THE BEAUFORT SCALE OF WIND FORCE.

Beaufort Number.	Admiral Beaufort's General Description of Wind.	Specification for use on Land, based on observations made at Land Stations	Limits of Mean Velocities Statute Miles per Hour.
0	Calm ..	Calm; smoke rises vertically	Less than 1
1	Light air ..	Direction of wind shown by smoke drift	1-3
2	Slight breeze ..	Wind felt on face; leaves rustle	4-7
3	Gentle breeze ..	Leaves and small twigs in constant motion; wind extends light flag	8-12
4	Moderate wind ..	Raises dust and loose paper; small branches are moved	13-18
5	Fresh wind ..	Small trees in leaf begin to sway; crested wavelets on inland waters	19-24
6	Strong wind ..	Large branches in motion; whistling heard in telegraph wires	25-31
7	High wind ..	Whole trees in motion; inconvenience felt when walking against wind	32-38
8	Gale ..	Breaks twigs off trees; generally impedes progress	39-46
9	Strong gale ..	Slight structural damage occurs (chimney pots and slates removed)	47-54
10	Whole gale ..	Seldom experienced inland; trees uprooted	55-63
11	..	Very rarely experienced; accompanied by widespread damage	64-75
12	Hurricane	Above 75

BEAUFORT NOTATION OF WEATHER.

a blue sky (not more than a quarter covered).
 b sky partly cloudy (one half covered).
 c generally cloudy (three-quarters covered).
 d drizzle, h hail, KQ line squall.
 l lightning, o overcast sky.
 m mist, visibility 1000-10000 m.
 f fog, 200-1000 m.
 F thick fog, less than 200 m.
 p precipitation within sight of station.
 D passing showers
 snow, rs sleet, r rain.
 unusual visibility, t thunder.
 dust haze, the turbid atmosphere of dry weather.

With present weather is combined, whenever possible, the general character of the weather.
 A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r=fair weather after rain; i=intermittent; -="decreasing"; += "increasing"; h(r)="hail" or "rain and hail".
 Capital letters indicate intense, suffix o indicates slight and repetition of letters continuity, thus:--
 R = heavy rain.
 rr = continuous moderate rain.
 rrr = continuous light rain.

GALE WARNINGS.

The Meteorological Office issues warnings to ports and fishing stations of gales on or near the coasts of the British Isles. When one of these notices has been received at a station a black canvas cone is hoisted.

The South Cone (point downwards) is hoisted for gales from S.E., veering to S.W., W. or N.W.
 " S.W., veering to W. or N.W.
 " W., veering to N.W.
 " E., veering to S. or S.W.

The North Cone (point upwards) is hoisted for gales from S.E., E. or N.E., backing to N.

" N.W., veering to N., N.E. or E.
 " N., veering to N.E. or E.
 " N.E., veering to E.

The Signals remain hoisted after the receipt of a warning telegram until danger of a gale is passed.

The Districts to which warnings are sent are shown in the British Section of the Daily Weather Report by the following symbols:—

▼ South Cone hoisted
 ▲ North "

NOTES ON THE INFORMATION CONTAINED IN THE BRITISH AND INTERNATIONAL SECTIONS OF THE DAILY WEATHER REPORT.

Heights of Stations.—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500–2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart (160 miles) in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are ½ inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10⁷ Charts.
or 2 mb " " 1 : 10⁷ "
or 1 mb " " 1 : 5 × 10⁶ "

This scale applies under the following conditions:—
Pressure, 1,015 mb. Temperature, 283° A=50° F. Latitude, 55°.
Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Weather.—In describing the distribution of weather over a district or during an interval of time such as a day, descriptive adjectives are used with the following meanings:—

- Fine—mainly b and bc of the Beaufort notation (see previous page).
- Fair or fair generally—mainly bc and c.
- Cloudy—combinations of bc, c and o, c predominating.
- Overcast—mainly c and o.
- Dull—overcast with low heavy cloud.
- Varying or variable cloud—combinations of b, bc, c, and o.
- Precipitation when occurring is specifically mentioned.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

Maximum and Minimum Temperatures entered in the British Section for Liverpool (Bidston) were from 1st March 1921 to 31st March 1924 for the 22 hour period commencing at 9 a.m. the previous day.

Upper Air Temperature.—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute. The lines marked "Anti-cyclonic," "Cyclonic," "Summer," and "Winter," indicate the normal fall of temperature with pressure under the conditions indicated. The oblique line marked "Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10a per kilometre. A lapse rate greater than this value indicates instability of the atmosphere.

Times of Sunrise, Noon and Sunset.—In compiling the table of Greenwich times of sunrise and sunset for selected stations in the British Section of the Daily Weather Report the mean declination of the sun for noon of each day is taken. No account is taken of the variation in declination on any given day as between leap year and the three following years, the same figures being repeated from year to year without change.

Radio Disturbances (Atmospherics) at Croydon.—In the table under the above heading, information is given concerning atmospherics heard at Croydon. The term "atmospherics" is used to denote the clicks and crashes which are commonly heard in a wireless receiver, the intensity of which varies greatly at different times. Observations at Croydon are made 4 times daily at 1h., 7h., 13h. and 18h. G.M.T.

The second column indicates the type of sound heard, by the following abbreviations:—

- C—Uniform clicks and normal quiet distribution.
- C₁C₂—Clicks of two obviously different orders of intensity.
- Cg—Clicks predominant but a few grinders.
- G—Grinders predominant.
- GG—Continuous grinders whose minimum direction can be found by estimation of intensity without counting.
- Ok—Clicks with a few loud crashes.
- OK—Clicks with numerous crashes.
- KK—Very loud atmospherics.

In the third column the number of atmospherics per 4 seconds is shown. This number is obtained with the receiving coil set in a direction to give the maximum number.

Fourth Column. Strength. From January 1st, 1923, strength has been obtained from the formula $S = \frac{10}{r}$ where r is the resistance in ohms of the shunt necessary to reduce the number of atmospherics heard in the telephone to one quarter of those heard without shunt.

Fifth column. Direction. This indicates the direction from which the maximum intensity of atmospherics is proceeding. Directions are given in degrees (see diagram below).

It is to be noted that there is an ambiguity of 180° in the determination of direction.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the numbers placed within the small circles. In the International Section the velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

Upper Winds.—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 1,000 feet, 3,000 feet, and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.
SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

Notes on the Weather of **APRIL** 1924.

Apart from a short spell of warm, sunny weather at Easter and a few moderately warm days towards the end of the month, temperature was generally below normal in April. During the first week high pressure moved first eastwards across Scotland towards Scandinavia, then withdrew westwards to the Atlantic giving cool northerly winds and but slight precipitation, partly in the form of sleet and hail.

On the 7th under the influence of a narrow ridge of high pressure over Southern England temperature rose to 59°F. in the Midlands but subsequently a cold current from Arctic regions spread down the western coasts of Europe and caused a renewal of cool weather. Secondary depressions developed near the Hebrides and were associated with considerable rain, snow or sleet and local thunderstorms as they moved Southeast. Meanwhile further depressions were approaching from the Azores and by the 13th a belt of low pressure extended from the latter region to the north of Norway. Rain fell repeatedly and during the seven days, 8th - 14th, the aggregate fall at Kew exceeded the normal for the month.

On the 16th, however, high pressure began to spread up from France and anticyclonic conditions prevailed until after Easter. Temperature rose to 60°F. or above on the 18th, 19th and 20th and touched 75°F. at S. Farnborough on the 21st. Then the anticyclone receded northward of Iceland and the ridge over the British Isles was broken by the approach of fresh depressions. The latter gradually gained in strength and rough conditions prevailed during the last week-end. Thunderstorms occurred locally in S.E. England on the 26th and gales were experienced in the Channel on the 27th, accompanied by heavy rain in places. Further rain fell in considerable quantities during the last few days and was particularly heavy in London on the 30th, bringing the total for the month up to 87 mm. at Kew, a figure only once exceeded there in April since 1866.

+ Since March 1st, 1921, the readings used have (except in the case of Phoenix Park & Bidston) been the maximum for the period 7h.-18h., and the minimum for the period 18h.-7h. Bidston adopted the same practice on April 1st, 1924. The normal values given above are based upon extremes taken over the 24 hours.

0=Dry ground.
1=Wet ground.
2=Soft (muddy) wet ground.
3=Bare ground frozen (but less than 2 ins. deep).
4=Bare ground frozen (but more than 2 ins. deep).
5=Dew (or wet grass but not wet ground).
6=Skating to-day in 1800 and 1800 reports (Hoar frost in 0100 and 0700 reports).
7=Snow (thin layer, often not continuous).
8=Snow (deep, impeding traffic, usually a continuous layer).
9=Glazed roads (ice on roads from frozen rain or melted snow).

The diagram shows the number of days each type of ground was recorded at each station. The stations are listed in the first column, and the number of days for each type of ground is given in the subsequent columns. The types of ground are defined in the legend on the right.

The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb pressure intervals intersect this line at 1h, 7h, 13h, and 18h, are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 68° N., Long. 18° W. in the north, at Lat. 41½° N., Long. 4° E. in the south.

* Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in Monthly Weather Report which are based on readings taken to 0.1 mm.

Capital letters indicate intense; suffix o indicates slight; repetition of letters indicates continuity. R = heavy rain. r = slight rain. rr = continuous rain. SYMBOLS. < = (less than for cloud height). > = (before for precipitation). ☉ = solar halo. ☾ = lunar halo. With present weather in combined, whenever possible, the general character of the weather. A = solidus (divides) actual existing weather from preceding conditions, thus: -b/r = fair weather after rain. - = "decreasing"; + = "increasing."																																
THE BEAUFORT SCALE OF WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.																																
SEA DISTURBANCE.																																
0 = no swell. 1 = mod. swell. 2 = heavy swell. 3 = no swell. 4 = mod. swell. 5 = heavy swell. 6 = rather rough sea. 7 = rough sea. 8 = very rough sea. 9 = mountainous sea.																																
COSE FOR STATE OF GROUND.																																
0 = Dry ground. 1 = Wet ground. 2 = Soft (muddy) wet ground. 3 = Bare ground frozen (but less than 2 ins. deep). 4 = Bare ground frozen (but more than 2 ins. deep). 5 = Dew (or wet grass but not wet ground). 6 = Skating to-day in 1890 and 1890 reports (Hoar frost in 1810 and 1890 reports). 7 = Snow (thin layer, often not continuous). 8 = Snow (deep, impeding traffic, usually a continuous layer). 9 = Glazed roads (ice on roads from frozen rain or melted snow).

GENERAL INFERENCE.

A long narrow ridge of high pressure stretches from the Azores over the British Isles to Scandinavia. Quiet, fair weather is probable generally with temperature below normal but rising during the day, especially in northern districts.

Districts.	Forecasts for the 24 hours commencing 15h G.M.T. Tuesday, 1st April, 1924.	Further Outlook.
1. S.E. England	Wind northeasterly, moderate to light; mainly fair, frost locally at night, day temperature rising somewhat; visibility good apart from morning mist locally.	Becoming gradually much warmer than of late; perhaps becoming unsettled in the extreme West and Northwest, continuing settled for a time elsewhere.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales	Wind light and indefinite; fair to fine, frost at night but day temperature rising; visibility good apart from morning mist locally.

SYMBOLS. < = (less than (for cloud height). > = (more than (for cloud height). ☉ = solar halo. ☾ = lunar halo. With present weather is combined whenever possible, the general character of the weather. A solidus / divides actual existing weather from preceding conditions, thus: -b/r = fair weather after rain. - = "decreasing". + = "increasing".																											
The BEAUFORT SCALE OF WIND is used only for surface observations. In the accompanying table the speed of the wind corresponding with the different numbers, is the speed at about 30 feet above the ground.																											
BEAUFORT No.		Statute miles per hour.

SYNOPTIC CHART FOR 7H. SUNDAY, 6TH APRIL, 1924.

Scale - 1:10,000,000

Nautical Miles.
Statute Miles.

EXPLANATION

Isobars are drawn for intervals of two millibars.
Direction is shown by arrows flying with the wind.
The scale 0-12, is indicated by the number of feathers.
Rain is shown in miles per hour by figures in small circles.
TEMPERATURE is given in °F.

SYMBOLS: ○ clear sky, ○ sky & clouded, ○ sky
○ sky & clouded, ○ overcast sky, ○ rain falling
* sleet, ▲ hail, = fog, = mist, T thunder.
WINDS: ~~~~~ Rough, ~~~~~ High

EXPLANATION
Isobars are drawn for intervals of two millibars.
Direction is shown by arrows flying with the wind.
The scale 0-12, is indicated by the number of feathers.
Force is shown in miles per hour by figures in small circles.
TEMPERATURE is given in ° F.

SYNOPTIC CHART FOR 7h. SATURDAY, 12th APRIL, 1924.

Scale - 1:10,000,000

Nautical Miles
Statute Miles

EXPLANATION

Isobars are drawn for intervals of two millibars. Direction is shown by arrows flying with the wind. The scale 0-12, is indicated by the number of feathers. The number of feathers is shown in miles per hour by figures in small circles. The number of feathers is given in °F.

SYMBOLS: ○ clear sky, ○ sky + clouded, ○ sky + overcast, ○ rain falling, ○ sleet, ○ hail, ○ fog, ○ mist, ○ thunder

WINDS: ~~~~~ Rough, ~~~~~ High

SYNOPTIC CODE FOR SURFACE VISIBILITY.	
1. Thick fog.	Objects not visible at 66 yards.
2. Moderate fog.	" " 220 "
3. Mist or haze.	" " 550 "
4. Poor visibility.	" " 1,100 "
5. Moderate.	" " 11 miles.
6. Good.	" " 21 "
7. Very good.	" " 31 "
8. Excellent.	" " beyond 31 "

GENERAL INFERENCE.

The depression recently over England is now centred over the Netherlands. Shallow secondary depressions have developed over our Western coasts, and a new depression over the Faroe Islands is moving South Westward. The weather will be variable in the North and Westerly to Southerly in the South. The weather will be showery but with considerable bright periods and warmer in the South than of

Nautical Miles
Statute Miles

All times are G.M.T. Add one hour to get summer time.

EXPLANATION

Isobars are drawn for intervals of two millibars. Direction is shown by arrows flying with the wind. The scale 9-12 is indicated by the number of feathers. Cloudiness is shown in miles per hour by figures in small circles. Temperature is given in °F.

SYMBOLS: ○ clear sky, ○ sky & clouded, ○ sky & rain falling, ○ overcast sky, ○ rain falling, ○ hail, ○ fog, ○ mist, T thunder

GENERAL INFERENCE.

A depression over the Channel moving slowly eastward will cause rain in the South at first, but an anticyclone spreading in from the southwest will subsequently cause mainly fair weather over the southern half of the Kingdom. In the North, there will be showers of rain, sleet or hail associated with a depression north of Scotland. Temperature will be rather low generally.

GENERAL INFERENCE.

The northwest wind current in the rear of a depression north of the Shetlands will be associated with rather low temperature in the northern districts and some showers in Scotland. Weather will be fair over England generally with moderately high day temperature but night frosts. The onset of a new depression from the S.W. is likely however to cause an early renewal of unsettled conditions.

Districts	Forecast for the 24 hours commencing 15h. G.M.T. Wednesday, 16th April, 1924.
1. S.E. England	Light variable winds; fair generally; some morning mist; moderate day temperature, ground frost locally at night.
2. E. England	
3. E. Midlands	
4. W. Midlands	Light variable winds becoming S.W. or S. later; fair
5. S.W. England	Wednesday probably some rain Thursday; visibility good at
6. South Wales	first some mist later; temperature rising.
7. North Wales	
8. N.W. England	Wind W. to N.W. moderate to light; fair generally; some

EXPLANATION

Isobars are drawn for intervals of two millibars.
Direction is shown by arrows flying with the wind.
Force on the scale 5-12, is indicated by the number of feathers.
Velocity is shown in miles per hour by figures in small circles.
Temperature is given in °F.

Scale - 1:10,000,000

Nautical Miles
Statute Miles.

EXPLANATION

Isobars are drawn for intervals of two millibars.
Direction is shown by arrows flying with the wind.
Force on the scale 0-12, is indicated by the number of feathers.
Velocity is shown in miles per hour by figures in small circles.
TEMPERATURE is given in ° F.

SYMBOLS: ○ clear sky, ○ sky & clouded; ○ sky & overcast; ○ rain falling; ○ hail; ○ fog; ○ mist; T thunder.

WIND: ~~~~~ Rough, ~~~~~ High.

TELEGRAPHIC CODE FOR SURFACE VISIBILITY.

1. Dense fog.	Objects not visible at 55 yards.
2. Thick fog.	" " " 220 "
3. Moderate fog.	" " " 1,100 "
4. Mist or haze.	" " " 11 miles.
5. Poor visibility.	" " " 2 "
6. Moderate.	" " " 3 "

GENERAL INFERENCE.

Pressure is now highest towards Greenland and is becoming low over the whole of Europe. Secondary depressions are likely to form over the British Isles and cause unsettled weather and except in the extreme Southwest temperature will be lower than late, while in Scotland and Eastern England the temperature will be much below the normal with sleet or snow in places.

GENERAL INFERENCE.

The depression recently over Norway is moving southwestwards across the Shetlands, while a shallow depression recently over Eastern England has been replaced by a small anticyclone which is likely to become larger. Over England the weather will be cloudy to fair with slight local rain first but in Scotland and Ireland intermittent rain is probable in most districts.

Further Outlook.

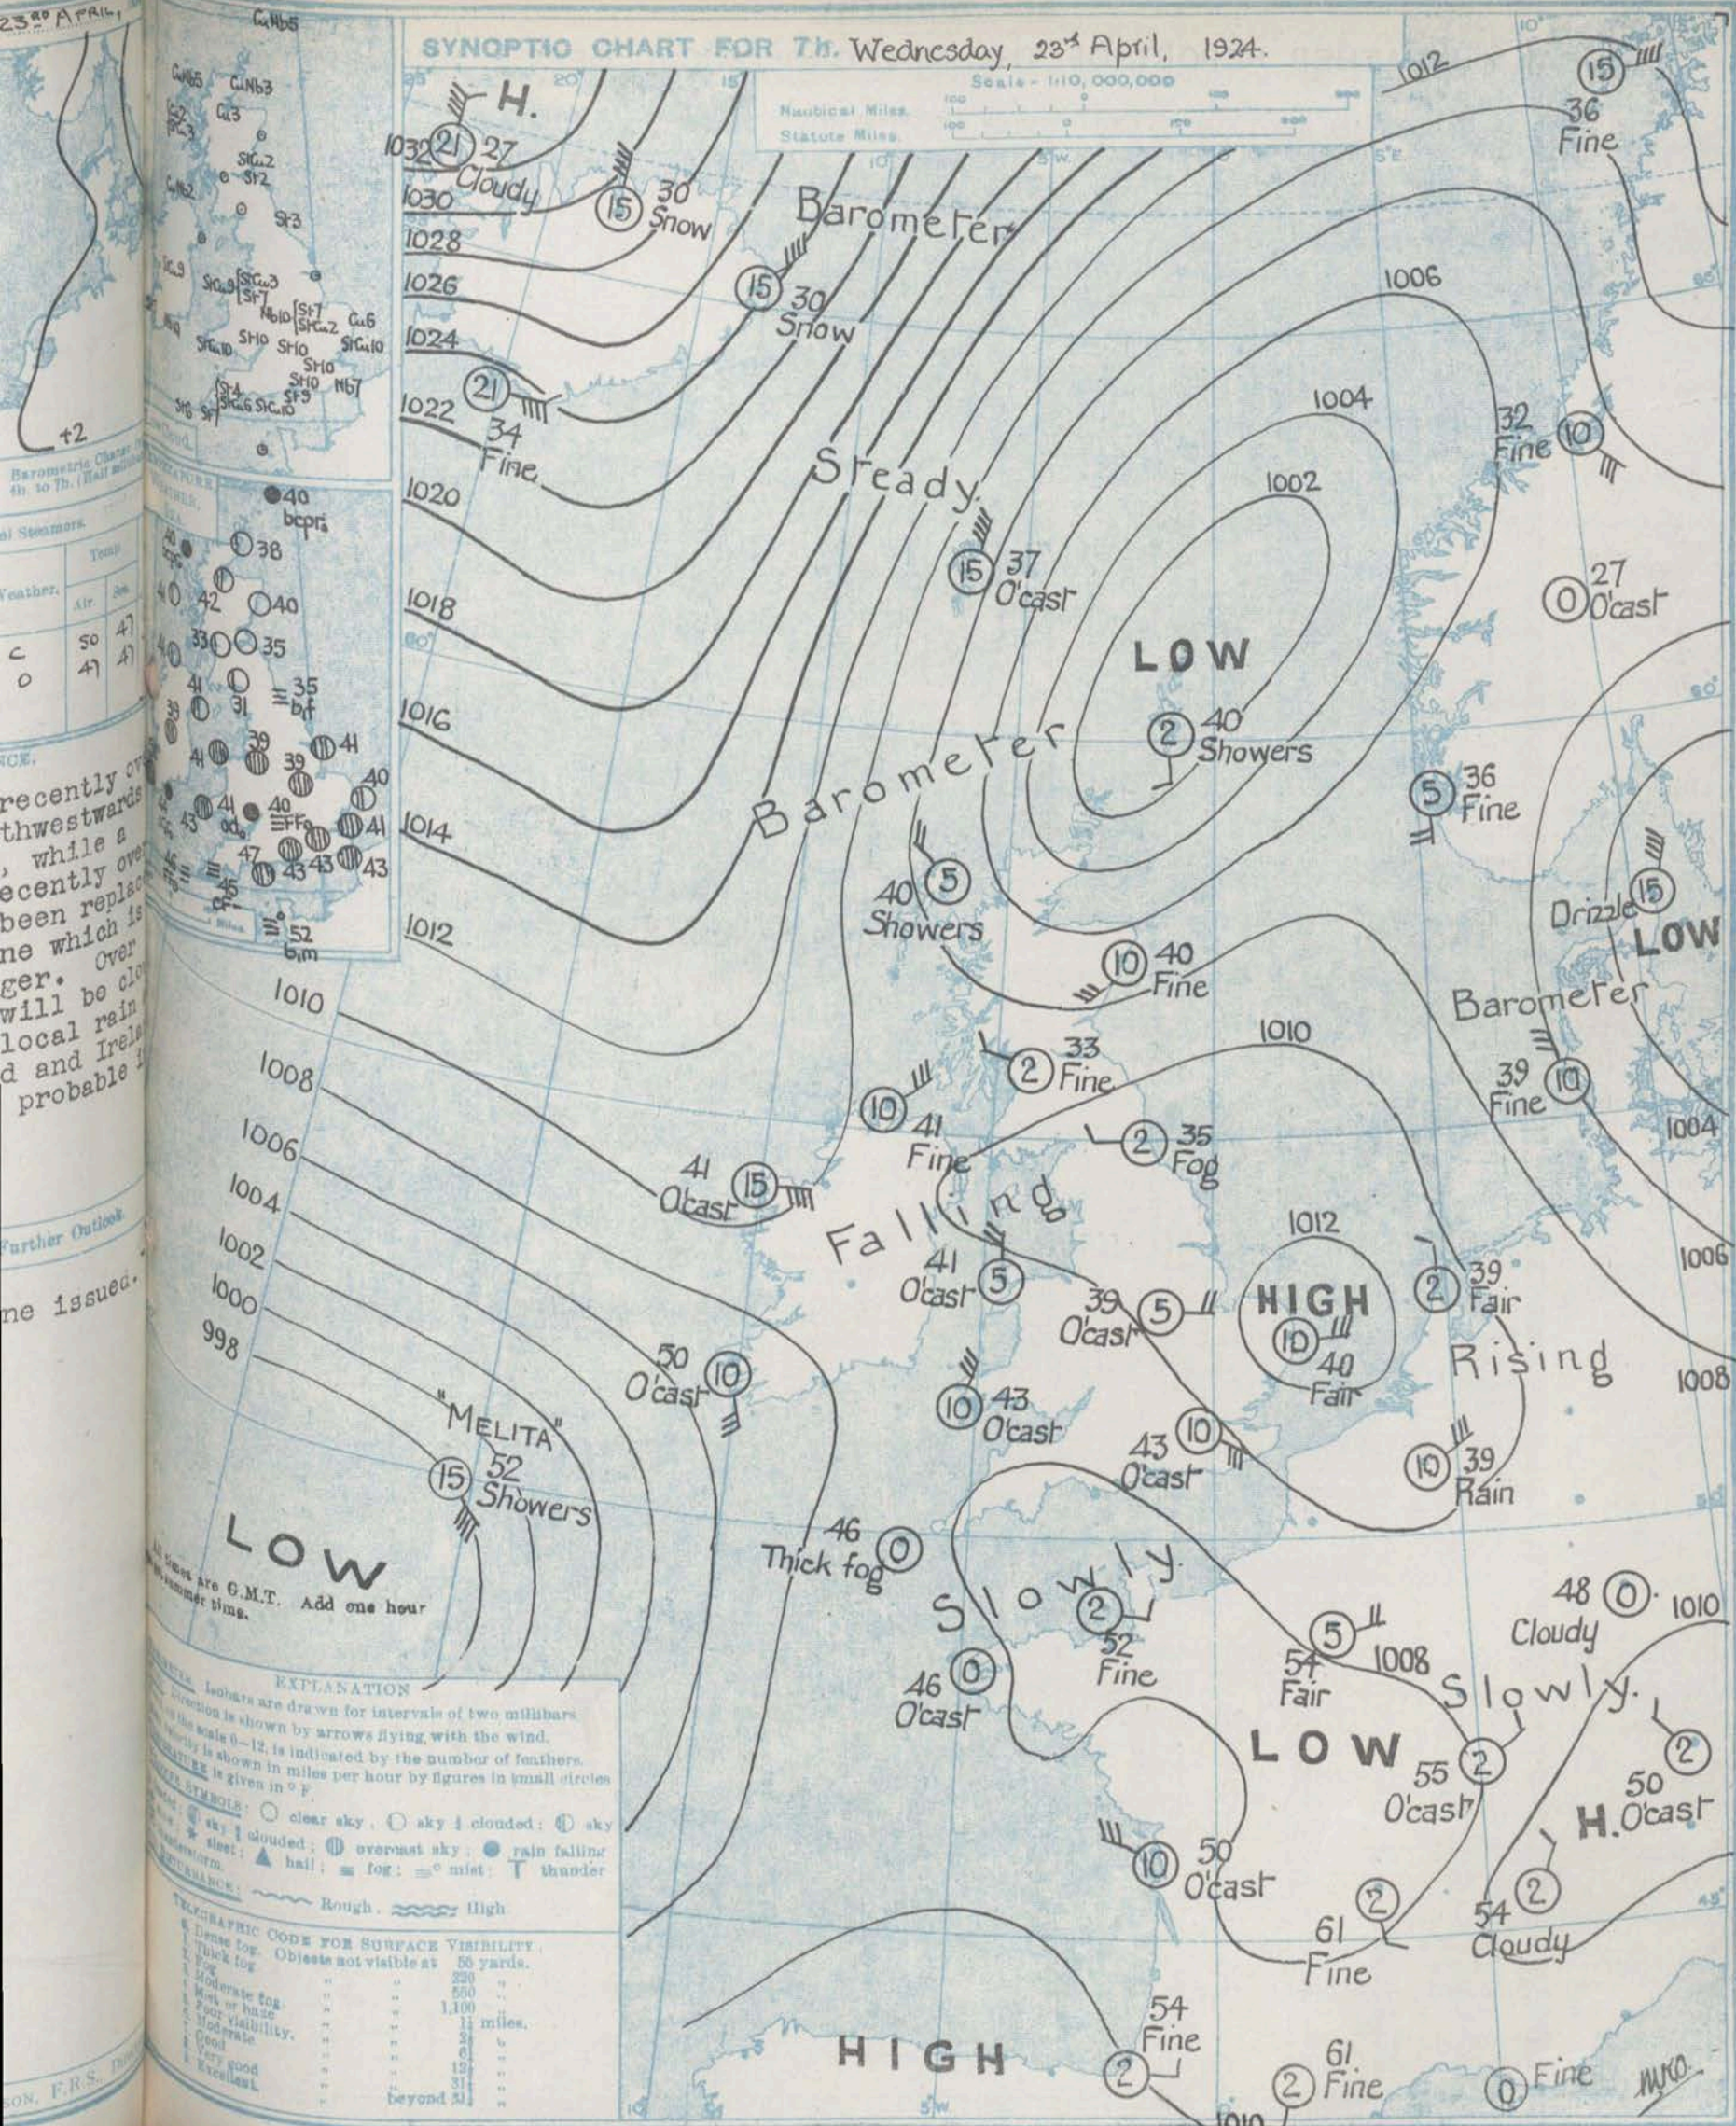

None issued.

EXPLANATION

Isobars are drawn for intervals of two millibars.
Direction is shown by arrows flying with the wind.
The scale 0-12, is indicated by the number of feathers.
The velocity is shown in miles per hour by figures in small circles.
The temperature is given in °F.

SYMBOLS: ○ clear sky; ○ sky & clouded; ○ sky & overcast; ○ overcast sky; ● rain falling; ▲ hail; = fog; = mist; T thunder

GENERAL INFERENCE.

A depression now over Ireland will move eastward slowly, decreasing in intensity. A wedge of high pressure in its rear will be associated with fairer weather but the presence of further depression in the Atlantic renders it probable that the improvement will be only temporary.

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T. Wednesday, 30th April, 1924.
1. S.E. England	Wind S.W., to W., moderate to fresh; some rain early, fairer later; visibility moderate to good; moderate temperature.
2. E. England	Light E. or S.E. winds, changing to W. or N.W., moderate; some rain, fairer later; visibility poor at times; rather cold.
3. E. Midlands	
4. W. Midlands	Wind W. to N.W., moderate; fair apart from local showers; visibility good; moderate temperature.
5. S.W. England	Wind W. to N.W., fresh or strong; fair apart from local showers; visibility good; moderate temperature.
