0600 GMT 01 JULY 2012 SIG WEATHER	1200 GMT 01 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Sunday 01 July 2012.</b>                      Most areas were dry overnight, with the exceptions being parts of Scotland, Northern Ireland, west Wales, and in particular south-west England, where some fairly heavy showers continued all night.                      During the morning eastern and south-eastern areas were sunny, with cloud and a few showers to the north and west.                      Cloud developed through the day, with showers spreading across the south.                      During the evening thicker cloud moved eastwards, with more persistent rain reaching western areas.                      Temperatures were around average.</p>

Through the morning another area of rain pushed in from the west, bringing further heavy downpours for the south-west and parts of Wales, with some heavy bursts widely across the country through the day.                      The north of Scotland remained largely dry and bright, and Northern Ireland turned more showery into the afternoon, along with some bright or sunny spells.                      The rain and heavy showers eventually started to ease through the evening.                      Maximum temperatures were a little below the seasonal average for most, but parts of Northern Ireland were above average.</p>

0600 GMT 04 JULY 2012 SIG WEATHER	1200 GMT 04 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 04 July 2012.</b>                      It was a rather cloudy night with outbreaks of rain for many, heavy at times.                      North-east Scotland was in fog for much of the night, as was the far south-west of England.                      It was mild and muggy under the cloud.                      During the day, the rain gradually became more showery, with further intense showers also developing in situ, as the cloud broke up and temperatures rose. Many of these showers were very heavy and thundery, with thunderstorms developing quite widely across England and southern Scotland during the afternoon.                      Northern Scotland and parts of southern England though, were mostly dry in the afternoon, with some sunshine.                      Flooding was reported in parts of Edinburgh and Glasgow towards the end of the afternoon.                      Temperatures were largely close to the seasonal average, perhaps even a little above in the sunnier areas.</p>

0600 GMT 07 JULY 2012 SIG WEATHER	1200 GMT 07 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Saturday 07 July 2012.</b>                      Overnight a slow-moving low pressure system lay close to south-west England, bringing very heavy and persistent rain across south-west England, with gusty winds too.                      A band of heavy rain also affected the far north of England and southern Scotland.                      Elsewhere it was mainly dry, but with a lot of low cloud and fog in eastern England.                      During the day, the rain in the south-west slowly spread east along southern counties of England, becoming less intense by afternoon. Rainfall totals in south-west England were around that normally seen in the whole month of July.                      The persistent rain over Scotland began to gradually ease, while moving slowly north.                      Between these two areas, there were bright or sunny spells, but the heat from these sparked off some heavy, thundery showers which persisted into the evening.                      Under the rain across southern counties temperatures were cool for the time of year, while the maximum temperatures recorded over north-west England were around average or slightly above.</p>

0600 GMT 09 JULY 2012 SIG WEATHER	1200 GMT 09 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Monday 09 July 2012.</b>                      It was a wet night across parts of Northern Ireland and the Scottish/English border, with initially heavy rain there gradually easing towards dawn.                      It was drier but rather cloudy elsewhere, with a few spells of light rain falling in parts of the west.                      With most places starting the day under overcast skies, any sunshine was rather limited, with early breaks in the cloud over parts of Wales and the Midlands soon closing. Showers developed there towards midday.                      Later in the morning and into the afternoon, swathes of heavy showers affected areas of both north-western and south-western England in particular, delivering some locally persistent rainfall.                      Northern Scotland saw the day's driest conditions, with cloudy skies there developing a few breaks, to give some late sunny spells.                      However, further south it remained a damp day over the Scottish border region, with much of Northern Ireland and especially the north also staying rather dull.                      Temperatures remained on the low side for July across many areas, particularly in northern parts of the U.K., where the cool feel was heightened by the northerly breeze.</p>

0600 GMT 12 JULY 2012 SIG WEATHER	1200 GMT 12 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Thursday 12 July 2012.</b>                      Heavy showers persisted into the early hours across the far east of East Anglia and Kent, while the far north-east of Scotland remained cloudy with patchy rain. Elsewhere though, there were a lot of clear skies, and as a result, temperatures fell very low for the time of year.                      Towards the end of the night, cloud thickened across the far west, with rain into the Isles of Scilly and Cornwall by dawn.                      This rain spread northwards and eastwards during the day, and by the end of the afternoon was affecting most of Wales, the Midlands and southern and south-eastern England, but had started to clear the far south-west.                      It also became quite breezy in the south-west and along the south coast later in the day.                      To the north of the rainband, there were some lengthy spells of sunshine.                      The rain across parts of Aberdeenshire and Angus eased during the morning, though there were a few showers for eastern Scotland and north-east England during the day, but also a good deal of dry weather with a little brightness at times.                      Temperatures were close to or just a little below average in the dry and bright conditions. Under the cloud and rain though, temperatures were well below average for the time of year.</p>

0600 GMT 13 JULY 2012 SIG WEATHER	1200 GMT 13 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Friday 13 July 2012.</b>                      Persistent, locally heavy rain across the East Midlands and East Anglia overnight became much more intermittent, but still locally heavy by dawn.                      There were a few showers over some other areas of the U.K., but most places had a dry, if rather cloudy night.                      Showers continued over England and Wales during the day, these merging to give some longer spells of heavy rain in an area extending across north Wales, the north-west Midlands and north to Lancashire by late morning.                      The showers continued into the afternoon and evening, and became more widespread across the Midlands and Wales, where some torrential rain was reported.                      Heavy, locally thundery showers developed over southern England too, although here there were also some dry, sunny periods.                      Most parts of Scotland, Northern Ireland and northern England had a dry day with some brighter periods. There was some rain though, this mainly affecting central and south-west Scotland and southern counties of Northern Ireland.                      Maximum temperatures were generally lower than average for the middle of July, especially in the parts of the country affected by persistent rain.</p>
1800 GMT 13 JULY 2012 SIG WEATHER	0000 GMT 14 JULY 2012 SIG WEATHER	<p><b>EXTREMES</b>  <b>Highest Maximum:</b>                      21.3 Pershore, Hereford &amp; Worcester  <b>Lowest Maximum:</b>                      11.6 Aviemore, Inverness-Shire  <b>Lowest Minimum:</b>                      5.6 Machrihanish, Argyll  <b>Lowest Grass Minimum:</b>                      0.7 Machrihanish, Argyll  <b>Most Rain:</b>                      25.8 Bedford, Bedfordshire  <b>Most Sun:</b>                      10.3 Tiree, Argyll</p>

0600 GMT 14 JULY 2012 SIG WEATHER	1200 GMT 14 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Saturday 14 July 2012.</b>                      Persistent rain affected Wales, the Midlands, eastern and south-eastern England overnight. This rain was very heavy in places and there were reports of flooding in north Wales and the west Midlands.                      Most other parts of the U.K. had a largely dry night, although there were a few showers, particularly over south-west England and southern Scotland.                      It remained rather cloudy overnight, although there were some clear spells, and where these developed it became rather chilly.                      Outbreaks of heavy rain continued over parts of Wales, central and southern England after sunrise, then gradually began to clear to the south-east during the morning.                      The rain affected the south coast and south-east England during the afternoon and evening, where there were some very heavy, thundery downpours.                      Other parts of the country saw a mix of sunny spells and scattered, locally heavy, showers. The best of the sunshine was over Northern Ireland and south-west Scotland.                      It was breezy around the coasts, especially in the south and west.                      Temperatures were generally a little below average for the time of year, especially in north-western areas.</p>

0600 GMT 16 JULY 2012 SIG WEATHER	1200 GMT 16 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Monday 16 July 2012.</b>                      Outbreaks of rain affected northern Scotland for much of the night, but much of the rest of the U.K. saw a dry start to the day, with some clear spells across central and eastern areas.                      Cloud soon built in the west though, with rain spreading to many western and south-western areas by dawn. This was accompanied by a lot of low cloud and mist around windward coasts and hills.                      Where skies cleared, especially across north-east England and south-east Scotland, it was another distinctly chilly night for July.                      Through the day, much of England and Wales, as well as southern parts of Northern Ireland and Scotland saw spells of rain, heavy in places, particularly over the high ground of Wales.                      Elsewhere, it was largely dry, although northern Scotland saw some further showers.                      Drier and brighter conditions moved back into parts of the south-west and Wales through the evening.                      It was a windy day in the far south, and particularly through the English Channel.                      Temperatures were around average, although slightly below in places.</p>

		<p><b>Summary of UK Weather for Tuesday 24 July 2012.</b>            Cloud and outbreaks of rain affected Northern Ireland, southern Scotland, north-west Wales and northern England during the night, with the rain most persistent over the Cumbrian Fells.            The far north of Scotland, however, remained dry with some clearer spells.            It was clear and dry elsewhere, although isolated mist and fog patches developed, particularly in south-west England.            The mist and fog cleared quickly in the early morning, leaving a dry day with unbroken sunshine for much of England and Wales.            North-west Wales, northern England, Northern Ireland and Scotland were mostly cloudy through the day, although mainly dry, with brighter spells in northern Scotland and north-east England.            Heavier rain affected south-eastern parts of Northern Ireland during the evening.</p>
1800 GMT 24 JULY 2012 SIG WEATHER	0000 GMT 25 JULY 2012 SIG WEATHER	
		<p>Winds were light and variable for most places, although sea breezes developed around many southern coasts.            Temperatures across the south of the U.K. were very warm, and hot in some parts of the south-east. Under cloud across northern parts temperatures were closer to average in general, although it was warm where there were bright spells. It was warm in northern Scotland.</p>
		<p><b>EXTREMES</b>  <b>Highest Maximum:</b>            29.7 Northolt, Greater London  <b>Lowest Maximum:</b>            15.5 Lerwick, Shetland  <b>Lowest Minimum:</b>            7.5 Tulloch Bridge, Inverness-Shire  <b>Lowest Grass Minimum:</b>            2.8 Tain Range, Ross-Shire  <b>Most Rain:</b>            9.2 Keswick, Cumbria  <b>Most Sun:</b>            15.0 Yeovilton, Somerset            15.0 Wattisham, Suffolk</p>

0600 GMT 25 JULY 2012 SIG WEATHER	1200 GMT 25 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 25 July 2012.</b>                      Overnight, rain and low cloud affected northern England and north-west Wales, becoming light and patchy by dawn, with warm minimum temperatures, making it feel very humid.                      Temperatures were around average under clear spells in Scotland, with a few showers in the north-west.                      Further south it was dry, and very warm, with patches of low cloud, mist and fog in places, although this generally burnt off in the morning.                      For much of southern and central England and Wales it was another dry, sunny day.                      Northern and western Wales, and much of northern England had a rather cloudy day, with limited brightness. A few isolated showers developed, particularly around Snowdonia and the Peak District.                      Scotland and Northern Ireland had a fine day with spells of hazy sunshine.                      Mist and fog drifted onto the north coast of Devon and Cornwall late in the afternoon, and areas around the Wash into the evening.                      Temperatures were again very warm, and hot in places across the south of the country. Across central parts temperatures were still warm for most. Across northern Scotland temperatures were around average.</p>

0600 GMT 27 JULY 2012 SIG WEATHER	1200 GMT 27 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Friday 27 July 2012.</b>                      Today was a mainly dry and fine day across large parts of the U.K.                      There was prolonged sunshine across south-west England, south Wales and the Midlands.                      There was rather more cloud however, across northern England and north Wales, at least during the morning, but it stayed largely dry there.                      South-east England was also rather cloudy, with a few isolated showers. It remained humid though, and a further outbreak of showers occurred during the evening around London. These mostly moved into Kent and East Sussex as dusk fell.                      Across Scotland and Northern Ireland, it was a fresh-feeling day with a fairly strong breeze and a scattering of heavy showers, these showers became fairly persistent across the Highlands and the Western Isles.                      The breeze was also felt across the sunny areas further south, which took some of the edge off the recently hot and humid conditions.                      Temperatures were generally around average for the time of year across the north of the U.K., and above average across more southern parts, especially in the south-east with the sunshine.</p>

0600 GMT 28 JULY 2012 SIG WEATHER	1200 GMT 28 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Saturday 28 July 2012.</b>                      It was a cloudy night across south-east England, with a few showers initially, but these cleared away to the east through the early hours.                      Elsewhere across England and Wales it was a drier, clearer night, although there were one or two showers towards the north-west.                      Scotland and Northern Ireland also saw frequent showers. These showers continued through the day, and became progressively heavier, and locally thundery. Between the showers there was still a good deal of bright and sunny weather.                      Much of England and Wales stayed dry and bright with a good deal of sunshine, although it was markedly cooler than recent days.                      However, there were also a few showers across western parts, and these pushed increasingly east across Wales and into parts of the Midlands and north-east England.                      Into the evening showers remained across northern and western parts of the U.K., with southern and eastern England seeing the best of the dry and bright conditions.</p>

However Northern Ireland and western parts of mainland U.K. saw a continuation of some showers, some of which were heavy and thundery, particularly across the Manchester area and through the Bristol Channel.                      After a sunny start for many, a showery day ensued with widespread thunderstorms across much of central and southern England, producing heavy rain, hail and gusty winds.                      Heavy showers also developed over north-east Scotland and Northern Ireland.                      South-west England and Wales became drier during the afternoon with showers more isolated. Showers continued elsewhere, well into the evening and night especially in the south-east.                      Temperatures were widely below average for the time of year, and especially cold in and around heavy showers.</p>

0600 GMT 31 JULY 2012 SIG WEATHER	1200 GMT 31 JULY 2012 SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 31 July 2012.</b>                      It was another fine start, but chilly for the time of year across northernmost parts of England and much of Scotland, while farther south it was dull with outbreaks of rain and low cloud.                      During the day the rain continued to gradually progress north-eastwards, replacing sunshine across the north of the U.K. Central and eastern Scotland and north-east England remained mostly dry until evening.                      There were some heavy bursts of rain at times, and under the most persistent rain in Northern Ireland, Wales and the Midlands temperatures were suppressed, remaining below average.                      Brighter weather arrived in the south of England late in the day, allowing temperatures to recover to near average.                      Winds were light or moderate south-easterly in the rain, becoming more south-westerly behind the rain, and freshening in the west ahead of another band of approaching rain.</p>
