# **DAILY WEATHER REPORTS**

---

**1ST JULY TO 30TH SEPTEMBER, 1925.**

METEOROLOGICAL STATIONS.

**BEUFORT NOTATION OF WEATHER.**

b blue sky (not more than a quarter covered).  
be sky partly cloudy (one half covered).  
c generally cloudy (three-quarters covered).  
d drizzle. h hail. K k line squall.  
l lightning. o overcast sky.  
m mist, visibility 1000-10000 m.  
f fog. " 200-1000 m.  
F thick fog " less than 200 m.  
jp precipitation within sight of station.  
p passing showers. r rain.  
s snow. rs sleet. t thunder.  
v unusual visibility. y dry air.  
z dust haze; the turbid atmosphere of dry weather.

With present weather is combined, whenever possible, the general character of the weather.  
A "solidus" divides actual existing weather from preceding conditions, thus: be/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; h(r) = "hail" or "rain and hail";  
Capital letters indicate intensity, suffix o indicates slight, and repetition of letters continuity, thus:—  
R = heavy rain.  
rr = continuous moderate rain.  
toto = continuous light rain.

Capital letters indicate intensity,  
suffix o indicates slight,  
and repetition of letters continuity,  
thus:—  
R = heavy rain.  
rr = continuous moderate rain  
r<sub>o</sub>r<sub>o</sub> = continuous light rain.

Beaufort Number.	Admiral Beaufort's General Description of Wind.	Specification for use on Land, based on observations made at Land Stations.	Limits of Mean Velocities in Statute Miles per Hour.
0	Calm ... ..	Calm ; smoke rising vertically ... ..	Less than 1
1	Light air ... ..	Direction of wind shown by smoke drift ... ..	1-3
2	Slight breeze ... ..	Wind felt on face ; leaves rustle ... ..	4-7
3	Gentle breeze ... ..	Leaves and small twigs in constant motion ; wind extends light flag ... ..	8-12
4	Moderate wind ... ..	Raises dust and loose paper ; small branches are moved ... ..	13-18
5	Fresh wind ... ..	Small trees in leaf begin to sway ; crested wavelets on inland waters... ..	19-24
6	Strong wind ... ..	Large branches in motion ; whistling heard in telegraph wires ... ..	25-31
7	High wind ... ..	Whole trees in motion ; inconvenience felt when walking against wind ... ..	32-35
8	Gale ... ..	Breaks twigs off trees ; generally impedes progress ... ..	39-46
9	Strong gale ... ..	Slight structural damage occurs (chimney pots and slates removed) ... ..	47-54
10	Whole gale ... ..	Seldom experienced inland ; trees uprooted ... ..	55-63
11	... ..	Very rarely experienced ; accompanied by widespread damage ... ..	64-75
12	Hurricane ... ..	... ..	Above 75

The *South Cone* (point downwards) is hoisted  
for gales from S.E., veering to S.W., W. or N.W.  
" S.W., veering to W. or N.W.  
" W., veering to N.W.  
" E., veering to S. or S.W.

The Districts in which warnings are in force are shown in the British Section of the Daily Weather Report by the following symbols:—

▼ South Cone hoisted.  
▲ North " "

## AIR MINISTRY.

### METEOROLOGICAL OFFICE, LONDON.

#### NOTES ON THE INFORMATION CONTAINED IN THE BRITISH AND INTERNATIONAL SECTIONS OF THE DAILY WEATHER REPORT.

**Heights of Stations.**—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the point of ground on which the rain gauge is situated.

**Tynemouth.**—The height of this station above M.S.L. has been 67 feet since September 28th, 1923, and not as entered in the British Section of the Report.

**Guernsey.**—The height of this station has been 295 feet since July, 1923.

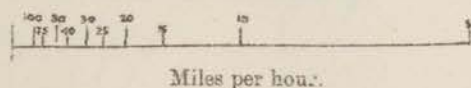

**Pressure.**—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500-2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart (160 miles) in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are  $\frac{1}{2}$  inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

#### GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10<sup>7</sup> Charts.  
or 2 mb " " 1 : 10<sup>7</sup> " "  
or 1 mb " " 1 : 5 × 10<sup>6</sup> " "

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 50° F. Latitude, 55°.

**Corrections.**—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

**Weather.**—In describing the distribution of weather over a district or during an interval of time such as a day, descriptive adjectives are used with the following meanings:—

Fine—mainly b and bc of the Beaufort notation (see previous page).

Fair or fair generally—mainly bc and c.

Cloudy—combinations of bc, c and o, c predominating.

Overcast—mainly c and o.

Dull—overcast with low heavy cloud.

Varying or variable cloud—combinations of b, bc, c, and o.

Precipitation when occurring is specifically mentioned.

Since the end of April, 1925, the use of the terms "mist" and "haze" has been restricted to cases of visibility between 1,100 yards and 1½ miles. These terms are no longer used for visibility of 1½-6½ miles.

**Temperature.**—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

**Upper Air Temperature.**—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the

diagram, temperatures are given in degrees Fahrenheit and Absolute. The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5.5° F. per 1,000 feet, or 10°a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

The statement contained in the Upper Air Supplement from January 1st to May 31st, 1925, implying that these lines are for air saturated at exactly 900 mb. is not strictly true: the pressure corresponding with a height of 1 km. averages about 900 mb. for the range of temperature considered, but is different for each adiabat.

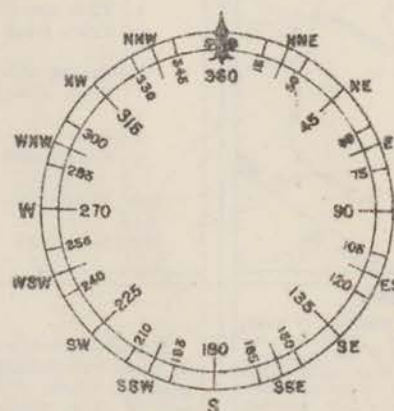

**Times of Sunrise, Noon and Sunset.**—In compiling the table of Greenwich times of sunrise and sunset for selected stations in the British Section of the Daily Weather Report, the mean declination of the sun for noon of each day is taken. No account is taken of the variation in declination on any given day as between leap year and the three following years, the same figures being repeated from year to year without change.

**Wind.**—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

**Upper Winds.**—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

9. Confused " "	

**SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.**  
**SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.**

Notes on the Weather of **AUGUST** 1925.

The general character of the weather during the first thirteen days of the month was unsettled. On the 1st and 2nd, in the rear of a depression over Scandinavia, showery weather prevailed with winds from between north and west, and subsequently pressure was low off our northwestern or western coasts, while secondaries passed across the country. There were bright periods when occasional good sunshine records were obtained, but rain fell almost daily in some places and thunderstorms occurred in many parts of the country on the 1st, 5th, 6th and again on the 10th and 11th. Moderately heavy local falls were recorded during this period, among the largest being 31mm. at Falmouth on the 5th, 34mm. at Manchester on the 10th, 39mm. at Blacksod Point and 34mm. at Rothesay on the 11th and 39mm. at Eskdalemuir on the 12th.

In the rear of a depression moving northeast towards Scandinavia on the 13th an anticyclone began to spread eastward over the British Isles with a consequent improvement in the weather. From the 14th to 17th rain fell only at a very few places while on the 15th, 16th and 17th it was generally sunny also, and temperature rose above 75°F. at many places on the 17th and touched 80°F. at Southend and South Farnboro'.

On the 18th depressions over Southern England and off Southwest Iceland displaced the anticyclone and renewed the unsettled weather. Thunderstorms occurred somewhere in the British Isles each day until the 25th, when the Azores anticyclone temporarily pushed north-eastward over the country. Rainfall was heavy locally in the South on the 23rd, Calshot recording 44mm. and Guernsey 38 mm.

On the 28th, the anticyclone again spread northeastward causing much fairer conditions in the more southerly districts.

0=Dry ground.  
1=Wet ground.  
2=Soft (muddy) wet ground.  
3=Hard ground frozen (but less than 2 ins. deep).  
4=Soft ground frozen (but more than 2 ins. deep).  
5=Dry for wet grass but not wet ground.  
6=Straw to-day in 1900 and 1901 reports (Hear frost in 0100 and 0700 reports).  
7=Snow (thin layer, often not continuous).  
8=Snow (deep, impeding traffic, usually a continuous layer).  
9=Glazed roads (ice on roads from frozen rain or melted snow).

## NOTES ON CHART OF ISOPLETHS (p. 4).

The diagram is obtained by drawing a line from Akureyri in Iceland to the South of France, near Marseilles. The points at which the isobars drawn for 4 m.b. pressure intervals intersect this line at 1h, 7h, 13h, and 19h, are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 66° N., Long. 18° W. in the north, at Lat. 44° N., Long. 4° E. in the south.

\* Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and the values in the Monthly Weather Report, which are based on readings taken to 0.1 mm.

G. C. SIMPSON, F.R.S., Director.

# PRESSURE: ICELAND TO GULF OF LIONS AUGUST 1925.

ISOPHETHS\* BASED ON SIX-HOURLY OBSERVATIONS.

## GENERAL INFERENCE.

There is still a depression over Scandinavia but pressure is high over the Eastern Atlantic. Winds will be mainly between N.W. and W., and weather mainly fair apart from local showers and perhaps thunder.

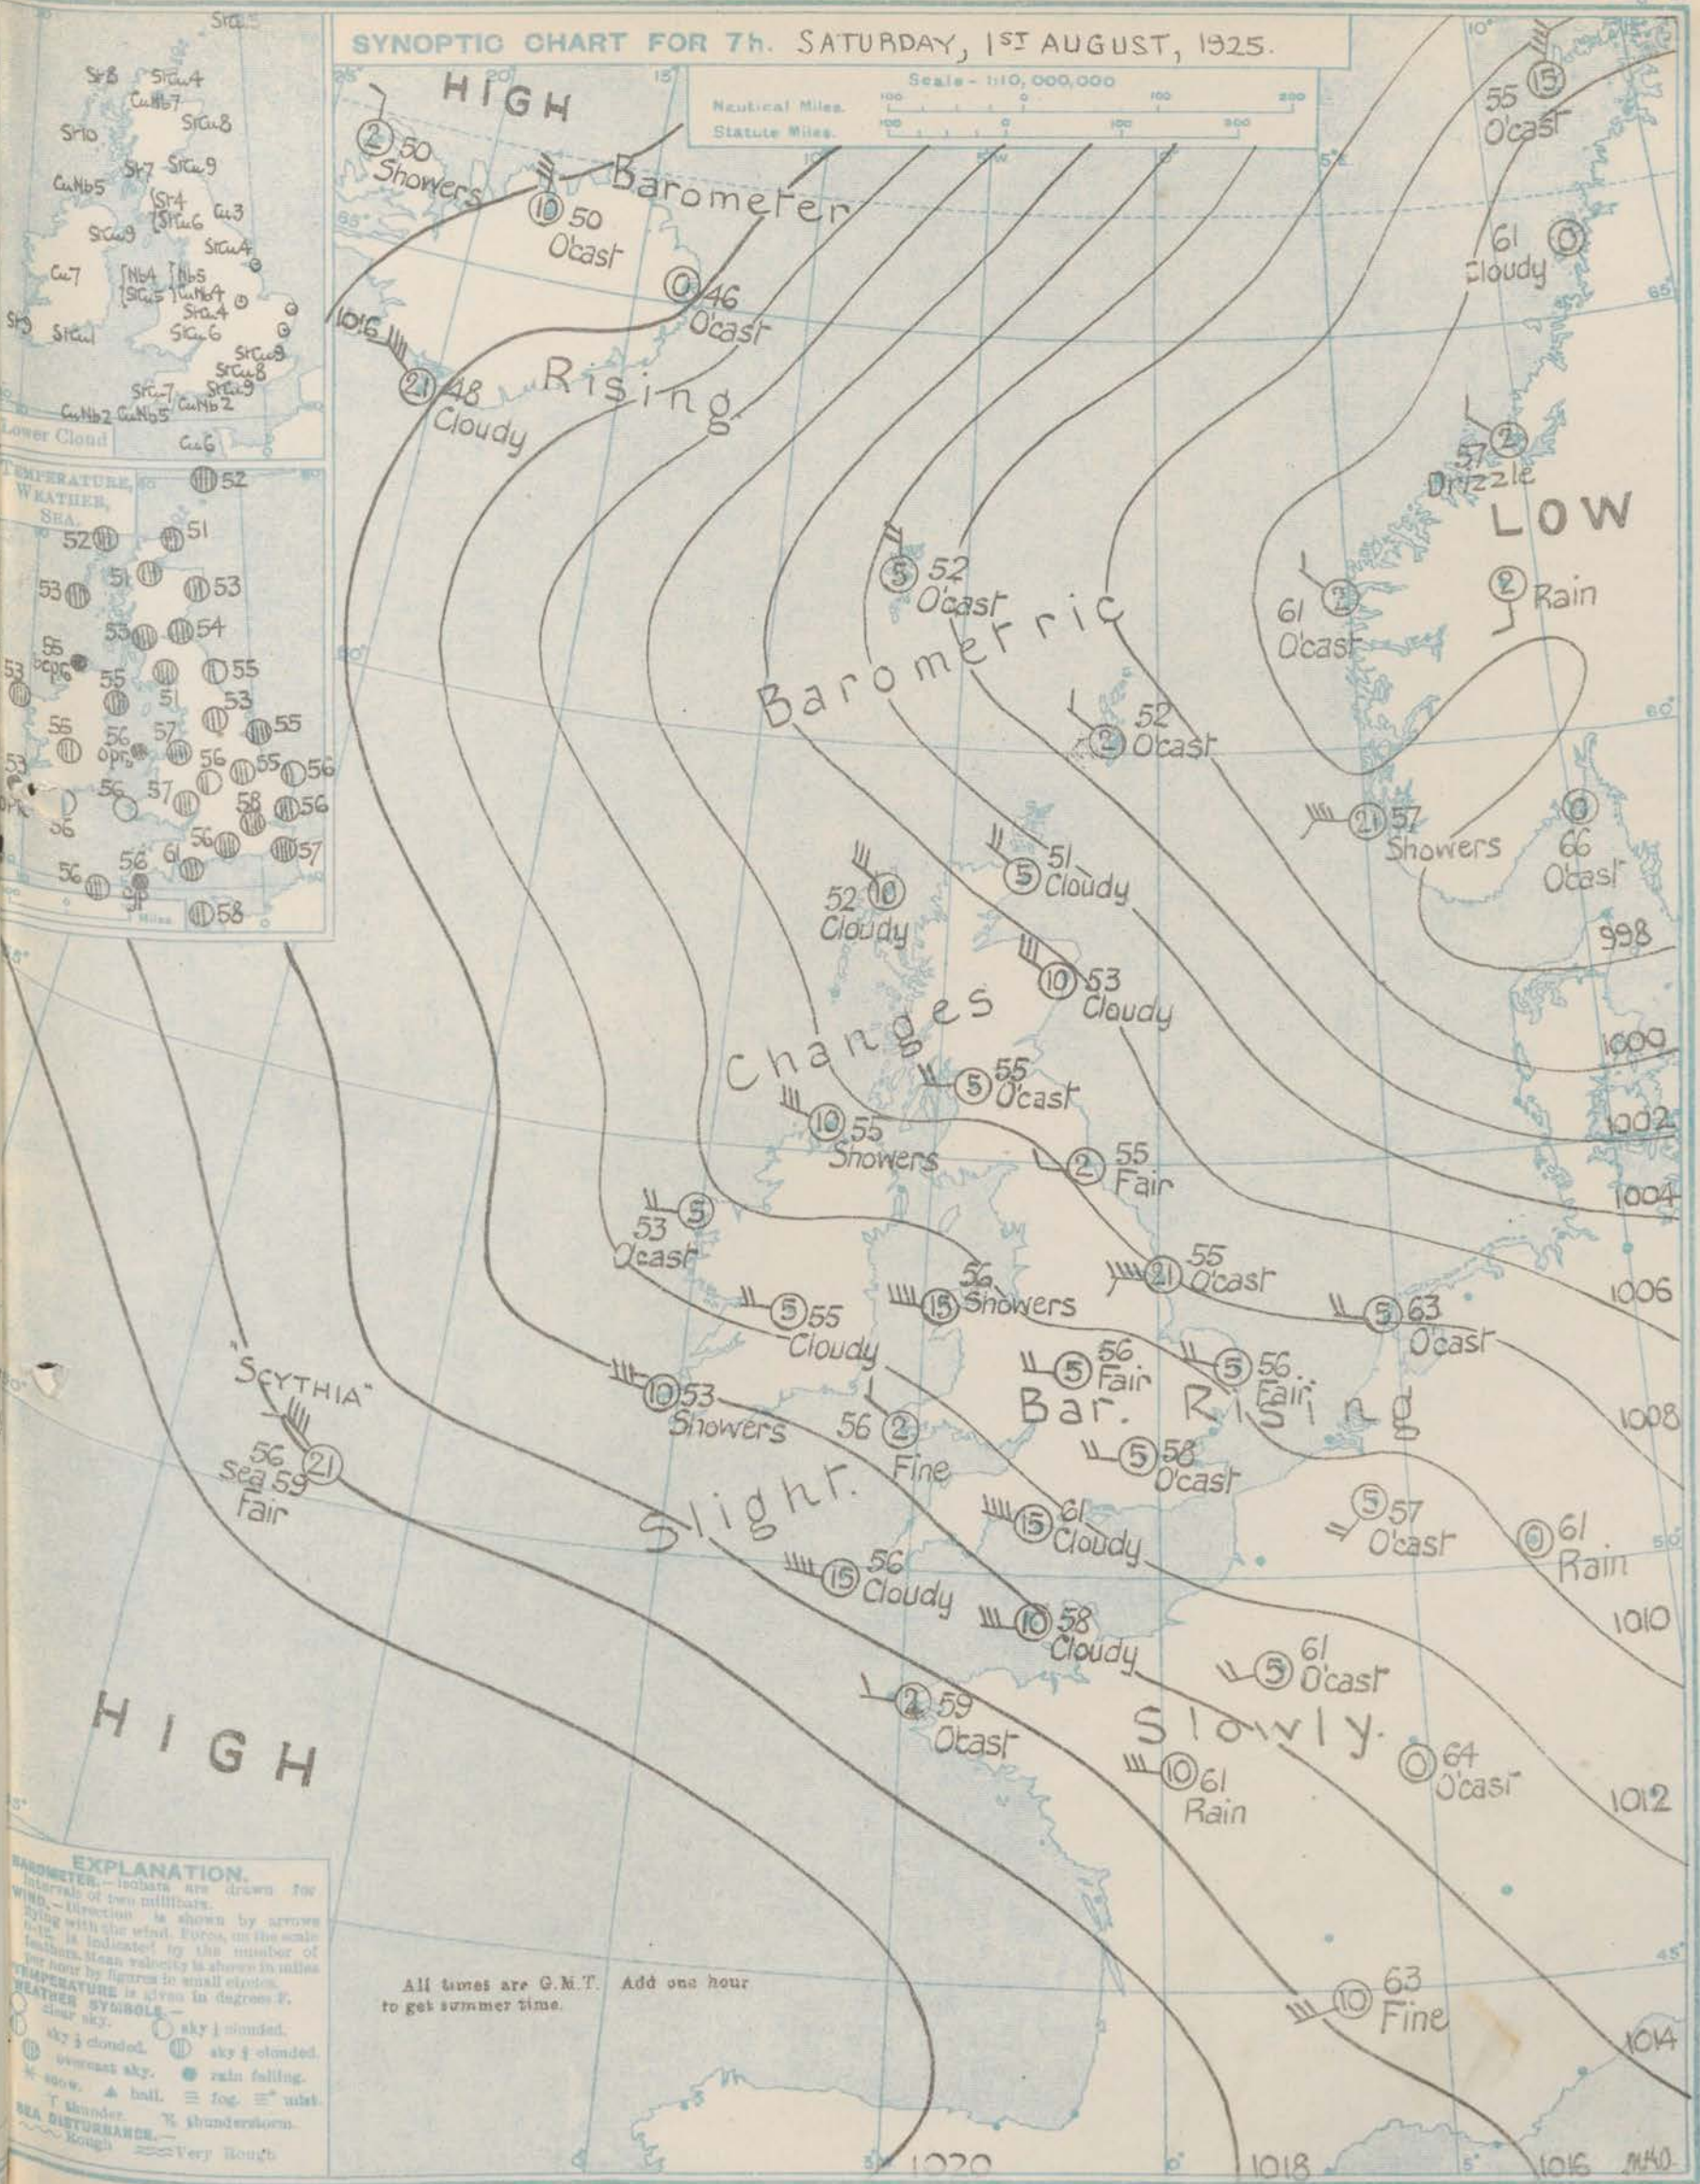

Districts.	Forecasts for the 24 hours commencing 15h. G.M.T. Saturday, 1st August, 1925.	Further Outlook.
1. S.E. England	<p style="text-align: center;">ALL DISTRICTS.</p> <p>Winds mainly between N.W. and W., light to moderate; mainly fair apart from local showers; visibility moderate to good; moderate or rather warm temperature.</p>	<p>Probably mainly fair apart from local showers.</p>

# SYNOPTIC CHART FOR 7h. SATURDAY, 1st AUGUST, 1925.

Nautical Miles.  
Statute Miles.

Scale - 1:10,000,000

**EXPLANATION.**  
 BAROMETER.—Isobars are drawn for intervals of two millibars.  
 WIND.—Direction is shown by arrows lying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
 TEMPERATURE.—is given in degrees F.  
 WEATHER SYMBOLS.—  
 ☉ clear sky. ☁ sky & clouded. ☁☁ sky & clouded. ☁☁☁ overcast sky. ☁☁☁☁ rain falling. ☁☁☁☁☁ hail. ☁☁☁☁☁☁ fog. ☁☁☁☁☁☁☁ mist. ☁☁☁☁☁☁☁☁ thunder. ☁☁☁☁☁☁☁☁☁ thunderstorm.  
 SEA DISTURBANCE.—  
 ~~~~~ Rough ~~~~~ Very Rough

All times are G.M.T. Add one hour to get summer time.

## GENERAL INFERENCE.

A depression west of Ireland will probably move slowly north-eastward, while the depression recently over France is passing away to Germany. Weather will remain generally unsettled, but a temporary improvement is probable in Southeast England.

| Districts                 | Forecasts for the 24 hours commencing 15h. GMT Wednesday, 5th August, 1925.                                                                           | Further Outlook.     |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| 1. S.E. England           | Wind W., backing S., light; mainly cloudy but brighter intervals; occasional rain tomorrow; perhaps local thunder; some mist; moderate temperature.   | Unsettled generally. |
| 2. E. England             |                                                                                                                                                       |                      |
| 3. E. Midlands            |                                                                                                                                                       |                      |
| 4. W. Midlands            |                                                                                                                                                       |                      |
| 5. S.W. England           | Wind S. to S.W., light to moderate, fresh locally; cloudy, occasional rain, thunder locally; visibility moderate to good; temperature moderate.       |                      |
| 6. South Wales            |                                                                                                                                                       |                      |

Capital letters indicate intense; suffix o indicates slight; repetition of letters indicates continuity. R = heavy rain. r = slight rain. rr = continuous rain. SYMBOLS. < = (less than (for cloud height). < = before (for precipitation). @ = solar halo. @ = lunar halo. With present weather is combined, whenever possible, the general character of the weather. A - indicates divides actual existing weather from preceding conditions, thus: bc-r = fair weather after rain; - = has decreased + = has increased. |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0=no swell 1=mod. swell 2=heavy swell 3=no swell 4=mod. swell 5=heavy swell 6=rather rough sea 7=rough sea 8=very rough sea 9=mountainous sea Calm or slight sea. Moderate sea. |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 0. Dense fog. 1. Thick fog. 2. Fog. 3. Moderate fog. 4. Mist or haze. 5. Poor visibility. 6. Moderate. 7. Good. 8. Very good. 9. Excellent visibility, beyond 3 1/2 miles. |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## GENERAL INFERENCE.

Pressure remains low on the Atlantic and relatively high on the Continent, and the general wind current will continue south to southwest. Small secondaries crossing the British Isles will give rise to local showers, and there is a risk of thunder in the West and North.

| Districts.                | Forecasts for the 24 hours commencing 15h. GMT. Saturday, 8th August, 1925.                                                         | Further Outlook.                                                                                       |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 1. S.E. England           | Wind S to S.W., light or moderate; mainly fair but a few local showers; visibility mainly good; rather warm.                        | Mainly fair and warm in the eastern half of England, but local thundery showers; unsettled in the N.W. |
| 2. E. England             |                                                                                                                                     |                                                                                                        |
| 3. E. Midlands            |                                                                                                                                     |                                                                                                        |
| 4. W. Midlands            | Wind S. to S.W., light to moderate; variable sky; showers in most places and perhaps local thunder; coast fog locally; rather warm. |                                                                                                        |

# SYNOPTIC CHART FOR 7h. SATURDAY, 8<sup>TH</sup> AUGUST, 1925.

All times are G.M.T. Add one hour to get summer time.

**EXPLANATION.**  
ISOBARS.—Isobars are drawn for intervals of two millibars.  
WIND.—Direction is shown by arrows pointing with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE.—Temperature is given in degrees F.  
WEATHER SYMBOLS.—  
○ clear sky.  
☁ sky & clouded.  
☁☁ sky & clouded.

## GENERAL INFERENCE.

A deep depression off N.W. Ireland is moving Northeast and conditions continue favourable for the development of further disturbances of secondary character. Winds will be mainly between S.W. and W. in the South, and S.E. to S.W. in the North, strong locally at times. Considerable rain is likely at first in the North, and in the South some rain or showers, and there is a risk of local thunderstorms in all districts.

## Districts.

Forecasts for the 24 hours commencing 15h. GMT. Sunday, 9th August, 1925.

## Further Outlook.

|                           |                                                                                                                                                                                           |            |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| 1. S.E. England           | Wind S.W., moderate to fresh, strong at times locally; cloudy, some rain or showers, local thunderstorms, but fair periods, visibility moderate to good; warm.                            | Unsettled. |
| 2. E. England             |                                                                                                                                                                                           |            |
| 3. E. Midlands            |                                                                                                                                                                                           |            |
| 4. W. Midlands            |                                                                                                                                                                                           |            |
| 5. S.W. England           | Wind S.W. to W., moderate to strong; cloudy, some rain or showers, local thunderstorms, but fair periods; visibility moderate to good; rather warm.                                       | Unsettled. |

GENERAL INFERENCE.

A wedge of relatively high pressure is moving eastwards across the British Isles and there will be sunny periods in all districts today with occasional local showers, but fresh disturbances will soon advance from the Atlantic and the improvement is likely to be quite temporary.

## Districts.

Forecasts for the 24 hours commencing 15h. G.M.T.

Tuesday, 11th August, 1925.

Further Outlook.

1. S.E. England
2. E. England
3. E. Midlands
4. W. Midlands
5. S.W. England
6. South Wales
7. North Wales
8. N.W. England
9. N. Midlands
10. N.E. England
11. E. Scotland
12. S.W. Scotland
13. Isle of Man
14. N. & N.W. Scotland
15. Hebrides
16. Orkneys and Shetlands
17. N.W. Ireland
18. N.E. Ireland
19. S.E. Ireland
20. S.W. Ireland

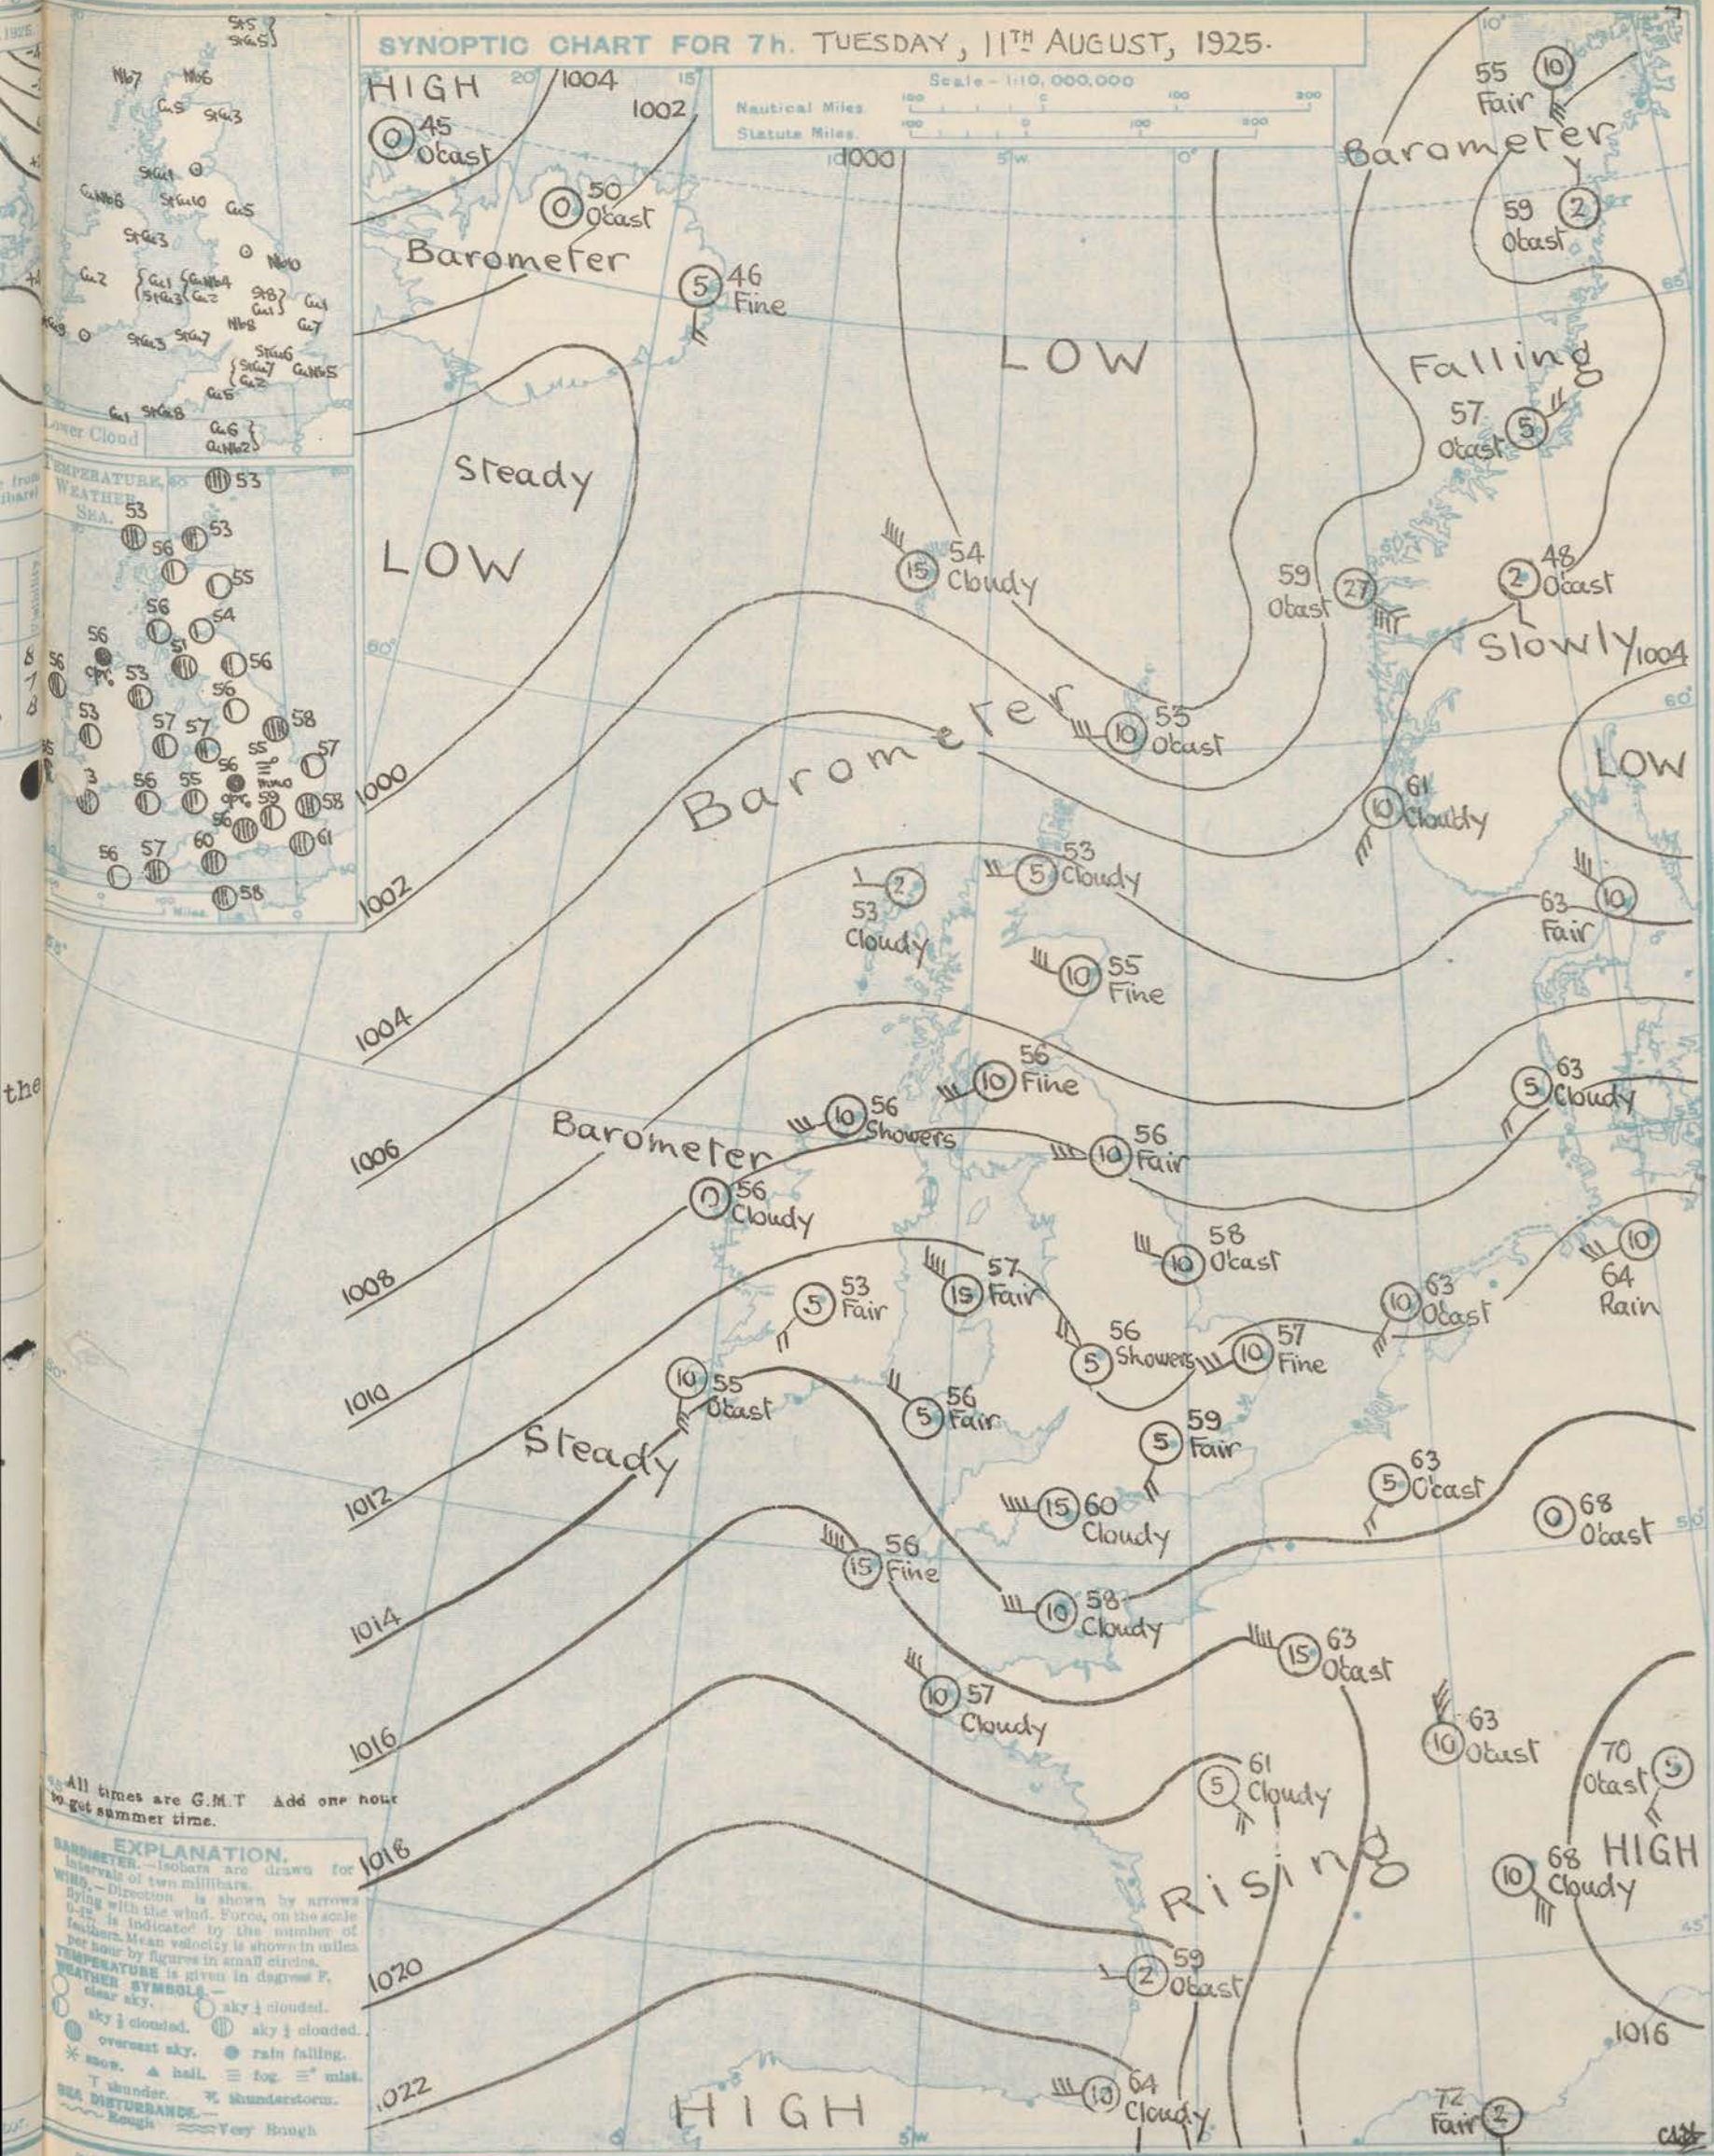

Moderate westerly to southwesterly winds; occasional showers, sunny intervals; visibility good; rather cool.

Alternating rainy and fair periods; cool.

Moderate to fresh southwesterly winds; fair to dull, some rain; visibility moderate to good; cool.

SYNOPTIC CHART FOR 7H. TUESDAY, 11TH AUGUST, 1925.

All times are G.M.T. Add one hour to get summer time.

**EXPLANATION.**  
Isobars are drawn for intervals of two millibars.  
WIND.—Direction is shown by arrows flying with the wind. Force, on the scale 0-12, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.  
**WEATHER SYMBOLS.**  
☉ clear sky. ☁ sky & clouded. ☁☁ sky & clouded. ☁☁☁ overcast sky. ☔ rain falling. \* snow. △ hail. ≡ fog. ≡ mist. T thunder. T thunderstorm.  
**SEA DISTURBANCE.** Rough. Very Rough.

## GENERAL INFERENCE.

The depression recently off the Hebrides is now north of Scotland and is filling up, but there is a secondary trough extending from it across Scotland and Ireland. Rain is probable in most places today but a general improvement is likely later.

# SYNOPTIC CHART FOR 7H. THURSDAY, 13<sup>TH</sup> AUGUST, 1925.

Scale - 1:10,000,000  
Nautical Miles 100 200 300  
Statute Miles 100 200 300

All times are G.M.T. Add one hour to get summer time.

- EXPLANATION.**  
Isobars are drawn for intervals of two millibars.  
Direction is shown by arrows.  
Force, on the scale, is indicated by the number of feathers. Mean velocity is shown in miles per hour by figures in small circles.  
Temperature is given in degrees F.  
**WEATHER SYMBOLS.**  
○ clear sky. ○ sky & clouded. ○ sky & clouded. ○ overcast sky. ○ rain falling. \* snow. △ hail. = fog. = mist. T thunder. T thunderstorm. **SEA DISTURBANCE.** Long Very Rough

## GENERAL INFERENCE.

A large anticyclone is spreading in from the Atlantic and generally fair weather is probable for the next day or two, with light to moderate northerly to northeasterly winds, backing to west before long in the North.

## GENERAL INFERENCE.

There is still a large and nearly stationary anticyclone over our western coasts and generally fair dry weather is probable for the next few days, but depression in the far north may cause local showers in the north of Scotland.

Districts. Forecasts for the 24 hours commencing 15h. G.M.T. Saturday, 15th August, 1925.

Further Outlook.

| 20. S.W. Ireland          | As 1 - 6.                                                                                                                             |

Fair for the next few days, except possibly in the north of Scotland.

# SYNOPTIC CHART FOR 7h. SATURDAY, 15<sup>TH</sup>. AUGUST 1925.

Scale - 1:10,000,000  
Nautical Miles  
Statute Miles

All times are G.M.T. Add one hour to get summer time.

**EXPLANATION.**  
Isobars are drawn for intervals of two millibars.  
Direction is shown by arrows.  
Force, in the case of wind, is indicated by the number of lines.  
Mean velocity is shown in miles per hour by figures in small circles.  
TEMPERATURE is given in degrees F.  
**WEATHER SYMBOLS.**  
☉ sky clear.  
☁ sky cloudy.  
☁☁ sky & cloudy.  
☁☁☁ overcast sky.  
☁☁☁☁ rain falling.  
☁☁☁☁☁ snow & hail.  
☁☁☁☁☁☁ fog.  
☁☁☁☁☁☁☁ mist.  
☁☁☁☁☁☁☁☁ thunderstorm.  
**SEA DISTURBANCE.**  
☁☁☁☁☁☁☁☁☁ Very Rough

## DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON:
