SURFACE REPORTS

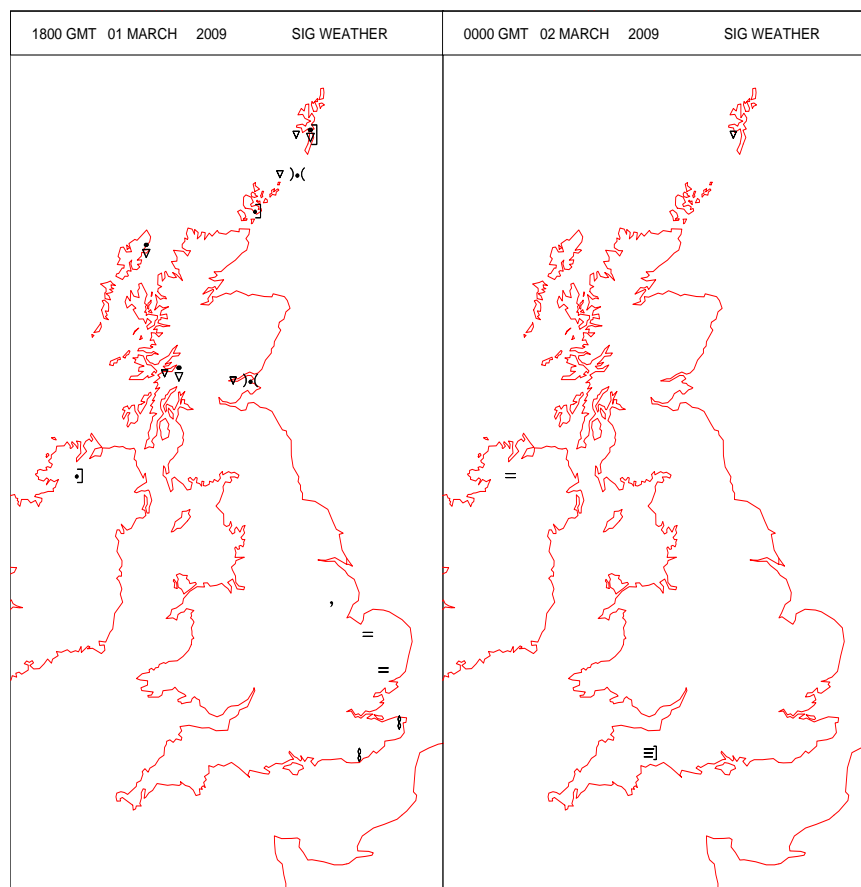

SIGNIFICANT WEATHER

Summary of UK Weather for Sunday 01 March 2009.

During the early hours, rain across Northern Ireland and western Scotland gradually spread to eastern Scotland, northwest England and north Wales. Elsewhere across England and Wales, it was largely dry and cloudy. Patchy frost across south-east England was replaced by misty low cloud and local drizzle by daybreak. Through the morning the rain spread east-wards into north-east England and the Midlands, becoming light and patchy as it did so. Apart from a few light showers in the north-west, much of England and Wales then had a mild and sunny afternoon, although it did remain fairly cloudy across East Anglia and the south-east, with the odd spot of rain. As for Scotland and Northern Ireland, the day was essentially bright and breezy with scattered heavy showers - especially in the west. During the evening, the showers became lighter and gradually confined to the far north-west, while elsewhere it became largely clear with some ground frost forming towards midnight. Maximum temperatures were above the seasonal average countrywide.

EXTREMES

Highest Maximum:

12.5 Pershore, Hereford & Worcester

Lowest Maximum:

6.1 Tulloch Bridge, Inverness-Shire

Lowest Minimum:

-1.0 Hurn, Dorset

Lowest Grass Minimum:

SIGNIFICANT WEATHER

0600 GMT 02 MARCH 2009	SIG WEATHER	1200 GMT 02 MARCH 2009	SIG WEATHER	<p>Summary of UK Weather for Monday 02 March 2009.</p> <p>The overnight period was cold across England with a widespread ground frost and localised air frost, with rural parts of the south-west several degrees below freezing. Scotland and Northern Ireland had light to moderate rain overnight, which moved slowly south-wards across England, weakening all the time. Rain showers, heavy and frequent, fed into Scotland, north-western England and Northern Ireland throughout the day. Many areas of England and Wales were dry with bright spells during most of the day, although with increasing cloud through the afternoon. Temperatures were quite mild, especially in sheltered parts of the south and east. South-westerly winds freshened later.</p>

SIGNIFICANT WEATHER

0600 GMT 03 MARCH 2009	SIG WEATHER	1200 GMT 03 MARCH 2009	SIG WEATHER	<p>Summary of UK Weather for Tuesday 03 March 2009.</p> <p>Many places started dry but a couple of developing fronts swung across much of the UK during the day. This initially brought showery bursts across western parts (with snow over the Scottish Highlands), but more general rain later to many places (with snow to Scotland), as a small area of low pressure developed south of Ireland and tracked over north Wales and north England later. Parts of south-west England and west Wales had over 25mm, with hail reported on the cold front. A gust of 61 knots was reported at Aberdaron in the afternoon. A gust of 49 knots was recorded at Yeovilton during the evening accompanied by heavy rain.</p>

SIGNIFICANT WEATHER

0600 GMT 04 MARCH 2009	SIG WEATHER	1200 GMT 04 MARCH 2009	SIG WEATHER	<p>Summary of UK Weather for Wednesday 04 March 2009.</p> <p>Rain cleared east-wards overnight, confined to East Anglia by morning, also some rain, sleet and hill snow still in the far north. Wintry showers with snow to low levels in places, followed to western areas. Clearing skies led to icy roads with a few Flash warnings issued for some western parts up to 0800 UTC. Minimum temperatures fell to 1 °C under clear skies inland, away from windward coasts. By day, sunny spells and scattered rain, hail, sleet and snow showers. The snow fell mainly over higher ground, with most showers in the west. Funnel cloud was reported off Manston. Maximum temperatures were generally between 3 and 6 °C in the north, and between 5 and 7 °C in the south. Icy roads Flash Warning was issued for most of Scotland later in afternoon.</p>

SURFACE REPORTS

SIGNIFICANT WEATHER

<p>0600 GMT 05 MARCH 2009 SIG WEATHER</p> 	<p>1200 GMT 05 MARCH 2009 SIG WEATHER</p> 	<p>Summary of UK Weather for Thursday 05 March 2009.</p> <p>Overnight areas of snow affected many south-western areas, in particular Devon, Dorset, Wiltshire and Somerset, where locally up to 15cm of snow fell. The sleet and snow then moved across Hampshire and the Isle of Wight later in the night. Meanwhile, a band of sleet and snow, locally heavy, moved east-wards across Scotland, and rain or sleet with snow on the leading edge across Northern Ireland. Less cold and showery conditions followed to western Scotland late in the night, and across Northern Ireland soon after dawn. By day, the band of quite heavy snow continued slowly east-wards across central and eastern Scotland, but early in the afternoon the band quickly weakened and turned to sleet or rain. Meanwhile a band of sleet and rain reached north-west England and north Wales, but rapidly weakened as it continued east, shifting the lingering overnight fog patches from north-east England. The area of sleet and snow across Hampshire and the Isle of Wight turned mostly to rain through the day, clearing away early in the afternoon. Remaining areas had rain, or hail, or sleet showers and sunny spells. Through the evening showers became confined to north-west Scotland, with only isolated showers across other western coastal areas, and so most places became dry and clear.</p>

SIGNIFICANT WEATHER

0600 GMT 07 MARCH 2009	SIG WEATHER	1200 GMT 07 MARCH 2009	SIG WEATHER	<p>Summary of UK Weather for Saturday 07 March 2009.</p> <p>Predominantly dry during the early hours with local ground frost. Towards dawn, rain spread into Northern Ireland, and then eastwards into western Scotland during the morning. Elsewhere, the morning was largely dry and bright, although thickening cloud did eventually bring rain into north-west England and western Wales. Wet and windy weather affected much of Scotland, Northern Ireland and north-west England through the afternoon, while damp and breezy weather spread across other parts of England and Wales. The only exception was south-east England, where it remained fair until evening. Heavy rain affected southern and western Scotland, northern England and Northern Ireland during the evening, accompanied by strong to gale force south-westerly winds. Very squally conditions affected Northern Ireland temporarily in the evening, as a narrow band of more intense rain and hail moved eastwards. This gave a gust of 74 knots at Orlock Head in County Antrim, before continuing east-wards into south-west Scotland and Cumbria later. Across the rest of England and Wales the evening was cloudy and windy with patchy light rain or drizzle. Maximum temperatures were generally above average.</p> <p>EXTREMES</p> <p>Highest Maximum: 13.3 Heathrow, Greater London</p> <p>Lowest Maximum: 5.8 Loch Glascarnoch, Ross & Cromarty</p> <p>Lowest Minimum: -1.2 Eskdalemuir, Dumfriesshire</p> <p>Lowest Grass Minimum: -5.4 Marham, Norfolk</p> <p>Most Rain: 24.8 Eskdalemuir, Dumfriesshire</p> <p>Most Sun: 3.8 Guernsey Airport, Guernsey</p>

0600 GMT 08 MARCH 2009	SIG WEATHER	1200 GMT 08 MARCH 2009	SIG WEATHER	<p>Summary of UK Weather for Sunday 08 March 2009.</p> <p>During the early hours, a band of thick cloud moved south-eastwards across central and southern England and Wales to give an hour or two of rain, before skies cleared from the north-west. Meanwhile, across Northern Ireland and Scotland and, a strong to gale force westerly wind brought occasional heavy wintry showers. All parts were then in a cold and blustery air flow throughout the day, giving a mix of sunshine and heavy wintry showers, although it did remain dry and sunny across south-east England until the middle of the day. The showers fell as either rain, hail, sleet or snow, with the snow being most prevalent towards the north. The westerly wind often reached gale force in the west, although squally gusts to around 50 knots occurred elsewhere at times. Some of the showers were thundery locally. Little changed through the evening, as it remained generally showery with blustery winds, although it did become dry and clear across central and eastern England later. Maximum temperatures ranged from below normal in the north and west, to around normal in the south-east.</p>

SIGNIFICANT WEATHER

<p>0600 GMT 09 MARCH 2009 SIG WEATHER</p> 	<p>1200 GMT 09 MARCH 2009 SIG WEATHER</p> 	<p>Summary of UK Weather for Monday 09 March 2009. Overnight, many central and eastern areas were dry with long clear spells, though a few showers did blow through on strong north-westerly winds. Northern and many western areas had showers overnight, and some of these were heavy and squally with hail. It was a chilly night, but almost all areas escaped a frost due to the strength of the wind. During the day, there were further showers for northern areas, and as temperatures rose, so these developed a little further east. A few showers were still heavy in the north, but were mainly of rain, except over hills. Across central and southern areas there were some spells of sunshine, and temperatures rose to near average values. Strong winds gradually eased during the day. During the evening, more prolonged outbreaks of rain spread across Northern Ireland, Wales, western and some central parts of England. Scotland remained showery regime, but these became more confined to the north.</p>

SIGNIFICANT WEATHER

0600 GMT 10 MARCH 2009	SIG WEATHER	1200 GMT 10 MARCH 2009	SIG WEATHER	<p>Summary of UK Weather for Tuesday 10 March 2009.</p> <p>Outbreaks of heavy rain spread across Northern Ireland, southern Scotland, and England and Wales during the early hours of the morning. The rain was heaviest across parts of Wales and south-west England. The heavy rain cleared the east coast later in the night to be followed by rather cloudy conditions with patchy rain across central and southern England and the Midlands during the morning. Further north most parts became dry with the cloud breaking to allow some sunshine. A few showers broke out across Northern Scotland during the afternoon. However, the patchy rain across Wales, the Midlands and parts of southern England gradually died out during the afternoon with some sunshine breaking through. Northern Ireland, northern England and southern Scotland remained dry with sunny spells. It was a mild day for many, especially in the south. During the evening, the cloud cleared in most places, and it became chilly with a touch of frost in some sheltered central and eastern areas. The far west became more generally cloudy again by midnight.</p>

SIGNIFICANT WEATHER

0600 GMT 16 MARCH 2009	SIG WEATHER	1200 GMT 16 MARCH 2009	SIG WEATHER	Summary of UK Weather for Monday 16 March 2009. Widespread rain overnight across central and north-west parts of Scotland and parts of Northern Ireland due to waving frontal zone. The heaviest of the rain occurred across the mountains of north-west Scotland. Lighter, intermittent rain across east Scotland. Elsewhere, it was dry. There were clear skies across the southern United Kingdom, with overnight temperatures just below zero in a few places. Through the day, there was further rain across Scotland, mainly for western areas, and across the north of Northern Ireland. The rain gradually became lighter and more patchy later in the day as it slowly moved south-wards. Elsewhere, it was dry with lots of sunshine, this made hazy by a fair amount of thin, high cloud. During the evening, a little drizzle continued across northern England and southern Scotland. Elsewhere it was a dry evening, turning chilly in places.

SURFACE REPORTS

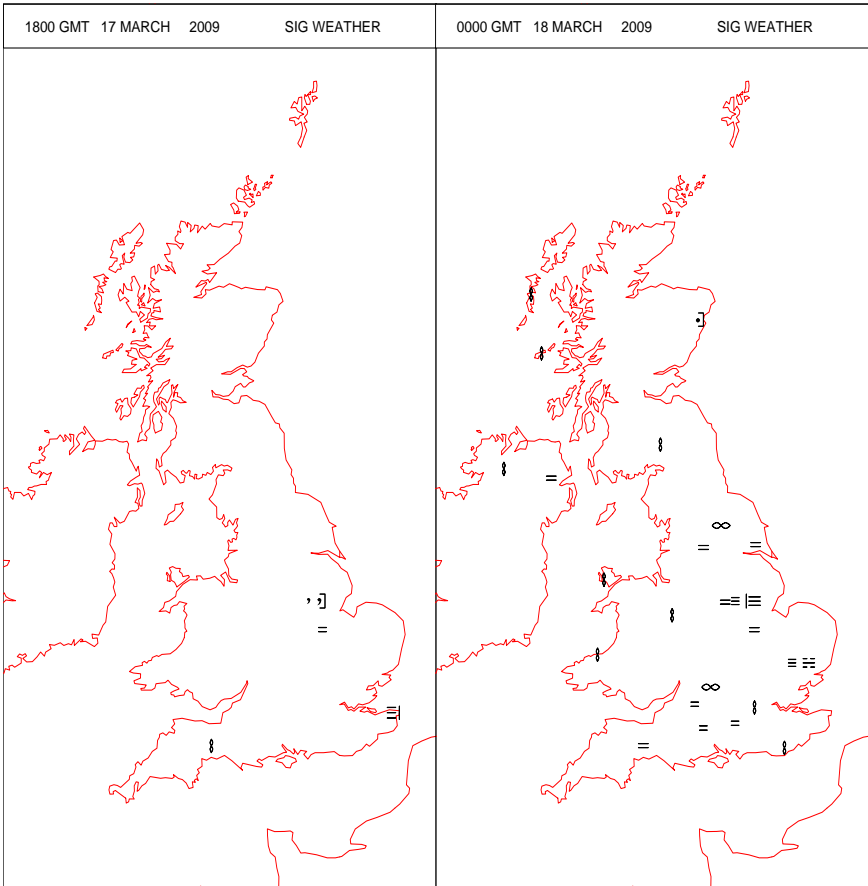

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 17 March 2009.

Overnight, a band of cloud and drizzle continued to move southwards over northern England during the early hours, lying from approximately Norwich to Stoke to Northern Ireland by dawn. To the south, there were clear spells and some mist and fog patches along with a widespread ground frost and a local air frost, this especially across Dorset. There were clearing skies also across Scotland with upland areas having a widespread locally sharp frost. During daylight hours, many places were dry and fine with plenty of sunshine. It became warm across many parts of the south with the highest temperatures for north and west parts of both Cornwall and Devon. However, central and eastern areas were more cloudy and dull in places. Temperatures were depressed under the cloud, and some parts of the east and south-east had a cold day. During the evening, many western areas remained dry and clear, but cloud across many central and eastern areas edged westwards. It also became misty in places.

0600 GMT 18 MARCH 2009 SIG WEATHER	1200 GMT 18 MARCH 2009 SIG WEATHER	<p>Summary of UK Weather for Wednesday 18 March 2009.</p> <p>A large area of high pressure over the North Sea dominated the weather across the UK, although weak fronts affected the far north.</p> <p>It was cloudy across north and north-east Scotland with some rain at times. Large areas of mist and low cloud across England and Wales (chiefly central and western areas) gradually cleared in the morning, although a few patches of low cloud lingered into the afternoon in some central areas of England and the far south-west of Scotland.</p> <p>Otherwise, after a chilly start with frost in places, a fine, dry and sunny day with western areas quite warm, but much colder near east coasts. Apart from the far north of Scotland, a fine, dry and clear evening followed although with temperatures falling quickly. Light winds in most areas.</p>

SIGNIFICANT WEATHER

0600 GMT 19 MARCH 2009	SIG WEATHER	1200 GMT 19 MARCH 2009	SIG WEATHER	<p>Summary of UK Weather for Thursday 19 March 2009.</p> <p>Overnight it was dry and chilly with clear spells. A frost formed across many parts of the United Kingdom, and there were also some areas of fog, some of which were dense, especially across the West Midlands and in the West Country. During the day the areas of fog gradually dispersed leaving most areas with plenty of sunshine. There were some exceptions though, notably the east side of England and parts of east Scotland where large areas of low cloud encroached from the North Sea, blotting out the sun for much of the time, and then persisting through the evening. Additionally, areas near the east coast of Northern Ireland were affected by sea fog for much of the day. Many places had a rather cold day in contrast to the warm or very warm afternoon enjoyed by the sunnier areas. Through the evening the areas of low cloud across eastern England started to drift slightly west-wards across central England. Elsewhere there was little change, apart for patchy mist and low cloud starting to form, mainly across Wales.</p>

SIGNIFICANT WEATHER

0600 GMT 20 MARCH 2009 SIG WEATHER 	1200 GMT 20 MARCH 2009 SIG WEATHER 	<p>Summary of UK Weather for Friday 20 March 2009.</p> <p>The night was frosty in many places, even though there were some large areas of low cloud, especially across the east side of England, east Devon, and Dumfries and Galloway, with fog across the Central Lowlands. A mixture of mist, fog and low cloud affecting many places along the east coast of Scotland and across the Northern Isles. During the day the majority of places became sunny, the exception some eastern coastal areas of northern Scotland and the Northern Isles, where a few spots remained dull and misty throughout. This was in contrast to the north Highlands, which had a exceptionally warm day. Through the evening mist, low cloud and fog lingered along the coasts of north-east Scotland, while remaining areas of the United Kingdom stayed largely cloud free, although a few isolated patches of low cloud did start to form inland, along with isolated mist patches.</p>

SIGNIFICANT WEATHER

0600 GMT 21 MARCH 2009 SIG WEATHER	1200 GMT 21 MARCH 2009 SIG WEATHER	<p>Summary of UK Weather for Saturday 21 March 2009.</p> <p>Most places were dry overnight, and there was a widespread, locally sharp frost. Lowest temperatures were at Altnaharra at -4.5 °C, Andrewsfield -3.6 °C, and Hurn at -3.8 °C. There were also some patches of shallow fog. Later in the night, cloud and a little rain reached the Outer Hebrides and the far north-west of Scotland. During the day, much of England and Wales were dry with long spells of sunshine, though misty low cloud drifted off the Irish Sea and across the Manchester basin and into the Cheshire Plain. Scotland and Northern Ireland were cloudier with a few spots of rain or light showers drifting south-eastwards. It was warm again across sunnier parts of England and Wales with top temperatures in the range of 14 to 17 °C. The highest temperature occurring at Exeter at 16.7 °C. Outbreaks of light rain continued through the evening in north-west Scotland but everywhere else was dry.</p>

SIGNIFICANT WEATHER

0600 GMT 23 MARCH 2009 SIG WEATHER	1200 GMT 23 MARCH 2009 SIG WEATHER	Summary of UK Weather for Monday 23 March 2009. <p>The early hours of the morning were wet and windy across northern and western Scotland with widespread rain, some of it heavy across the west Highlands. Later in the night a little rain also moved southwards across Northern Ireland. England and Wales started dry. The outbreaks of rain in the north continued to move south-wards during the day, reaching the English Channel coasts late afternoon. A mixture of sunshine and scattered heavy showers followed across Scotland and Northern Ireland, spreading to northern and central England and northern Wales as the day went on. The showers were most widespread across northern Scotland where they fell as sleet, snow and hail at times, with a few centimetres of snow accumulating on the hills. There were also a few thunderstorms around. It was a very windy day with strong to gale force westerly becoming northwesterly winds giving gusts to 47 knots in places. Northern and central areas felt much colder than of late.</p>

SIGNIFICANT WEATHER

0600 GMT 24 MARCH 2009	SIG WEATHER	1200 GMT 24 MARCH 2009	SIG WEATHER	<p>Summary of UK Weather for Tuesday 24 March 2009. Heavy showers and thunderstorms continued into the early hours of the morning across parts of East Anglia and the far south-east, giving a covering of hail locally. Elsewhere, showers largely died away with temperatures close to zero under clear skies, the coldest places mainly in Scotland. Cloud thickened across Northern Ireland, and outbreaks of rain arrived soon after dawn. During the day scattered showers continued to affect East Anglia for a while, but much of Wales and central and southern England remained dry and bright. The rain across Northern Ireland gradually spread across Scotland into northern England, but it was after dark before any of this rain reached southern England and East Anglia. In southern parts of the United Kingdom amounts of rain were generally small. During the afternoon and evening a clearance to scattered heavy showers followed into north-western parts.</p> <p>EXTREMES Highest Maximum: 12.2 Pershore, Hereford & Worcester Lowest Maximum: 5.9 Lerwick, Shetland Lowest Minimum: -1.7 Drumalbin, Lanarkshire -1.7 Tulloch Bridge, Inverness-Shire Lowest Grass Minimum: -8.0 Drumalbin, Lanarkshire Most Rain: 13.8 Tulloch Bridge, Inverness-Shire Most Sun: 10.1 Jersey Airport, Jersey</p>

<p>0600 GMT 26 MARCH 2009 SIG WEATHER</p> 	<p>1200 GMT 26 MARCH 2009 SIG WEATHER</p> 	<p>Summary of UK Weather for Thursday 26 March 2009.</p> <p>A band of rain and drizzle initially across the southern United Kingdom gradually cleared away during the morning to leave bright and showery weather. A narrow band of heavy showers moved south-wards across the Midlands during the morning, and across East Anglia and the far south-east during the afternoon, with some thunderstorms occurring near Norwich. Otherwise, the bulk of the showers were across Northern Ireland and western Scotland, often of hail but sometimes thundery, the showers falling as snow across the Highland mountains. Generally it was a blustery day, but the westerly wind was strongest across northern parts with gusts up to 48 knots. Daytime maximum temperatures ranged from average across north-western parts to rather warm across southern England. Through the evening frequent showers continued across much of Scotland, apart for the sheltered north-east, and also Northern Ireland and north-west England. Remaining areas had isolated showers, with much of central and southern England becoming dry. Strong winds and localised gales persisted across northern areas, with the strongest gust of 69 knots occurring early evening at Cairnwell, in the Grampians.</p>

During the day showers or periods of rain continued across Scotland, bringing snow to high ground, while the showery conditions spread to reach all areas of the United Kingdom. Rain also spread south across Northern Ireland, and then reaching Wales during the evening. Through the evening most of the showers across central and southern England moved away, leaving most places with a dry and clear end to the day. Showers covered Northern Ireland and Scotland. By late evening the showers across the Northern Isles where turning wintry. Daytime maximum temperatures were generally near average. It was windiest across northern parts, with widespread gusts up to 43 knots, but with much stronger gusts along exposed coasts and over high ground. Late evening Malin Head, Northern Ireland had a gust of 64 knots.</p>

0600 GMT 28 MARCH 2009 SIG WEATHER	1200 GMT 28 MARCH 2009 SIG WEATHER	<p>Summary of UK Weather for Saturday 28 March 2009.</p> <p>A strong north to north-westerly wind affected the United Kingdom. This brought a mix of broken cloud and occasional rain or hail showers, although a spell of more prolonged rain and hill snow affected northern Scotland during the early hours of the morning. Through the day, the showers turning increasingly to sleet and snow across Scotland and Northern Ireland, before becoming more isolated during the afternoon. Across England and Wales, the showers remained during the afternoon, heaviest across central and eastern England. Thunderstorms also occurred locally during the afternoon around Peterborough and to the south and west of London. The showers became mainly confined to eastern England during the evening, although a sleety shower drifted across Lancashire and into the north Midlands. Late in the evening, rain and hill snow spread into the north-west of Scotland.</p> <p>Maximum temperatures were generally below average, especially in the north.</p>

SIGNIFICANT WEATHER

0600 GMT 30 MARCH 2009 SIG WEATHER 	1200 GMT 30 MARCH 2009 SIG WEATHER 	<p>Summary of UK Weather for Monday 30 March 2009. Overnight, south-east England and areas close to the south coast remained dry and clear. It became frosty in many places, and locally the frost was sharp, especially in Dorset. Elsewhere, the night was mostly cloudy, and most central and eastern areas remained dry. However, there was some rain or drizzle across some western areas, particularly the hills of Wales. During the day, many areas remained mostly cloudy, but the rain or drizzle across some western areas became mainly confined to the north of Scotland. The cloud broke in places to allow some brightness, especially in the east. Across the far south-east of England, it was fairly sunny for much of the day. It was a milder day than recently, especially in the north and east, more particularly where there were any decent sunny periods. Shetland was much colder throughout with some sleet or hail showers during the morning. Little change during the evening, with most places remaining dry and cloudy, but still a little rain across northern Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 31 MARCH 2009	SIG WEATHER	1200 GMT 31 MARCH 2009	SIG WEATHER	<p>Summary of UK Weather for Tuesday 31 March 2009. Overnight, most places were dry, but cloudy, though there were enough breaks to allow just a touch of frost here and there, with the far south-east of England perhaps the most affected. Thicker cloud and outbreaks of rain persisted across the north and west of Scotland and the Northern Isles. During the day, patchy rain persisted across northern and parts of western Scotland, though tended to die out from the south towards evening. Elsewhere, it was dry with variable, often large amounts of cloud. However, the cloud did thin and break in places, especially across eastern areas, and in the sunniest spots, notably north-east England and eastern Scotland, it became warm. During the evening, there was little change with most places dry with rather cloudy skies, though cloud did tend to break further across central England. A little rain or drizzle occurred across the far north of Scotland.</p>
