SURFACE REPORTS

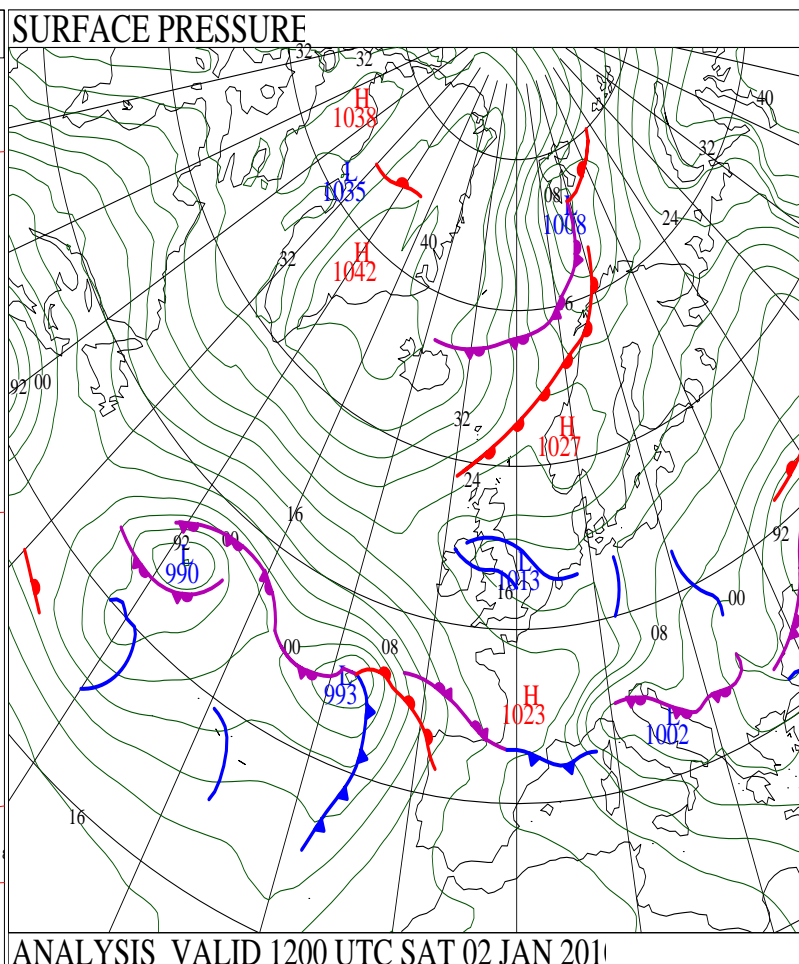

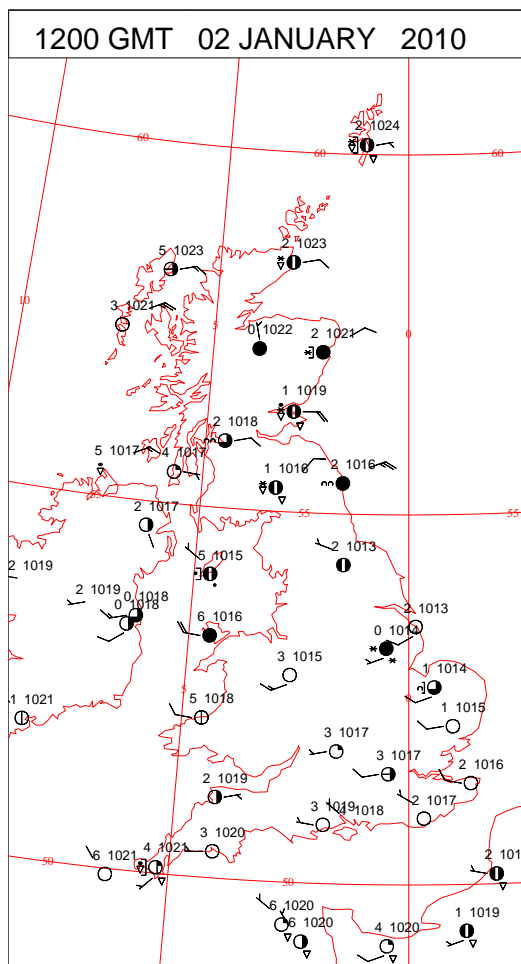

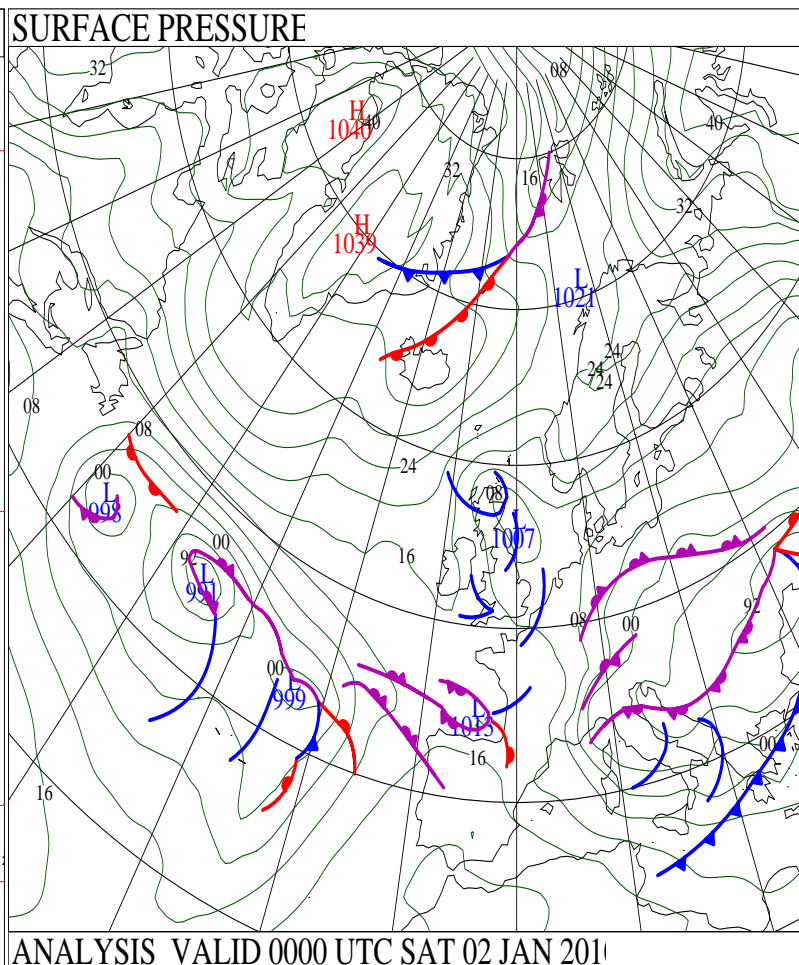

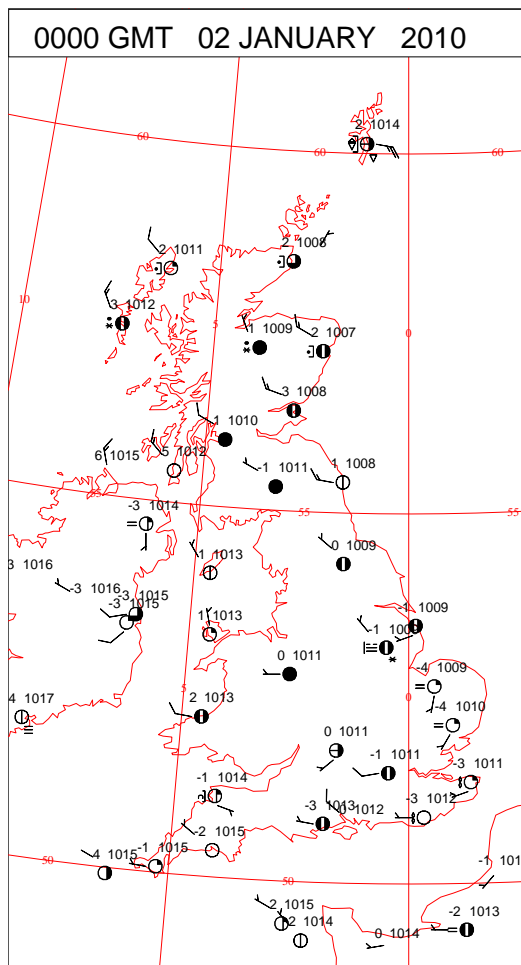

SIGNIFICANT WEATHER

0600 GMT 02 JANUARY 2010	SIG WEATHER	1200 GMT 02 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Saturday 02 January 2010. Overnight many inland areas became dry and clear with a widespread frost. Some sleet and snow showers continued in north and west Wales, Devon and Cornwall, and also on the east coast. More frequent wintry showers affected Scotland, then north-west England and Northern Ireland later in the night.</p> <p>During the rest of the morning snow showers, with coastal sleet, moved across parts of north-east England, and also across from Manchester and Cheshire, through the southern Pennines to the East Midlands. This band continued moving slowly southwards across Wales, the Midlands and much of East Anglia through the afternoon.</p> <p>At the same time, another area of sleet and snow moved south-westwards across Northumberland and then subsequently southwards across Yorkshire, with frequent and quite heavy snow showers affecting eastern Scotland, and later north-east England.</p>
1800 GMT 02 JANUARY 2010	SIG WEATHER	0000 GMT 03 JANUARY 2010	SIG WEATHER	<p>EXTREMES Highest Maximum: 7.3 St Marys Airport, Isles Of Scilly Lowest Maximum: -0.5 Loch Glascarnoch, Ross & Cromarty Lowest Minimum: -7.8 Castlederg, Tyrone Lowest Grass Minimum: -11.0 Eskdalemuir, Dumfriesshire -11.0 Yeovilton, Somerset -11.0 St Angelo, Fermanagh Most Rain: 7.4 Rhyl No 2, Clwyd Most Sun: 7.2 Lyneham, Wiltshire</p>

SURFACE REPORTS

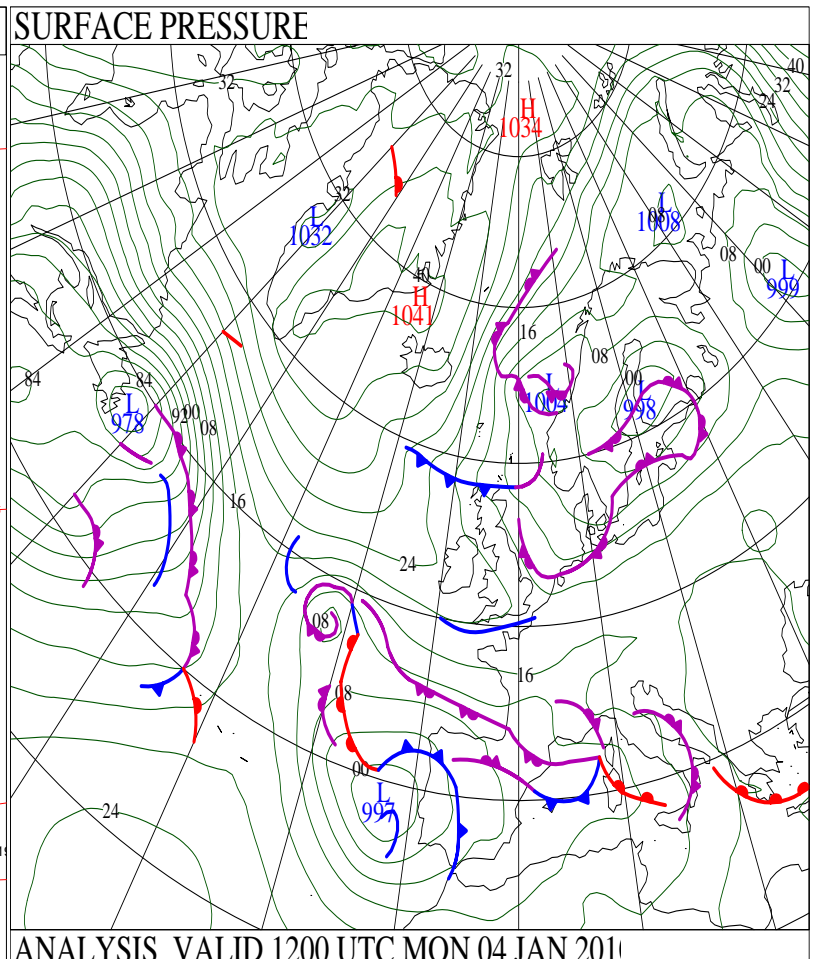

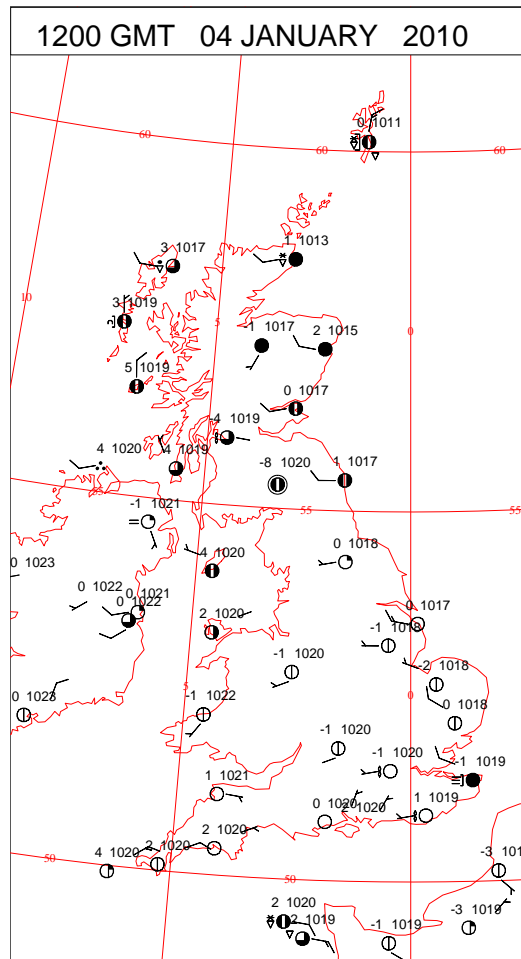

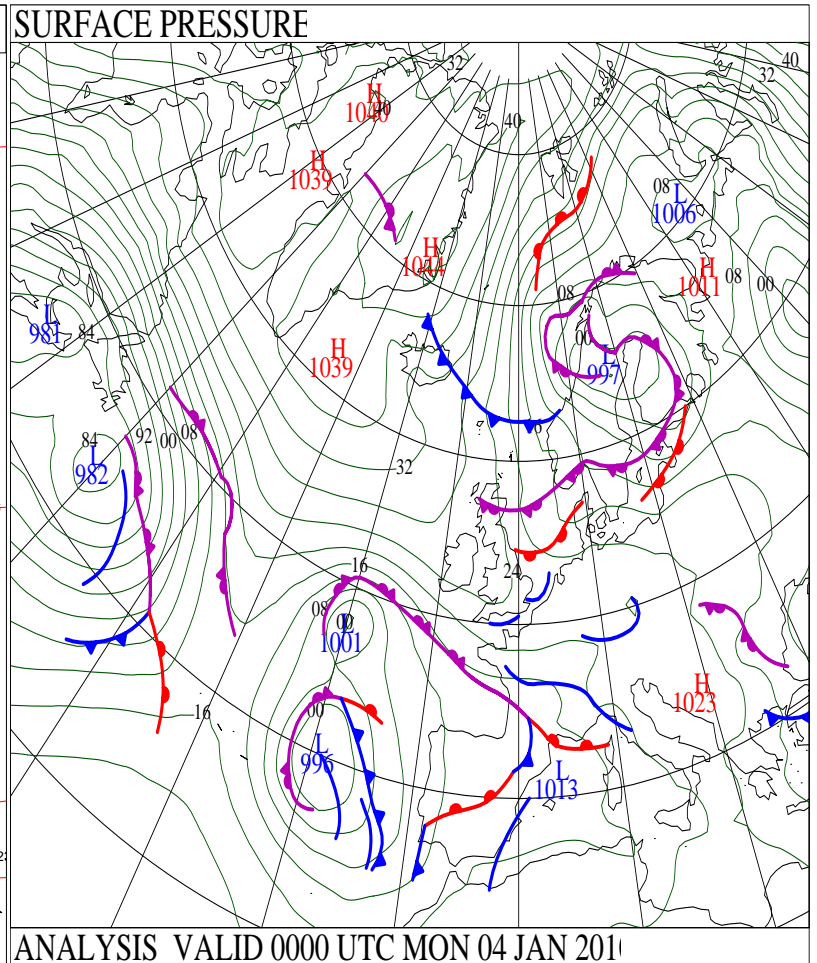

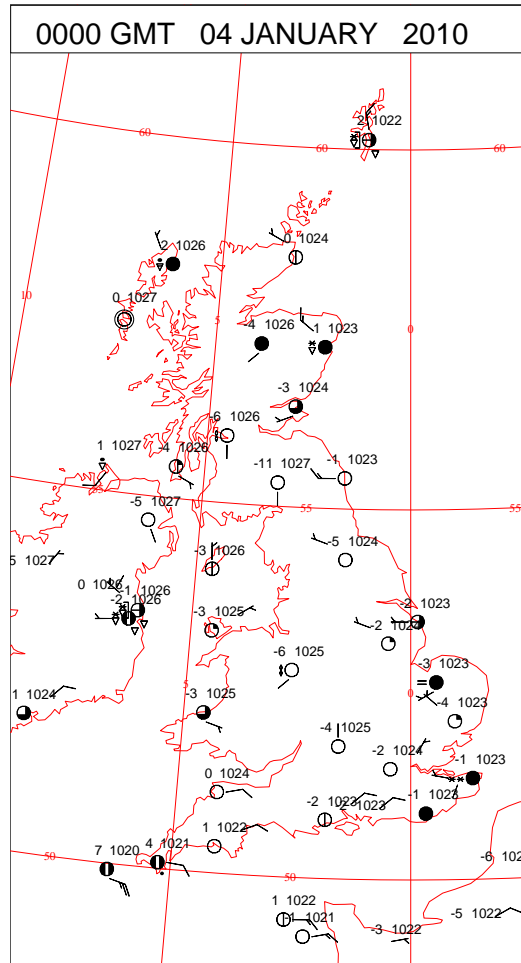

SIGNIFICANT WEATHER

0600 GMT 03 JANUARY 2010	SIG WEATHER	1200 GMT 03 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Sunday 03 January 2010. Sleet and snow showers continued to feed into north-east Scotland and parts of eastern England overnight giving further falls of a few centimetres. A few light snow flurries fed into the East Midlands, with also a few sleet and snow showers for a time in south Wales and central southern England. Most other parts were dry with clear spells allowing a widespread frost, which was hard in places. Snow showers continued through the day in parts of the north and east of Scotland, north-east England, Lincolnshire and also the far south-east of England. There was also some rain in the far west of Cornwall. Most other parts were dry and quite sunny. It was a cold day with some places in northern England and Scotland remaining below freezing all day. The wintry showers died out in most parts during the evening, although some continued to affect the far north of Scotland and the far south-east of England. The rest of the country had a dry and clear evening with temperatures soon falling below freezing.</p>
1800 GMT 03 JANUARY 2010	SIG WEATHER	0000 GMT 04 JANUARY 2010	SIG WEATHER	<p>EXTREMES Highest Maximum: 7.8 St Marys Airport, Isles Of Scilly Lowest Maximum: -2.9 Strathallan Airfield, Perthshire Lowest Minimum: -14.8 Tulloch Bridge, Inverness-Shire Lowest Grass Minimum: -12.4 Nottingham, Nottinghamshire Most Rain: 6.6 Aultbea No 2, Ross & Cromarty Most Sun: 6.8 Nottingham, Nottinghamshire 6.8 Odiham, Hampshire 6.8 Aberporth, Dyfed</p>

SURFACE REPORTS

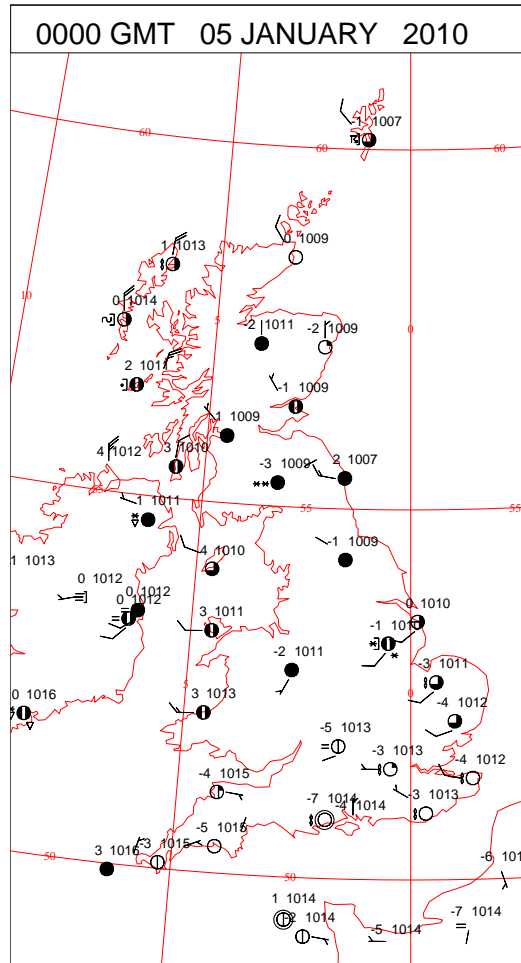

SIGNIFICANT WEATHER

0600 GMT 04 JANUARY 2010	SIG WEATHER	1200 GMT 04 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Monday 04 January 2010. Most places had a dry, clear and very cold night, with a widespread and very sharp frost in many places. Patchy freezing fog also developed over parts of the south Midlands and central southern England. Wintry showers continued to affect a few northern and eastern coasts.</p> <p>During the morning and into the afternoon, more widespread wintry precipitation moved southwards into northern Scotland, with most of the remainder of the U.K. dry and sunny.</p> <p>Increasing cloud spread to the north, but it continued sunny over most central and southern parts through the afternoon. Wintry showers moved into north-west England and north and west Wales late in the afternoon and through the evening.</p> <p>It was a cold day with temperatures only a couple of degrees above freezing at best, some places remained below freezing all day.</p>

SIGNIFICANT WEATHER

0600 GMT 05 JANUARY 2010	SIG WEATHER	1200 GMT 05 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Tuesday 05 January 2010.</p> <p>The wintry weather continued, with snow falling in many parts of the U.K., and temperatures in some places struggling to rise above freezing. Snow fell overnight in parts of Scotland, northern England and Northern Ireland.</p> <p>Further south it was dry but very cold, with temperatures well below freezing across much of southern England. By the end of the night the snow had spread further south to affect all but south-eastern and central southern England. There were significant accumulations in the north.</p> <p>The snow continued to spread during the morning and afternoon, and by the evening many parts had snowfall at some point, with significant accumulations being recorded in parts of southern England. It remained cold everywhere, and felt bitterly cold in Scotland and northern England as a very strong, gusty north or north-easterly wind developed.</p> <p>Temperatures were mainly below average, with only parts of the south coast of England and Wales approaching their seasonal averages.</p>

SIGNIFICANT WEATHER

0600 GMT 06 JANUARY 2010	SIG WEATHER	1200 GMT 06 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Wednesday 06 January 2010. Further wintry weather affected almost all of the U.K. during the day, with the heaviest snow continuing over central southern England, north-east England and the Scottish Borders from the early hours.</p> <p>Many places had widespread ice and freezing temperatures in the morning, with some strong winds in eastern coastal areas.</p> <p>During the day, snow slowly moved south, just clearing the far south-east by the end of the day. Occasional snow showers continued to affect north-east England and eastern Scotland into the evening with significant accumulations and drifting and blowing snow in places. A few snow showers spread into northern parts of Northern Ireland in the evening too.</p> <p>As the snow spread south, many central parts of the U.K. had some drier and brighter weather, but this led to frost and ice developing quite readily in the evening.</p> <p>Snow accumulations amounted to 25 to 30cm quite widely across central southern parts of the U.K., and up to 40 to 50cm across the north-east of England and southern parts of Scotland.</p> <p>Maximum temperatures were well below the seasonal average.</p>
1800 GMT 06 JANUARY 2010	SIG WEATHER	0000 GMT 07 JANUARY 2010	SIG WEATHER	<p>EXTREMES Highest Maximum: 5.6 St Marys Airport, Isles Of Scilly Lowest Maximum: -3.8 Tulloch Bridge, Inverness-Shire Lowest Minimum: -12.9 Aboyne No 2, Aberdeenshire -12.9 Loch Glascarnoch, Ross & Cromarty Lowest Grass Minimum: -13.4 Marham, Norfolk Most Rain: 6.6 Chivenor, Devon Most Sun: 5.6 Tiree, Argyll</p>

SURFACE REPORTS

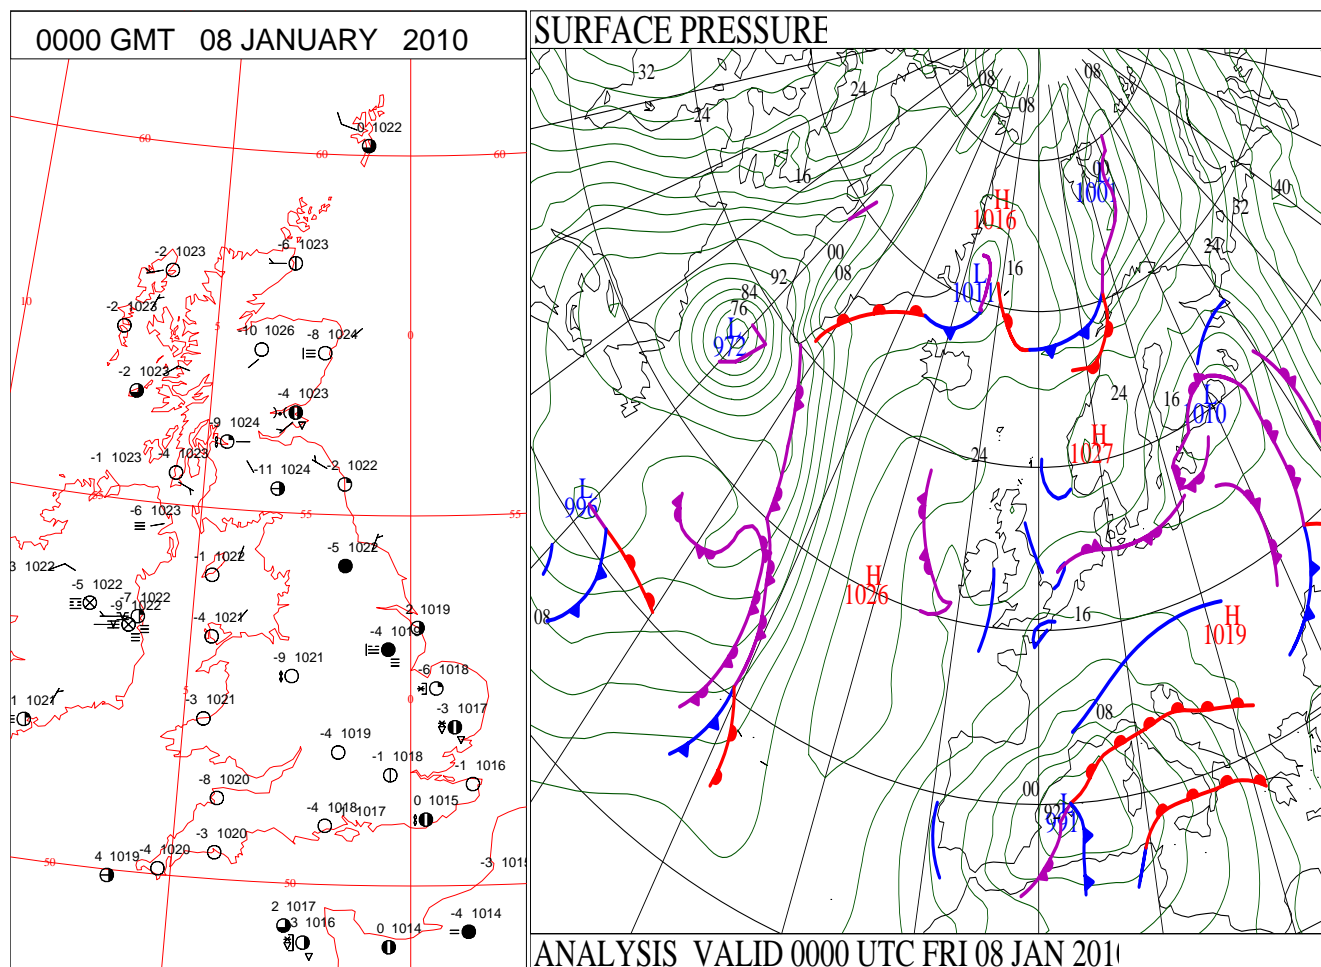

SIGNIFICANT WEATHER

0600 GMT 07 JANUARY 2010	SIG WEATHER	1200 GMT 07 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Thursday 07 January 2010. Cold, wintry weather continued with snow becoming mainly confined to eastern parts of the U.K. through the early hours. A few snow showers also developed over far western parts of Wales and the far south-west of England.</p> <p>Clear skies and a covering of snow over many central areas of the U.K. produced exceptionally low minimum temperatures. The coldest places were across parts of Oxfordshire, Manchester and Devon, where temperatures came very close to exceeding the extreme recorded minimums.</p> <p>Through the day, snow showers continued in most eastern areas and turned heavy at times, bringing further fresh accumulations. Snow showers continued across Pembrokeshire and Cornwall for much of the day, eventually clearing later in the evening.</p> <p>Remaining parts of the country saw mostly dry and sunny weather, but temperatures in many inland areas failed to rise above zero and this put maximum temperatures well below the seasonal average.</p>
1800 GMT 07 JANUARY 2010	SIG WEATHER	0000 GMT 08 JANUARY 2010	SIG WEATHER	<p>EXTREMES Highest Maximum: 5.8 St Marys Airport, Isles Of Scilly Lowest Maximum: -7.1 Loch Glascarnoch, Ross & Cromarty Lowest Minimum: -17.7 Benson, Oxfordshire Lowest Grass Minimum: -20.7 Eskdalemuir, Dumfriesshire Most Rain: 4.0 Rosehearty, Aberdeenshire Most Sun: 7.5 Lyneham, Wiltshire</p>

SURFACE REPORTS

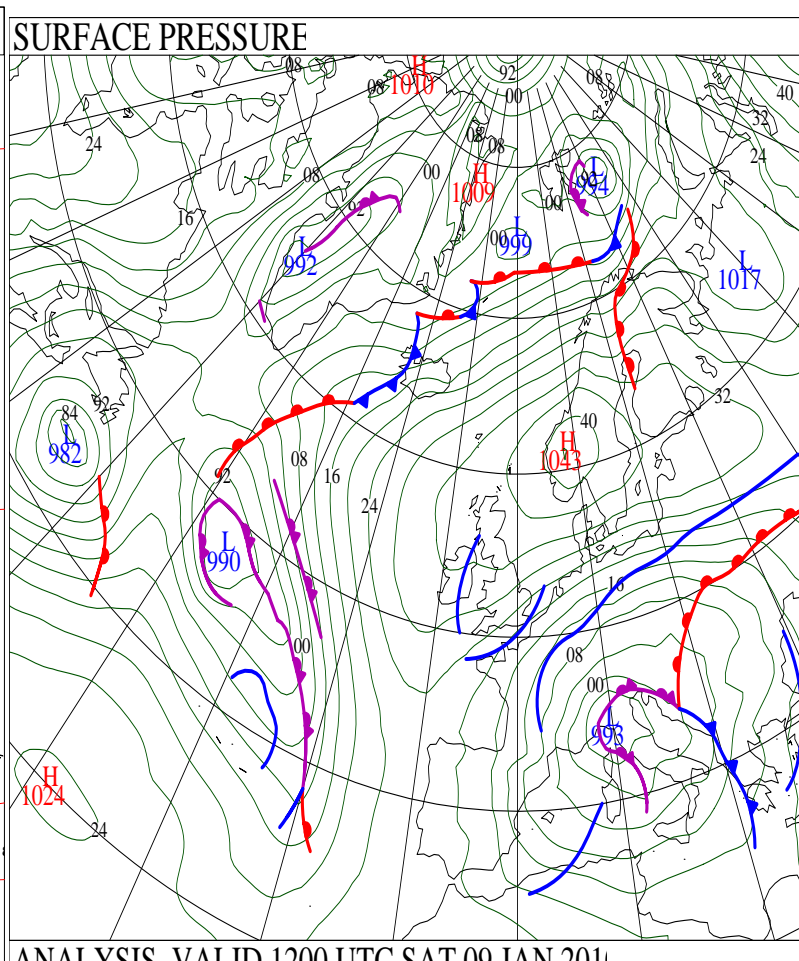

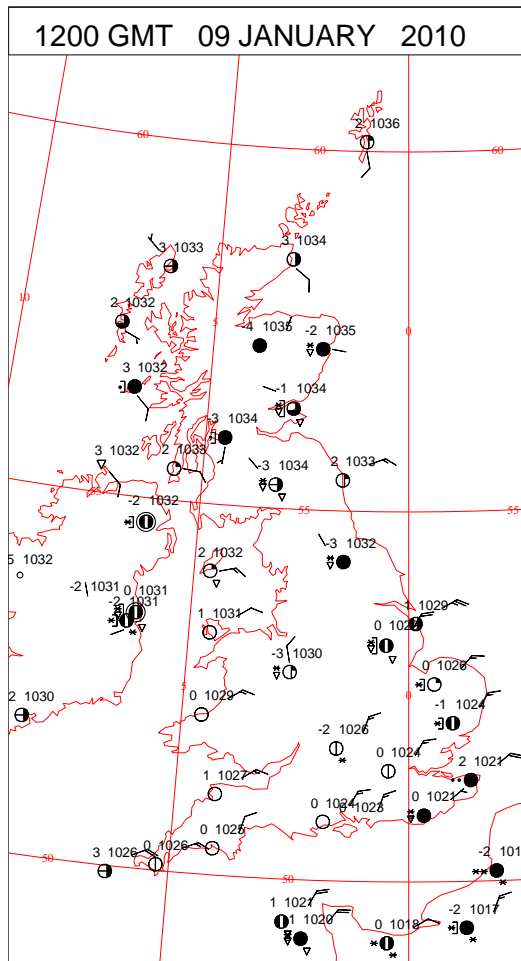

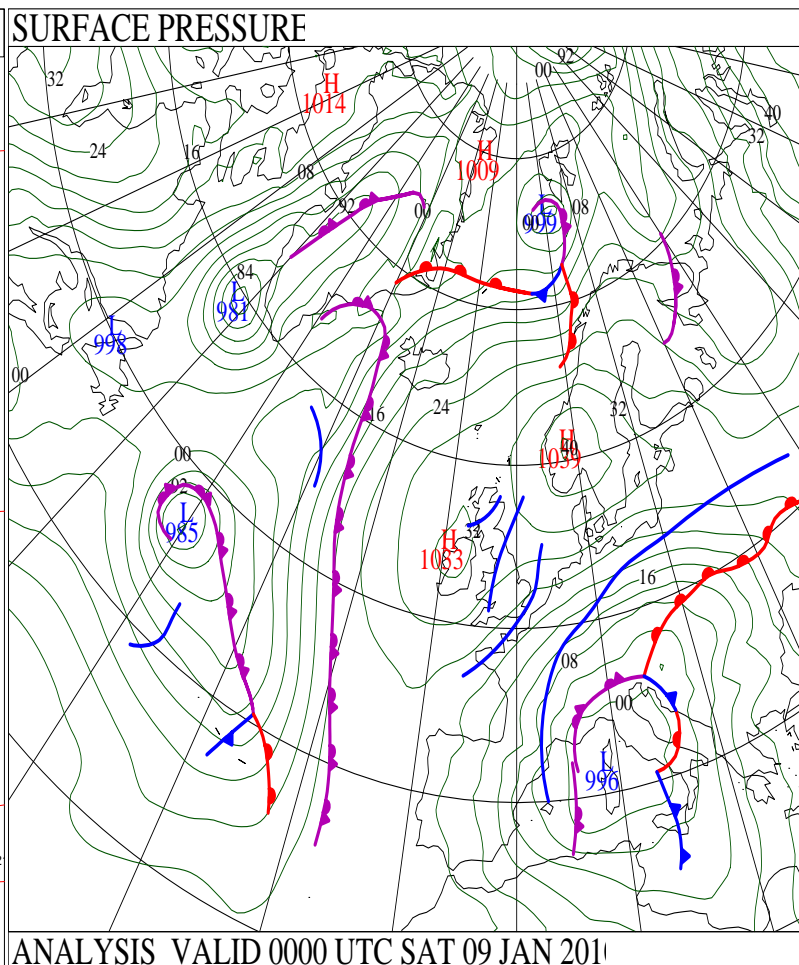

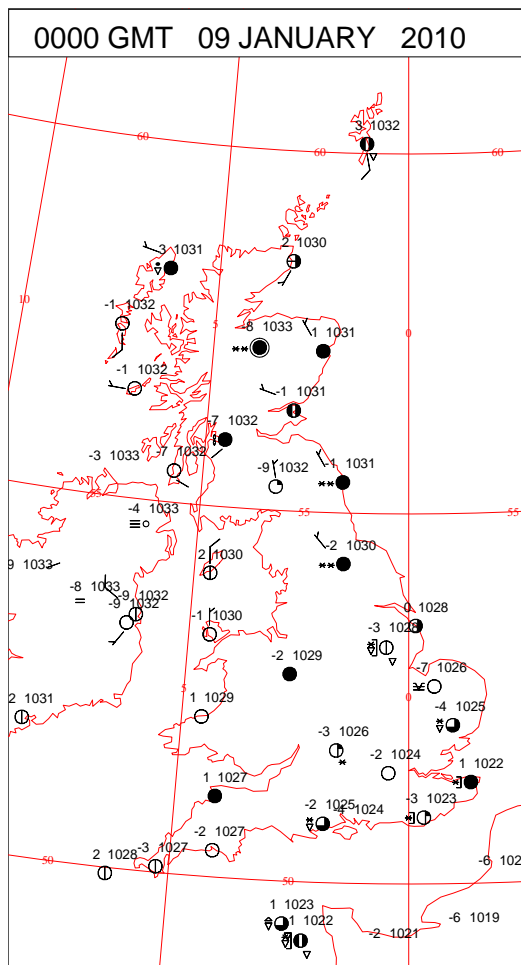

SIGNIFICANT WEATHER

0600 GMT 08 JANUARY 2010	SIG WEATHER	1200 GMT 08 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Friday 08 January 2010. It was another extremely cold night with exceptionally low temperatures recorded in many areas. The most significantly low temperatures were recorded across north-west Scotland and parts of western England.</p> <p>Across eastern parts snow showers continued for much of the night, bringing fresh accumulations in places. These snow showers continued through the day and into the evening across many eastern parts of the U.K. Some of the heaviest snow fell across parts of Yorkshire and Humberside, with significant accumulations falling over a short period during the early evening.</p> <p>Some snow showers did penetrate inland into more central areas at times during the day, but these were mainly light.</p> <p>Away from the snow showers in the east, many areas of the U.K. remained dry with prolonged spells of sunshine. However, some slightly milder air did move into northern Scotland during the evening, bringing a mixture of rain and snow, causing widespread ice to form as it fell on to frozen surfaces.</p> <p>It was another very cold day across all parts, with most places failing to see temperatures rise above freezing throughout.</p>
1800 GMT 08 JANUARY 2010	SIG WEATHER	0000 GMT 09 JANUARY 2010	SIG WEATHER	<p>EXTREMES Highest Maximum: 5.3 St Marys Airport, Isles Of Scilly Lowest Maximum: -5.5 Carlisle, Cumbria Lowest Minimum: -19.0 Tulloch Bridge, Inverness-Shire Lowest Grass Minimum: -20.1 Eskdalemuir, Dumfriesshire Most Rain: 15.8 Rosehearty, Aberdeenshire Most Sun: 7.2 Camborne, Cornwall</p>

DAILY WEATHER SUMMARY

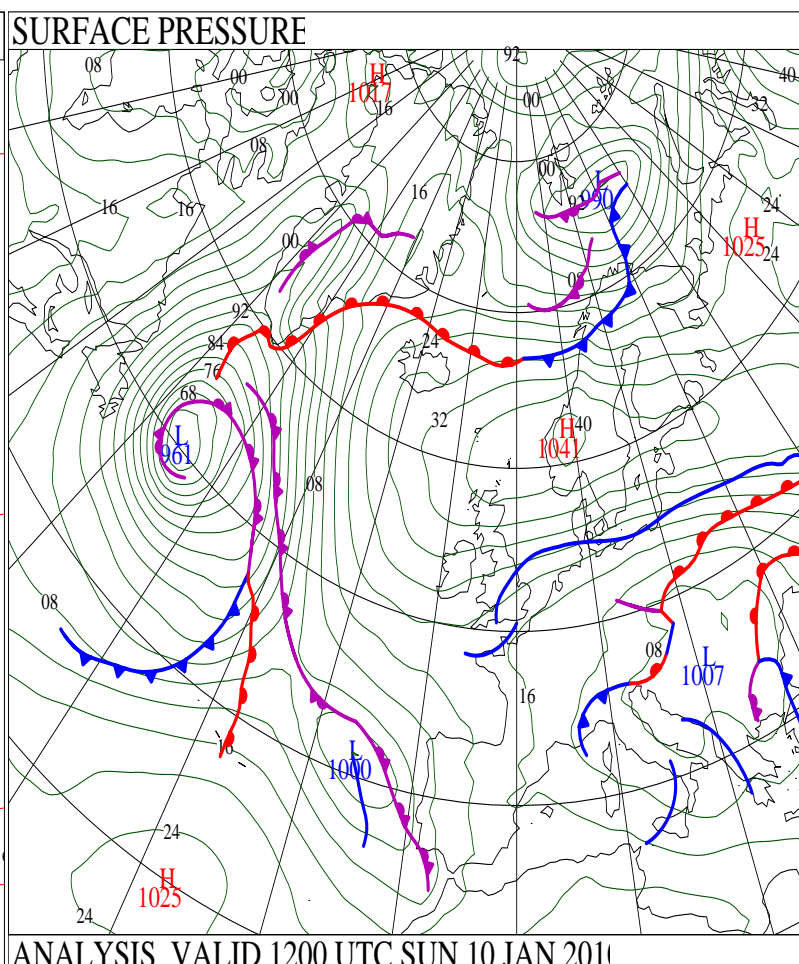

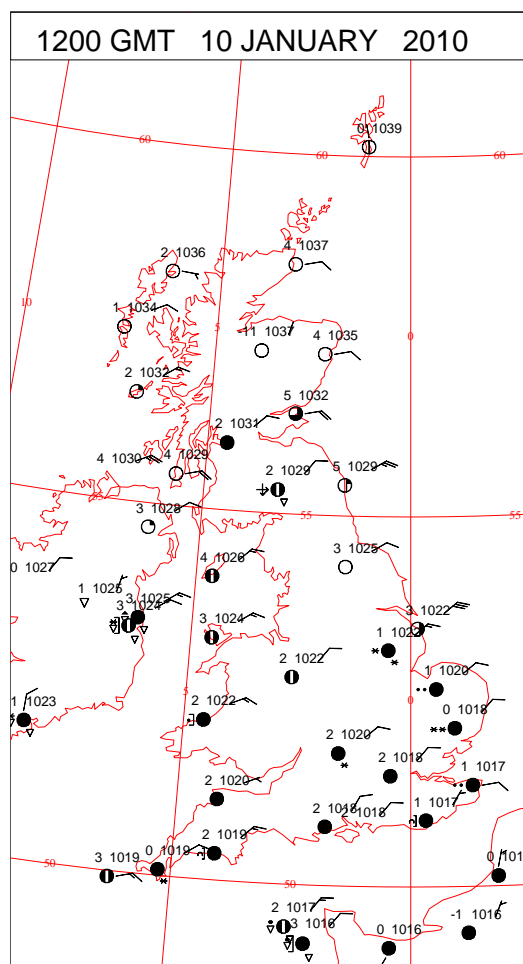

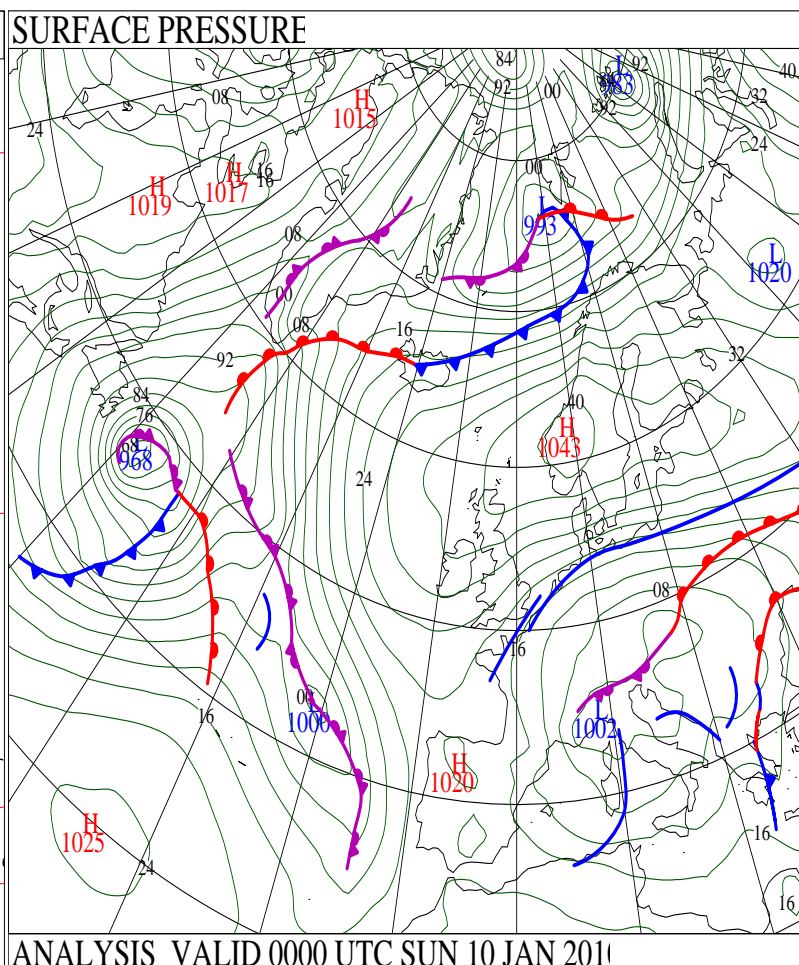

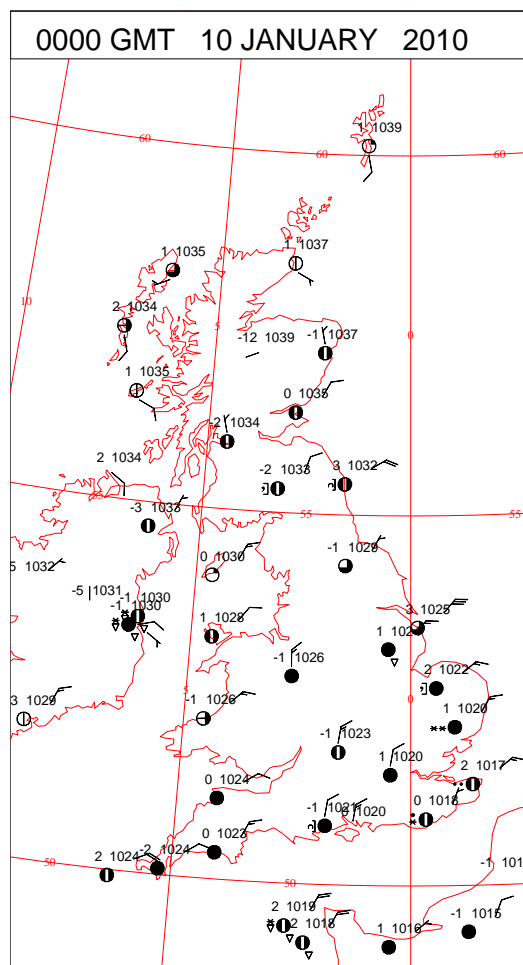

SIGNIFICANT WEATHER

0600 GMT 09 JANUARY 2010	SIG WEATHER	1200 GMT 09 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Saturday 09 January 2010.</p> <p>The very cold weather continued with overnight temperatures again falling well below freezing. The lowest temperatures were recorded across parts of the Highlands and Cumbria. Snow showers persisted in eastern parts of the U.K. throughout the night.</p> <p>Through the day snow showers continued in many eastern areas, spreading to central parts at times, although these became mostly light through the day. Across the far south-east snow showers merged to give longer periods of snow, with fresh accumulations across Kent and East Sussex. There were also persistent sleet and snow showers in the Irish sea which pushed across Northern Ireland for a time.</p> <p>Strengthening north-easterly winds became a significant feature, especially across southern and south-eastern parts. The winds caused fresh as well as lying snow to drift.</p> <p>Western areas saw plenty of sunshine, but it remained very cold with many inland areas again failing to see temperatures rise above zero.</p>
				<p>EXTREMES</p> <p>Highest Maximum: 4.6 Boulmer, Northumberland</p> <p>Lowest Maximum: -2.9 Castlederg, Tyrone</p> <p>Lowest Minimum: -18.2 Tulloch Bridge, Inverness-Shire</p> <p>Lowest Grass Minimum: -19.9 Eskdalemuir, Dumfriesshire</p> <p>Most Rain: 9.2 Boulmer, Northumberland</p> <p>Most Sun: 7.6 Camborne, Cornwall</p>

SIGNIFICANT WEATHER

0600 GMT 10 JANUARY 2010	SIG WEATHER	1200 GMT 10 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Sunday 10 January 2010.</p> <p>It was another cold night with temperatures falling below freezing across the U.K., with the coldest temperatures in the Highlands of Scotland.</p> <p>During the early hours of the morning there were outbreaks of snow in Wales and southern and central England. These were mainly light and scattered but they did continue throughout the day, becoming more persistent at times. This eased by the end of the afternoon, with only isolated flurries of light snow reported during the evening.</p> <p>There was also snow in eastern England, although this turned increasingly to rain or sleet during the day. By the evening the outbreaks of snow had pushed further north, with some moderate snowfall on the eastern slopes of the Pennines.</p> <p>In contrast to England and Wales, Scotland and Northern Ireland had a much drier day with some sunny periods. It was a windy day, especially across eastern parts of the U.K., with the strongest winds seen along eastern coasts of England and Scotland.</p> <p>It remained cold, with maximum daytime temperatures across the U.K. below the seasonal average.</p>
1800 GMT 10 JANUARY 2010	SIG WEATHER	0000 GMT 11 JANUARY 2010	SIG WEATHER

SIGNIFICANT WEATHER

0600 GMT 12 JANUARY 2010	SIG WEATHER	1200 GMT 12 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Tuesday 12 January 2010. It was another cold night across Scotland with temperatures falling well below freezing, although temperatures were generally less cold than of late. Many areas had a lot of cloud with a strengthening south-easterly wind.</p> <p>During the day, a band of rain, sleet and snow slowly moved north-east across south Wales and south-west England, accompanied by gale force gusts in far south-west coastal areas. Some heavy rain fell across Cornwall and the Isles of Scilly, but as the rain band moved further north-east it fell as snow across the moors and hills, and as a mixture rain and sleet at lower levels.</p> <p>The snowfall caused significant disruption to transport across parts of the south-west during the 'rush hour' with strong winds also causing lying snow to drift back onto previously cleared surfaces.</p> <p>It was cloudy and mostly dry for central parts of the U.K., with outbreaks of rain, sleet or snow across parts of the north-east.</p> <p>It was another cold day with maximum temperatures around or just below the seasonal average.</p>
1800 GMT 12 JANUARY 2010	SIG WEATHER	0000 GMT 13 JANUARY 2010	SIG WEATHER

SURFACE REPORTS

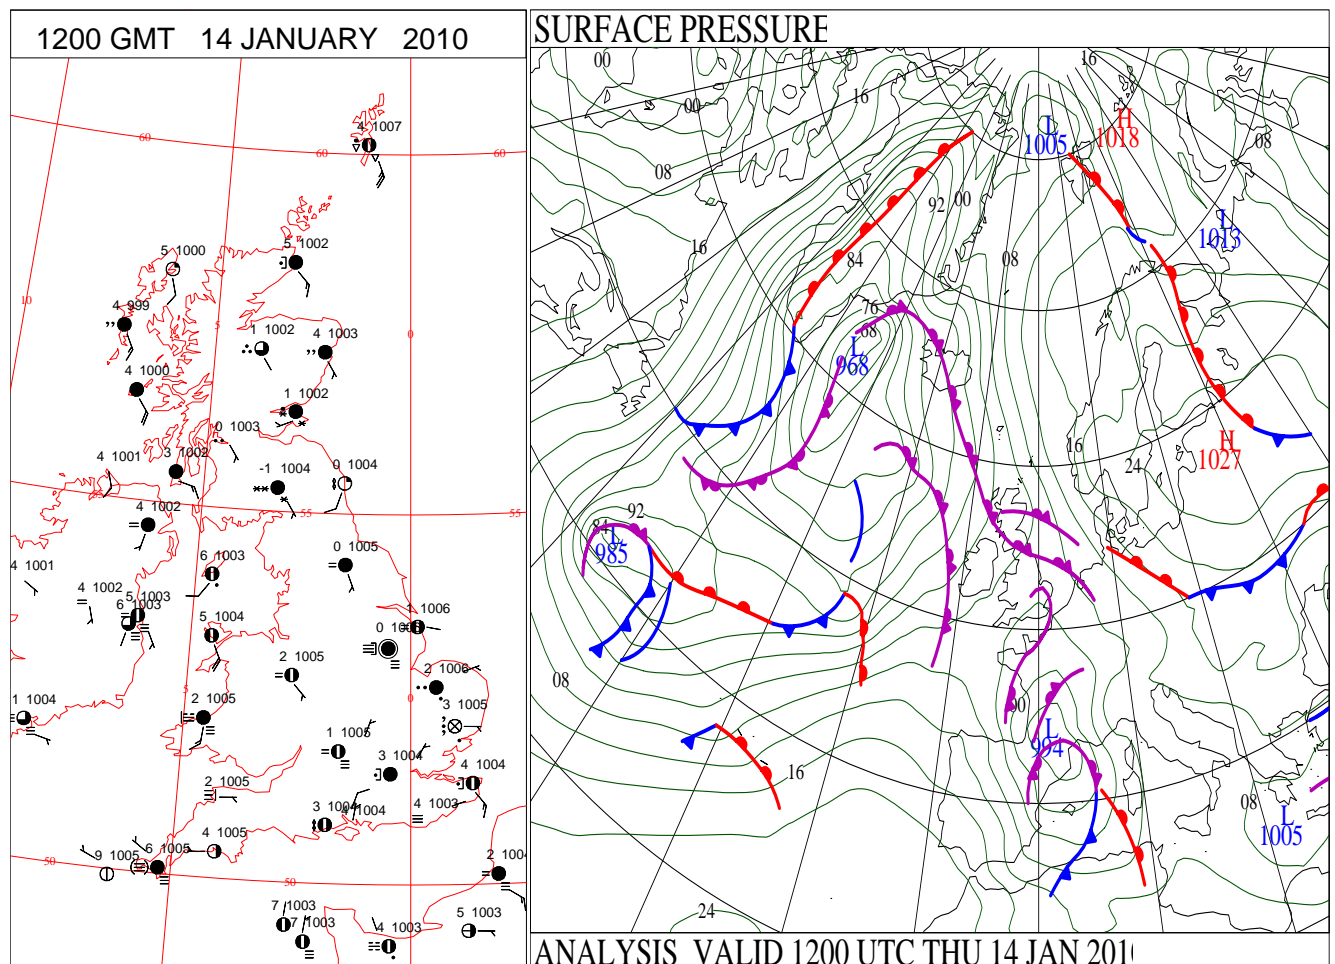

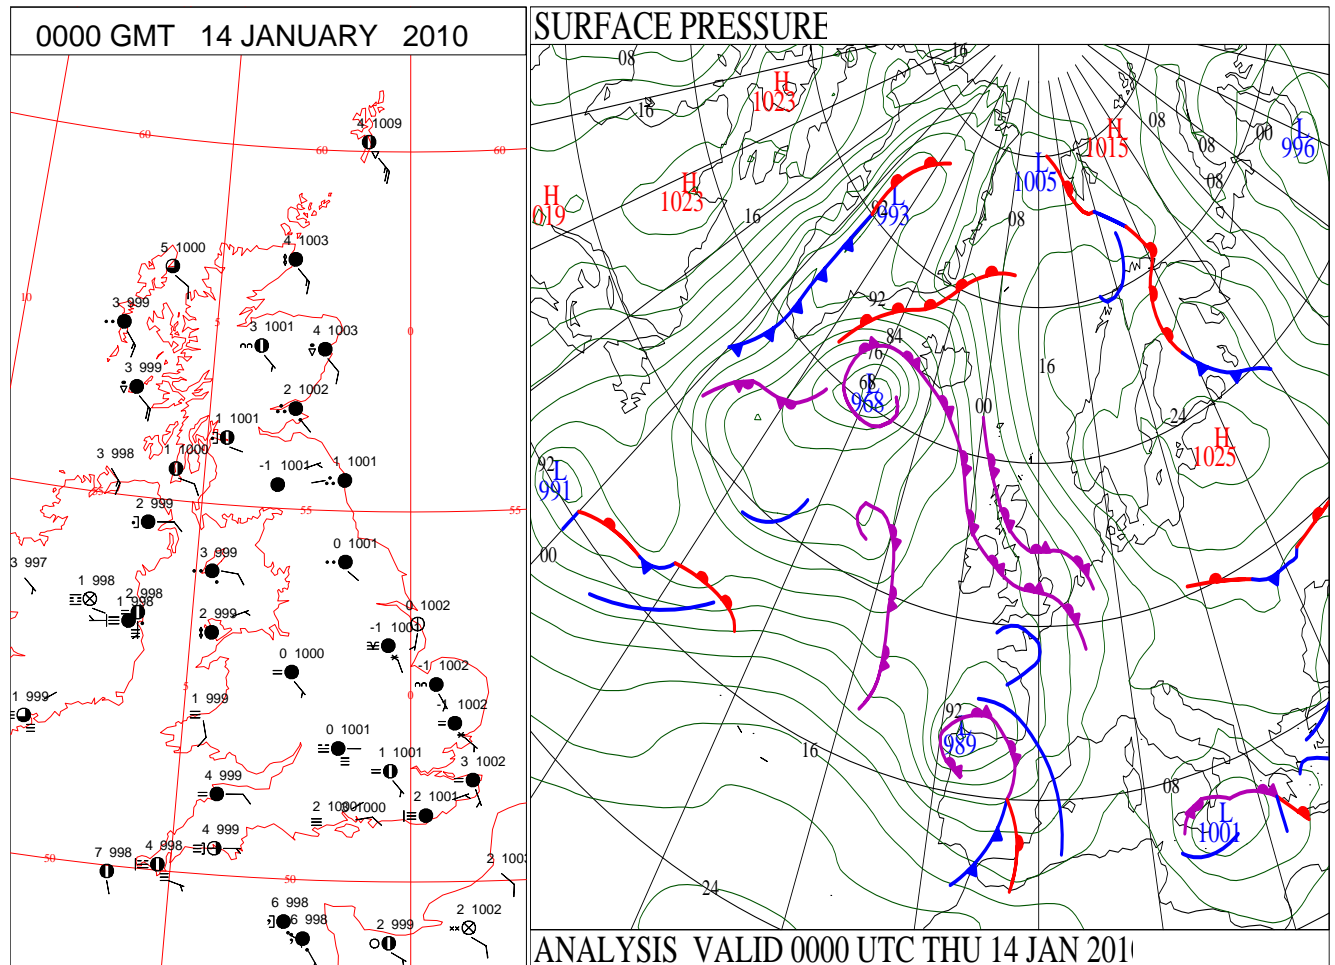

SIGNIFICANT WEATHER

0600 GMT 13 JANUARY 2010	SIG WEATHER	1200 GMT 13 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Wednesday 13 January 2010. During the early hours, a band of sleet and snow edged north-eastwards across Wales, and southern and western parts of England. Several centimetres of fresh snow accumulated in places causing some disruption to travel, and there was drifting snow on exposed higher ground in brisk south-easterly winds. Northern Ireland also had some rain or sleet, with snow on higher ground, but many other areas were dry with some frost and ice. During the day, the band of sleet and snow continued to edge north-eastwards across England and Wales, turning to rain and drizzle in places. A few centimetres of fresh snow accumulated locally. Some freezing rain was reported in parts of eastern England during the morning, giving localised icy conditions. Northern Ireland and parts of Scotland also had some fresh snow in places, mainly on the higher ground.</p>
1800 GMT 13 JANUARY 2010	SIG WEATHER	0000 GMT 14 JANUARY 2010	SIG WEATHER	<p>It was another cold day in general, with temperatures at or just below the seasonal average, although temperatures were slightly above normal in the far south-west.</p> <p>EXTREMES Highest Maximum: 10.7 St Marys Airport, Isles Of Scilly Lowest Maximum: -1.0 Bingley No 2, West Yorkshire Lowest Minimum: -1.8 Little Rissington, Gloucestershire Lowest Grass Minimum: -1.9 Kinloss, Moray Most Rain: 18.4 Herstmonceux, East Sussex Most Sun: 5.6 Jersey Airport, Jersey</p>

SURFACE REPORTS

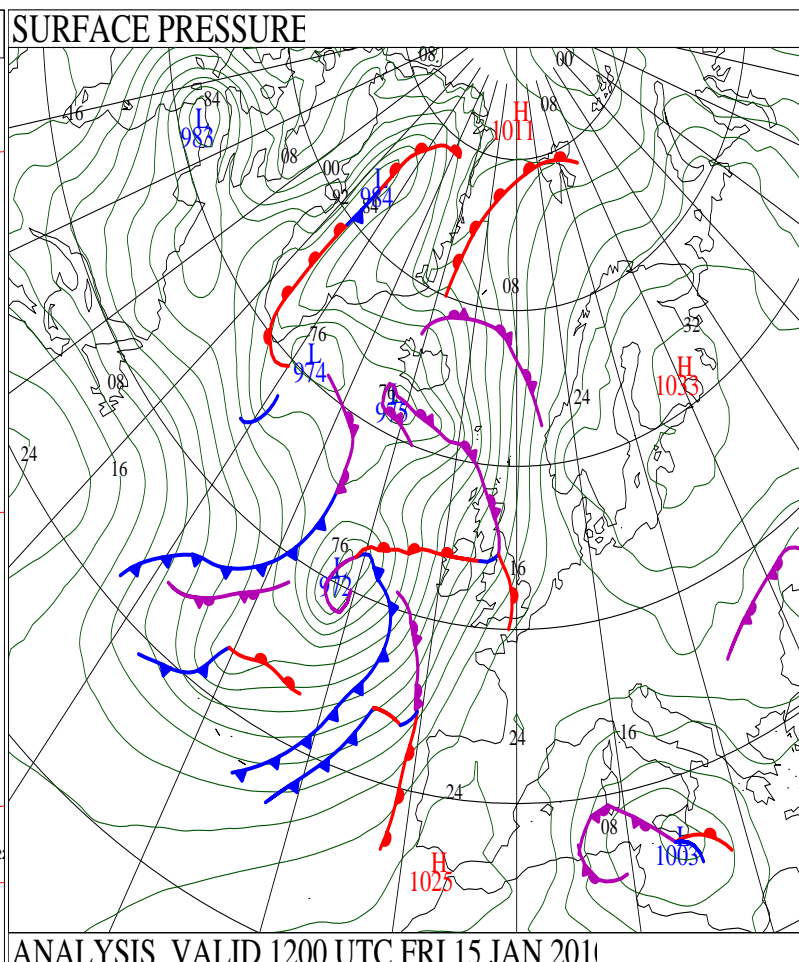

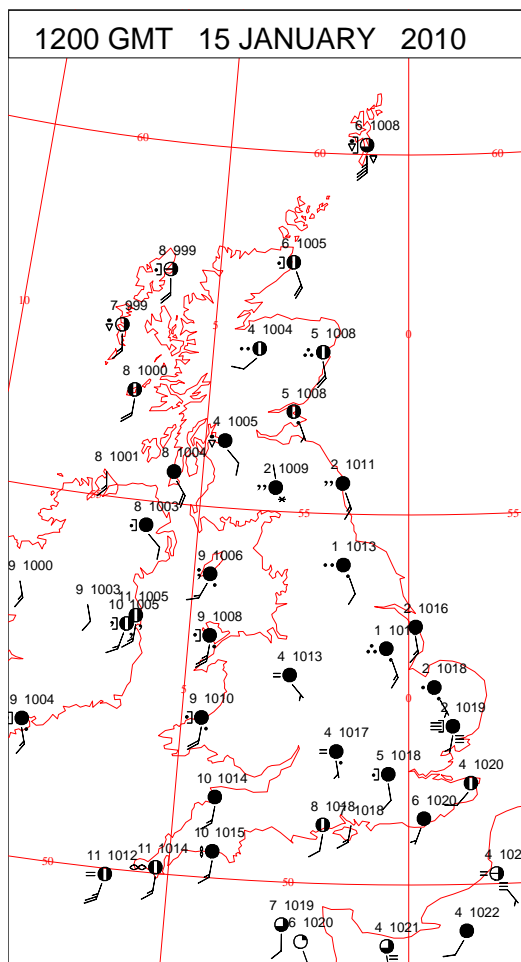

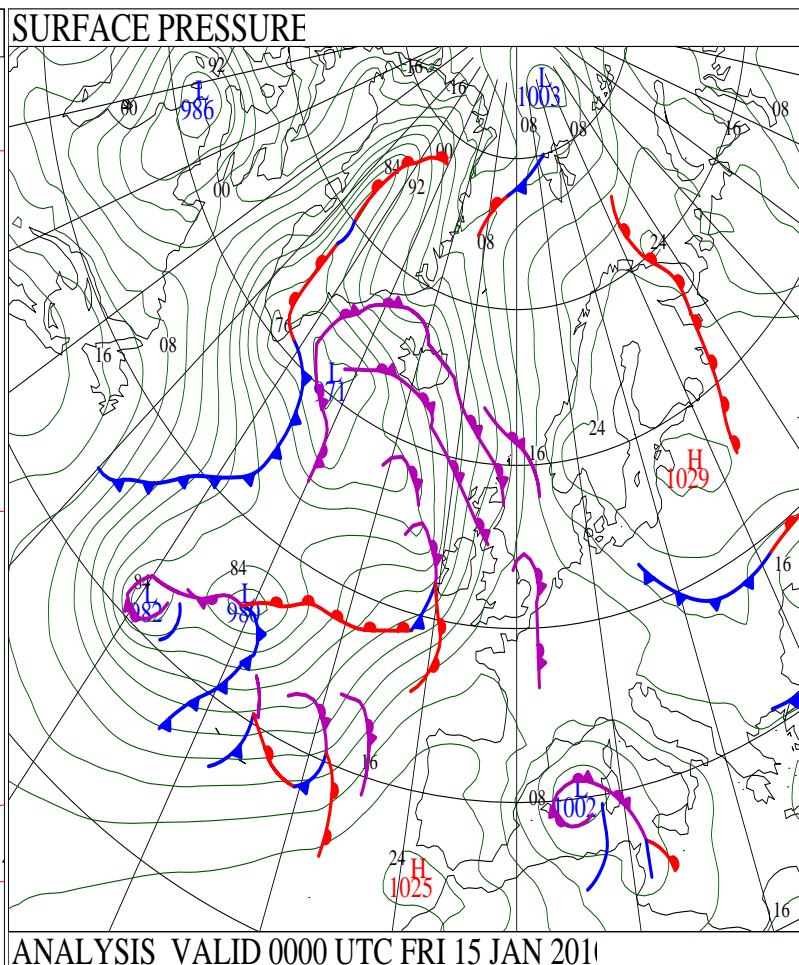

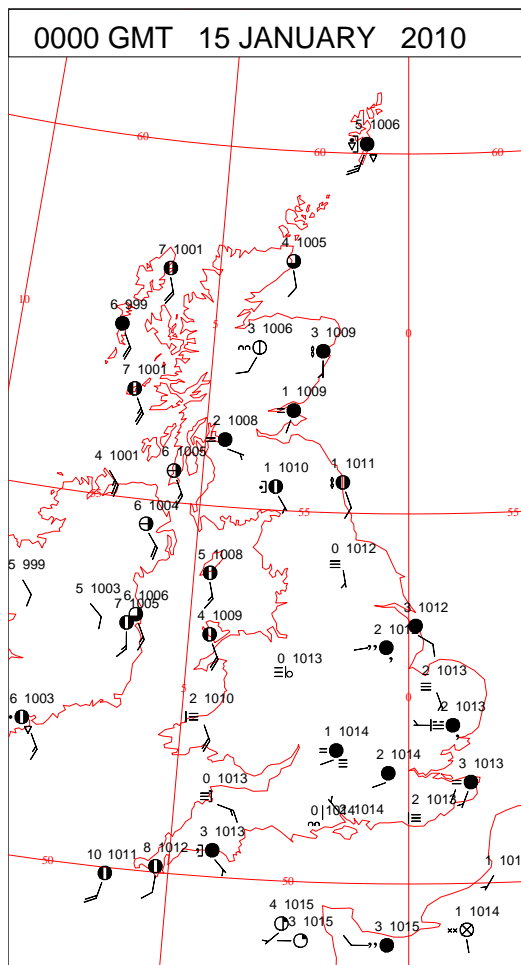

SIGNIFICANT WEATHER

0600 GMT 20 JANUARY 2010	SIG WEATHER	1200 GMT 20 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Wednesday 20 January 2010. A couple of bands of rain spread from the south-west overnight, producing some heavy rain in places, especially parts of south-west England. The rain spread north-eastwards during the early hours, and turned to sleet and snow over parts of south-east Wales, south-west Midlands, the West Country and also parts of southern England in the morning.</p> <p>Rain continued to affect areas from north-west Scotland, through Wales, and into south-east England, but weakened during the day.</p> <p>By the afternoon, the far south-west of England saw some drier weather, and even some sunshine, as the rain weakened and cleared to the east.</p> <p>The remaining eastern parts of the country were drier but rather cloudy, with a few scattered showers spreading inland from the North Sea at times, affecting eastern parts of Scotland in particular. A few showers turned to sleet or snow over higher ground.</p> <p>Maximum temperatures were close to or slightly below the seasonal average.</p>

SURFACE REPORTS

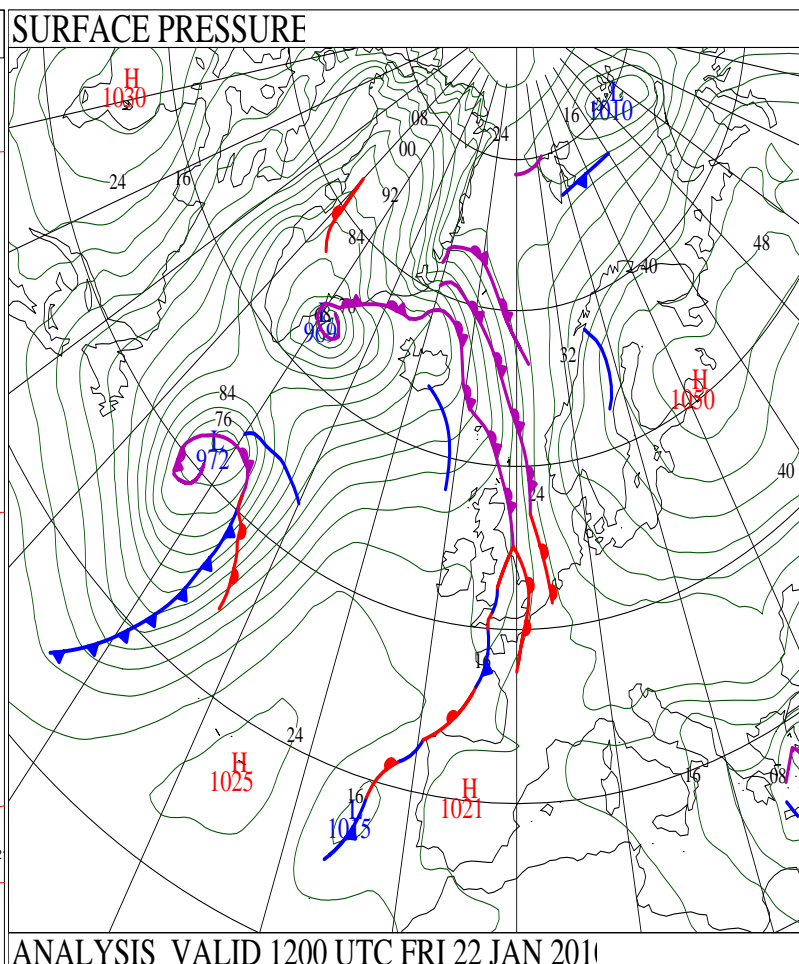

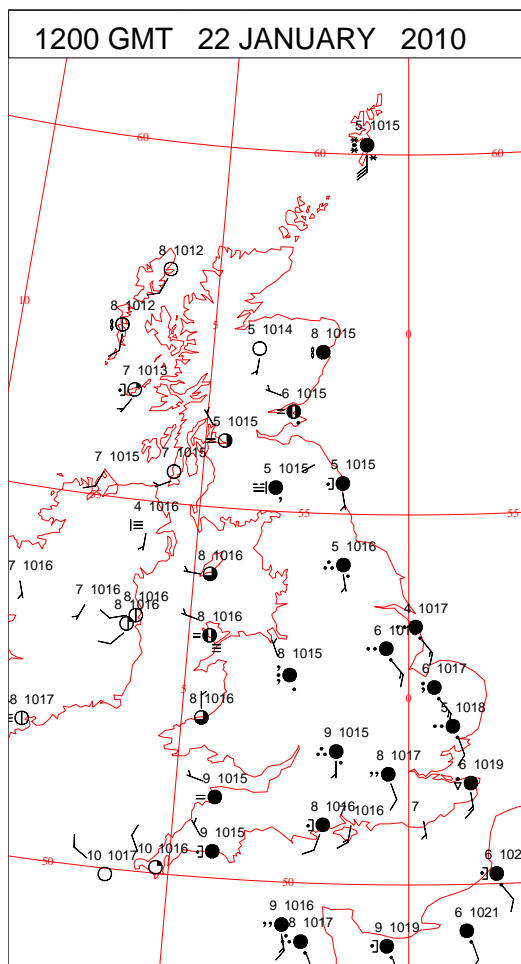

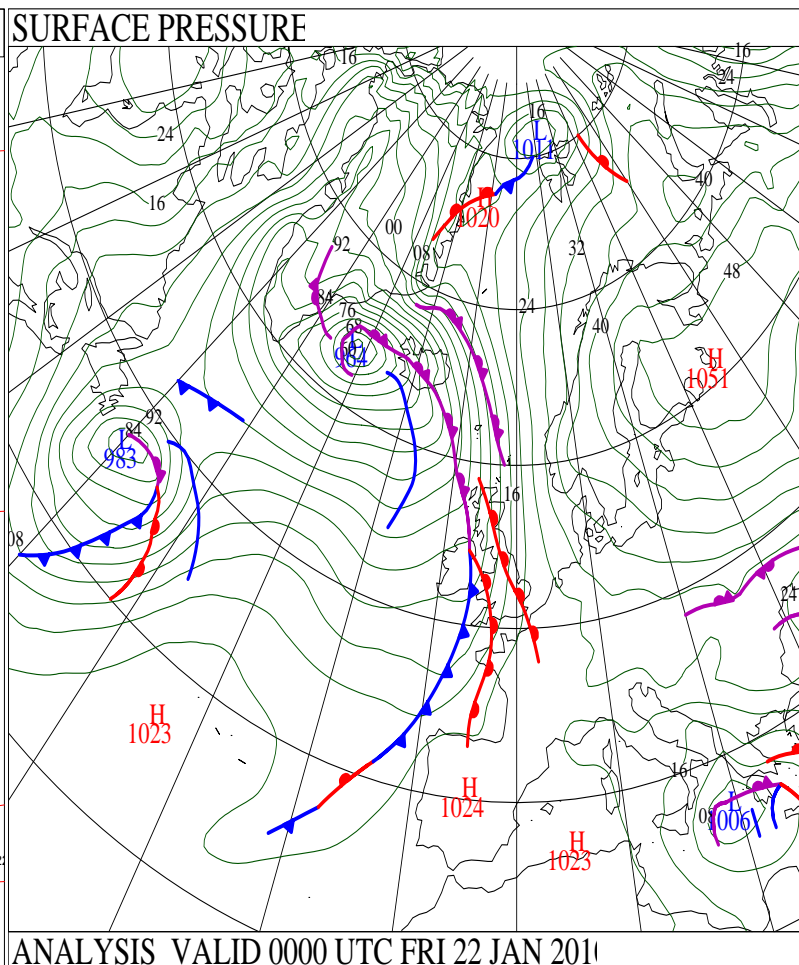

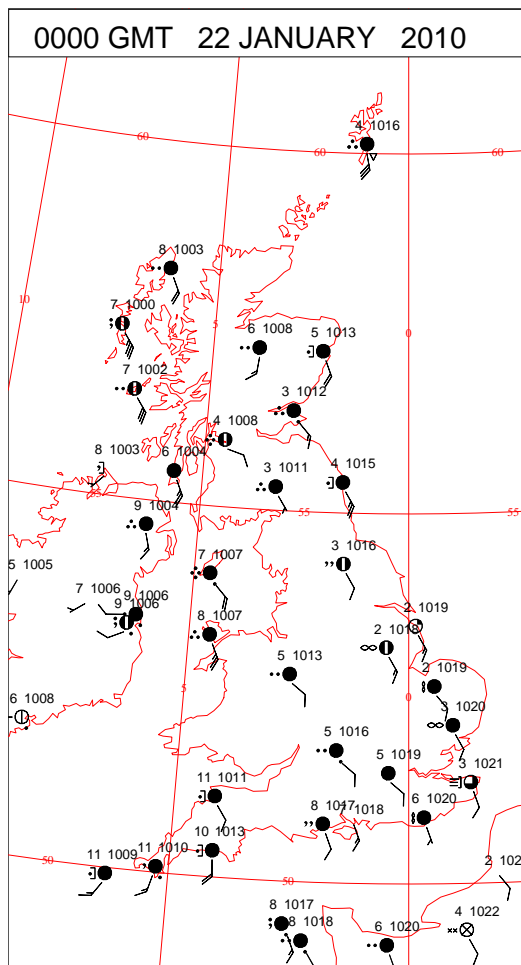

SIGNIFICANT WEATHER

0600 GMT 25 JANUARY 2010	SIG WEATHER	1200 GMT 25 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Monday 25 January 2010. An area of high pressure centred over Scandinavia spread over the U.K., bringing relatively settled but rather cloudy conditions to most places. Rain fell in some eastern parts of the U.K. overnight, and there were showers in Wales and south-west England, but these had mostly cleared by dawn. Isolated outbreaks of rain continued in and around London and the south-east. Most parts of the U.K. remained dry for the rest of the day but were rather cloudy, especially in eastern counties where there was occasional rain, sleet or snow. The best of any bright and sunny spells were found in central and southern England and Wales, with some longer sunny periods in Northern Ireland. During the evening there were further outbreaks of light rain across parts of the U.K., these continuing into the night in some places. Temperatures were held below average under the extensive cloud in many parts, but did rise to near the average on the southern and south-western coasts of England, and the far west of Wales.</p>

SIGNIFICANT WEATHER

0600 GMT 27 JANUARY 2010	SIG WEATHER	1200 GMT 27 JANUARY 2010	SIG WEATHER	<p>Summary of UK Weather for Wednesday 27 January 2010. A cold night across the south with a widespread air frost. It was a cloudier night across the north with some patchy rain, this spread south overnight. As cloud increased later in the night across southern parts it produced a few spots of light rain and drizzle, which locally fell as freezing drizzle across parts of East Anglia for a time.</p> <p>Another band of thicker cloud and rain moved across Scotland during the morning, and then moved south through the day to affect most parts, although precipitation became mainly light and patchy. This band cleared the south coast during the evening.</p> <p>It became drier and brighter across Scotland later in the day, but occasional showers, turning wintry at times, soon followed across northern parts.</p> <p>Winds strengthened from the north through the day, becoming moderate or fresh north-westerly for most, and locally strong in exposed locations.</p> <p>Maximum temperatures were mostly close to the average, or even mild across the north. Across southern areas the maximum temperatures occurred mostly during the later afternoon and evening.</p>
