With present weather is combined, whenever possible, the general character of the weather.
A "solidus" divides actual existing weather from preceding conditions, thus: -bc/r = fair weather after rain; i = intermittent; - = "decreasing"; + = "increasing"; h(r) = "hail" or "rain and hail";
Capital letters indicate intensity, suffix o indicates slight; and repetition of letters continuity, thus: -
R = heavy rain.
rr = continuous moderate rain.
rro = continuous light rain.

METEOROLOGICAL OFFICE, LONDON.

NOTES ON THE INFORMATION CONTAINED IN THE VARIOUS SECTIONS OF THE DAILY WEATHER REPORT.

Stations.—*Croydon.* From 1st May, 1928, the wind records at Croydon have been obtained from a new site, the anemometer vane being 104·5 feet above ground level whereas formerly in the old site the height was 40 feet. Since 15th February, 1929, the velocity as measured from the anemometer record has been reduced in the ratio 6:5 before conversion to the Beaufort number by the table of equivalents in general use in this country which is applicable to anemometers having a height of 40 feet.

Guernsey.—The observations have been taken at the station of the States Meteorological Service in St. Peter Port from June 10th, 1929. Formerly the readings at 7h., 13h., and 18h. were taken at Fort George, those at 0h. being from St. Peter Port.

Kew. Temperature readings at Kew are taken in a large louvered screen placed against the north wall of the observatory. The thermometer bulbs are at a height of 10 feet above the ground immediately surrounding the building. This ground is raised a few feet above the general level of the Old Deer Park in which the observatory stands.

Valentia. The observations at 1 a.m. are taken at the Post Office Wireless Station on Valentia Island. Those at all other hours at the Observatory near Cahirciveen on the mainland.

Heights of Stations.—The heights of British Stations above M.S.L. published in the British Section of the Daily Weather Report refer to the plot of ground on which the rain gauge is situated.

Pressure.—The distribution of barometric pressure at Mean Sea Level is shown by means of isobars which are drawn for intervals of 2 millibars on the British Section of the Report and for intervals of 4 millibars on the International Section.

The wind at a height of 1,500–2,000 feet above ground usually blows along the isobars and, for the same temperature, pressure and latitude, the speed of the wind is inversely proportional to the distance between the isobars, e.g., for isobars 1 inch apart in the Daily Weather Report the speed of the upper wind is about 12 m.p.h. in latitude 55°, with a temperature of 50° F. and a pressure of 1,015 mb; if, however, the isobars are $\frac{1}{2}$ inch apart the corresponding speed is 24 m.p.h.

The scale below can be used with both the International and the British Sections. If the distance between consecutive isobars is measured along the rule from the left-hand extremity the geostrophic wind is shown by the scale in miles per hour.

GEOSTROPHIC WIND SCALE FOR

4 mb isobars on 1 : 2 × 10⁷ Charts.
or 2 mb " " 1 : 10⁷ "
or 1 mb " " 1 : 5 × 10⁶ "

This scale applies under the following conditions:—

Pressure, 1,015 mb. Temperature, 50° F. Latitude, 55°.

Corrections.—For an increase of 10 mb pressure, subtract 1% from velocity; for an increase of 10° F. add 2%. From Latitude 55° to Latitude 65° subtract 1% for each degree above 55°. From Latitude 55° to Latitude 45° add 1½% for each degree below 55°.

Temperature.—Temperature is specified in degrees Fahrenheit, and is shown on the charts by means of figures written alongside the circles which indicate the positions of the stations.

In ship reports published on page 3 of the British Section of the Report sea temperature is given below air temperature and is preceded by the word "Sea."

Relative Humidity.—Relative humidity at British stations is calculated from the following hygrometric formulæ:

$$x = f - \cdot 444 (t - t') \text{ for wet bulb readings above } 32^\circ \text{ F.}$$

$$x = f - \cdot 400 (t - t') \text{ for wet bulb readings below } 32^\circ \text{ F.}$$

where x is the vapour pressure in mb.;

f the saturation vapour pressure at the temperature of the wet bulb;

t the dry bulb temperature; and

t' " wet " "

The tables used for calculating humidities from the readings of the dry and wet bulb thermometers on aeroplanes, are based on a formula similar to the above, but allowance is made for the variation of barometric pressure with height and for the increased ventilation of the thermometers.

Upper Air Temperature.—The British observations are made normally, one at 1,000 feet above the level of the aerodrome, and the remainder at pressures of 950, 900, 850, 800, etc., millibars. Heights are then computed and, apart from instrumental error, are correct heights: they do not require modification for differences of temperature from normal as these are allowed for in the computation. The values are shown graphically and in tabular form in the Upper Air Supplement. On the diagram, temperatures are given in degrees Fahrenheit and Absolute.

The oblique line marked "Dry Adiabatic" shows the lapse rate of temperature for dry air ascending or descending under adiabatic conditions, i.e., without communication of heat from external sources. The lapse rate under these circumstances is very approximately 5·5° F. per 1,000 feet, or 10°a per kilometre. A lapse rate greater than this value indicates instability in a dry atmosphere.

The broken lines marked Saturated Adiabatic show lapse rates for saturated air. These are for air masses which contain just sufficient moisture at 1,015 mb. pressure to become saturated after rising 1 km. in an environment having the dry adiabatic lapse rate. The condensed moisture is assumed to be retained thereafter in the air as it rises.

Wind.—All wind directions specified in the reports are "true," as distinguished from "magnetic." The arrows indicating wind direction are drawn to fly with the wind. Wind velocities are shown on the charts of the British Section and Upper Air Supplement in m.p.h. by the numbers placed within the small circles. In the International Section velocities are not shown. In both Sections the number of feathers on the arrows denotes wind force by Beaufort number.

Upper Winds.—The direction and velocity of the wind are given in the charts of the Upper Air Supplement for heights of 2,000 feet and 6,000 feet. The data are also given in tabular form for various heights. The reports are usually based on Pilot Balloon ascents.

Wind reports deduced from British Pilot Balloon Ascents refer to the 1,000 feet layers centering at the heights given in the table up to 16,000 feet. When winds are reported at greater heights, they refer to the 5,000 feet layers centering at 20,000 feet, 25,000 feet, 30,000 feet and 35,000 feet.

In the tabular statement direction is specified in degrees from true north measured through East 90°, South 180°, West 270° to North 360°. (See diagram below.)

Rainfall.—At Stations marked † in the International Section of the Report, the rainfall is received in an abbreviated code and the measurement entered is therefore not necessarily correct to the nearest millimetre. For example any fall between 11 and 15 mm. would be reported by the same code figure and entered as 13 mm. in the Report.

Sea Disturbance.—The code for sea disturbance used at coastal stations is given on p. 1 of the British Section of the Report. Ships at sea use the following code:—

0. No or slight swell	} and {	5. No or slight swell	} and {
1. Moderate swell		6. Moderate swell	
2. Heavy " "		7. Heavy " "	
3. Long low " "		8. Long low " "	
4. Confused " "		9. Confused " "	

Adjusted Readings.—Where an instrumental reading is found to be in error and some adjustment is necessary, such adjusted reading is published in brackets thus (59).

The entries in the British Section of the Report for the stations in the main tables on pages 1, 2, and 4 are compared with those in the returns received from the stations at the end of the month and errors in the Report so found are noted in the monthly correction sheets.

The reports from the London Stations on page 1 and from the Health Resorts on page 4 are not subjected to the same close scrutiny but if any errors are found these are also noted in the correction sheets.

Times of Sunrise, Noon and Sunset.—From January 1st, 1926, the times of Sunrise, Noon and Sunset published in the British Section of the Report for certain stations have been recalculated from (1) the figures for the duration of sunshine contained in the International Meteorological Tables and (2) the value of the sun's declination and the equation of time published in the Nautical Almanac. The change of declination of the sun on the same day from year to year over a cycle of four years is now taken into account. This change was formerly neglected.

SUPPLEMENT TO THE DAILY WEATHER REPORT OF THE METEOROLOGICAL OFFICE, LONDON.
SUMMARY OF METEOROLOGICAL OBSERVATIONS AT SELECTED STATIONS ISSUED ON THE 1st DAY OF EACH MONTH.

Notes on the Weather of APRIL, 1929

April was generally dry and in Great Britain cold, with a preponderance of northerly winds.

During the opening days pressure was high to the westward of the British Isles while shallow depressions passed down the North Sea. Rain or wintry showers occurred locally but most places had considerable periods of bright sunshine. By the 5th an anticyclone moving in from westward covered the British Isles and the 6th was a bright day with practically no rain. This anticyclone moved away southeast and was followed by a new one, which maintained fair conditions in Scotland and Ireland for some days, notably from the 9th - 13th. This beautiful weather continued locally in Scotland until the 16th (at Stornoway the average daily sunshine from the 10th - 16th was 10.8 hours). Meanwhile rather cloudy weather with rain at times prevailed in East and Southeast England. On the 14th a depression off Southwest Ireland spread in eastward causing some moderately heavy rain in the South-west (Guernsey 15 mm., Scilly 12 mm., Falmouth 10 mm.).

A change of type occurred about the 16th - 17th, when weather became unsettled in the West and North, while anticyclonic conditions were enjoyed in the Southeast. It was at this time that the one really warm spell was enjoyed, particularly in the Eastern and Southeastern districts of England. Temperature rose above 60°F. in places on the 17th, and reached or exceeded 70°F. locally on the 19th. The northerly wind in the rear of a depression over Norway spread southward, however, and by the 20th cold, rather unsettled conditions were re-established. Wintry precipitation occurred at times but there were long periods of bright sunshine.

On the 28th - 29th a depression over the Bay of Biscay moved in eastward across France and mainly dull weather with occasional rain prevailed except in the extreme North and West.

Sunshine totals were above the normal on the Western and northwestern seaboard and below the normal locally elsewhere.

† The average sunshine for Liverpool and the average rainfall for the other stations marked † have been computed from the records available for these several stations by reference to the nearest stations with long records.

‡ Based in part on reports made by telegraph in which the day & night measurements are rounded off to the nearest whole millimetre. Small discrepancies may arise between these totals and those given in the Monthly Weather Report which are based on readings taken to 0.1 mm.

G. C. SIMPSON, F.R.S., Director.

ISOPLETHS* BASED ON SIX-HOURLY OBSERVATIONS.

NOTE: The diagram is obtained by drawing a line from Akureyri, Iceland, to the South of France, near Marseilles. The points at which the isobars drawn for 4 mb. pressure intervals intersect this line at 1h, 7a, 13h, and 19h are plotted consecutively and joined to show the variation of pressure from day to day at any point in the line. The line terminates at Lat. 65° N., Long. 18° W. in the north, at Lat. 44½° N., Long. 4° E. in the south.

GENERAL INFERENCE.

A trough of low pressure associated with a depression over Southern Scandinavia is moving southeastwards across the British Isles, while an anticyclone remains centred southwest of the British Isles. Strong northwest winds will be experienced generally. Bright periods and showers will occur in all districts and temperature will be rather low generally. On the hills in the extreme north some snow will be experienced.

Districts.	Forecasts for the 24 hours commencing 12 Noon G.M. Monday, 1st April, 1929.	Further Outlook.
1. S.E. England	Fresh northwest winds, strong at times; cloudy, occasional light rain or showers during early part of period; bright periods but local showers later; cold.	Probably cold for a day or two with some snow in the extreme north
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England		
6. South Wales		
7. North Wales		
8. N.W. England	Fresh northwest winds; bright periods, local showers; cold.	South Cone hoisted at 2h. 10m today in districts 2, 7, 8, 10, 11 and 12 and at 10h. today in districts 1, 5, 19 and 20.
9. N. Midlands		
10. N.E. England		
11. S.E. Scotland	Fresh to strong northwest winds; bright periods, hail and snow showers; cold.	Still flying elsewhere.
12. S.W. Scotland & Isle of Man		
13. N.W. Scotland		
14. Mid-Scotland	As 8 - 12.	
15. N.E. Scotland	As 13A - 17B.	
16. Orkneys and Shetlands		
17. N.W. Ireland	Fresh northwest winds; bright periods; showers; rather cold.	20.

An anticyclone centred over France is drifting slowly southwards, while secondaries to an Atlantic depression are moving N. or N.E. along our extreme western seaboard. Over England and the eastern half of Scotland mainly fair weather will continue, but over Ireland and Western Scotland some rain or showers will occur.

GENERAL INFERENCE.

A ridge of high pressure over Western Ireland is likely to move in over the British Isles as a trough of low pressure over the North Sea drifts away eastwards. Winds will be generally northerly and weather fair apart from local showers over the Eastern Seaboard. Day temperature will be low and ground frost be widespread at night.

Districts.	Forecasts for the 24 hours commencing 12 Noon G.M.T. Tuesday, 9th April, 1929.	Further Outlook
1. S.E. England	Moderate northerly winds; local coastal showers at first, fair later; rather cold, ground frost inland at night.	Fair with some rise in temperature.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England	Moderate northerly winds becoming light variable; fair; rather cold, ground frost inland at night.	
6. South Wales		
7. North Wales		
8. N.W. England		
9. N. Midlands	As 1 - 2.	
10. N.E. England		
11. S.E. Scotland		
12. S.W. Scotland & Isle of Man		
13. A.W. Scotland	As 3 - 9.	
14. N.W. Scotland		
15. Mid-Scotland		
16. N.E. Scotland

EXPLANATION.
Barometer. - Isobars are drawn for
centrals of two millibars.
Winds. - Arrows show the wind
direction. Number indicates force
in knots. Mean velocity in miles
per hour entered in small circles.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS.

EXPLANATION.
Isobars are drawn for every two millibars.
Arrows show the wind direction and force.
Ships are indicated by their names and positions.
Weather symbols are used to denote conditions.
Barometer readings are given in degrees F.
Other symbols are used for specific weather phenomena.

SYMBOLS.

EXPLANATION
Barometer. Isobars are drawn for
every 0.2 millibars.
Arrows fly with the wind.
Number of feathers indicates force.
Mean velocity in miles
per hour entered in small circles.
TEMPERATURE is given in degrees F.
WIND SYMBOLS.
Clear sky. Cloudy less than 1
clouded. Cloudy more than 1
clouded. Cloudy 2 clouded.
Overcast sky. Rain falling.
Snow. A hail. Fog. Mist.
Thunder. Thunderstorm.
Very Rough.
Barometric change from
1000 to 1010 millibars is entered
above the word for weather.

GENERAL INFERENCE.

Secondaries to a deep depression centred over Scandinavia are moving south-eastwards across Scotland, and the anticyclone recently covering southern districts is withdrawing southeast. In northern districts cold northerly winds with unsettled weather will become established, and in the South, after today, a deterioration in the present fair weather is probable with a lower temperature.

Districts.	Forecasts for the 24 hours commencing 12 Noon G.M.T. Friday, 19 th April, 1929.	Further Outlook.
1. S.E. England	Wind between S.E. and S.W., mainly light to moderate; bright becoming cloudy, perhaps showers tomorrow; warm to day, cooler tomorrow.	Unsettled, colder.
2. E. England		
3. E. Midlands		
4. W. Midlands		
5. S.W. England	Wind southerly or variable, mainly light to moderate; bright to cloudy, probably some rain or showers later; rather warm to moderate temperature.	A North Cone hoisted at 9h. 25 m. G.M.T. this morning. BCP
6. South Wales		
7. North Wales	Westerly winds, moderate or fresh; cloudy, some showers; temperature falling.	
8. N.W. England		
9. N. Midlands		
10. N.E. England	Westerly winds, moderate to strong; some rain or showers; temperature falling.	
11. S.E. Scotland		
12. S.W. Scotland & Isle of Man	W. to N.W. winds, moderate to strong; cloudy, some rain or showers, perhaps sleet on high ground; temperature falling.	
13. A.W. Scotland		
14. N.W. Scotland		
15. Mid-Scotland	N.W. winds, strong to gale; cloudy, some rain or showers, perhaps snow or sleet over high ground; cold.	
16. N.E. Scotland	As 10 - 11.	
17. Orkneys and Shetlands	As 13B.	
18. N.W. Ireland	As 12 - 13A.	
19. N.E. Ireland		
20. S.W. Ireland	As 5 - 6.

BEAUFORT NOTATION OF WEATHER.

b blue sky (not more than a quarter covered with cloud).
bc sky partly cloudy (one half covered).
c generally cloudy.
d drizzle, e wet air, g gloomy.
f fog, visibility 200-1000 m.
F thick fog, less than 200 m.
m mist, 1000-2000 m.
h hail, i intermittent.
jp precipitation within sight of station.
KQ the squall, l lightning.
o overcast sky, p passing showers.
q equally, r rain, s snow.
rs sleet, t thunder.
u ugly, threatening sky.
v unusual visibility, w dew.

z hoar frost, y dry air.
x dust haze; the turbid atmosphere of dry weather.
h(r) "hail" or "rain and hail."
Capital letters indicate intensity: prefix o indicates slight; repetition of letters indicates continuity.
R = heavy rain, r = slight rain.
rr = continuous rain.

SYMBOLS.
< = (less than (for cloud height),
> = (more than (for precipitation)).
⊙ = solar halo, ⊙ = lunar halo.
With present weather is combined, whenever possible, the general character of the weather.
A "solidus" divides actual existing weather from preceding conditions, thus: bc/r = fair weather after rain; - = has decreased; + = has increased.

ATMOSPHERIC POLLUTION.
Milligrams of Solid Impurity per cubic metre.

EXPLANATION.
Isobars are drawn for intervals of two millibars.
Arrows fly with the wind. Number of feathers indicates force. Mean velocity in miles per hour entered in small circles.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS.
Clear sky. ☉ sky less than 1/4 clouded.
☁ sky 1/4 to 1/2 clouded.
☁☁ sky more than 1/2 clouded.
☁☁☁ overcast sky.

Secondary depressions moving southwards over the British Isles and the North Sea will give rise to local wintry showers in the East and North and occasional rain or drizzle in the extreme West. Weather will, however, be mainly bright.

Further Outlook.

Less cold than of late.

EXPLANATION.

BAROMETER. Isobars are drawn for intervals of two millibars.

WIND. Arrows fly with the wind. Number of feathers indicates Beaufort Force. Mean Velocity in miles per hour entered in small circles.

TEMPERATURE. Is given in degrees F.

WEATHER SYMBOLS.

- Clear sky.
- Cloudy (less than 1/2)
- Cloudy (more than 1/2)
- Overcast sky.
- Rain falling.
- Snow.

SYNOPTIC CHART FOR 7h. TUESDAY, 30th APRIL, 1929.

All times are G.M.T. Add one hour to get summer time.

EXPLANATION.
Isobars are drawn for intervals of two millibars.
Arrows by with the wind.
Number of feathers indicates Beaufort Force. Mean Velocity in miles per hour entered in small circles.
TEMPERATURE is given in degrees F.
WEATHER SYMBOLS.
☉ Clear sky. ☁ Sky less than 1/4 clouded. ☁☁ Sky 1/4 to 1/2 clouded. ☁☁☁ Sky more than 1/2 clouded. ☁☁☁☁ Overcast sky. ☁☁☁☁☁ Rain falling. ☁☁☁☁☁☁ Rain falling. ☁☁☁☁☁☁☁ Thunder. ☁☁☁☁☁☁☁☁ Thunderstorm.
SEA DISTURBANCE.
☁☁☁☁☁☁☁☁☁ Very Rough.
☁☁☁☁☁☁☁☁☁☁ In Iceland barometric change from 4h. to 7h. in half millibars is entered beneath the word for weather.
