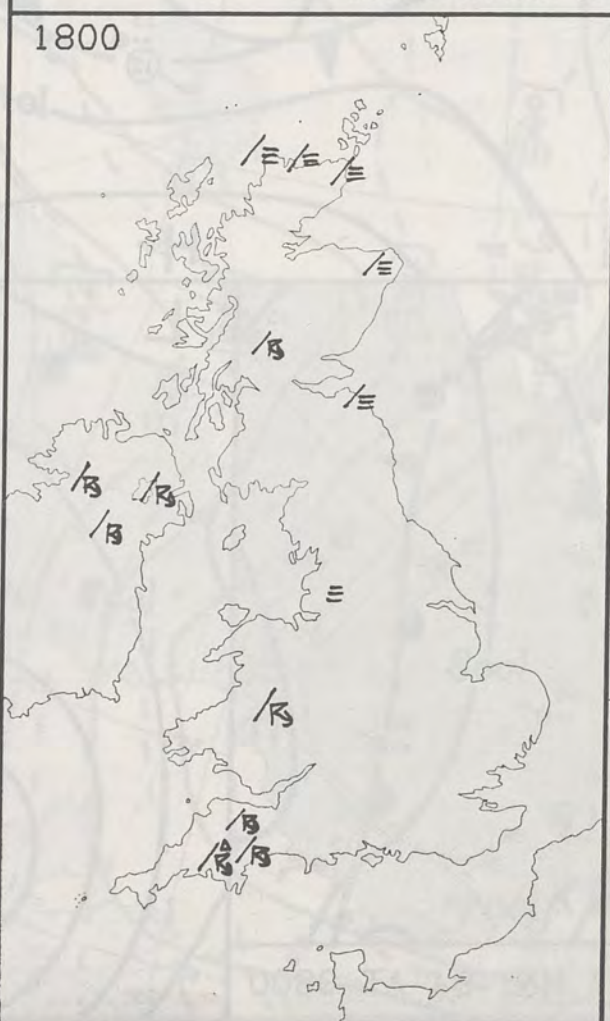

There was a slight frost in parts of central Scotland overnight. During the day it was rather warm in most places - warm in parts of the north and west, but in the east and southeast of England it was cold.

FRIDAY
4 MAY 1984SUMMARY
OF
BRITISH WEATHER

Overnight most regions remained dry and in central and eastern Britain it became misty and there were isolated patches of thick fog. In southwest England rain reached Cornwall in the early hours and extended to west Devon by daybreak.

During the day rain was heavy at times in Cornwall and west Devon and rain reached the Channel Islands by midday. Over the rest of Britain early mist and low cloud gradually cleared and most places had a dry day with sunny periods.

A few showers developed in Scotland and there were isolated thunderstorms. In the Northern Isles and in some regions adjacent to the North Sea low cloud persisted and it was rather cold. It was also rather cold in parts of southwest England. Elsewhere temperatures were near or a little above normal and in the northwest it was mainly sunny and rather warm, but in parts of the Central Highlands it was very warm.

SATURDAY
5 MAY 1984SUMMARY
OF
BRITISH WEATHER

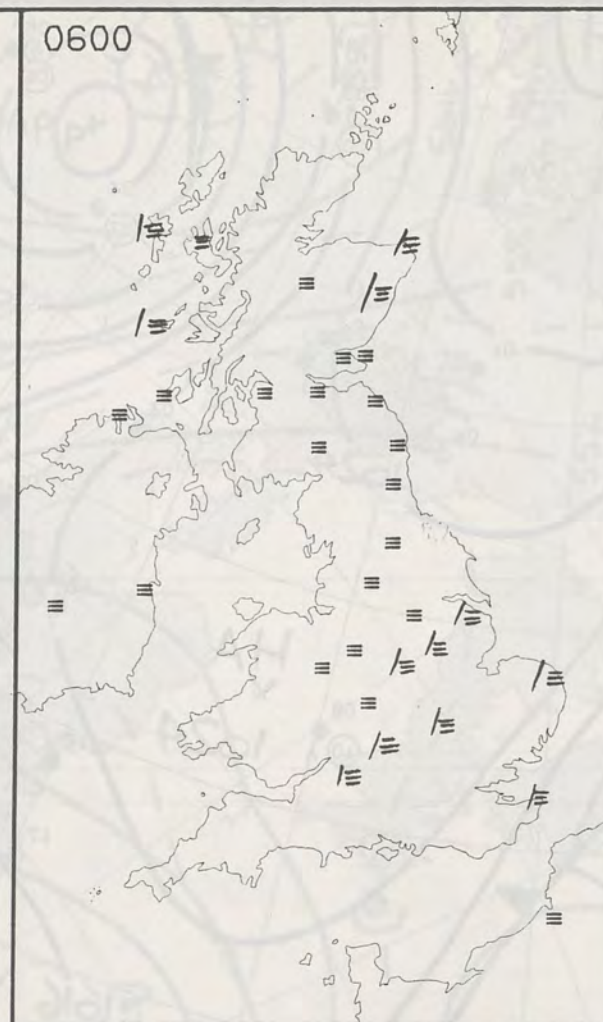

Most places had a dry night but there was a little rain in the Northern Isles of Scotland and in parts of South Wales and southwest England about as far east as Dorset and the Isle of Wight. Many of the dry areas stayed clear but in southern, central and eastern Scotland, northern England and the Midlands there was quite a lot of fog. Many eastern coasts of England were misty as well and in parts of Scotland there was a frost.

During the day most areas were dry but many eastern parts of England and Scotland remained cloudy and rather cold. Many western areas of Britain and Northern Ireland were sunny and warm or very warm in a few places. Southeastern, central and northern areas of England brightened up with sunny periods and it became warm in a few places. Southwest England and the Channel Islands however were rather cloudy with temperatures near normal and rain or showers; Jersey had a thunderstorm. Most southeastern coasts of Scotland were foggy and cold.

SUMMARY
OF
BRITISH WEATHER

It was a rather cold day in many areas but it was rather warm in Western Wales and cold on most northern coasts, most places remained dry. There were a few light showers, however, in northern Scotland overnight. In southeastern areas of England and the Channel Islands there was some light rain or drizzle. During the day many areas were cloudy and dull. However there were some sunny intervals in eastern and central areas, especially during the afternoon. The rest of the sunshine was in the Western Isles of Scotland and in sheltered parts of northwest Wales. There were some light showers as well, these chiefly in northern and eastern Britain. There was a cool moderate to fresh northeasterly wind.

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had a mainly cloudy night, with some rain.

England and Wales were dry and there was a frost in many places.

It was mainly dry in Scotland during the day and most places had some sunshine but there were a few showers. The Northern Isles were cloudy with some persistent rain.

After a cloudy morning with a little rain, Northern Ireland had a fairly sunny and mainly dry afternoon and evening, with just a few showers.

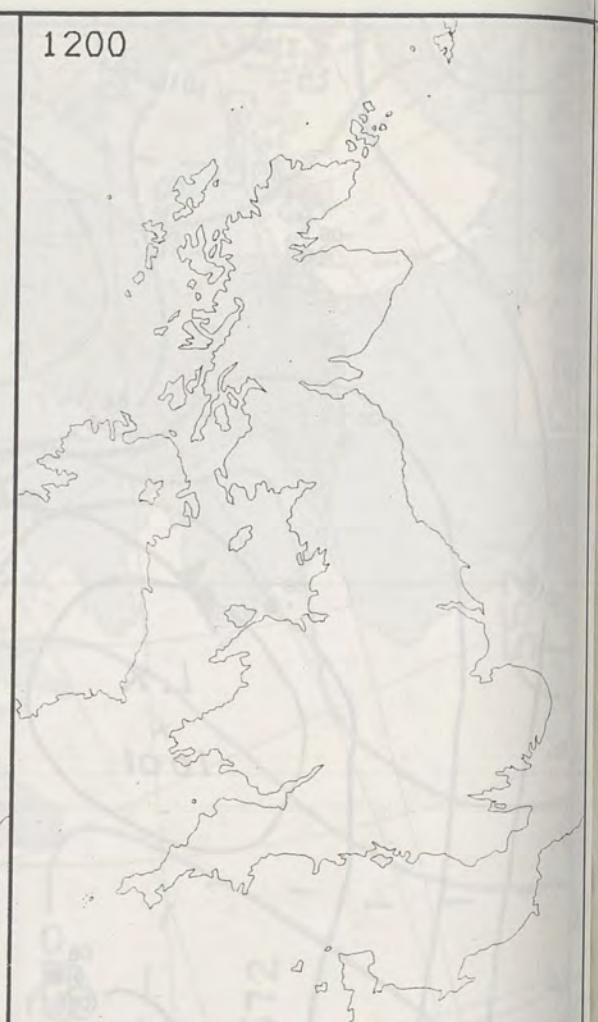

A few places in Wales had a shower, but much of the area was dry and there was some sunshine everywhere.

Southern England and the Channel Islands had a sunny day and over the rest of England there was some sunshine, but cloudy weather with a little rain spread southwards during the day.

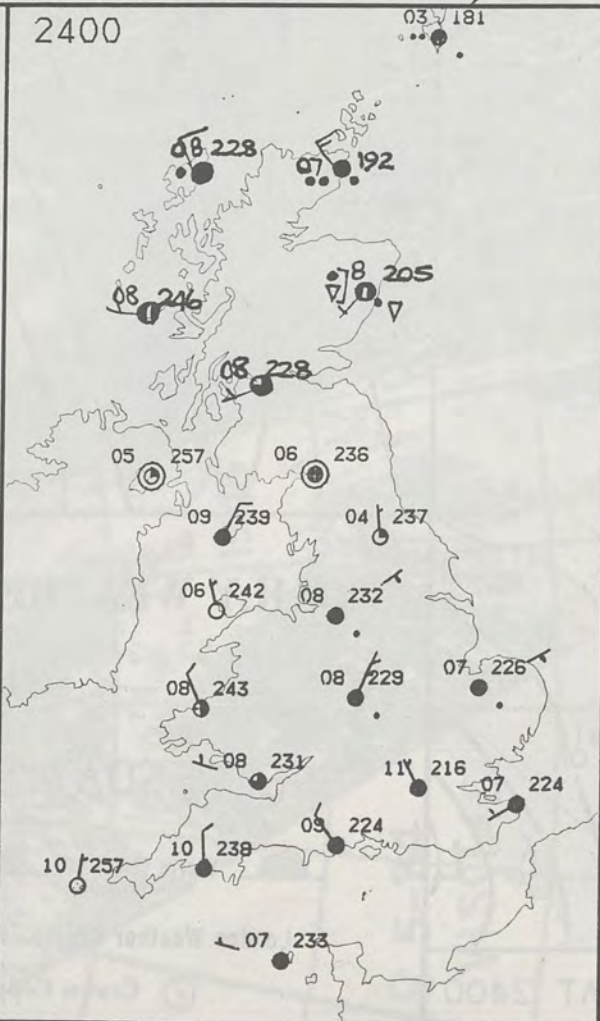

It was rather cold near eastern coasts and in northern England, elsewhere temperatures were near normal.

SUMMARY
OF
BRITISH WEATHER

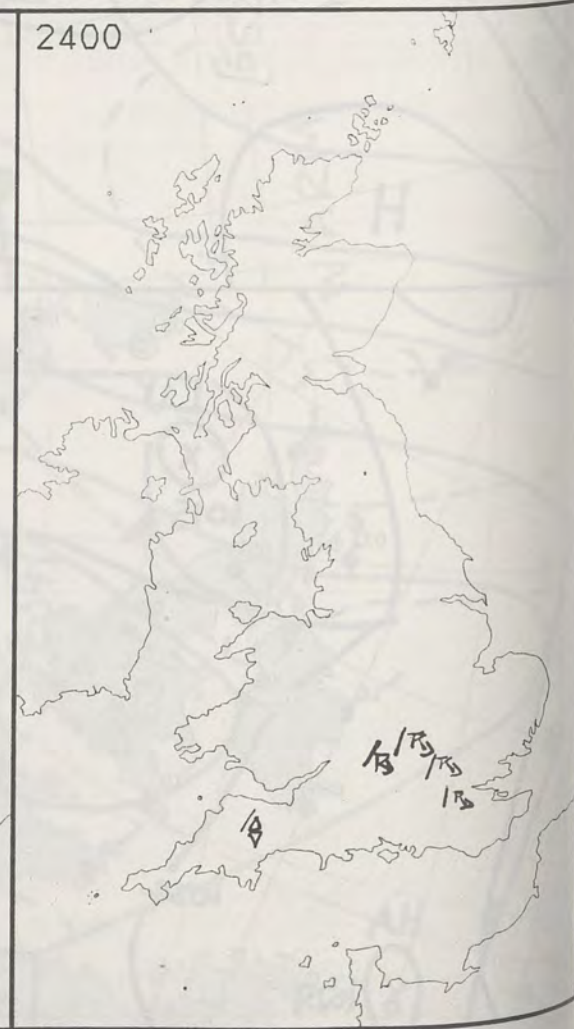

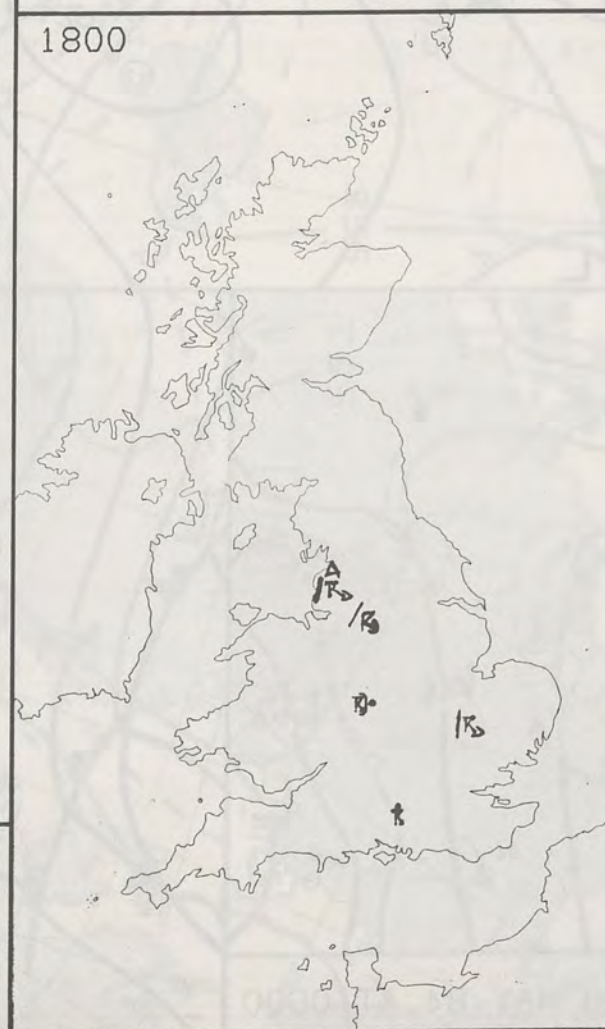

Most parts of England and Wales had a dry night but there was a little light rain or drizzle in places, chiefly in southeastern counties of England. Scotland and Northern Ireland were mostly cloudy with some rain or showers in central and eastern regions. In eastern and northeast Scotland it was quite a windy night with some heavy bursts of rain in places. During the day, West Wales and parts of southwest England were quite sunny but many remaining areas of England and Wales had some rain or showers. There was snow for a time in parts of northeast England with squally northerly winds, while in central areas of England there were quite a few thunderstorms. Northern Ireland and western Scotland were mostly dry and sunny but over eastern regions of Scotland the weather was cloudier with some sunny intervals and scattered showers. Temperatures ranged from near normal in the west of Britain and Northern Ireland to cold in eastern England.

FRIDAY
11 MAY 1984SUMMARY
OF
BRITISH WEATHER

Most places stayed dry throughout, although there were some showers, chiefly in the Channel Islands and east Kent in the early hours and inland over eastern and central England for a time around the middle of the day. Nearly all the showers were light.

There was a good deal of sunshine during the day over most of the country, with patchy cloud tending to disperse during the day. In the evening skies were clear almost everywhere with the exception of the southeast coast of England, where there were again one or two light showers.

Many western regions of the British Isles had temperatures near or rather below normal, but it was cool in the Midlands and in east and southeast England, where there was also a strong northeasterly wind. Parts of central Scotland were warm.

SUMMARY
OF
BRITISH WEATHER

Following a sharp frost in some northern and central regions of Britain it was dry everywhere, and most places had a lot of sunshine. There was some patchy cloud - more especially in the south during the morning. Southern Britain was again windy. Most eastern, central and southern districts were rather cool, but it became warm in some northwestern areas, especially in central Scotland.

SUNDAY
13 MAY 1984

SUMMARY
OF
BRITISH WEATHER

After a slight frost in many central and northern regions, most of Britain had very little cloud and it was a dry and sunny day; the exceptions being the extreme southeast of England and northwest Scotland. In the southeast it was rather cloudy at times, especially along the Channel coast. In the Channel Isles there was a little rain during the evening. In northwest Scotland cloud increased and there was some rain, chiefly in the Outer Hebrides and Northern Isles.

Temperatures were mostly near normal. Central Scotland, however, had a very warm day. A brisk northeast wind made it rather cold along the east coast.

MONDAY
14 MAY 1984

SUMMARY
OF
BRITISH WEATHER

In northwest Scotland it was a mainly cloudy day with outbreaks of rain, but clearer weather reached the Western Isles during the late afternoon and evening.

In Northern Ireland, after a sunny morning rain spread from the west during the afternoon and most places had a wet evening.

Over southern and eastern Scotland, northern England, Wales, the north Midlands and East Anglia it was a mainly sunny day but in the northwest Midlands cloud increased towards evening.

In the south Midlands and southern England it was a mainly cloudy day though parts of south-west England had sunny periods. Most places remained dry but in the Channel Islands and southern coastal counties there was some light rain.

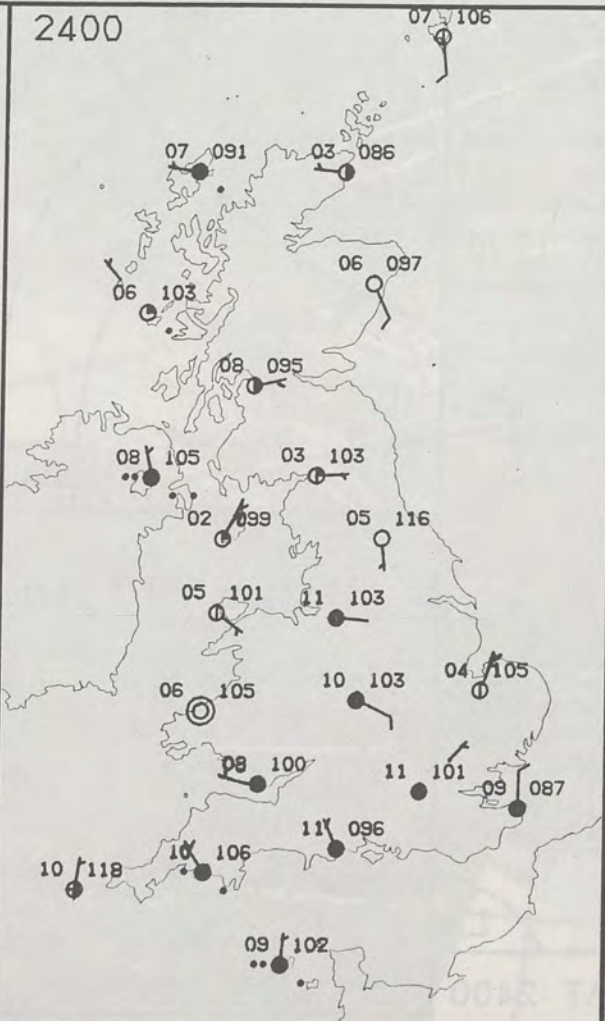

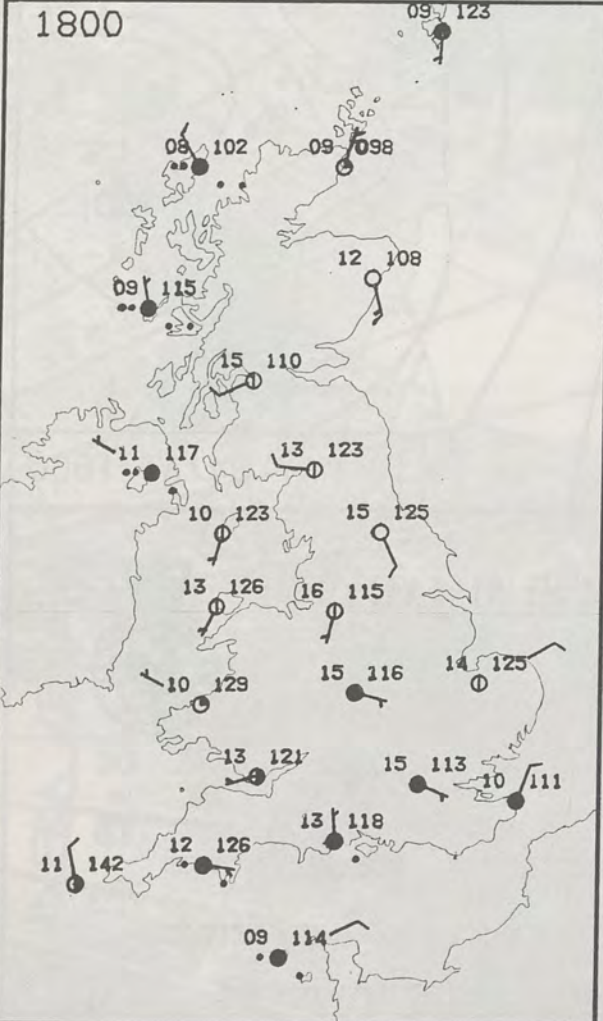

After overnight frost in many places in Wales and the Midlands northwards, afternoon temperatures were mainly near normal. However, central Scotland had another very warm day but northern Scotland and eastern England were cool.

TUESDAY
15 MAY 1984SUMMARY
OF
BRITISH WEATHER

Northern Ireland and western Scotland had rain early followed by sunshine and a few showers. The afternoon temperatures were near normal.

Central and eastern Scotland and northern England were mainly dry and quite sunny after a slight frost in a few places overnight. The temperatures were above normal; it became rather warm in sheltered places.

The Midlands and North Wales were mainly cloudy with temperatures close to normal. There was also some outbreaks of light rain which became heavier and more persistent in the Midlands later. Eastern England was also rather cloudy with a little rain in places, however, some places also had sufficient breaks in the cloud to give a fair amount of sunshine. Temperatures were around normal.

South Wales and southern England had a mainly cloudy day with several hours of persistent rain, moderate at times in parts of central southern England. It was generally rather cool but cool in places especially in southeast England.

WEDNESDAY
16 MAY 1984SUMMARY
OF
BRITISH WEATHER

Northern Ireland, the Western Isles and the west coast of Scotland had long sunny periods and occasional light showers.

Remaining areas of Scotland were cloudy with periods of light rain, although the east coast and the Northern Isles were dry for much of the day.

Wales, central and western areas of England were dull with showery rain for much of the day. Thunder was reported from Southampton during the evening.

Eastern areas of England and the Channel Islands were cloudy with occasional outbreaks of light rain and a few brief sunny intervals.

The coast of Essex and east Kent were dull, misty and cool.

Wales, the West Midlands and southwest England were cool. In other areas of Britain, temperatures were near or rather below normal.

**SUMMARY
OF
BRITISH WEATHER**

Most of the British Isles were cloudy with outbreaks of rain, both overnight and during the day. The more persistent rain was over the southern half of England and Wales.

The northeastern parts of England and eastern Scotland were rather cloudy but dry for much of the time.

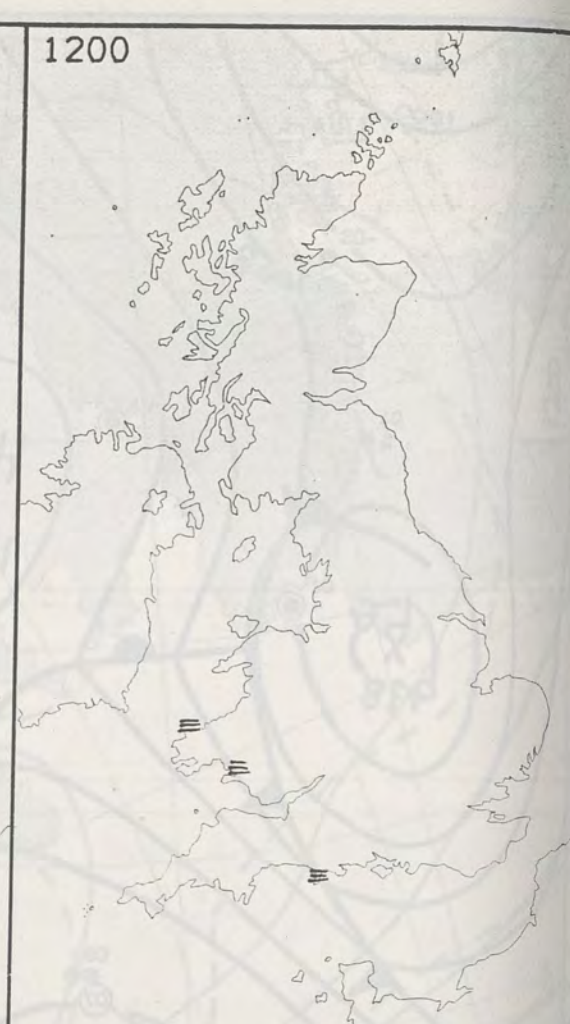

Northern Ireland and the Western Isles became cloudier with some rain after a dry and bright start.

Brighter weather reached southeast England during the afternoon.

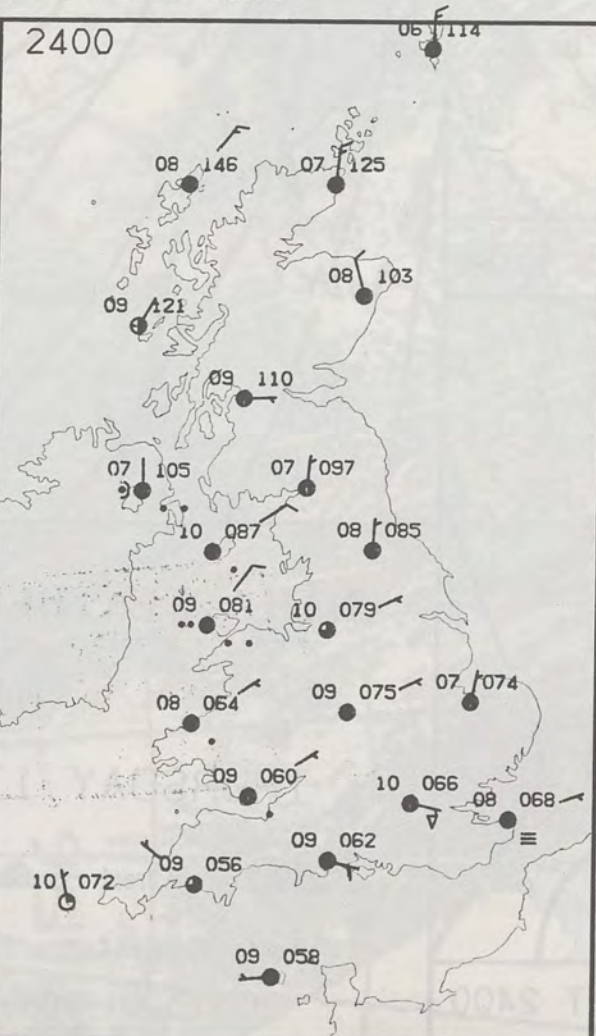

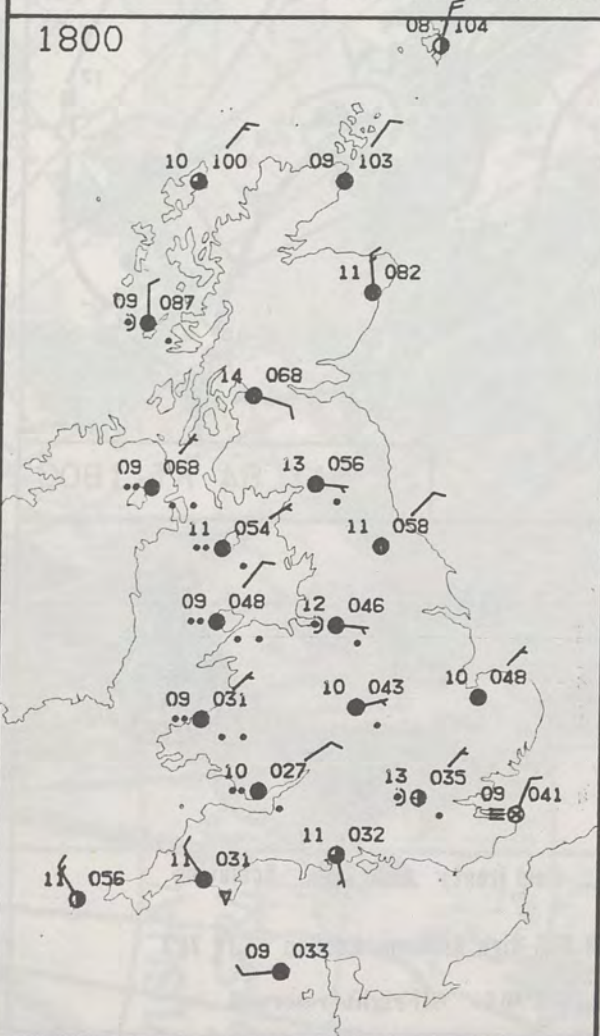

In most areas of Britain temperatures were below normal, and in the wetter parts it was cold. Some places in Scotland experienced near normal temperatures.

18 MAY 1984

SUMMARY
OF
BRITISH WEATHER

Most of eastern Britain had a cloudy day. There were some outbreaks of rain over northeastern England and parts of eastern Scotland. A small area of rain over the southeast of England at first, cleared away during the morning.

Western parts of England and Wales soon became quite bright, and stayed dry.

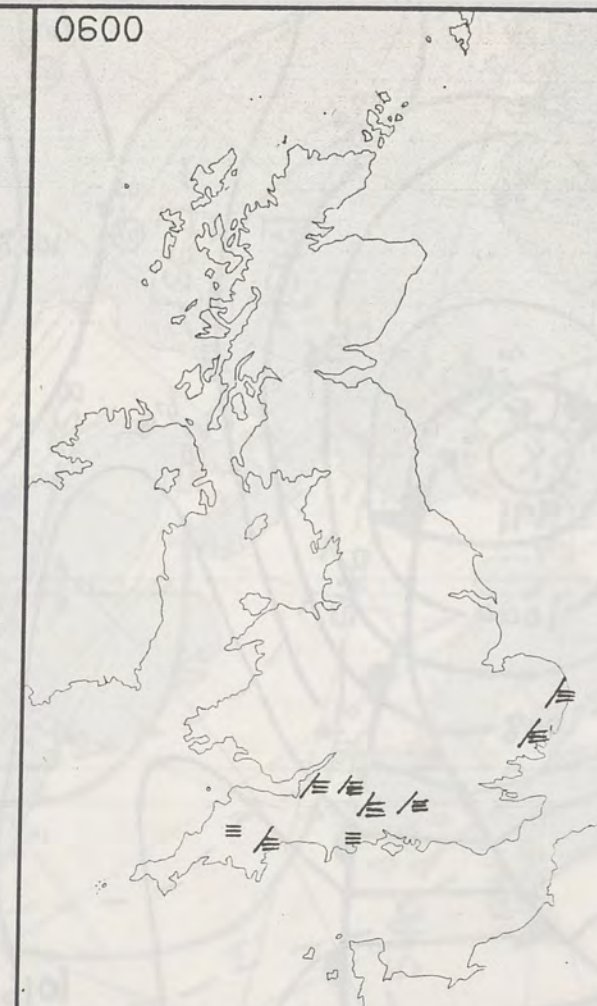

Northern Ireland and western Scotland had a mainly dry day with long sunny periods.

In general most areas were cool, especially in the east. Some inland parts of Scotland however, became very warm.

SUMMARY
OF
BRITISH WEATHER

Much of Britain had a dry, misty night and there were some fog patches, but in the Northern Isles of Scotland there was some rain.

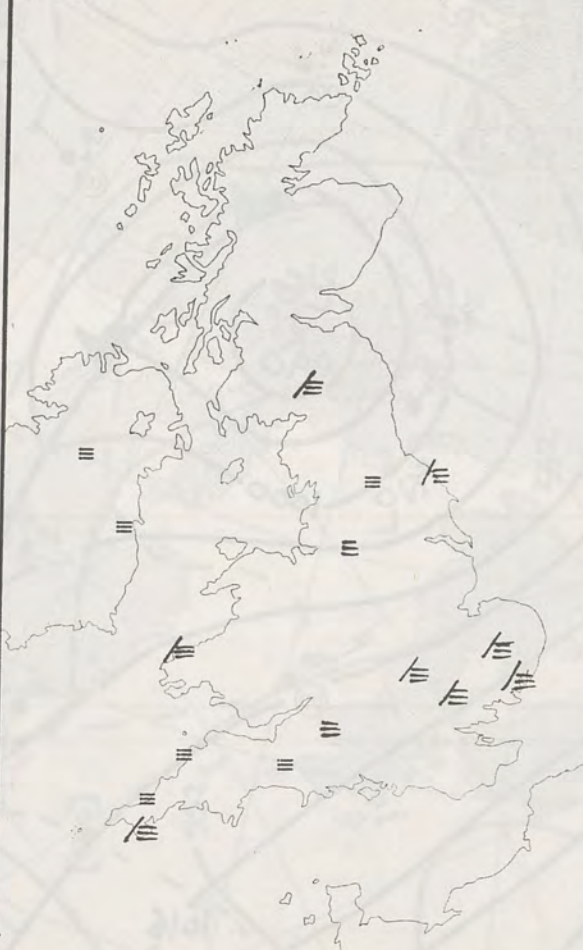

Over England and Wales it was a dry, bright day nearly everywhere, with a fair amount of sunshine in most places. In north-east England there were a few showers and in Snowdonia there were two reports of thunder.

In Scotland and Northern Ireland there was some sunshine in most places and north and east Scotland had a dry, bright day, but many places in Scotland and Northern Ireland had some rain during the afternoon. After the rain the cloud broke to give some further sunshine in northwest Scotland and Northern Ireland.

Temperatures over much of Britain were close to normal, but parts of northeast England and eastern Scotland were warm.

SUNDAY
20 MAY 1984SUMMARY
OF
BRITISH WEATHER

Most places had a dry misty night and there were some fog patches. In northern and western Scotland there were some coastal showers and in east Kent it was raining by daybreak.

During the day the rain spread westwards giving East Anglia and the southeast of England a wet day. The persistent rain, which was heavy at times reached central and southern England, the Midlands, East Wales and parts of northern England by early evening.

In the west of England and in Wales there were some heavy showers and thunderstorms in the afternoon.

Over Northern Ireland and Scotland there was quite a lot of dry weather and many places had a fair amount of sunshine, but there were showers here and there.

Much of Britain had temperatures close to or a little below normal, and in parts of eastern England, particularly East Anglia and Kent it was a cold day, while in parts of western England temperatures were a little above normal.

SUMMARY
OF
BRITISH WEATHER

Rain over central, southern and eastern areas of England and East Wales spread to northeast England and all eastern regions of Scotland overnight. Some of the rain was quite heavy and many hilly areas were misty. Clearer weather however spread to most of East Anglia, London and southeast England by morning. Western areas of Britain and Northern Ireland were mostly dry with clear intervals but there was some rain in North Wales and the Isle of Man.

PLOTTED SURFACE OBSERVATIONS

1800

2400

On Monday many northeastern areas of England and eastern Scotland had rain in the morning, but were mainly dry though cloudy in the afternoon, and near northern and eastern coasts of Scotland there was fog. Most central parts of Britain were cloudy and rather cool but mainly dry. Many eastern areas were cool while western areas and Northern Ireland had temperatures near normal. However further rain spread to parts of eastern England and East Anglia during the evening. Most western areas on the other hand were dry, and many places had quite a sunny day.

TUESDAY
22 MAY 1984SUMMARY
OF
BRITISH WEATHER

It was a very wet day in southern Britain with a lot of heavy rain and an inch of rain or more in parts of southern England, the Midlands and East Anglia. The rain over central and eastern areas of England spread to most of England and Wales, southern and eastern Scotland overnight. The north coast of Scotland and the Northern Isles were very misty but most of Northern Ireland and western Scotland remained dry. During the day the heavy rain soon spread to Cornwall and the Channel Islands but somewhat drier and brighter weather reached eastern parts of England during the first part of the morning and spread to a good deal of England and Wales by lunchtime. The south, however, stayed misty with rain and drizzle; the heavier rain clearing southwest England in the evening. Most parts of Northern Ireland and Scotland also had a cloudy day with some rain but most of it was light and western parts and the Northern Isles were mainly dry. Eastern and southern Britain was generally cool. In parts of northwest England, southern and central Scotland it became warm. Many areas of Britain had a windy day with northwesterly gales in some western areas.

WEDNESDAY
23 MAY 1984SUMMARY
OF
BRITISH WEATHER

Central southern, southwest England and the Channel Islands were affected by outbreaks of rain and drizzle and very strong easterly winds until mid morning. The rest of the day was dry with some late sunshine, but it stayed rather cool.

Southeast England and East Anglia had a dry sunny morning but the afternoon was cloudy with outbreaks of rain, moderate at times. The day was rather cool.

Most other areas of Britain were dry and warm with long sunny periods, many parts of Scotland were very warm even hot inland.

The Northern Isles and the north coast of Caithness and Sunderland were affected by fog for much of the day.

THURSDAY
24 MAY 1984SUMMARY
OF
BRITISH WEATHER

Southern coastal counties of England were affected by outbreaks of rain early in the day but were mostly dry by dawn. England and Wales were mostly dry, sunny and warm. In many places it was very warm but during the late afternoon and evening, thunderstorms developed over northwest England, the Midlands and central southern counties. The east coast between the Humber and Essex was dull and misty with occasional drizzle and it was cool.

Northern Ireland and Scotland were generally cloudy with outbreaks of mainly light rain, but thunderstorms developed in southern Scotland accompanied by bursts of very heavy rain.

The far north of Scotland and the Northern Isles were foggy until mid afternoon. Southern and central Scotland were mostly very warm. In other parts of Scotland and Northern Ireland temperatures were close to normal.

2400

FRIDAY
25 MAY 1984SUMMARY
OF
BRITISH WEATHER

Most of England and Wales was dry at the start of the period and skies were clear in many southern and western regions. Low cloud over eastern England spread steadily west and south to affect many places by morning and there was a little drizzle in places. There were a few heavier outbreaks of rain near the Scottish border. Most of England and Wales then had a cool, cloudy day with outbreaks of rain, slowly becoming more widespread and heavier and giving a wet evening to many central and southern districts. However, in northern England and the east of East Anglia and Kent there was mostly very little rain and parts of the northwest were quite bright at times, as were also parts of the south coast.

Scotland and Northern Ireland were also cool and mostly cloudy with rain at times, especially in southern Scotland. There were brighter intervals in the west and north of Scotland and in Northern Ireland. Most of Scotland and Northern Ireland became dry in the evening.

PLOTTED SURFACE OBSERVATIONS

SATURDAY
26 MAY 1984

SUMMARY OF BRITISH WEATHER

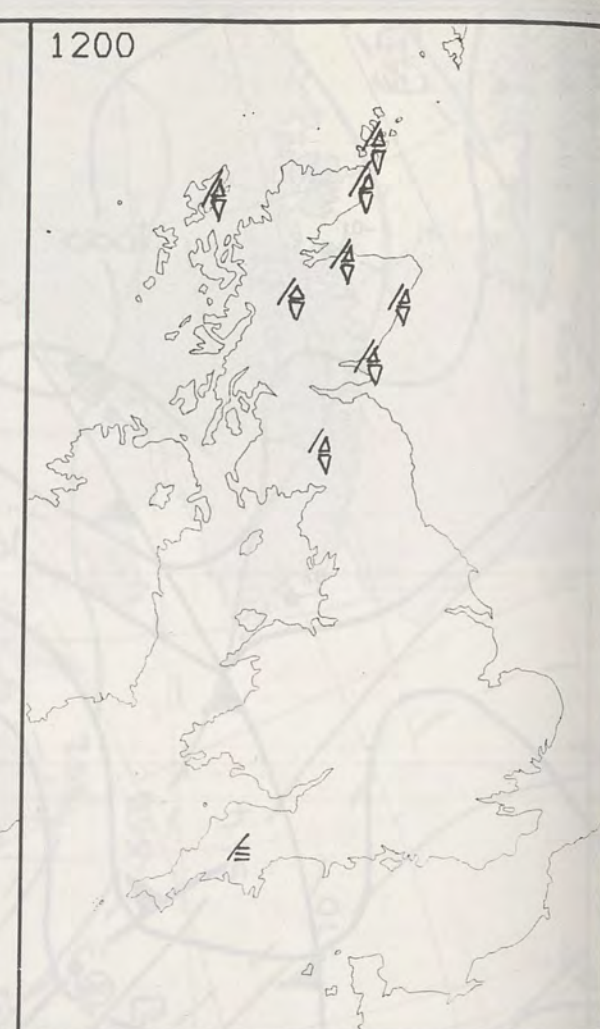

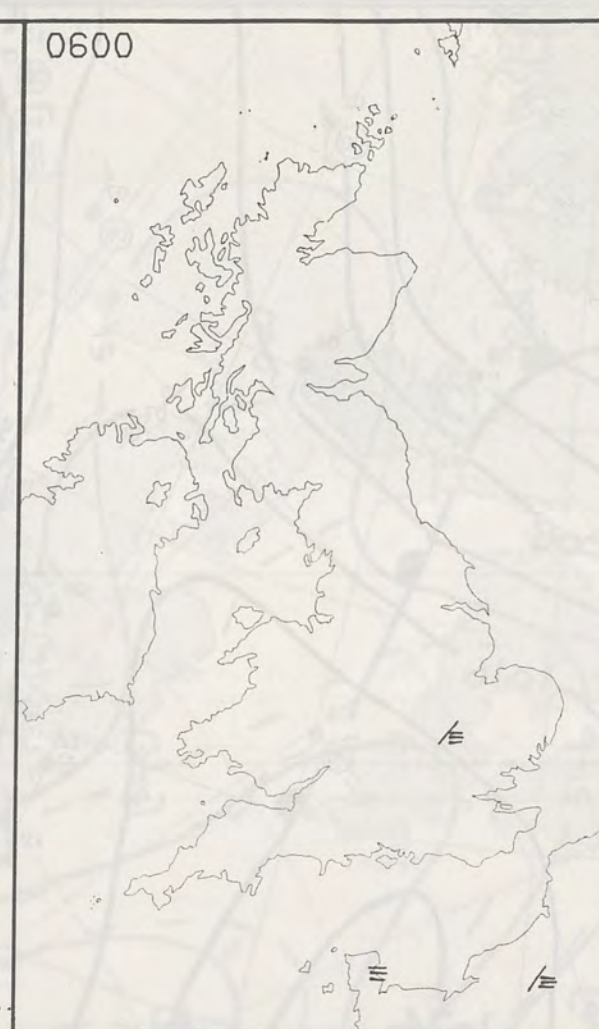

London, southeast and central southern England, East Anglia, Lincolnshire, the southern Midlands and much of the West Country had a cold, wet day.

The extreme southwest of England, most of Wales and northern and central England had a good deal of dry weather, though mostly with a lot of cloud and it was cool. Rain fell in Southeast Wales at first and a few showers developed elsewhere. Some places near the west coast and close to the Scottish border had some sunshine.

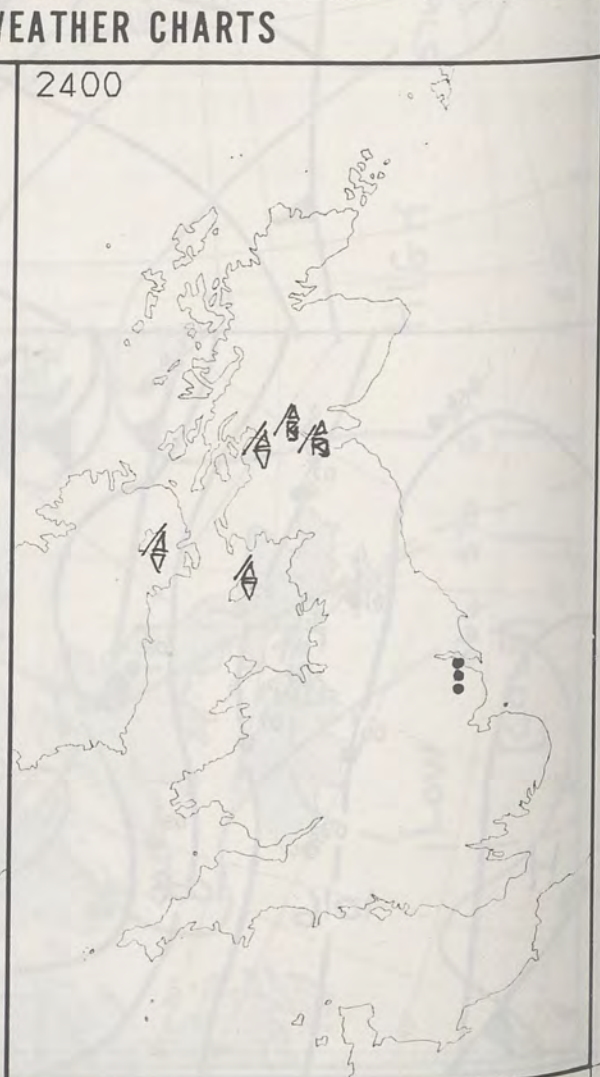

Scotland and Northern Ireland had a day of sunshine and showers, with the best of the sunshine in the Western Isles. There were some heavy showers in southern Scotland, with some hail and thunder. It was mainly cool in these northern areas.

SUNDAY 27 MAY 1984

SUMMARY OF BRITISH WEATHER

Southeast England, East Anglia and Lincolnshire had a wet night with some heavy rain, but much of the rest of Britain was mostly dry overnight. However, there were showers in England, Wales and on the coasts of Scotland, and Anglesey had a thunderstorm. The north of Britain and Northern Ireland were cold and many places were frosty at first.

Western Scotland, Northern Ireland and West Wales were dry and sunny during the day, but in most places temperatures were well below normal. In east and northeast Scotland and the Northern Isles it was a cloudy day with some rain and drizzle.

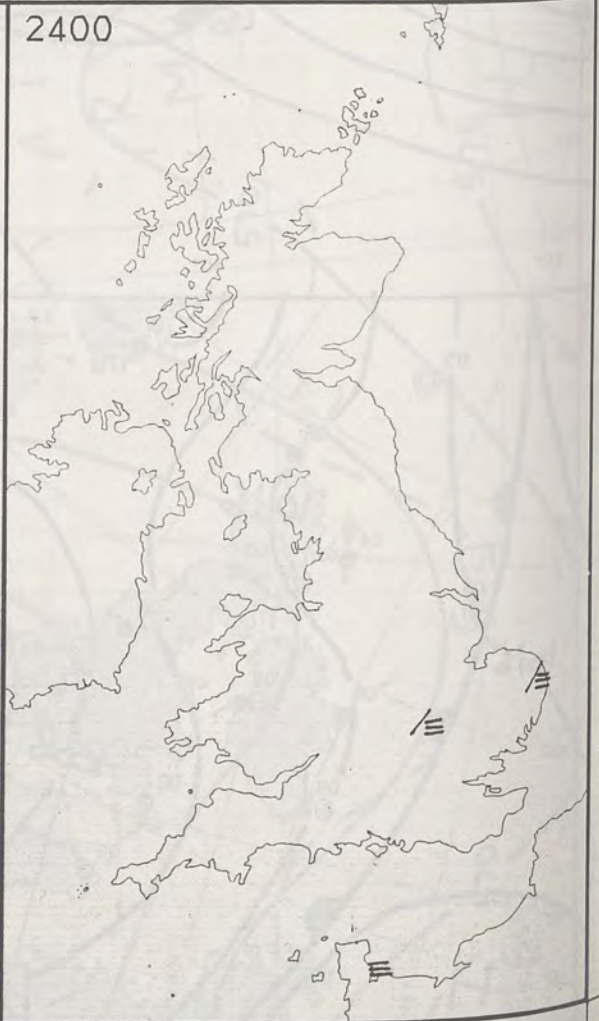

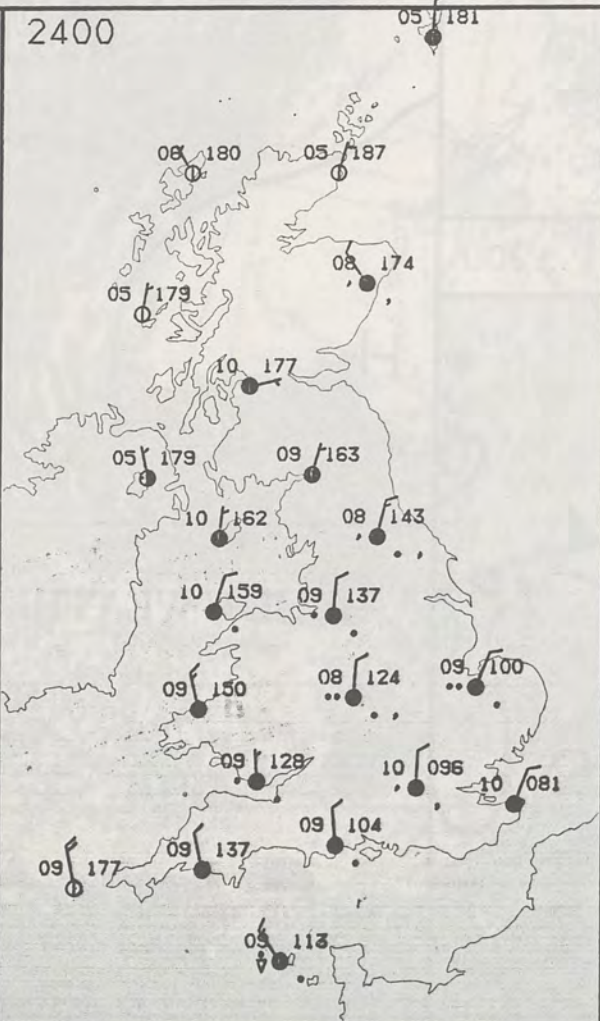

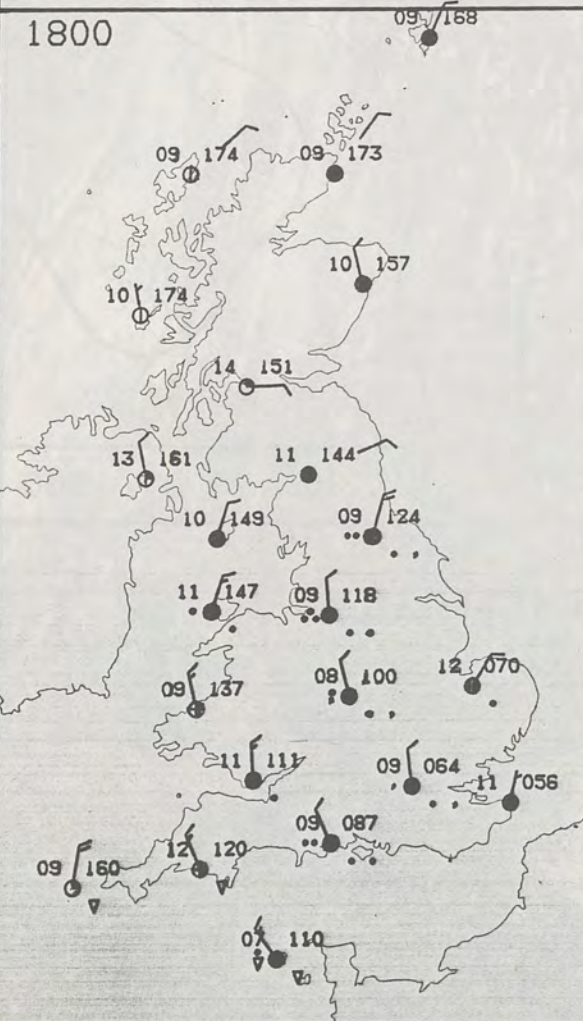

In parts of southwest England and in the Channel Islands there was some sunshine but also showers. Over East Wales and much of England it was a cold, cloudy day. There was rain and drizzle too, with heavy rain, especially in the Midlands and Lincolnshire. Southwest England and East Anglia were mostly rather cool.

**SUMMARY
OF
BRITISH WEATHER**

Much of England and Wales had a cloudy night. There was rain and drizzle in many places, persistent and heavy in the Midlands and East Anglia.

The west of Wales, Northern Ireland and much of Scotland had a dry night and in Northern Ireland and Scotland it was cold in most places.

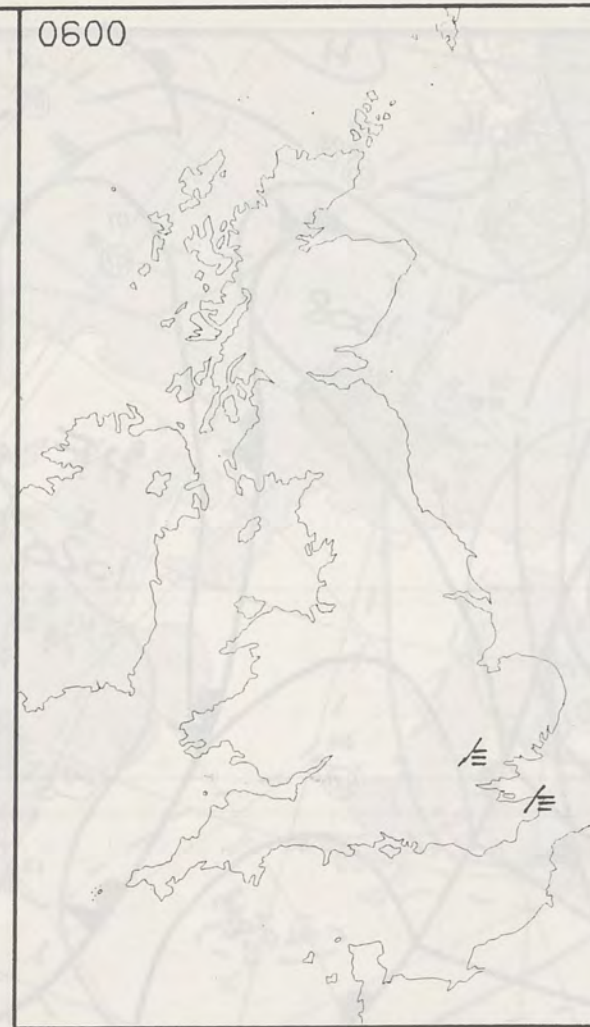

During the day northeast Scotland had a little drizzle in a few places in the morning, but much of Scotland along with Northern Ireland and West Wales was dry with quite a lot of sunshine.

Central and eastern districts of Wales and most places in England were cloudy. There was rain and drizzle in most places, the rain persistent and at times heavy in the morning in East Anglia, the Midlands and southern England. Most of England had a cold day, however Wales and southwest England were mainly rather cool.

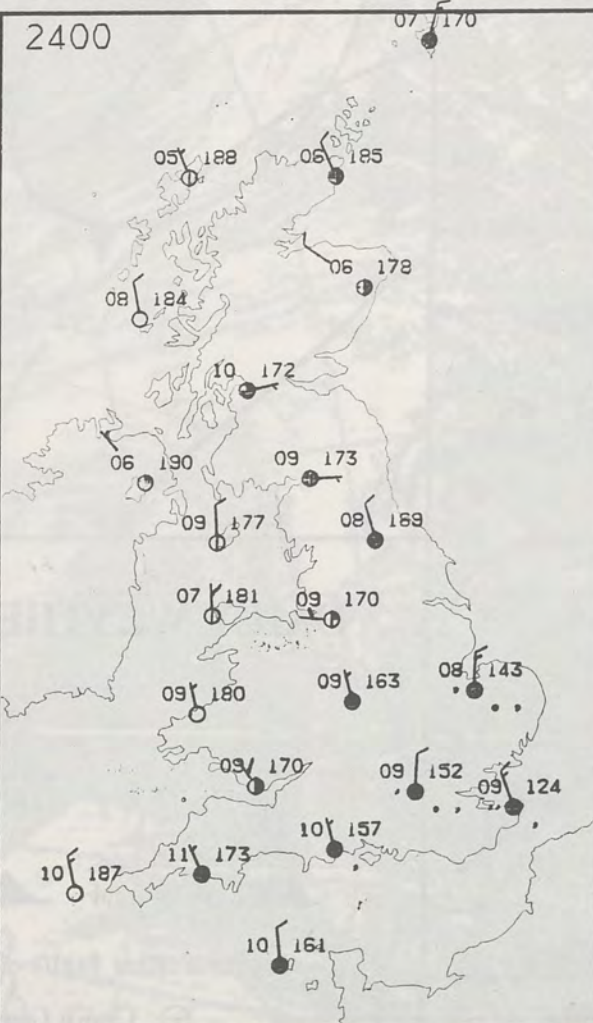

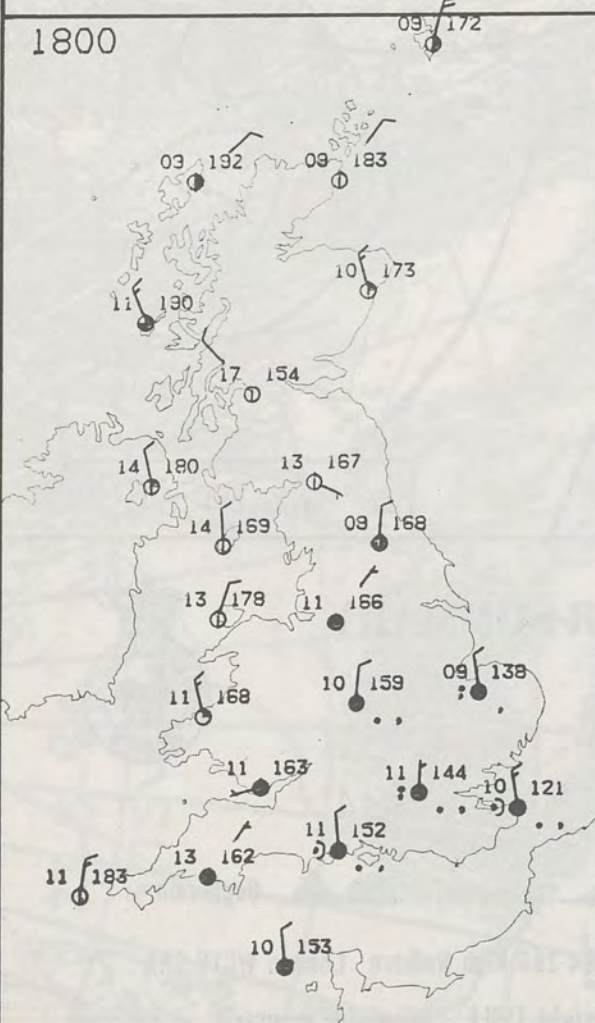

In Northern Ireland and parts of southern and central Scotland it was warm.

A map of the British Isles (Great Britain and Ireland) with 19 numbered locations marked by dots. Each location is associated with a number, often with a small circle around it. The locations are distributed across the islands, with some numbers appearing multiple times. The numbers are: 09, 144, 153, 13, 149, 152, 150, 149, 140, 134, 141, 119, 141, 154, 159, 192, 151, 170, 168, 156, 167, 162, 153, 15, 13, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19.

TUESDAY
29 MAY 1984

SUMMARY OF BRITISH WEATHER

Central and eastern areas of England had a cloudy night with a little light drizzle in places. Western parts of England and Wales were dry with clear periods. Northern Ireland and Scotland also had a dry night, it was cloudy in some eastern parts of Scotland but western regions had clear periods.

During the day the cloud sheet over England continued to move eastwards and although some eastern parts of East Anglia and Kent remained cloudy and cool with some occasional light rain and drizzle, central areas of England stayed dry with a fair amount of sunshine. Western areas of England and Wales were dry and mostly sunny. Much of Scotland and Northern Ireland was dry with sunny periods and very warm in places but some regions were cloudy for a time and in western Scotland there was a little light rain in places. Apart from the cool eastern coastal areas, temperatures generally were near average in England and Wales and some places even became warm.

PLOTTED SURFACE OBSERVATIONS

WEDNESDAY
30 MAY 1984

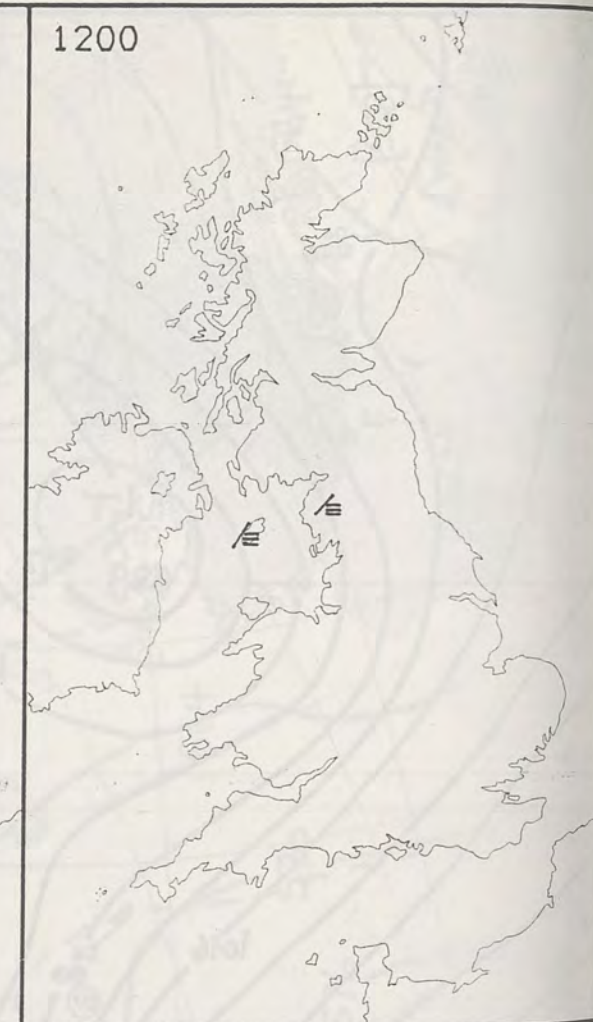

SUMMARY OF BRITISH WEATHER

Apart from a little light drizzle near the east coast of East Anglia and Kent, most of England and Wales and eastern Scotland had a dry night with clear periods but the weather was a little misty around dawn with some fog in places which soon dispersed. Northern Ireland and western Scotland however had a cloudy night with some mainly light rain.

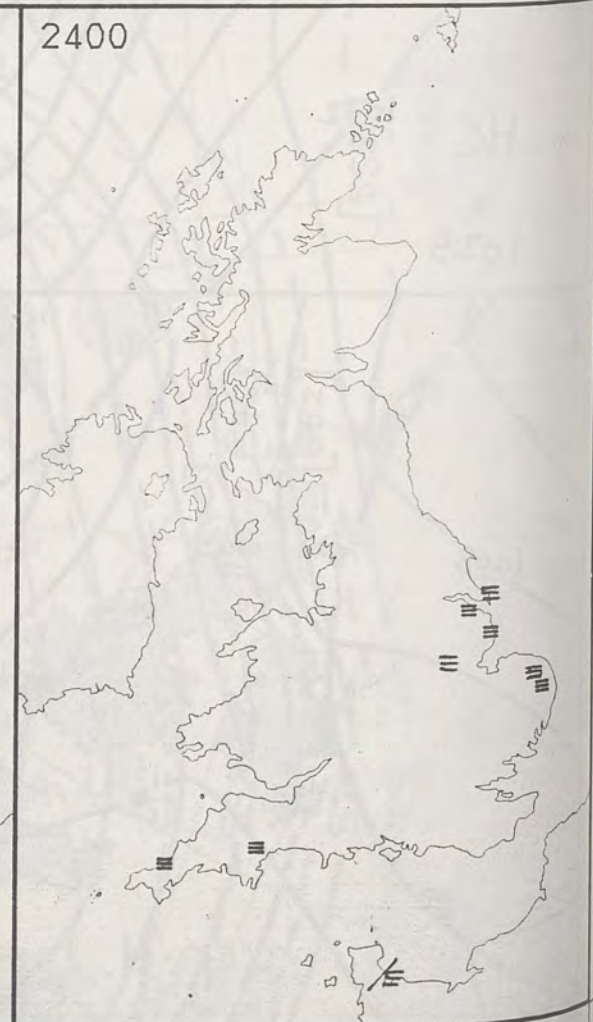

During the day parts of the Norfolk coast remained cool and cloudy but many central, southern and eastern parts of England and Wales were again dry, fairly sunny and quite warm. There was also dry and warm weather, with a fair amount of sunshine in many western parts of England and Wales and eastern Scotland. Northern Ireland and western Scotland for the most part were cloudy with some light rain and drizzle in places and central and southern areas were warm.

THURSDAY
31 MAY 1984

**SUMMARY
OF
BRITISH WEATHER**

Over most of Britain it was a dry, warm day and in many regions quite sunny, but there were exceptions. In some eastern coastal areas and in the Northern Isles it was cool and misty. In southwestern counties of England and Wales it was rather cool and cloudy and during the late afternoon and evening there was rain in places.

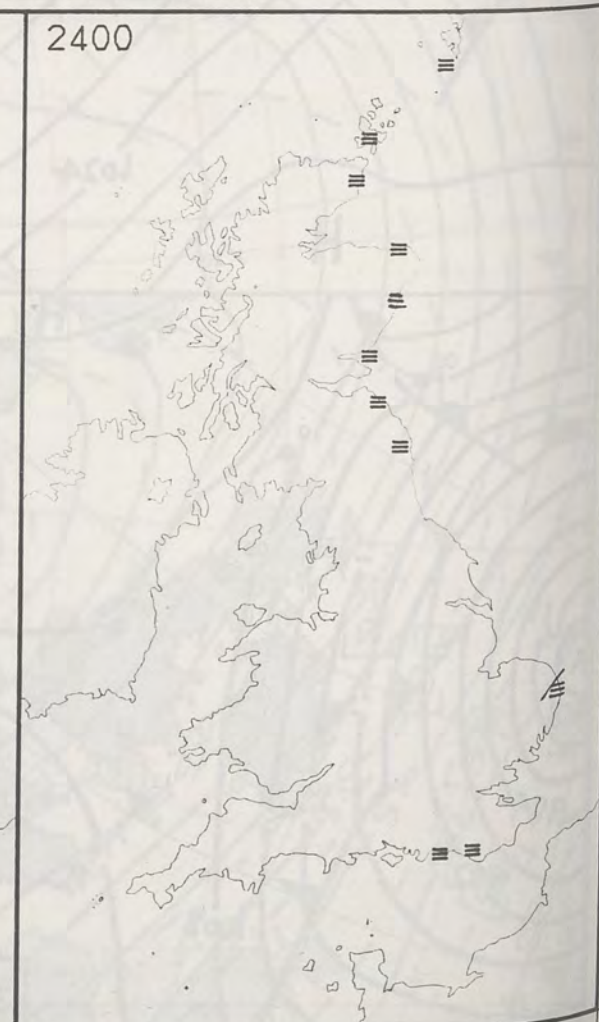

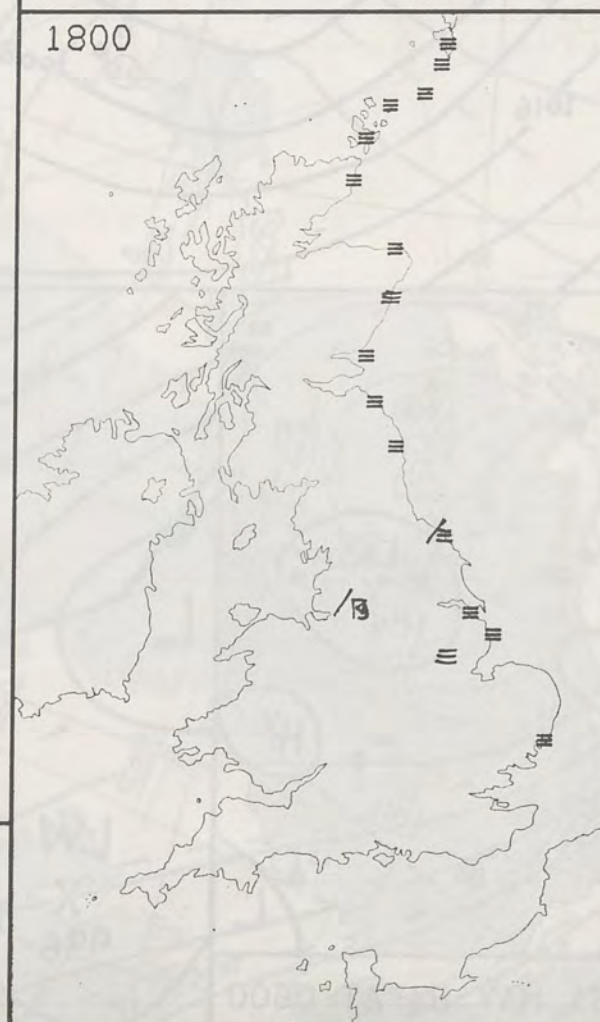

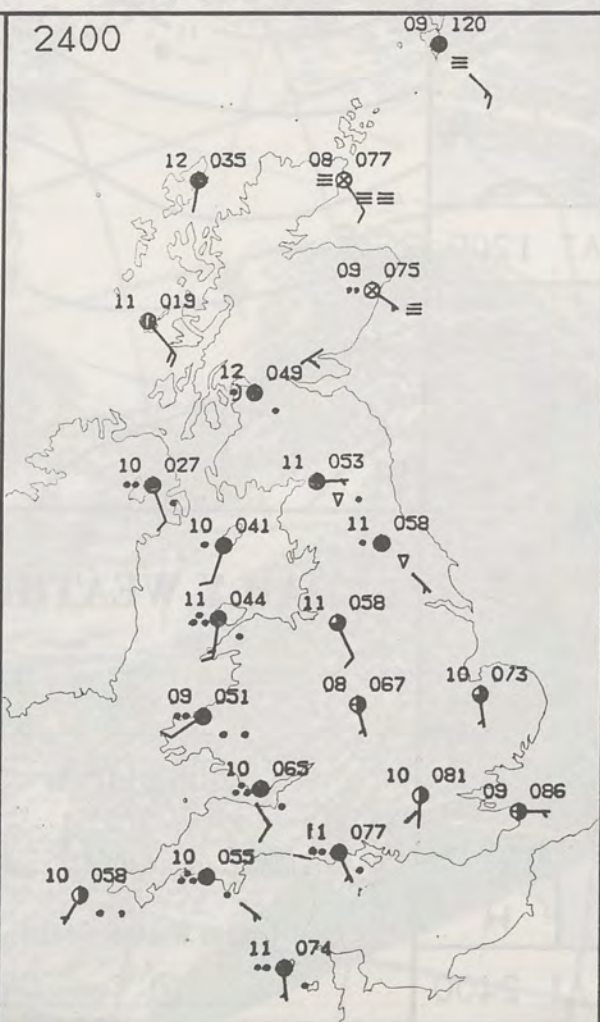

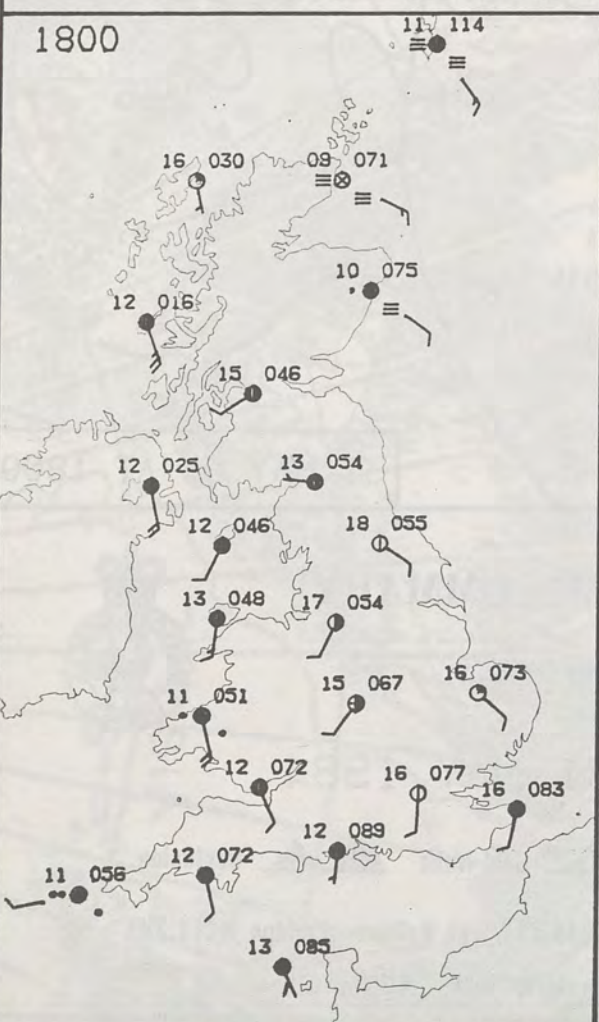

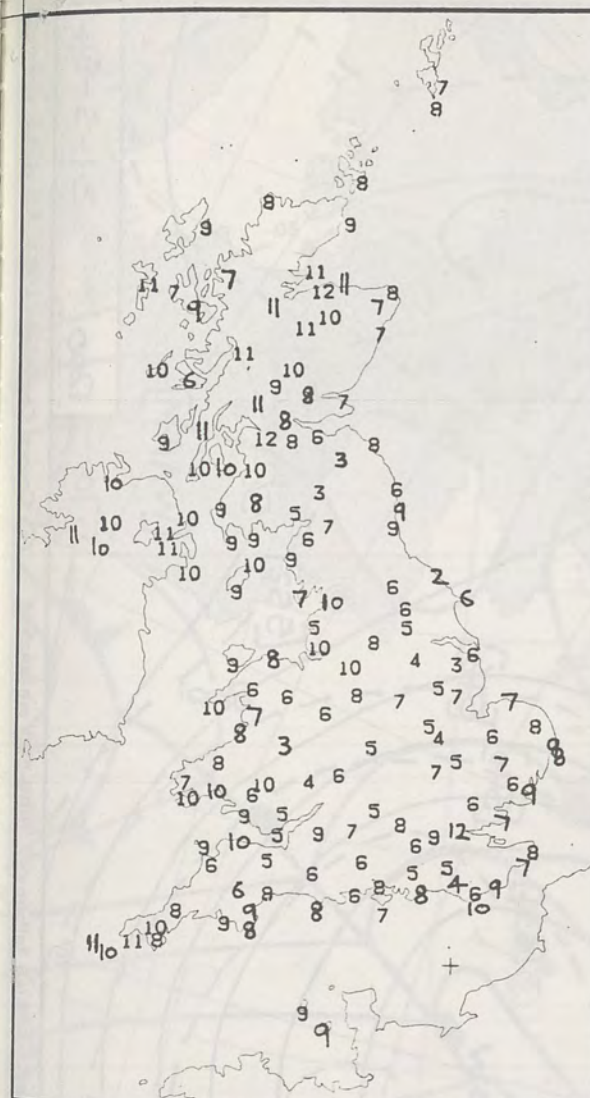

PLOTTED SURFACE OBSERVATIONS

In Northern Ireland there were a few bright spells in the east at first but the day was mainly cloudy and rather cool. Eastern regions remained dry until evening but in the west there was light rain at times during the day.

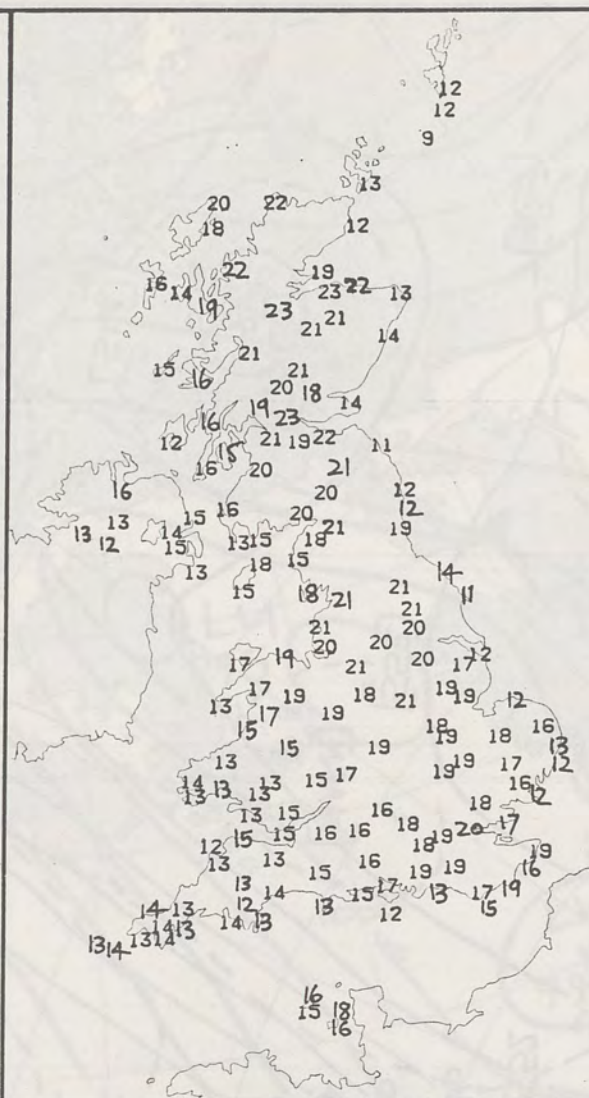

Much of Scotland was very warm, and in northern England it was warm.
