THURSDAY
1 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

Rain already across southern England, the Midlands, Wales and Northern Ireland extended northeastwards overnight to reach the central lowlands of Scotland by dawn. The rain was accompanied by a strengthening southeasterly wind, reaching gale force in south Wales and southwest England. The strongest gust was reported from Berry Head, 72 knots.

The rain gradually extended to the remainder of Scotland leaving most parts of the United Kingdom with a wet and windy morning, much of the rain being heavy. Brighter conditions soon reached the far southwest and by midday it had brightened up over parts of Northern Ireland, Wales and the Midlands. This improvement, together with a slight moderation of the wind, then followed to the rest of England and southwest Scotland by evening. Heavy showers soon developed and thunderstorms were reported over Northern Ireland and eastern England.

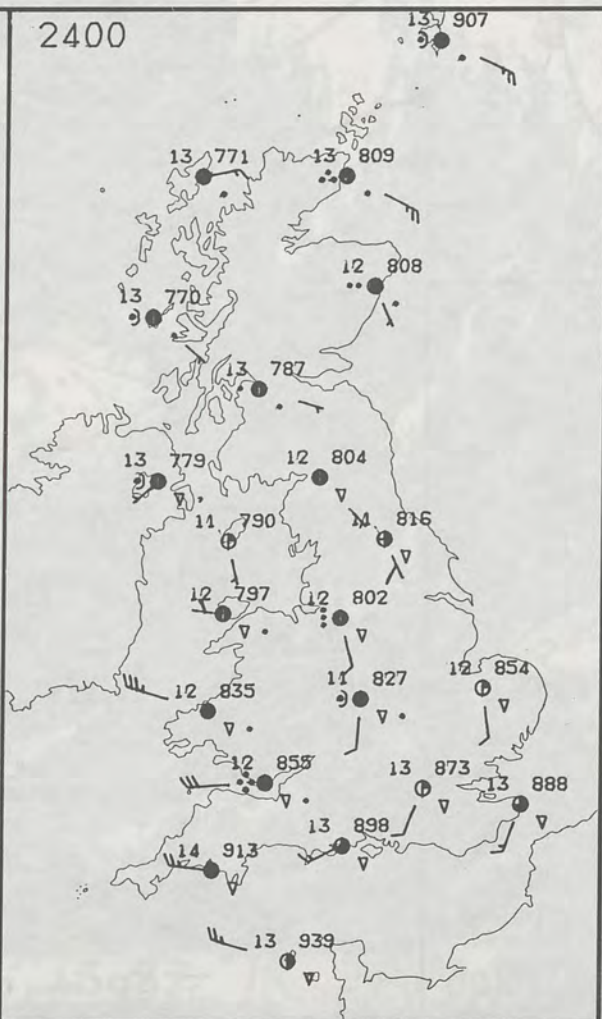

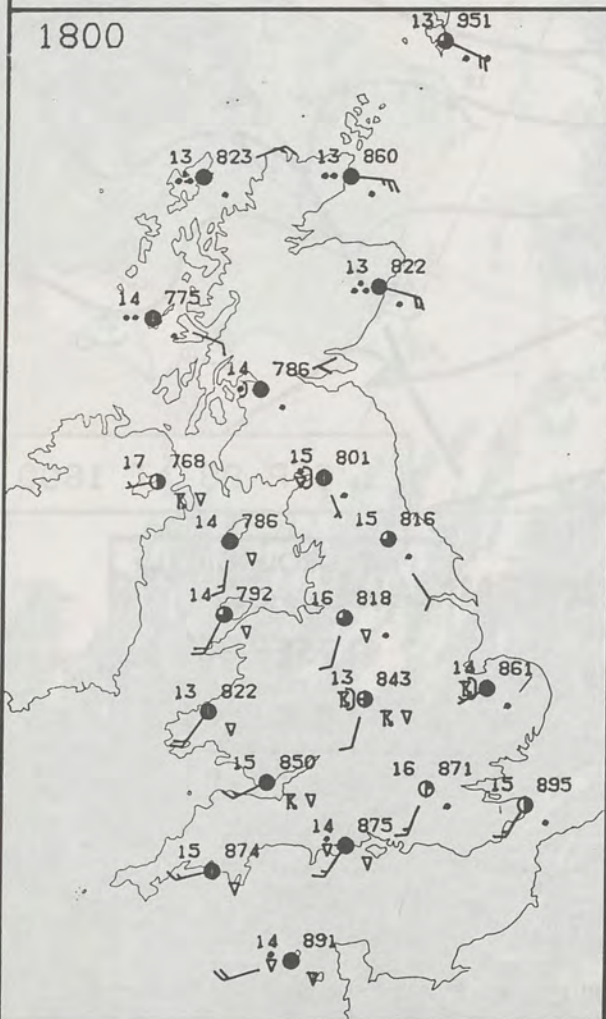

It was rather cool everywhere.

FRIDAY
2 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

There were outbreaks of rain or showers overnight, some of them heavy in the west. Some eastern districts stayed dry.

During the day, southernmost districts were quite sunny, though scattered showers moved east, turning thundery, especially as they reached the southeast in the early afternoon.

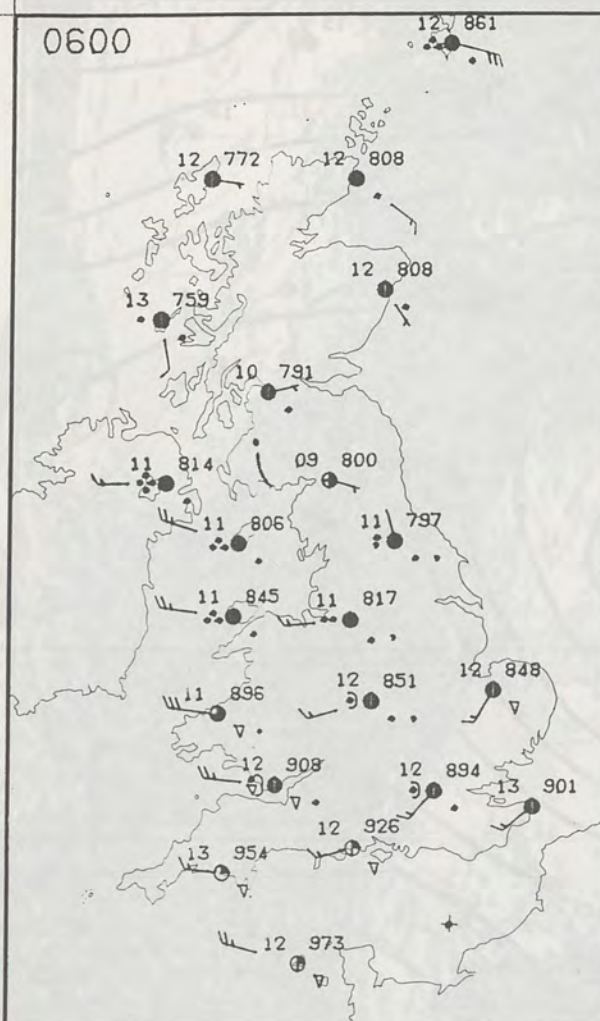

The northern half of Wales and England, Northern Ireland and southern Scotland were mostly cloudy with showery rain, prolonged in places, especially around the northern Irish Sea. Some of the more sheltered eastern areas were bright at times, and had few showers. Northern and central Scotland were bright with a few showers.

Most places were cool and windy, however, parts of central and northern Scotland were quite warm for a time with only light winds.

SATURDAY
3 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

An area of rain moved east over the English Channel and northern France overnight; the Channel Islands and areas bordering the south coast of England were affected by it. Elsewhere, western regions had showers, but most of eastern Britain had a fine night.

Much of England, Wales and eastern Scotland had a dry, bright day, and many places were sunny. However there was rather a lot of cloud at times in southern England with some showers, chiefly in the southeast in the morning. There were also a few showers in northern England and eastern Scotland.

Northern Ireland, western and northern Scotland had quite a few showers, though still with sunny spells. However, northwest Scotland had some more persistent rain.

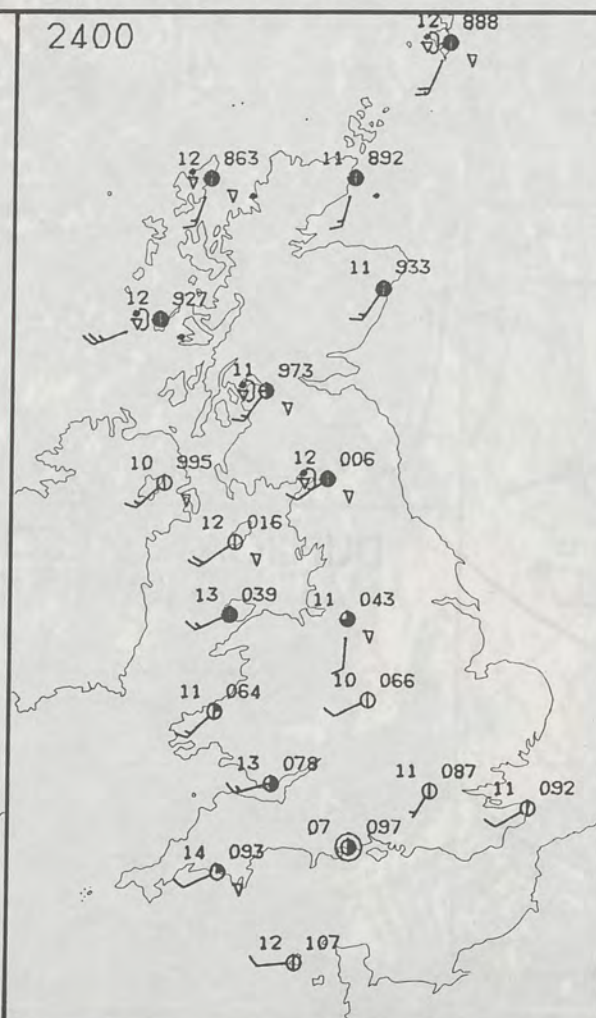

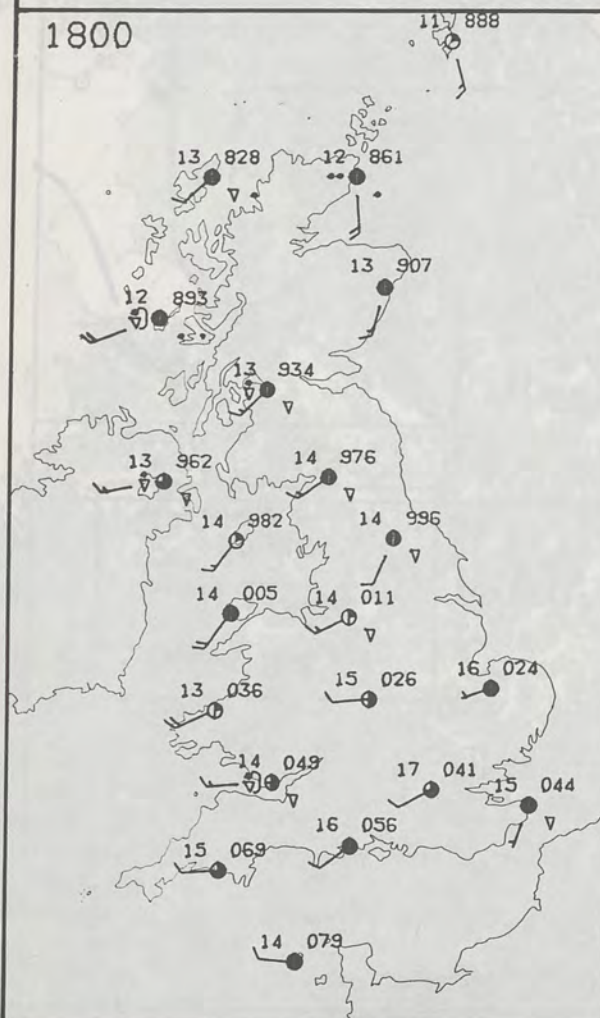

It was cool and windy in the north and west, especially in northwest Scotland. Temperatures were mostly rather below normal in central and eastern England, though with lighter winds than on Friday. The temperature reached normal values in East Anglia and Lincolnshire.

SUNDAY
4 SEPTEMBER 1988SUMMARY
OF
BRITISH WEATHER

Much of England and Wales had a dry night with largely clear skies but there were a few showers near western coasts of Britain.

Central and southern counties had a dry day with sunny periods, the best of the sunshine around southwestern coasts.

Over Wales and northern parts of England there were sunny spells and scattered showers.

Much of Scotland and Northern Ireland had a day of sunshine and showers with the most frequent showers in the northwest. Eastern Scotland was dry with good sunny periods.

Temperatures were NEAR THE early September average.

MONDAY
5 SEPTEMBER 1988

SUMMARY OF BRITISH WEATHER

There was some heavy overnight rain across the Borders with Eskdalemuir reporting hail and thunder during the early hours; thereafter there were only scattered showers.

It was a reasonable day for many districts with temperatures slightly above the early September average in most areas.

It was a gloomy start to the day in southeast England with outbreaks of rain and drizzle and a lot of low cloud from a shallow wave that ran eastwards along the Channel, though the effect of this was short-lived - most areas had brightened up by midday.

The sunniest parts of the UK were in the west and northwest, and sheltered parts of eastern Scotland and northeast England had a sunny, warm day too.

TUESDAY
6 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

It was a dry, bright day over much of the southern half of England and Wales - the sunniest spots being along the North Kent coast; it was sunny along the south coast too.

Unfortunately it was not so sunny in the southwest where fog and low cloud was rather persistent - in fact thick enough at times for a little drizzle. It was rather dull too over much of Wales and northern England.

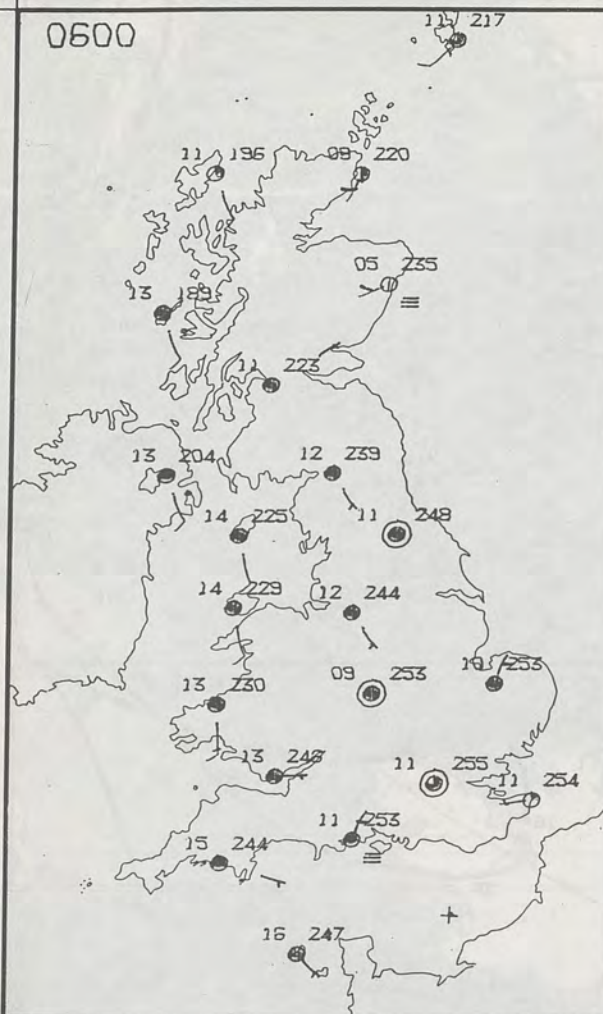

It was overcast and wet over Northern Ireland and the south-western half of Scotland with heavy rain in many places during the late morning and early afternoon, though eastern and north-eastern Scotland had a bright start to the day.

Much of England and Wales had a warm or very warm day, though most western areas together with Scotland and Northern Ireland had temperatures near normal.

WEDNESDAY
7 SEPTEMBER 1988SUMMARY
OF
BRITISH WEATHER

England and Wales had a clear night with the exception of patchy cloud around southwestern coasts but it did become very misty with some fog for a time around dawn. Northern Ireland remained cloudy with occasional drizzle though it was a warm night.

The more persistent rain in Scotland became largely confined to the Northern and Western Isles as cloud became broken in the east. During the day these same eastern and many southern parts had a fine, sunny day with very warm temperatures in the Moray Firth. The Northern Isles and western parts remained cloudy with further light rain or drizzle and thunderstorms reached southwest Scotland during the early evening spreading northeast and eastwards giving heavy rain in places especially northwest Scotland and the Western Isles.

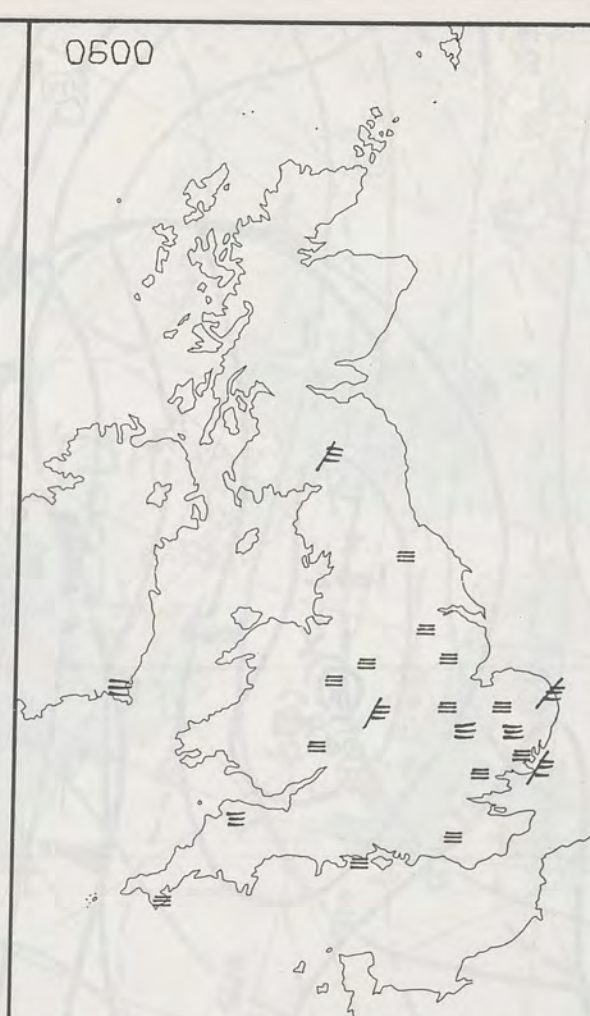

Northern Ireland soon became dry with some warm sunshine but here too storms occurred by the late afternoon.

Over England and Wales the mist soon gave way to a very warm, sunny day and a return to summer weather, however, thunderstorms broke out over Wales, the Isle of Man, western parts and extreme northeast England during the evening.

THURSDAY
8 SEPTEMBER 1988SUMMARY
OF
BRITISH WEATHER

Thundery outbreaks of rain affected many western and northern districts overnight, but the southeast had a fine night.

Over Scotland and Northern Ireland the weather generally improved during the day, after a wet start in many places, still with a few thunderstorms during the morning and early afternoon. Most districts had a drier afternoon with a little sunshine, though it stayed mostly damp and misty in the Scottish Isles.

Central southern and southeast England had a mostly sunny day. There were thundery showers in parts of Wales, the North Midlands and northern England in the morning; it became mostly dry in the afternoon, but stayed fairly cloudy. The South Midlands and East Anglia had a fair amount of sunshine, but an hour or two's cloud and a brief shower or two moved east across these areas during the day. Southwest England had some misty drizzle, though it was bright at times to the east of high ground.

Some southeastern areas were very warm again, and it was generally warm, especially in the east and south. It was rather cool in Cornwall and parts of northwest Scotland.

FRIDAY
9 SEPTEMBER 1988SUMMARY
OF
BRITISH WEATHER

The night was generally dry and fairly clear. By morning, there were a few patches of mostly light rain near some northwestern coasts, and the most westerly and northerly regions of Scotland had a cloudy day with some drizzly rain.

Most of the rest of the British Isles had a dry day, and although there were some large areas of cloud, most places had sunny spells. The best of the sunshine was in the Midlands, central southern and southwest England and south Wales. The extreme southeast of England stayed generally cloudy.

A patch of light rain affected parts of southwest Scotland and across the border to Carlisle and Newcastle in the late afternoon or early evening.

It was rather cool in the northwest. Elsewhere temperatures were generally near normal and it was warm or very warm over much of the southern half of England and Wales.

SATURDAY
10 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

England and Wales were dry overnight with clear spells and some early morning fog patches which cleared by mid-morning.

Southern counties of England including the South Midlands and East Anglia than had a dry bright day with sunny spells, the best of the sunshine in the Channel Islands.

The northern half of England and most of Wales were rather cloudy with some rain in places, chiefly in the afternoon and evening.

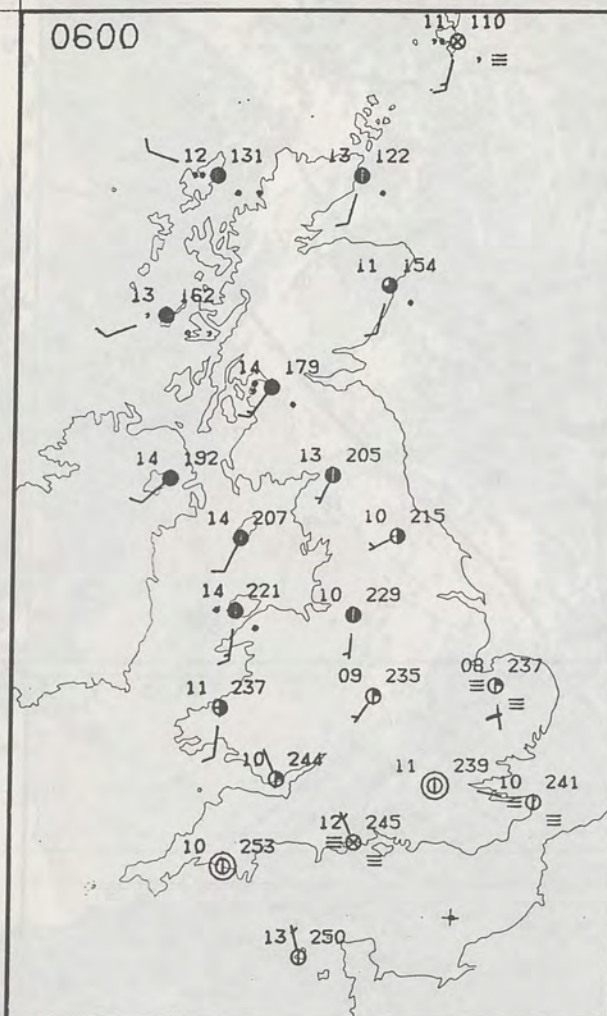

Scotland and Northern Ireland were also cloudy with patchy outbreaks of rain, mostly light but there were some periods of heavier rain over Northern Ireland and the Isle of Man in the early evening.

It was a very warm day over the southeastern half of England, elsewhere temperatures were near or rather above average.

SUMMARY
OF
BRITISH WEATHER

Wales, northern and western parts of England were cloudy overnight with some rain in places but daylight hours were dry and mainly sunny.

Over the southeastern half of England after a clear night and a bright start in Kent, it became cloudy during the morning with some light rain or drizzle in places. Brighter weather with sunny spells spread from the northwest reaching Kent in mid-afternoon.

Scotland and Northern Ireland had sunny periods but there were also showers, chiefly in the north and west. During the evening more general cloud and rain spread quickly east across Scotland

Temperatures were near normal almost everywhere.

PLOTTED SURFACE OBSERVATIONS

MONDAY
12 SEPTEMBER 1988

**SUMMARY
OF
BRITISH WEATHER**

Overnight a small but quite vigorous depression crossed Scotland and introduced a cool northwesterly airstream to all districts. The cold front associated with this depression swept southeastwards across the country clearing the Straits of Dover late this afternoon. It was windy in the north and west, particularly over coasts and hills.

The depression also brought a wet night to western and northern Scotland, with Cape Wrath in the far northwest recording more than an inch of rain. The general rain area moved on into the North Sea. The cold front brought showers to most areas, the heaviest being mostly in Scotland, although some did penetrate through the Cheshire Gap. There were good sunny periods in most places with Northern Ireland coming off best.

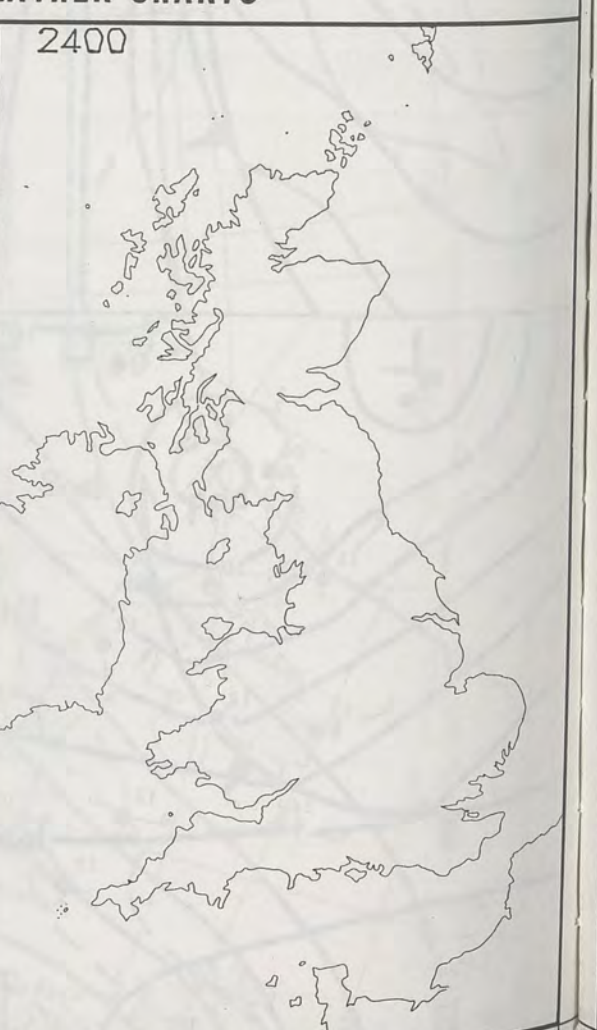

The wind made it distinctly cool in most places, with temperatures near or rather below average.

TUESDAY
13 SEPTEMBER 1988SUMMARY
OF
BRITISH WEATHER

It was a cool, showery day for most districts as the whole of the country lay in the path of a fresh northerly airstream. It was quite a windy day, particularly in the west.

It was also showery in the west, more especially overnight where bands of showers off the Irish Sea brought a wet night to North Wales and to northwest England.

Later in the day a further feature in the northerly flow brought showers and a few thunderstorms to central and eastern districts and later on to southern areas.

It was a reasonably bright day, with most areas seeing something of the sun, the best totals being in the west and Northern Ireland.

It was a cool day in most places, although one or two places in the north had near normal temperatures.

WEDNESDAY
14 SEPTEMBER 1988SUMMARY
OF
BRITISH WEATHER

Eastern, central and northern counties of England, Northern Ireland, eastern and northern Scotland were mostly cloudy. There were some light showers in the north and east. A few areas did brighten a little, and near the south coast of Kent and parts of Sussex it was quite sunny.

However, the best of the sunshine was in Cornwall, Devon, parts of Wales and southwest Scotland.

It was mostly rather cool, though temperatures reached the seasonal normal in some of the sunnier spots. Conversely, some of the cloudier areas, particularly in central and eastern England, were cold, and it was windy in the southeast.

THURSDAY
15 SEPTEMBER 1988SUMMARY
OF
BRITISH WEATHER

It was a generally dry twenty-four hours with varying amounts of cloud across the country.

Northern Ireland and the Western and Northern Isles of Scotland were mostly cloudy throughout, with the odd spot of drizzle, whilst it was often quite damp and windy on Shetland.

Eastern and southern Scotland and northeast England had fairly clear skies throughout; the night was chilly with some frost, but the day became warm in places in the long sunny spells.

Central southern and southwest England, the Western Midlands, Wales and northwest England had cloudier intervals, but with spells of sunshine in most places during the day, though temperatures mostly stayed a degree or two below normal.

Southeast England had a fairly sunny morning,, but cloud over East Anglia and the East Midlands spread south later, and there were some showery bursts of rain to the east of the Greenwich Meridian, particularly during the evening. East Anglia had a cool day and it was less windy than on Wednesday.

FRIDAY
16 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

England and Wales had a largely dry twenty-four hours with clear then sunny spells. There were some large areas of cloud though drifting down on the north to northwesterly winds, and some north-facing coasts in particular were prone to this cloud. There were even a few spots of rain or drizzle in East Anglia, Kent and parts of Wales.

Northern Ireland stayed largely cloudy through the twenty-four hours but dry.

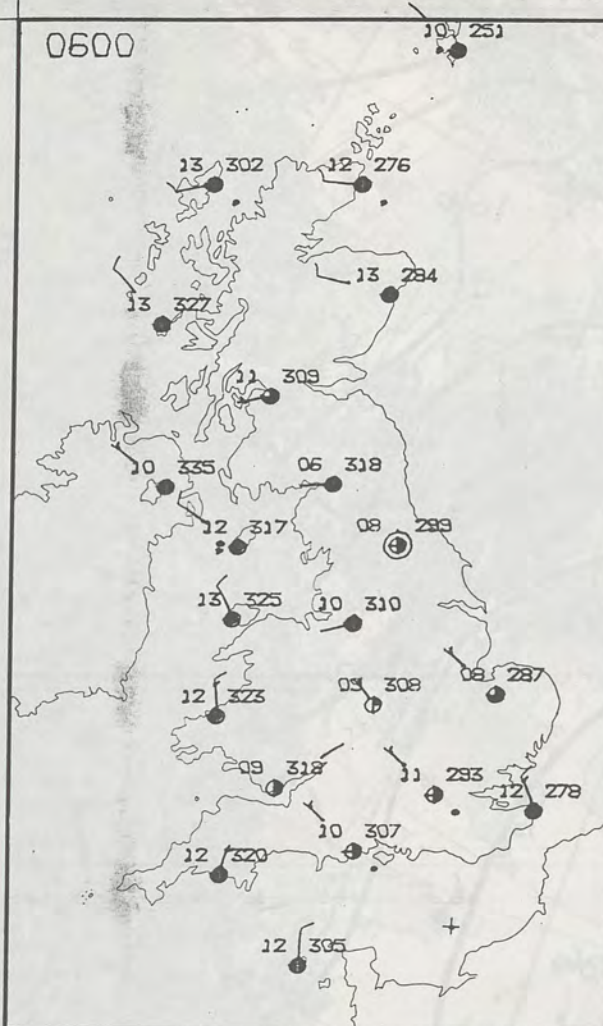

Southern and central Scotland also stayed dry and, during the day, fairly sunny. Northern Scotland was more cloudy though, and the Northern Isles in particular had occasional rain and drizzle. During the evening northern Scotland became mainly dry and the northwest largely clear.

Temperatures were generally a couple of degrees either side of average but one or two spots in the extreme southwest were cool, and parts of southeast Scotland were very warm.

SATURDAY
17 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

England and Wales had a largely dry 24 hours apart from the odd spot of drizzle. This drizzle was chiefly in East Anglia and Kent in the early morning. Cloud amounts were very variable and generally large but some places had long sunny spells, especially towards the southwest and in the far north of England.

Northern Ireland had another dry, mostly cloudy day but there was some afternoon sunshine in the north of the area, and most places became clear in the evening.

The far north and extreme west of Scotland stayed cloudy most of the day with a little drizzle, most of this in the Northern Isles. Elsewhere in Scotland it was quite sunny. During the evening northern Scotland remained cloudy with drizzle while southern and central parts were clear.

Temperatures were generally close to average, though it was on the cool side in the cloudier parts of Wales and central England.

SUNDAY
18 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

Northern England, the southern half of Scotland and Northern Ireland for a time had clear skies with some local ground frost and fog patches. Elsewhere it was mostly cloudy with some light rain or drizzle in the north of Scotland.

Northeast England and southeast Scotland had a mainly sunny day and over the rest of England and Wales cloud broke up to give some sunny spells. Near the coast of East Anglia, Cornwall and the west of Wales it was mostly cloudy.

Northern Ireland and western and northern Scotland were cloudy with occasional drizzle and in the far north it was windy.

Temperatures ranged from near normal in the northwest to slightly above in the south and east.

SUMMARY
OF
BRITISH WEATHER

Southern counties of England were clear overnight but with patchy fog in many places by the early morning followed by sunny periods. Eastern parts of England and Scotland were also dry and mainly sunny after a clear night.

Cloud over Wales and northwest England spread into the Midlands by the morning, but sunny spells developed by the afternoon in the Midlands.

The north and west of England and Wales with Northern Ireland and much of Scotland had a cloudy day with some light rain or drizzle in the far north.

It was a warm afternoon in the sunnier parts of the east and south but it was rather cool in the north and west.

TUESDAY
20 SEPTEMBER 1988SUMMARY
OF
BRITISH WEATHER

With rather static conditions in the overall weather pattern, there were some quite marked changes over relatively short distances. There were brighter spots, more particularly over coastal districts, the sunnier areas being the Channel Isles, South Wales, the West Country and eastern Scotland.

There was a wide range of temperatures; near normal in the sunnier spots of the southeast, along the south coast and over eastern Scotland, however, over a large part of the Midlands and northern England it was cool or very cool under very dull skies.

In the evening, cloud was thick enough for one or two spots of rain, though most of the British Isles had another dry day. There were spots of rain over Northern Ireland, western and northern Scotland. It was windy as well in the far north, with the westerly wind gusting to near gale force throughout the 24 hours.

WEDNESDAY
21 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

Another rather drab day for much of the country with most districts seeing little, if anything, of the sun. Areas that did were southern counties bordering the south coast, the Channel Isles and northeast Scotland.

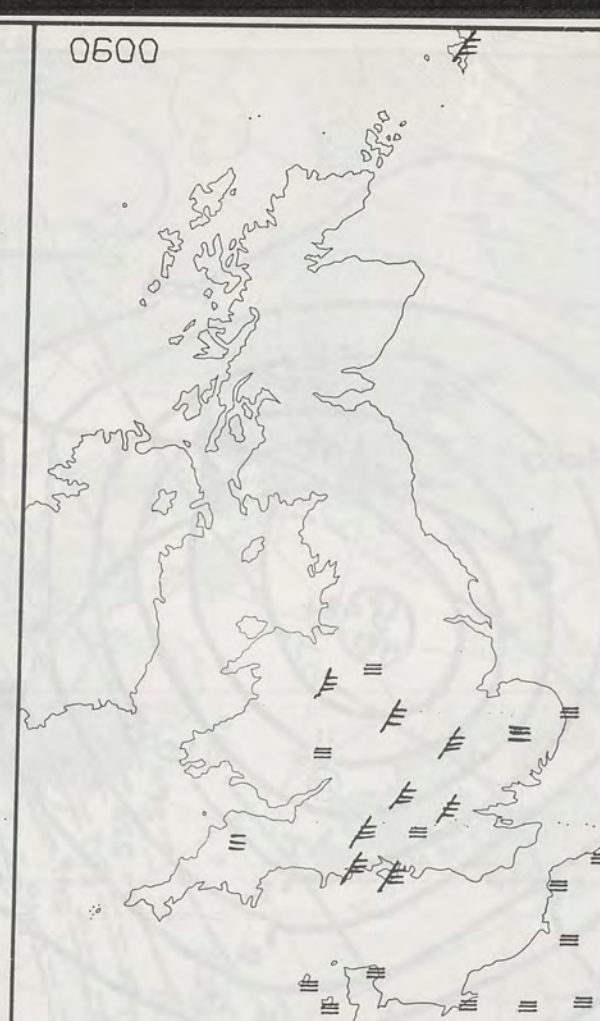

In the brighter spots along the south coast and parts of eastern Scotland afternoon temperatures were up to the mid-September average.

Thick overnight fog was responsible for much of the persistent low cloud over central southern England and the Midlands. This cloud and fog was deep enough for a little drizzle, but by and large it was another dry day over most of England and Wales. Over western and northern Scotland there were outbreaks of light rain and drizzle.

2400

THURSDAY
22 SEPTEMBER 1988SUMMARY
OF
BRITISH WEATHER

Many northern and western districts had a clear night, though with showers near coasts. It was mostly cloudy over most of England and Wales, and often damp and misty. Heavier outbreaks of rain developed over parts of southeast England towards dawn, and moved northeast across Essex, Suffolk and Norfolk during the first half of the morning. There were also some heavier bursts of rain in some western regions at the end of the night.

It was a fairly cloudy day over most of the British Isles, with showery outbreaks of rain. Some rather more persistent rain moved slowly east across Wales and western regions of England and Scotland during the morning and early afternoon, this area of rain then turning rather more showery as it came further east during the afternoon.

Nevertheless, although the character of the day country-wide was essentially showery, there was a lot of dry weather, and most places saw at least a little of the sun, especially in the afternoon, when some western districts were quite sunny.

Temperatures were mostly not far from normal, but it was rather warm in the southeast.

FRIDAY
23 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

Rain spread steadily eastwards across the British Isles during the early hours, and it became windy in the south and west. Clearer weather moved quickly east across most of Northern Ireland, Wales and England during the morning, though parts of eastern and northern England stayed fairly cloudy and showery. The rain was heavy at times in many places. Southern Britain had a good deal of sunshine from about mid-morning, with just an isolated shower or two. However it was very windy.

Most of Scotland had a cloudy day with rain or showers but it was mostly dry over a good part of northern Scotland, and drier, clearer weather spread from the southwest to most other districts by early evening.

Further rain spread across Northern Ireland in the evening, reaching parts of Wales, northwest England and western Scotland by midnight.

It was a rather cold day in most districts, but temperatures reached the seasonal normal over much of southern England.

24 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

During the night there were some clear spells at first but cloud, with rain or showers, spread through most regions. The heaviest rain crossed Northern Ireland, northern England and southern Scotland but had largely cleared by dawn.

During the day northern England, Northern Ireland and Scotland had a good deal of sunshine. There were scattered showers too but these became fewer and fewer as the day went on. The evening was largely clear, just a few showers in the Northern Isles.

Wales, the Midlands, East Anglia and southern England had a mostly cloudy day and evening, with outbreaks of rain or drizzle. Some of this rain was heavy in a band from south Wales to East Anglia. Parts of the south coast though, saw little rain until the evening.

Temperatures were generally in the rather cold category.

SUNDAY
25 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

Southern England, East Anglia, the Midlands and Wales had a cloudy night with patchy rain and drizzle. During the day there was further light rain or drizzle but many places were dry, especially in the afternoon. It stayed mostly cloudy though. The evening was cloudy with rain in north and west Wales.

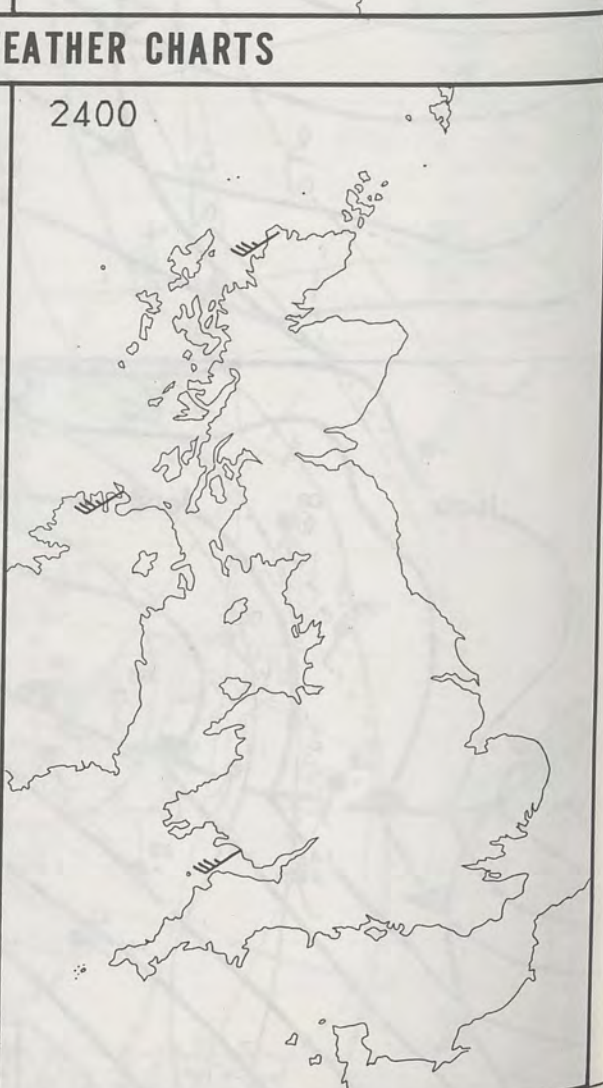

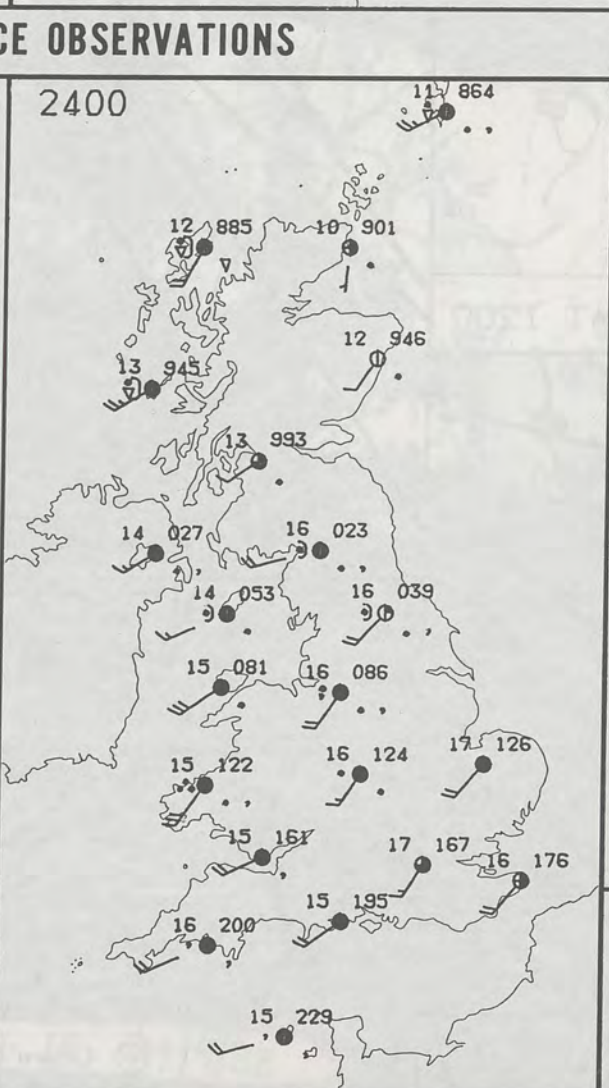

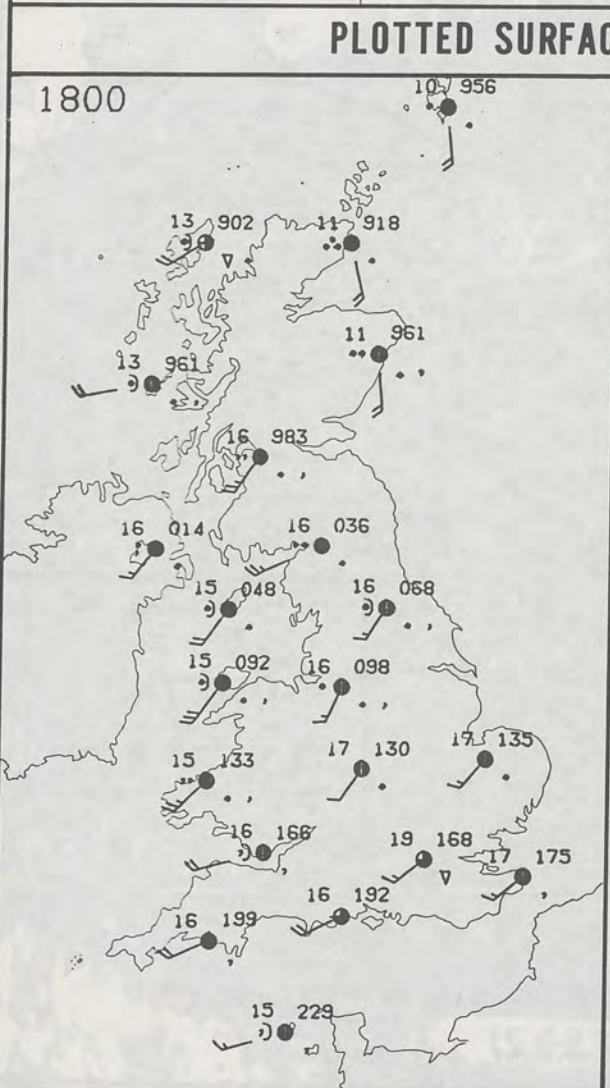

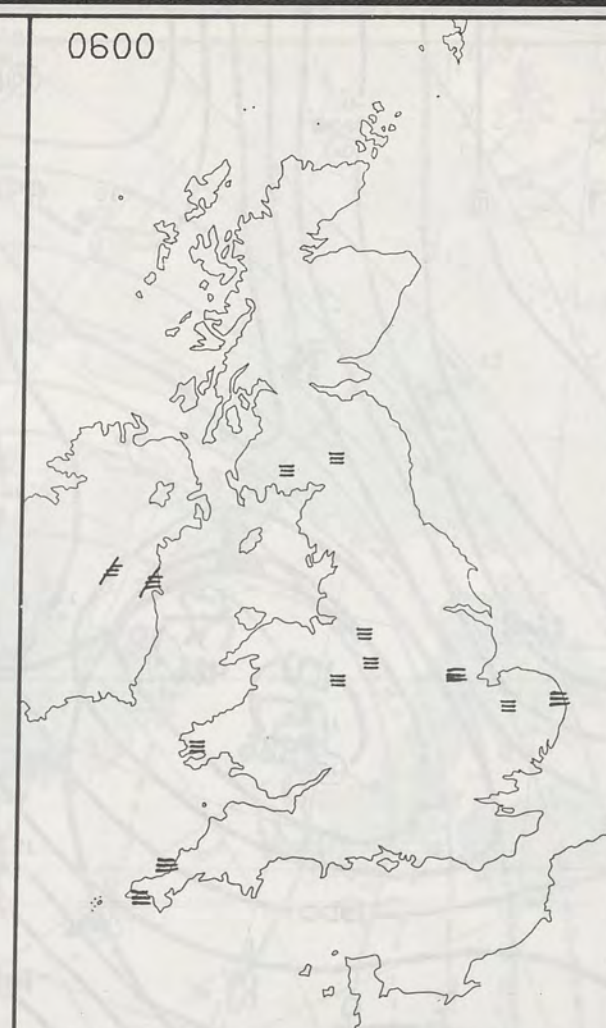

Northern Ireland had a clear night but it turned wet during the morning. There was further rain at times during the afternoon and evening before clearer weather spread across from the west.

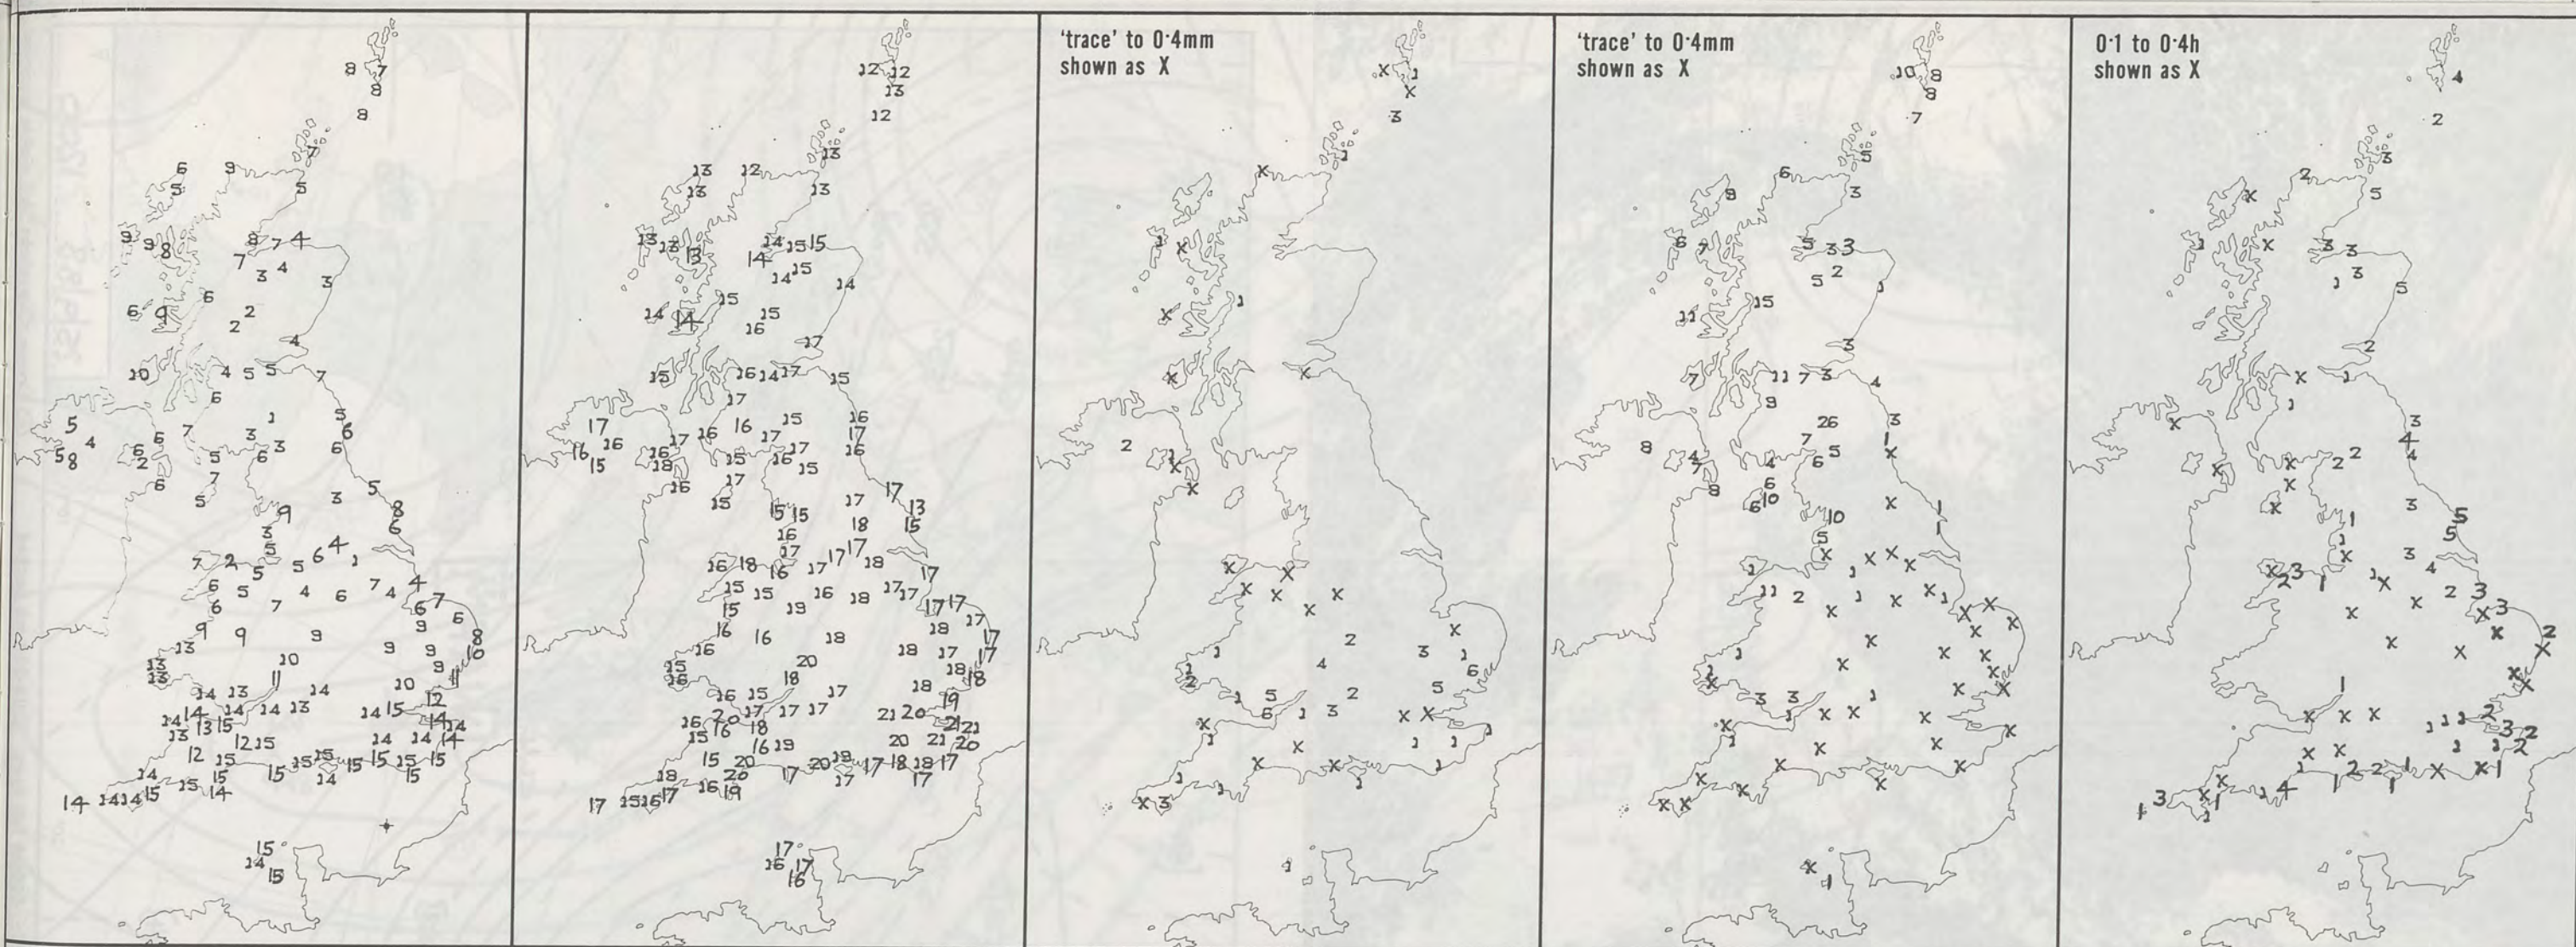

Northern England and Scotland were largely clear overnight. The morning started bright, the best of the sunshine in the east. Rain quickly spread across during the afternoon though heavy in places. During the evening much of the rain over Scotland died out, some clear spells developing.

Temperatures were generally close to average and parts of southern England were rather warm.

MONDAY
26 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had showers overnight while England and Wales were cloudy and most places had rain and drizzle with heavy rain here and there, especially in Wales. It was quite a windy night.

Scotland had some sunshine during the day, but there were showers in most places, especially in the morning. More persistent rain reached the Western Isles in the early evening.

Northern Ireland and central and northern districts of England were mainly dry and bright with some sunshine and only a few showers, mostly in the morning.

Southern England was mainly cloudy with rain and drizzle at times, and some heavy rain in a few places, mainly in the southwest.

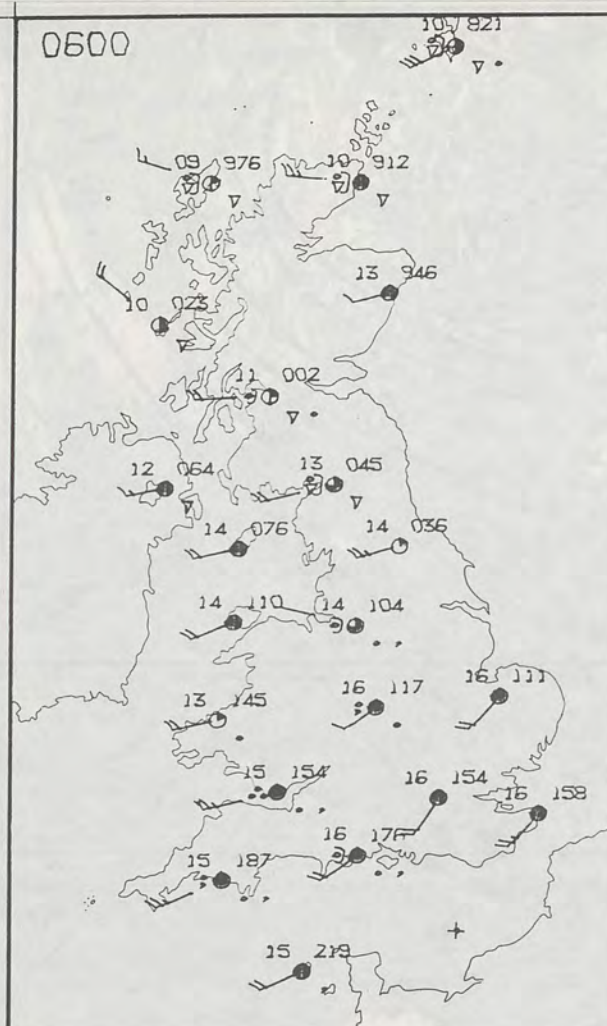

Wales had a sunny morning but the afternoon and evening were cloudy and there was more heavy rain in the south.

Temperatures over much of the United Kingdom were close to normal, but central and southern England were mostly rather warm.

TUESDAY
27 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

It was a cloudy, mild night nearly everywhere and most places had rain or drizzle at times, with some heavy rain here and there, mainly in western areas.

During the day over Scotland there was some sunshine in most places, but there were showers as well and some longer spells of heavy rain in the northwest.

In Northern Ireland the weather brightened up during the morning, so there was some afternoon sunshine but in the late afternoon and evening there were showers.

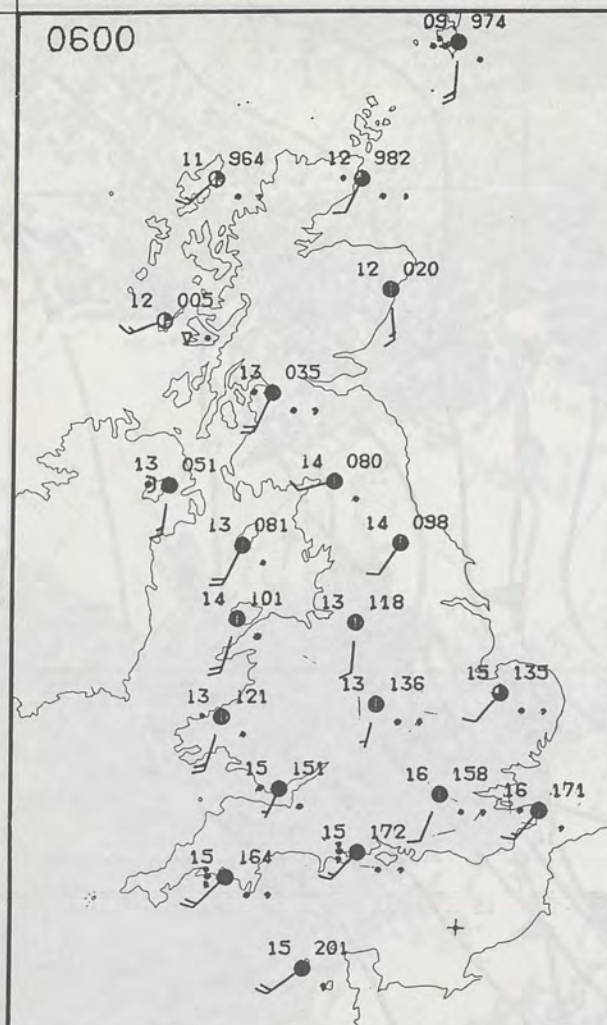

Wales was cloudy all day and there was rain and drizzle in most places, occasionally heavy.

Over England there was a little bright weather in a few places, but much of the day was cloudy and here too there was rain or drizzle at times, with heavy rain for a while in a few places, *and an odd report of thunder.* Temperatures were generally close to or a little above normal.

WEDNESDAY
28 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

There was quite a change in weather type for many areas with strong winds and blustery showers replacing the overcast skies and drizzly weather of recent days. It was windy across most districts with the strongest gusts around coasts in the west and southwest. There were also reports of a mini-tornado in Cumbria.

Most districts of England and Wales had overnight rain, heavy in places with thunder and apart from eastern districts, had a day of occasional showers too, showers were heaviest over the southwest Peninsula and in northwest England with some isolated reports of thunder. There were reports of hail in Northern Ireland and the first snow of the season over the Grampians. All this activity was the result of a deep depression over northern Scotland which introduced a cool northwesterly airstream as it tracked northeastwards towards Norway.

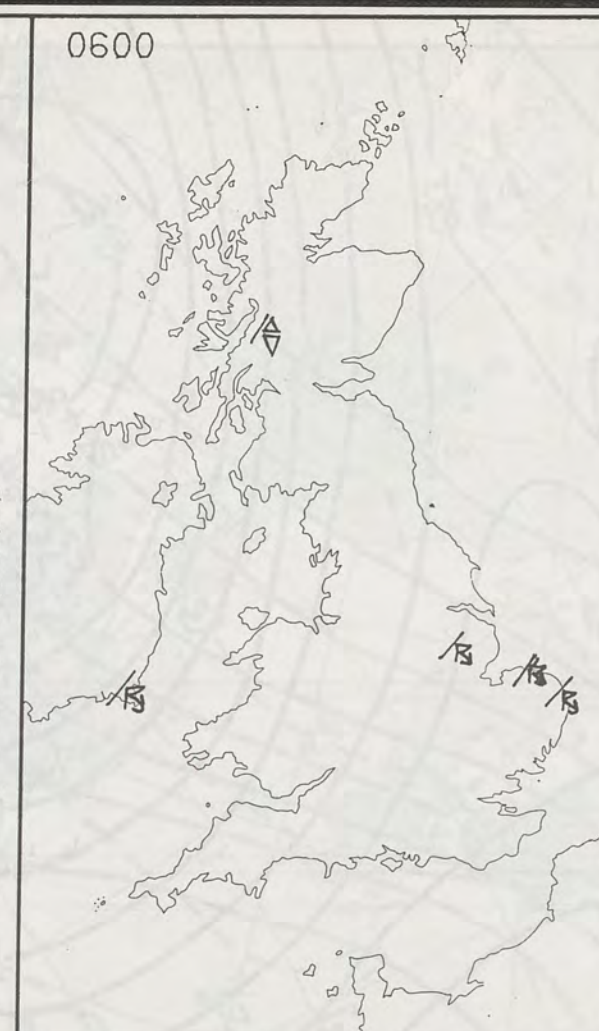

There was a minor bonus in that most of us saw something of the sun.

It was a rather cold day in most places.

THURSDAY
29 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

Much of the United Kingdom was dry, clear and quite cold over-night, but there were showers, most of them in northern and western Scotland. In northern Scotland it was a windy night.

During the day most places in England and Wales were sunny, but there were a few showers here and there and in the evening some thunderstorms in the English Channel close to Hampshire and Sussex.

Northern Ireland had a sunny morning but in the afternoon and evening there were showers with hail in a few places.

There was some sunshine everywhere in Scotland and parts of eastern Scotland were sunny for much of the day but there were showers in most places, some heavy with hail, and over the mountains a few snow showers.

Temperatures were below average nearly everywhere and most places were rather cold, and in Scotland many places had a cold day.

FRIDAY
30 SEPTEMBER 1988

SUMMARY
OF
BRITISH WEATHER

A dry, clear night over much of the British Isles gave a wide-spread ground frost, with an air frost in a few spots as far apart as Scotland to the south coast of England.

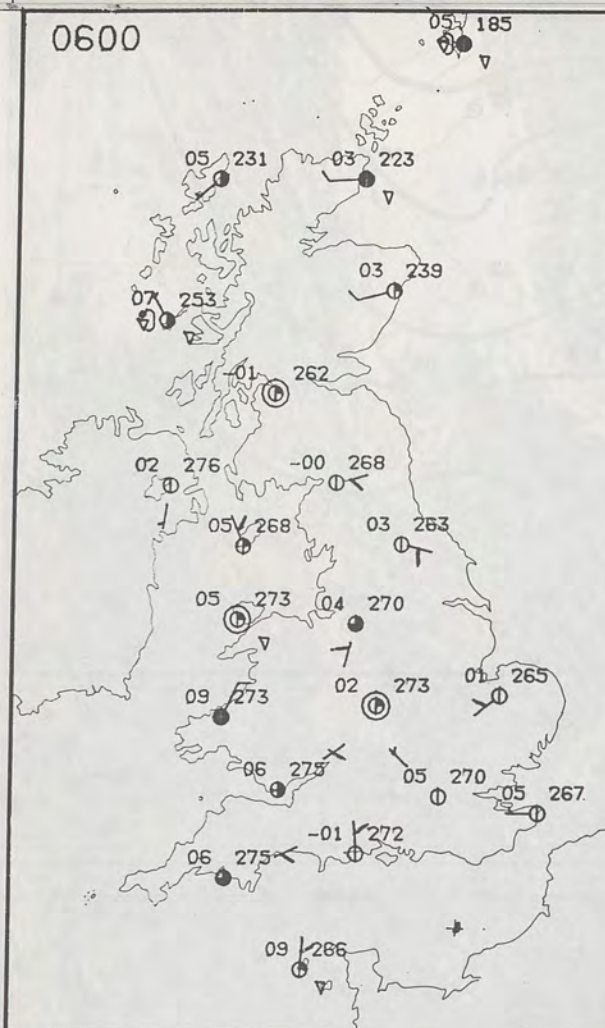

Apart from showers over western and northern Scotland and the Channel Islands, the day remained dry with a fair amount of sunshine with the eastern half of England having a sunny day. Clear periods followed again in the evening and first part of the night.

It was a mostly rather cold day.
