WEDNESDAY
1 JANUARY 1986SUMMARY
OF
BRITISH WEATHER

In most regions the night was dry with a slight frost but in northern England and eastern Scotland there was rain at times and sleet on hills. Near south-western coasts of England and Wales there were isolated showers.

Eastern and southeastern England had a sunny start to the day and over much of England and Wales it was dry to begin with but rain reached southwestern parts during the morning. The rain moved across central and eastern England during the afternoon and evening with heavy outbreaks, sleet in places, and snow over Lincolnshire, Humberside and the Pennines in the evening. Clearer weather followed from the south-west during the late afternoon and evening.

In northern England and Northern Ireland it was dry most of the day, though mainly cloudy. Rain or sleet spread to all parts during the late afternoon and evening with some heavy bursts and over high ground there was snow. In central and eastern Scotland it was a cloudy day with patches of light rain, while in western Scotland it was dry with bright spells.

Temperatures were near normal in most southwestern parts of England and Wales. Elsewhere it was rather cold.

A gust of 62 knots was reported from Gwennap Head (Lands End) late in the evening.

1800

2400

THURSDAY
2 JANUARY 1986SUMMARY
OF
BRITISH WEATHER

In South Wales and southern England there were heavy showers which were most frequent in southern coastal regions with isolated thunderstorms.

In central and northern counties of England and Wales along with Northern Ireland and southern Scotland it was mainly cloudy with rain or sleet at times and over highest ground there was snow, especially on the Pennines and Cumbrian mountains. In southern Scotland and Northern Ireland it became dry in most places later in the day, though there were still one or two showers in southern Scotland. During the evening dry weather spread south across northern England and northwest Wales.

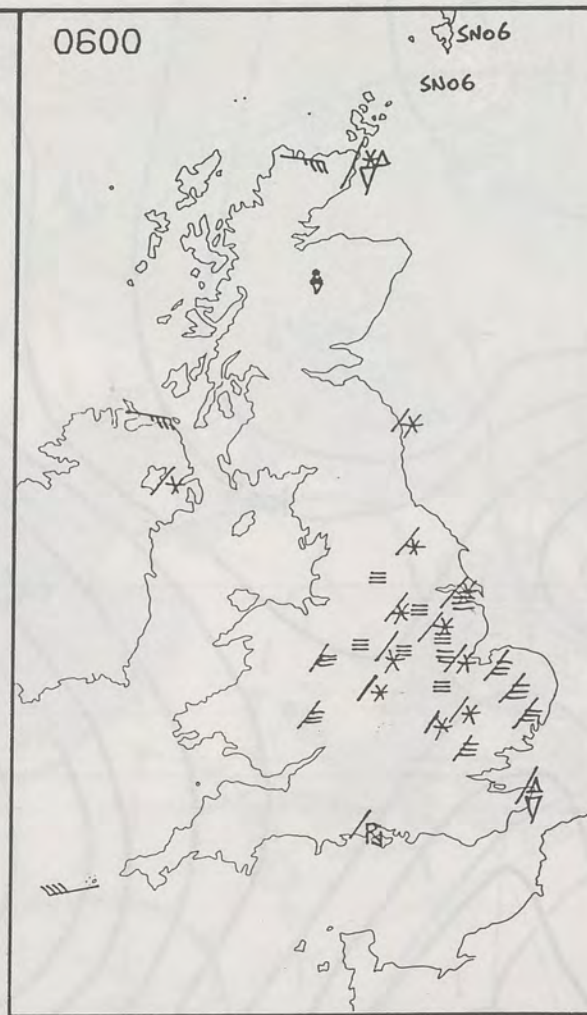

In northern Scotland there were scattered showers which turned to snow in parts of the northeast later where there were also sunny periods.

Temperatures ranged from a little below normal in most central and northern regions to a little above normal in the south of England and South Wales.

1800

2400

FRIDAY
3 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

It was very wet in the early hours in the southeast of England, and there was some mostly light sleet or snow in some places in the area. Further north and west over Britain most places were dry, and as skies cleared from the north it became frosty by dawn. However, there were wintry showers towards eastern and northern coasts.

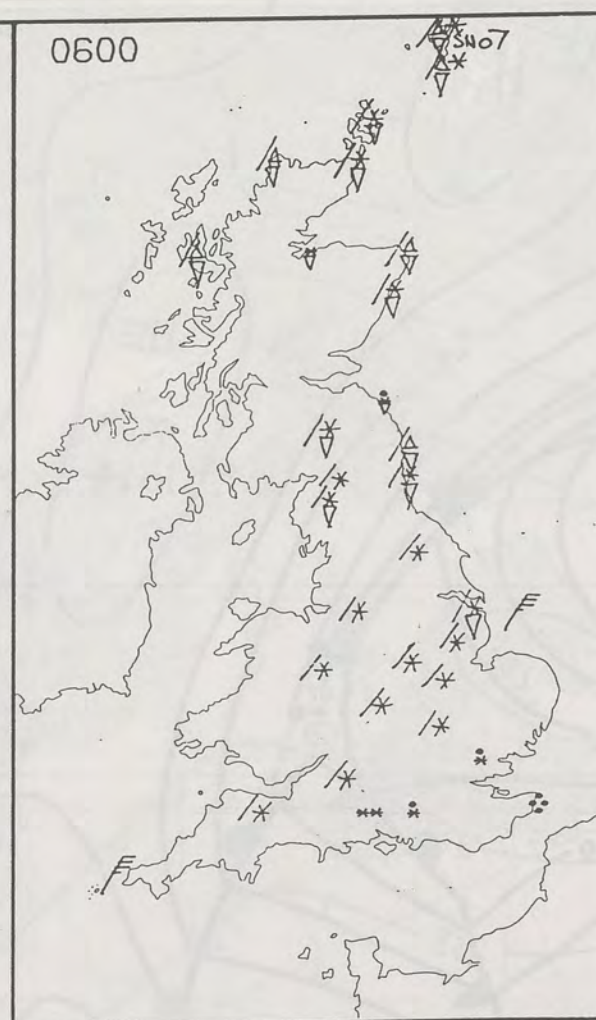

The rain cleared from the south-east of England by mid-morning, and the clearance of cloud followed from the north within a few hours, so that much of the British Isles had quite a sunny, though mainly cold, day with a fresh northerly wind. Snow or hail showers fell in some eastern districts, chiefly towards the coast, with even a report of thunder from Flamborough Head in the early afternoon.

Most of the British Isles had a clear, frosty evening.

SATURDAY
4 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

Most of Britain had a frost over-night - severe in parts of central and southern Scotland.

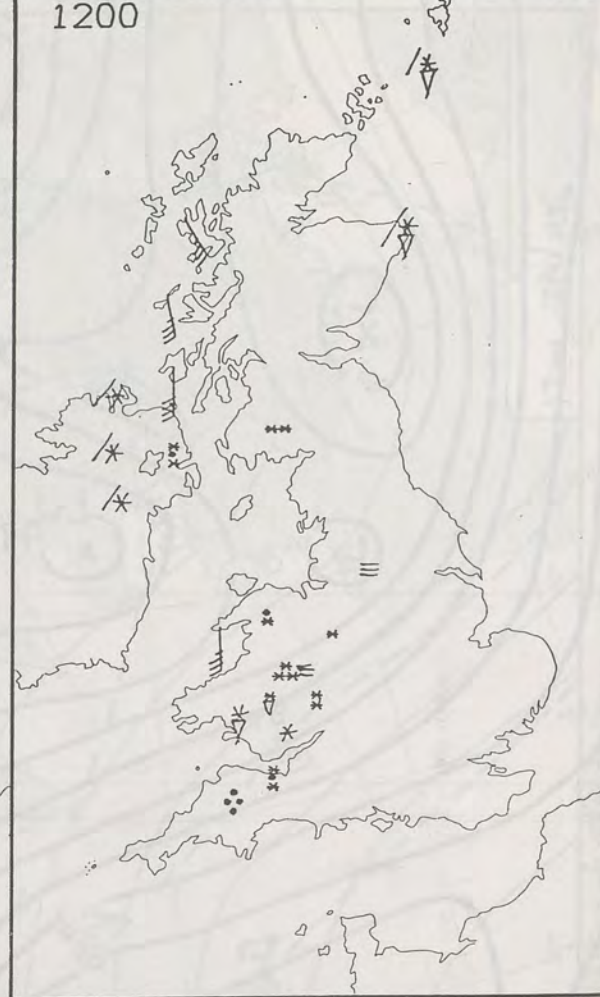

During the morning cloud and rain spread into southwest England, Wales, Northern Ireland and the Western Isles, turning to sleet in places. For the rest of Britain it was a bright and frosty morning.

Through the rest of the day the rain continued to spread eastwards, turning to wet snow for a while in the Midlands, East Anglia, southern and central Scotland. Clearer weather reached Northern Ireland around dusk, spreading across Wales and southwest England during the evening.

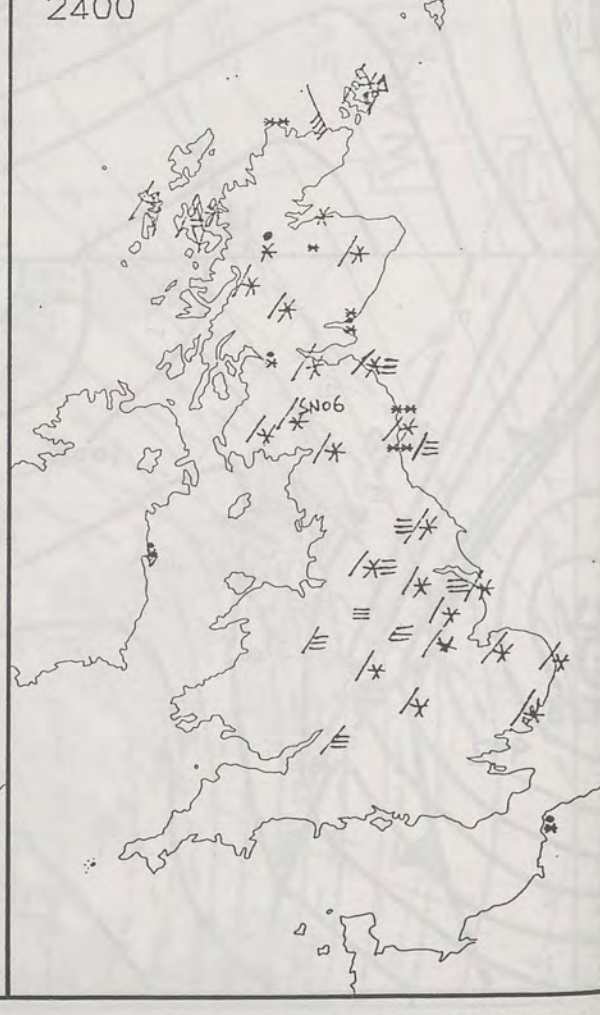

Temperatures were near average in southwest England, South and West Wales, Northern Ireland and the Western Isles. Over the rest of southern England and in Scotland it was a rather cold day and very cold in many central, northern and eastern counties of England, with frost persisting all day in one or two places.

PLOTTED SURFACE OBSERVATIONS

SUNDAY
5 JANUARY 1986

SUMMARY OF BRITISH WEATHER

A belt of rain moved across England and Wales early in the night, turning to snow over northeast England for a time. Clear skies followed with frost in many places by dawn, and some freezing fog in the Midlands and northern England. Rain returned to parts of southwest England and the Channel Islands before dawn. Over Scotland and Northern Ireland there was a mixture of rain and sleet showers - with northeast Scotland having rather more continuous rain and sleet.

During the morning counties bordering the English Channel had rain and grey skies, later clearer weather spread from the west. Elsewhere over England and in Wales there were bright or sunny spells and any fog cleared during the morning. Near western coasts showers of rain and hail were reported and a few ran through the Cheshire Gap turning to sleet in places. In northeast England it turned wet during the afternoon with some sleet over hills by evening. Eastern Scotland had a raw, wet day, with more rain and snow. Over the rest of Scotland and Northern Ireland there were showers of rain and sleet with a few bright spells, southern Scotland having more continuous sleet and snow by evening.

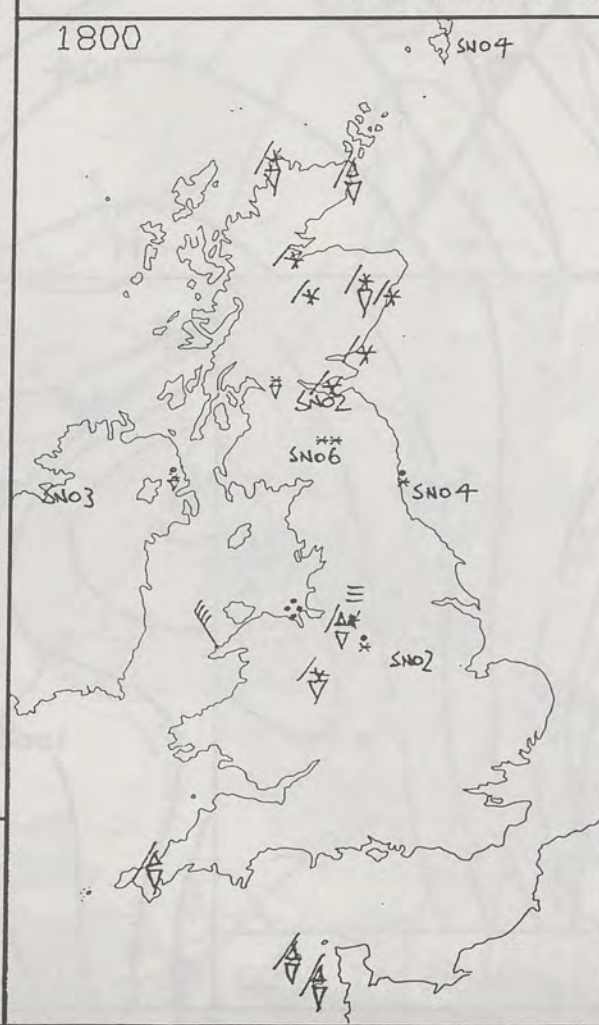

It was generally cold over much of Britain.

PLOTTED SURFACE OBSERVATIONS

MONDAY 6 JANUARY 1986

SUMMARY OF BRITISH WEATHER

There was frost in most places overnight, with some patchy fog. Many parts of eastern England had some fresh snowfall extending as far south as London by dawn, though the most significant snow was confined to the moors of Yorkshire and Lincolnshire.

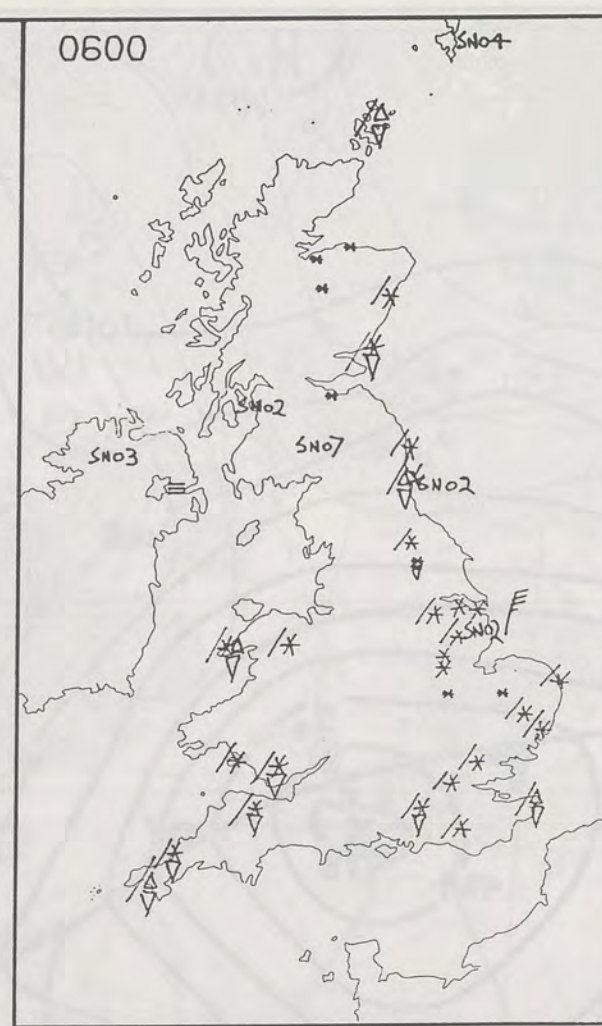

Eastern areas saw further snow showers during the day, though they gradually became confined to coastal areas, becoming well scattered.

Some parts of north and east Scotland also had snow showers, though these too tended to die away in the afternoon. Most other areas of the United Kingdom had a cold, dry day with some sunshine, but cloud thickened up in the southwest of Britain with rain into the far southwest before midnight. Elsewhere, frost and patchy fog formed through the evening.

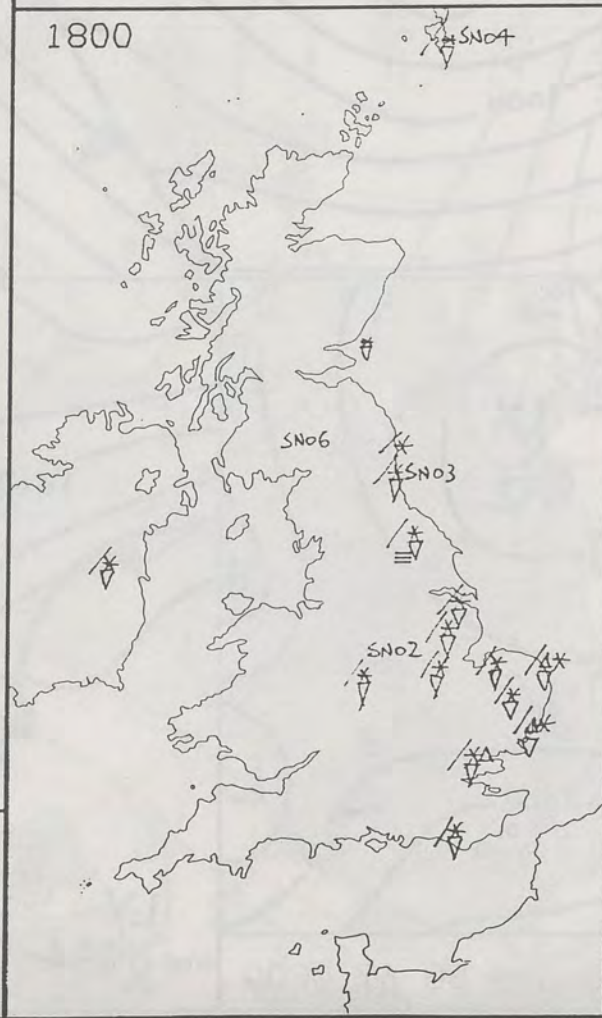

Temperatures during the day were generally in the cold category away from the southwest and in central Scotland they stayed well below freezing all day.

TUESDAY
7 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

Most places away from western coasts had a dry night with frost, severe in places, and patchy fog. Southwestern parts and Northern Ireland were windy and less cold with periods of rain or sleet. The area of rain stayed put until dawn and then began to move north turning to snow in the process.

The snow eventually reached East Anglia and parts of northern England. In southern areas the snow didn't last long, to be followed by quite heavy rain. The Midlands was particularly badly hit. In contrast northern parts stayed mostly dry and even quite bright, although there were a few wintry showers along the east coast and occasional rain or sleet continued in Northern Ireland.

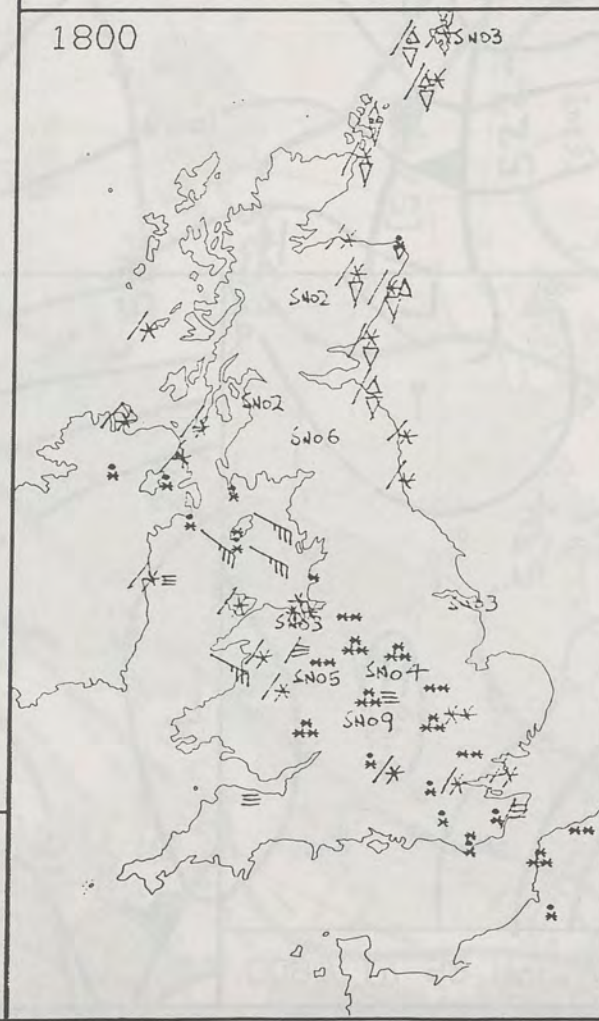

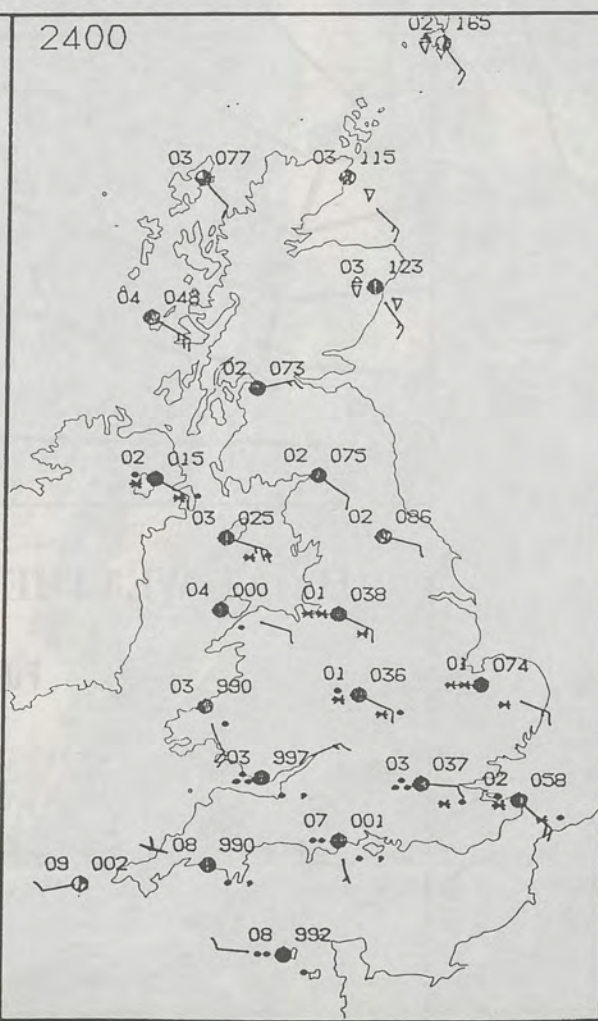

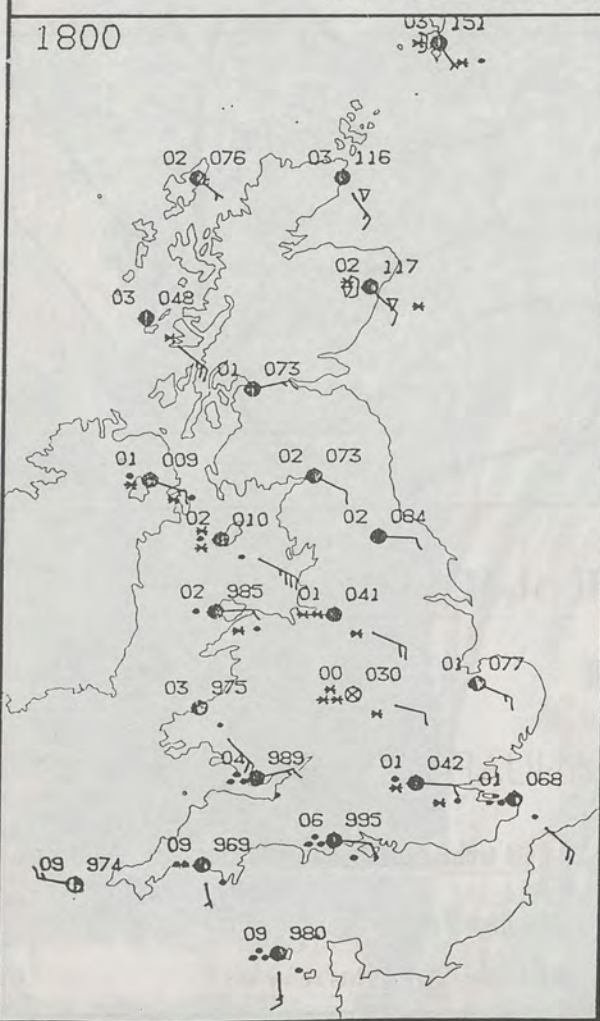

It was cold nearly everywhere but Devon and Cornwall had temperatures slightly above normal.

WEDNESDAY
8 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

Scotland, northeast England, West Wales and southwest England had broken cloud overnight and a few showers, wintry in places. Over the rest of southern England, Northern Ireland and South Wales it was misty with periods of rain or sleet. Over the Midlands, East Anglia, northeast Wales and northwest England there were periods of snow, heavy and drifting at times. Some places had as much as 8 inches of level snow.

During the day the snow petered out and turned to rain in many places but continued in the East Midlands. Outbreaks of rain, sleet or snow also pushed north into the rest of northern England and Scotland again tending to die out. Northern Ireland and southeastern parts of England had a dull day with periods of rain or sleet and southwest England and the Channel Islands were bright with showers.

Temperatures were around normal in Devon and Cornwall. Northern Ireland, western Scotland and West Wales were rather cold while the rest of the United Kingdom was cold.

THURSDAY
9 JANUARY 1986SUMMARY
OF
BRITISH WEATHER

Wales and the south of England had a mainly dry night, but the Midlands and northern England had more snow, although it was dry before morning. Northern Ireland and Scotland had some rain.

During the day there was a lot of dry weather over southern England, Wales and Northern Ireland, just a little rain and drizzle in a few places. Northern England had some more snow. In the northwest the snow turned to rain, then northern England had a dry evening.

Scotland had rain too, and in eastern Scotland snow for a time in the morning. Later on the rain became heavier and more persistent. Western areas of Britain and Northern Ireland were mild but eastern England was cold, while remaining areas of Britain were rather cold.

In the Northern Isles there were strong to gale force winds.

FRIDAY
10 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

A thaw of lying snow continued in many central and northern parts of the United Kingdom as milder southwesterly winds became established.

Much of England and Wales started the night dry but rain over Scotland, Northern Ireland and West Wales quickly spread eastwards to all other areas. The rain was heavy, especially in the north and west, driven along by a strengthening wind which reached gale force in many places.

Clearer, showery weather reached Northern Ireland and most of Scotland by dawn but it was mid-afternoon before the rain finally cleared the Channel Islands and the extreme southeast of England.

The showers were heavy with hail and thunder in Northern Ireland and western Scotland but showers were well-scattered in the south and east with many places having some sunshine.

It was very mild in England and Wales and mostly mild over Scotland and Northern Ireland. A gust of 85 knots was reported from Collafirth Hill (Shetland) late in the evening.

SATURDAY
11 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

Central and eastern England had a fine, clear night but blustery showers continued over much of northern and western Britain with hail being reported in places as far apart as Orkney and Cornwall. Gale force winds were common-place in these areas with a gust to 72 knots at Benbecula (Outer Hebrides) in the mid-evening.

After a sunny start to the day over much of England and Wales the showers became more widespread with most places seeing at least one shower by the afternoon. The heaviest showers were still to be found over Scotland and Northern Ireland with hail, thunder and some snow on the hills from North Wales northwards.

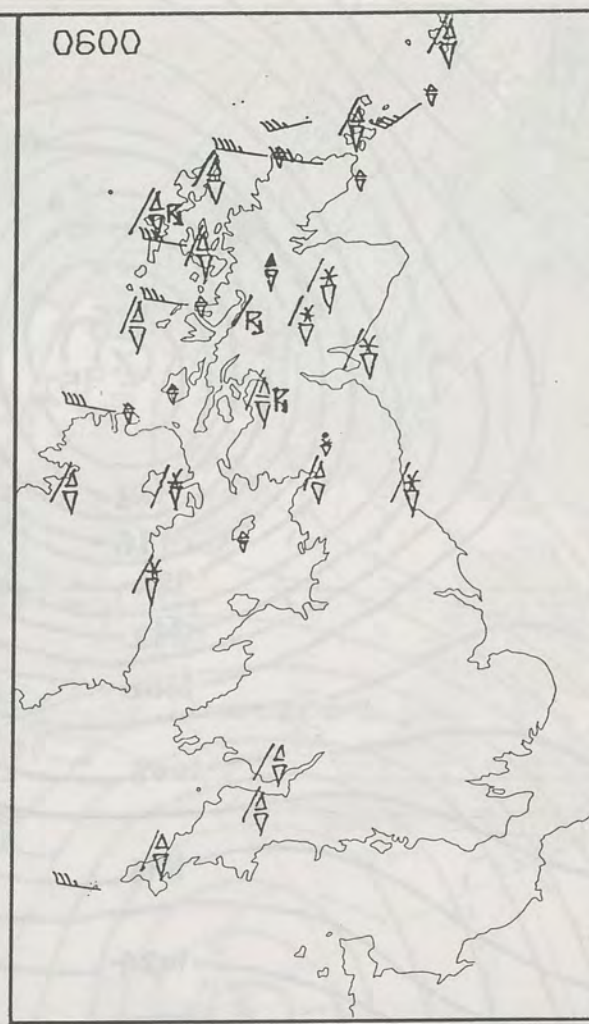

During the evening the showers became confined to Scotland, Northern Ireland and southwest England.

It was mild in southern Britain and elsewhere temperatures were not far from normal.

SUNDAY
12 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

Scotland, Northern Ireland and the northern half of England had frequent showers overnight, heavy and squally over Scotland with hail, thunder and snow over hills. Elsewhere over northern areas, the showers were not quite so much in evidence. Although they did continue through the day, they did become more scattered, and during the latter half of the afternoon and evening thickening cloud spread from the west later with rain into many areas by mid-evening.

The southern half of Britain had very few showers and a good deal of sunshine, indeed most places were dry. Later in the day, cloud increased from the west, with some rain during the evening over Wales and central England.

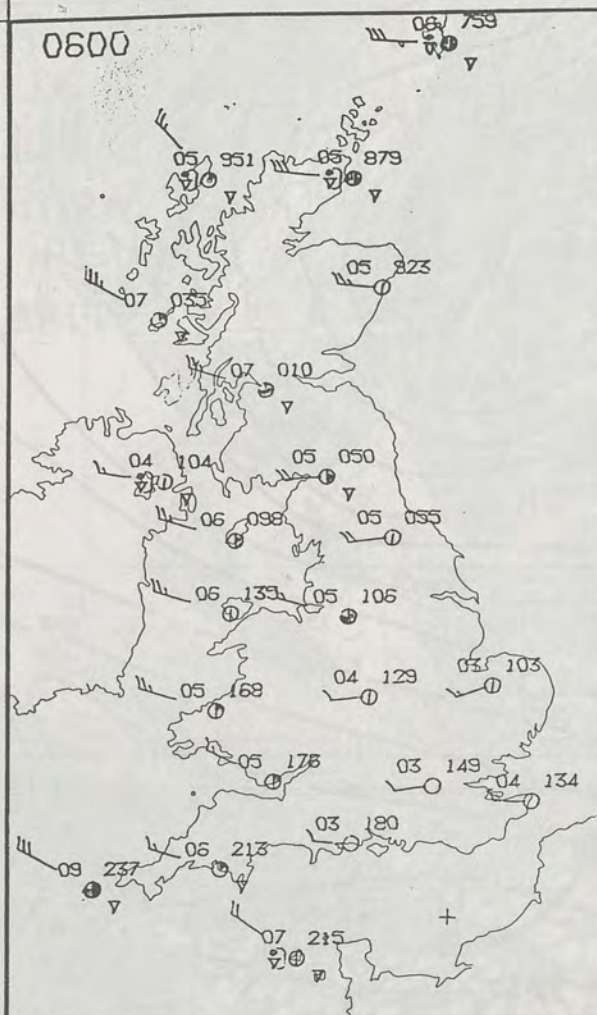

Temperatures were mostly in the mild category, although the winds would have made it feel cooler. There were gale force winds over many northern areas again, though they did moderate somewhat during the day.

Maximum gust 68 knots from St Abbs Head (Borders) at 1000 hours.

MONDAY
13 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had a cloudy night with some heavy rain in places, followed by an equally cloudy morning and more rain, particularly heavy in northern and western Scotland. By the end of the afternoon, clearer, colder and showery weather spread to all of these northern areas, some of the showers being heavy, with hail and thunder and snow over hills.

Some parts of England had rain overnight, but by dawn it was cloudy but mostly dry over England and Wales. Later in the morning, rain edged into north-west England, and proceeded to cross all of England and Wales, reaching southern coastal counties around midnight.

It was very windy with gales or severe gales in many northern areas, with gusts of 64 knots being reported from the Hebrides during the afternoon and evening.

It was very mild in most places during the day, although it became chilly in Scotland and Northern Ireland by evening.

TUESDAY 14 JANUARY 1986

SUMMARY OF BRITISH WEATHER

It was very windy during the whole twenty-four hours. The wind reached gale force almost everywhere and in many places gusted to storm force with a gust of 82 knots being reported from St. Abbs Head (Borders) in the late afternoon.

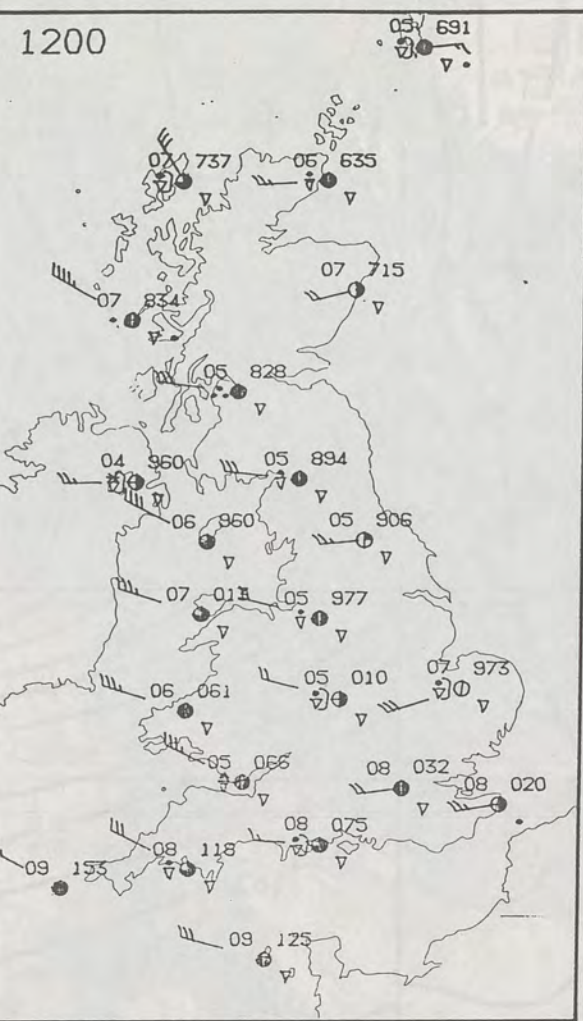

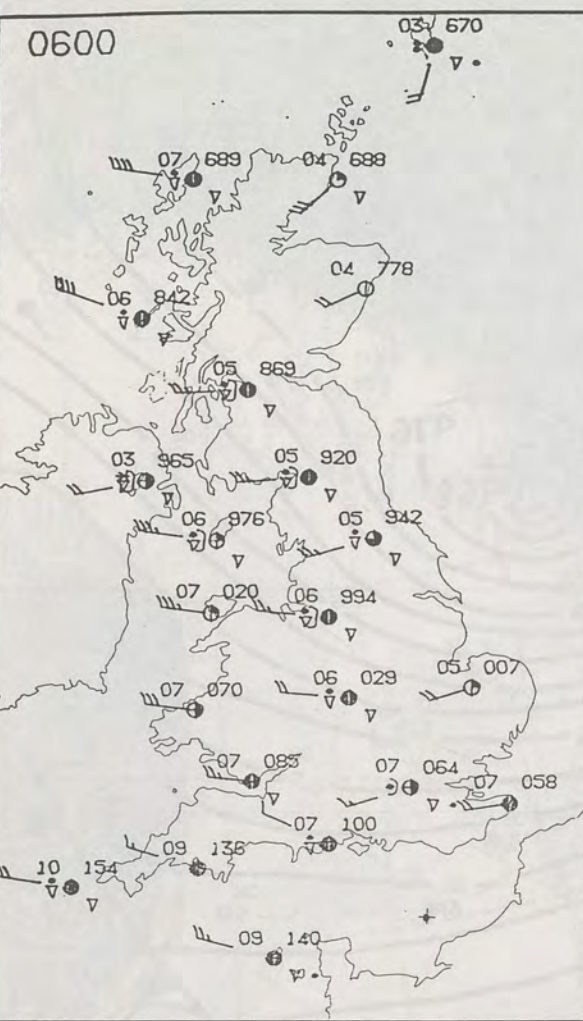

During the night there were showers over much of Britain with some snow in Scotland and Northern Ireland. England and Wales had showers overnight too, but some places stayed dry.

By day there were showers over much of the United Kingdom, some heavy with hail. Northern Ireland had a few showers, while over Scotland there were some longer spells of rain. However most places had some sunshine, and parts of eastern Scotland had a fairly sunny day. Showers were infrequent and light over eastern, southeastern and central southern England.

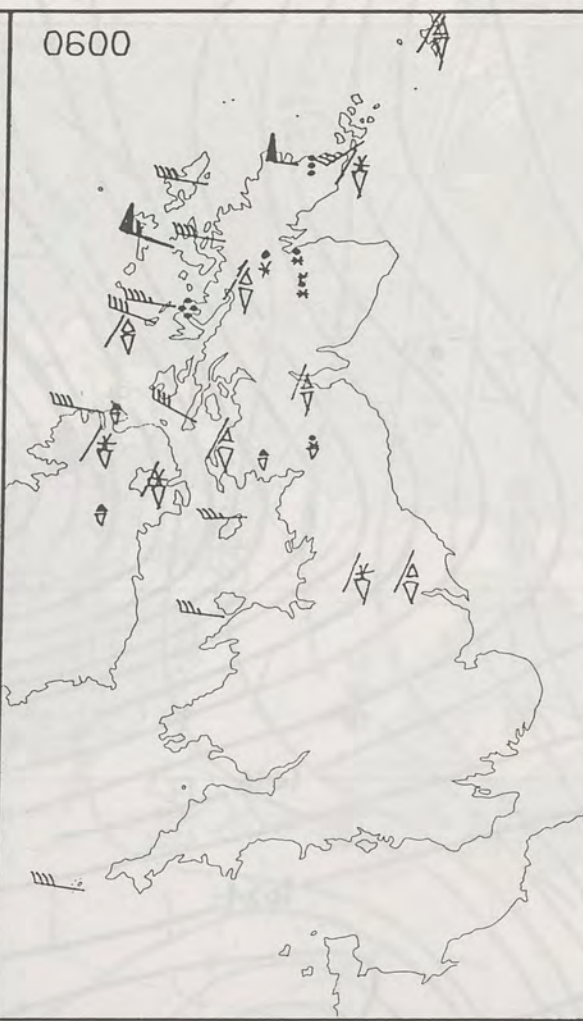

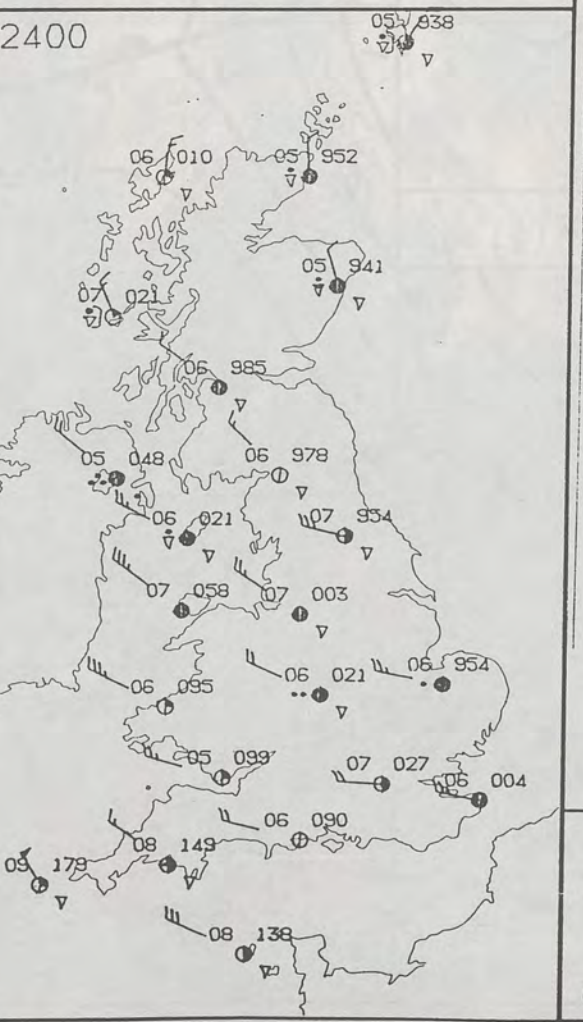

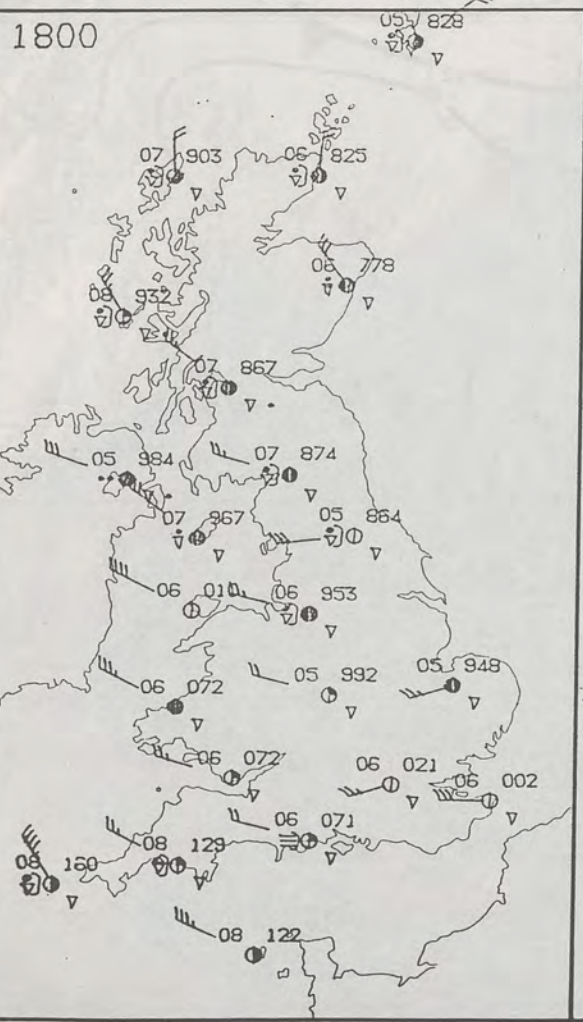

Temperatures were a little above normal nearly everywhere, although the strong winds made it feel chilly.

WEDNESDAY
15 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

There were clear intervals and some showers overnight, and it was windy. Most places stayed free of frost.

Much of eastern England had a cloudy day with outbreaks of rain. Eastern Scotland was also fairly cloudy with showers. Hail and sleet occurred here and there in eastern Britain. Many western and southern regions of the British Isles had quite a bright day but still with showers here and there, with a few reports of hail.

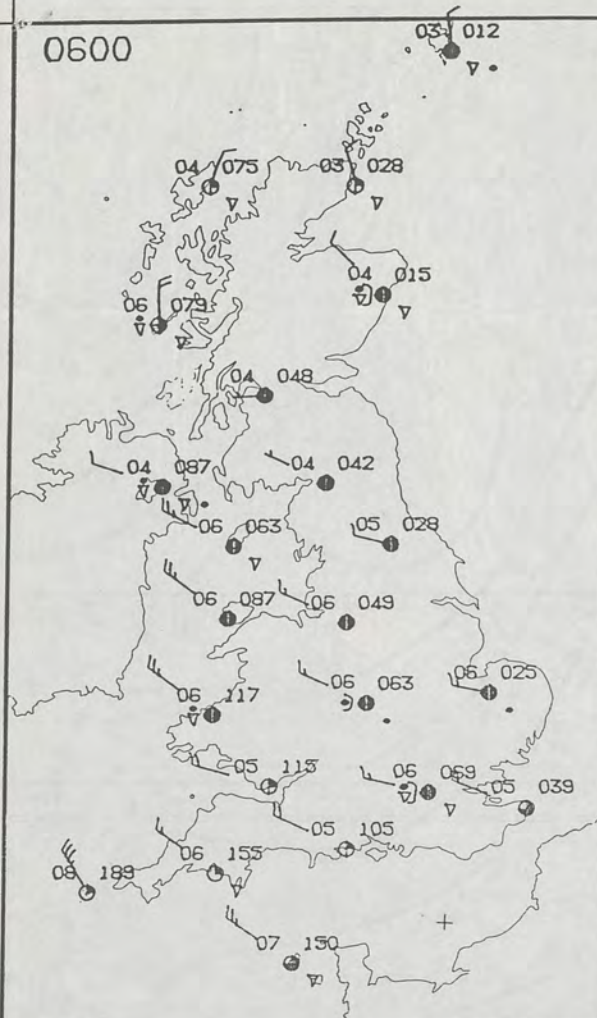

Temperatures were around normal, and the wind moderated slowly.

Skies cleared over much of the country in the evening, with frost in places by midnight.

THURSDAY
16 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

The night was mostly clear and frosty, though there were a few wintry showers near coasts exposed to the west or northwest.

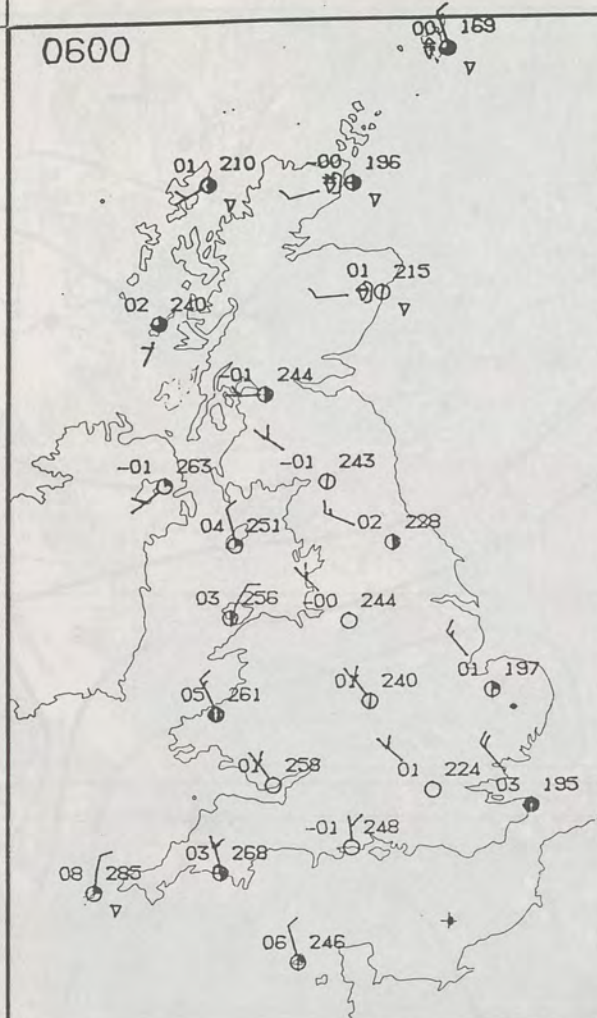

The day was quite sunny in the southeast, of England but it soon clouded over in the west and north, and most places were cloudy by evening. Some rain or snow followed - chiefly into westernmost regions of the British Isles. It was heavy for a time in the late afternoon and evening over Northern Ireland and West Wales.

It was mostly rather cold, though temperatures were near normal in western Scotland.

FRIDAY
17 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

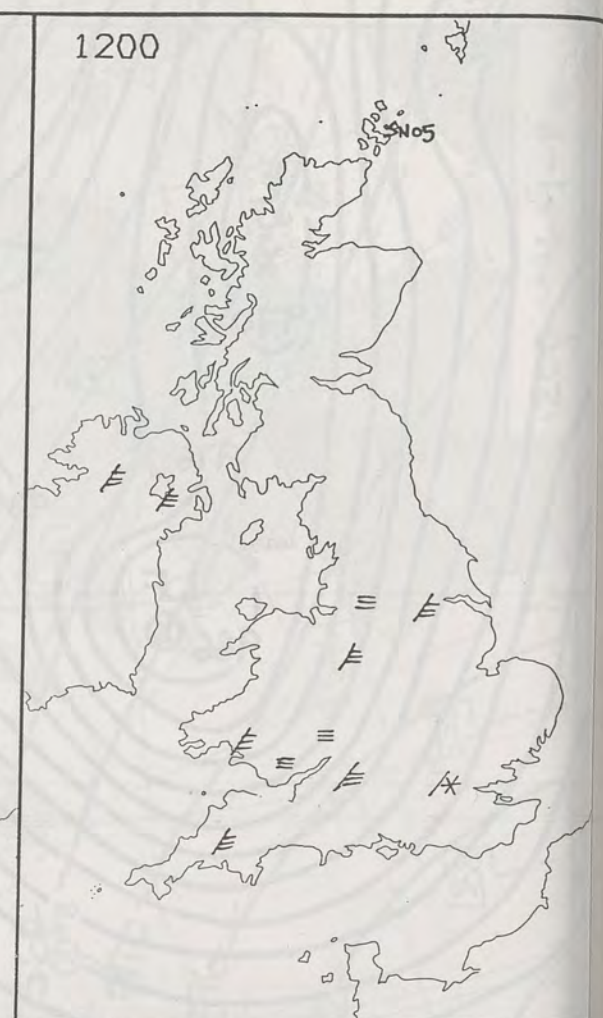

Most places in England, Wales and Scotland had a frost overnight. Northern Ireland, Wales and southwest England had rain for a time, while in the Midlands, central southern and southeast England there was sleet and snow for a while but it turned to drizzle before dying out in most places.

During the day, much of eastern England stayed dry and bright with some sunshine. In eastern Scotland too there was some bright weather, but most places had a cloudy day. There was a lot of dry weather for a good part of the day, no more than a little rain here and there. During the afternoon heavier and more persistent rain reached western Scotland and this spread to all of Scotland and to Northern Ireland, northern England and Wales in the evening.

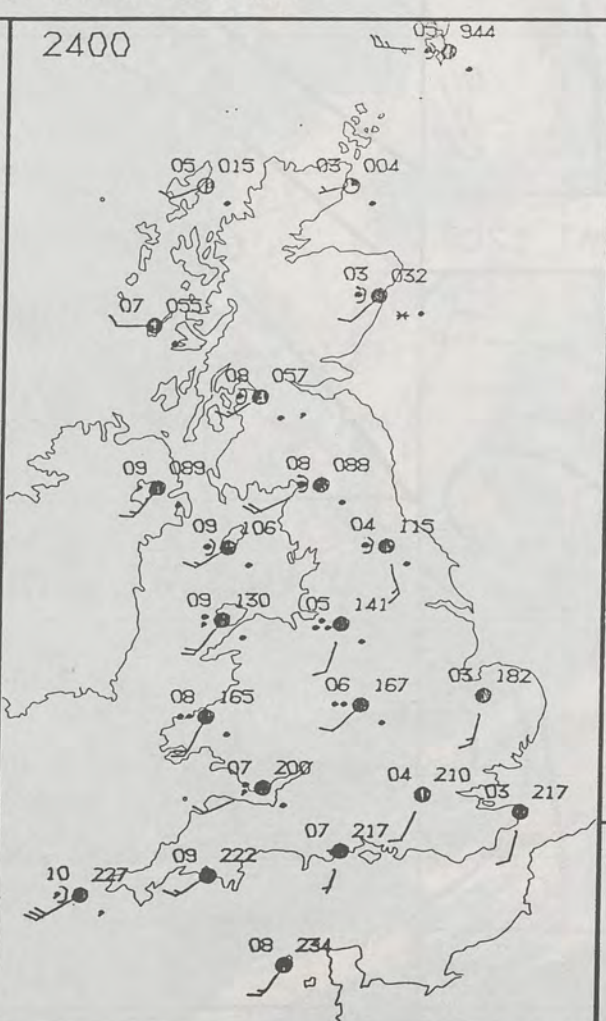

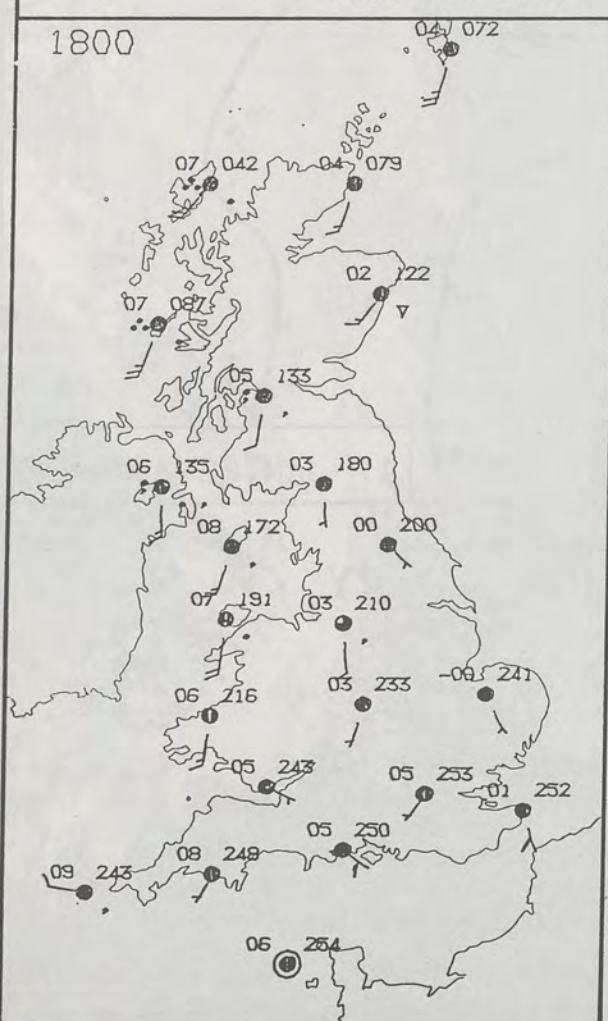

Temperatures in most eastern and southern regions of the British Isles were close to or a little below normal. Northern Ireland and the western half of Scotland were mild.

SATURDAY
18 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

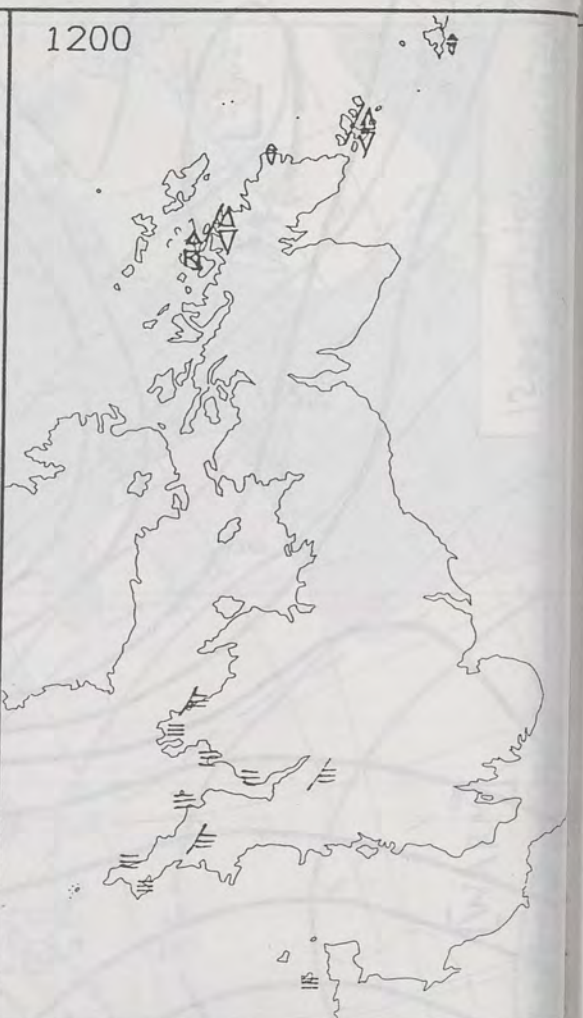

There was a slight frost over eastern England at first under clear skies. Rain spread across most parts of the United Kingdom, heavy in places, but clearer, showery weather returned to northern Britain before morning.

Scotland and Northern Ireland had a showery day, especially in the North and West, with hail, snow and thunder reported in the far north. There was sunshine between the showers over northern Scotland but over England and Wales it remained mostly cloudy with occasional rain in the south and west. An area of more persistent rain covered the region around Greater Manchester.

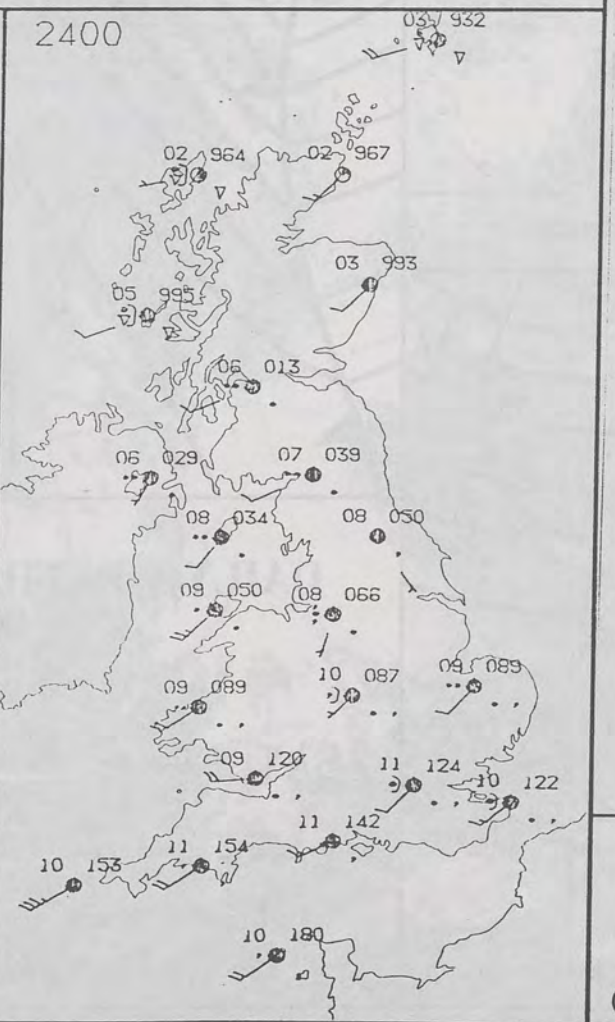

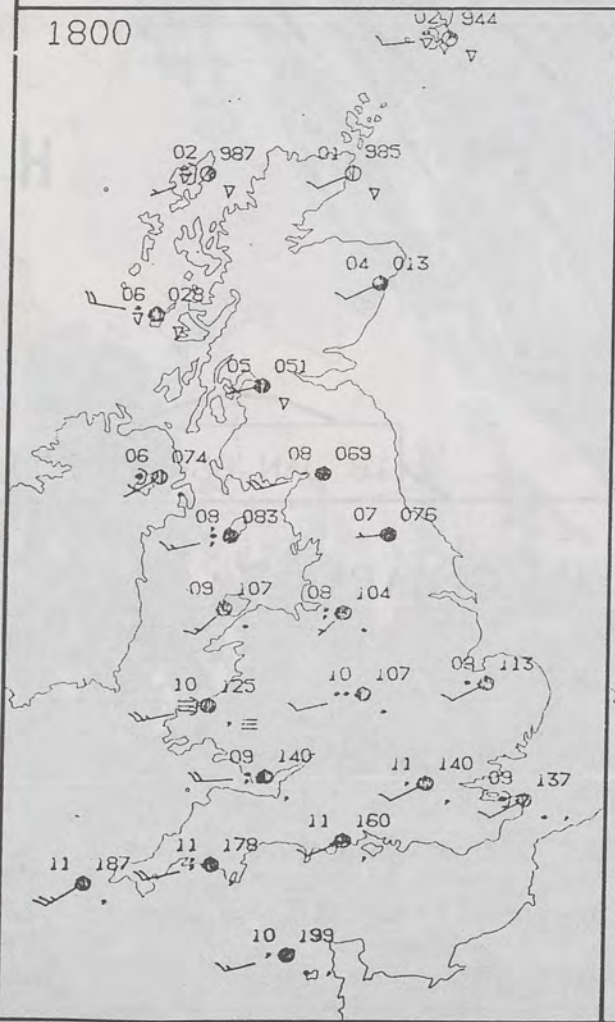

Temperatures were in the very mild category over much of England and Wales. In Scotland and Northern Ireland temperatures were near normal.

SUNDAY
19 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

Northern Scotland and the Northern Isles had a chilly night with scattered showers, hail being reported in the Northern Isles. The rest of the United Kingdom had a mild but cloudy night with many parts of England and Wales having their mildest night of the month. There was a little rain in many places and some heavier and more persistent rain over northern England, Northern Ireland and southern Scotland.

Clearer, colder weather reached Northern Ireland early in the morning, turning the rain to snow for a short time over the hills. The colder conditions quickly extended southeast during the day, eventually clearing East Anglia and Kent around dusk. Showers became widespread over northern and western Britain, falling as hail or snow, especially over Scotland.

The southwesterly wind increased to gale force over the southern half of England and Wales with squally conditions as it veered northwesterly on the cold front. There was a gust of 74 knots at Gwennap Head near Lands End late in the morning and thunder was reported at Spurn Point.

It was rather cold in Scotland and Northern Ireland. After a very mild start in England and Wales it became rather cold in these regions by the end of the afternoon and early evening.

MONDAY
20 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

Scattered showers continued through the night in the western and northern areas of the United Kingdom, but most parts had a dry, mostly clear night, with moderate winds.

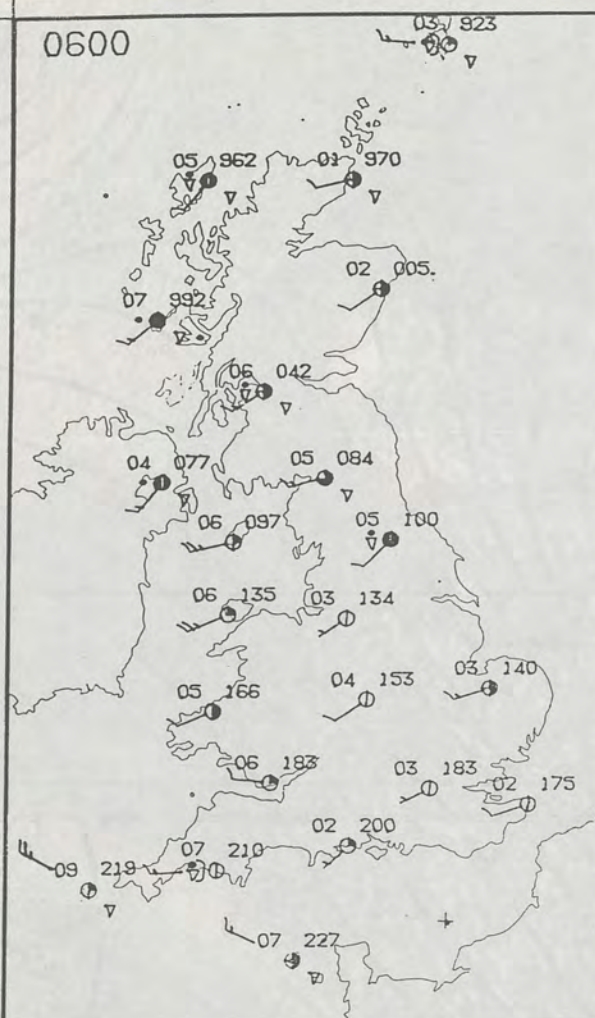

At dawn, rain had reached Northern Ireland and westernmost Scotland, and by midday, this rain, with sleet and snow over the mountains of Scotland, had spread to much of northern Britain. England, except the far north, and Wales had a sunny start to the day but cloud quickly increased over western districts, with light rain in most of Wales and western England by mid-afternoon. The east remained dry but turned cloudy. Through the evening, squally showery weather pushed across Northern Ireland and Scotland. Rain finally reached the remainder of England in the evening, though not in any great amounts in the south.

Temperatures were generally in the mild category.

TUESDAY
21 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

A band of heavy rain at midnight over parts of northern England, the Midlands, South Wales and southwest England moved steadily southeastwards, finally clearing Kent at the start of the afternoon.

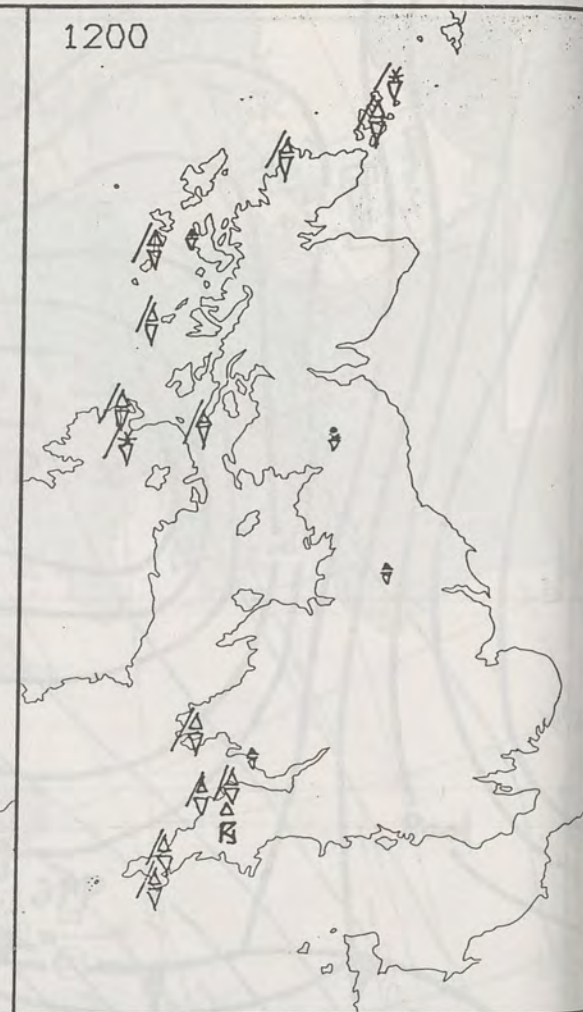

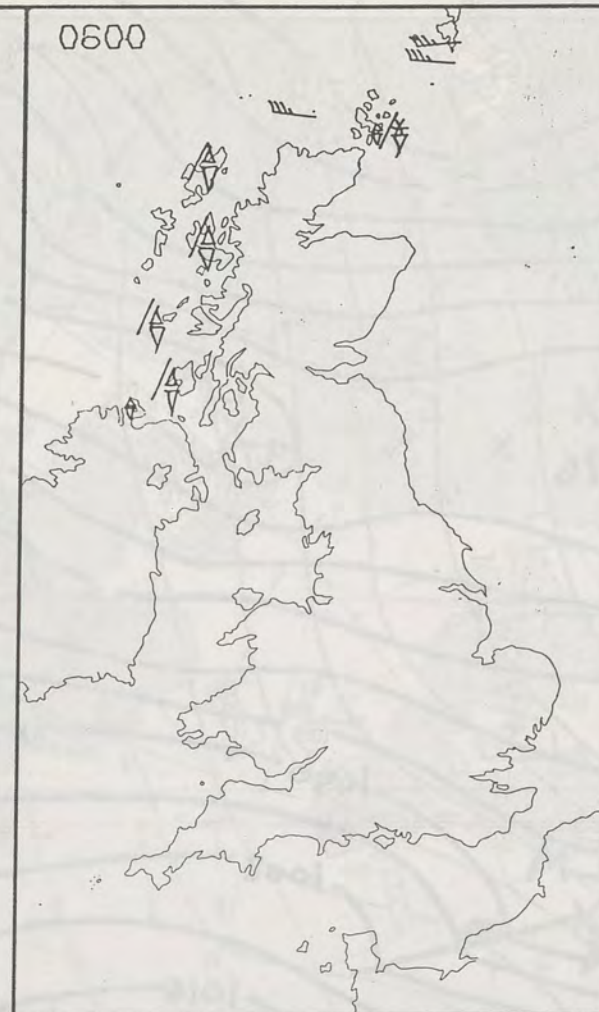

Meanwhile, showers over Scotland and Northern Ireland became heavy with hail in places, and snow over the mountains. Showers also developed in western England and Wales, cropping up in the remainder of England by the afternoon. A band of heavier showers with hail and thunder crossed England, including the London area later in the afternoon.

The showers tended to die down over the country as upper cloud moved in from the west through the evening, though skies largely cleared in the east.

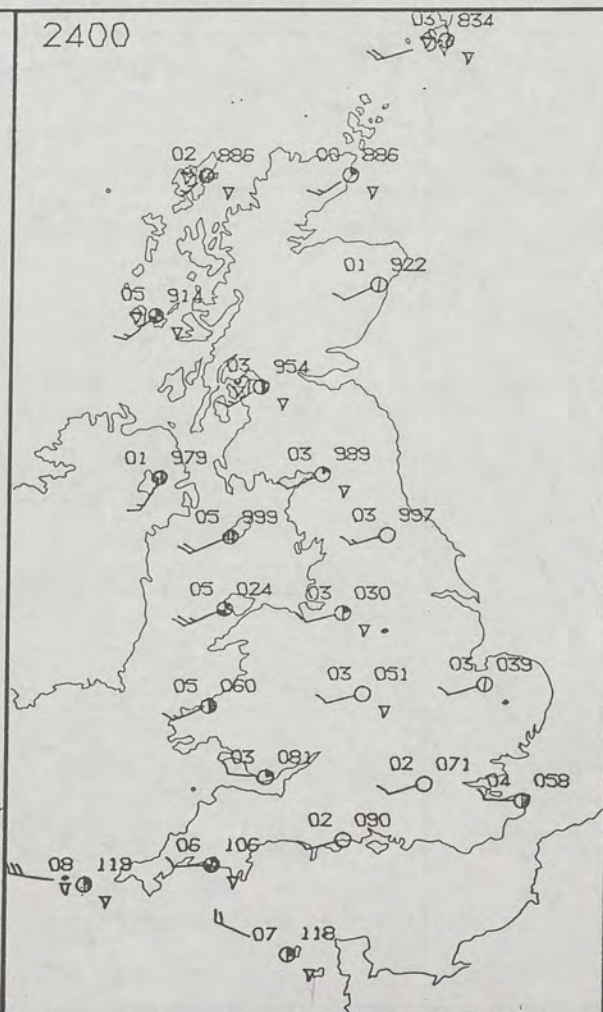

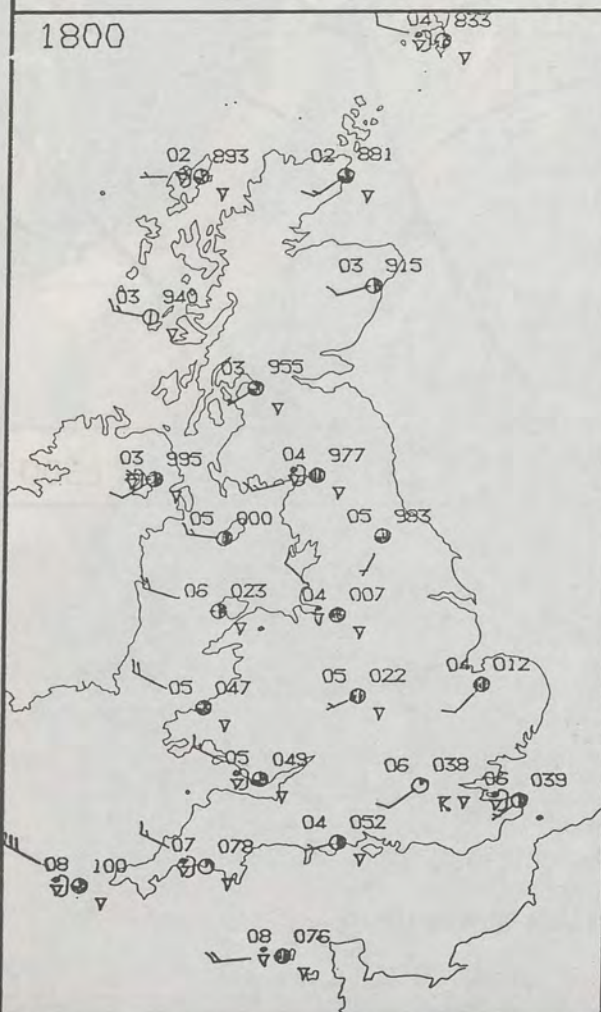

Temperatures were generally near normal in the north, but above normal in the south. The Highest gust reported was 72 knots at Gwennap Head (near Lands End) in the early hours.

PLOTTED SURFACE OBSERVATIONS

WEDNESDAY
22 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

Many places were frosty for a time overnight, but wet and windy weather reached much of the country before daybreak, spreading on to southeast England, East Anglia, the East Midlands and northeast Scotland in the morning.

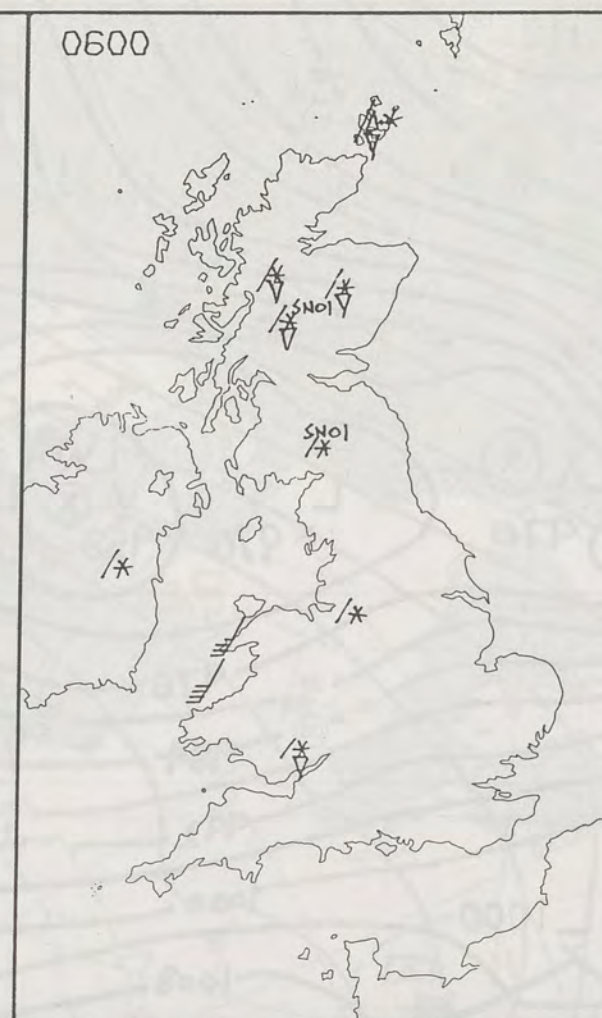

There was heavy rain in many places and some sleet and snow, especially over Scottish mountains. There were strong southwesterly winds, up to gale force on coasts and hills, with a gust of 61 knots reported from Langdon Bay (Kent) during the afternoon.

During the morning the weather brightened up in Northern Ireland and mainland Scotland and this clearer weather reached all districts of Britain by early evening. In the clearer weather there were showers and in the north they were heavy with hail and snow, especially over the hills.

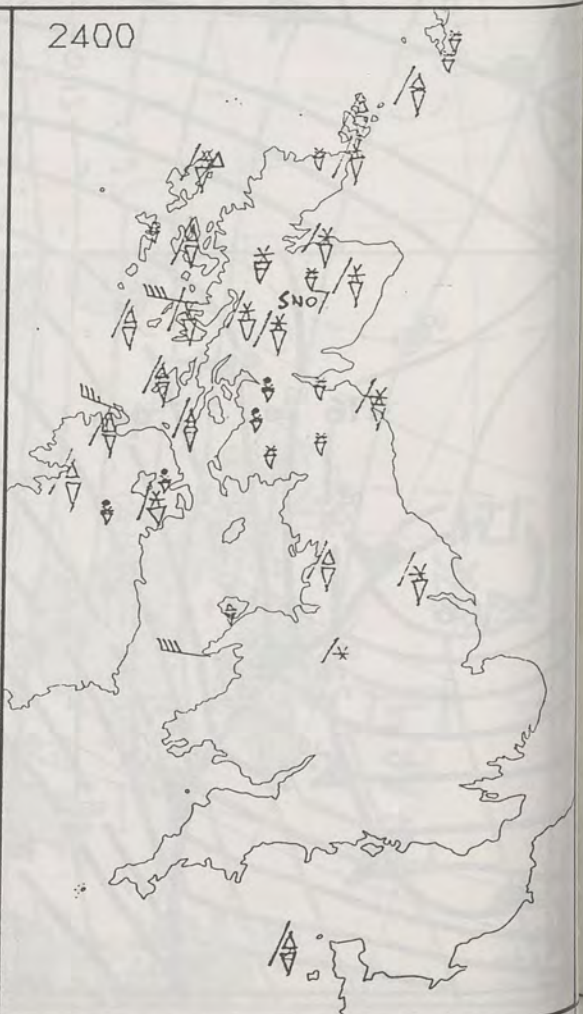

Temperatures over much of Britain were above normal for a while, but northern areas turned colder during the afternoon; however southern parts stayed generally mild.

THURSDAY
23 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

Northern Ireland and Scotland had a frost overnight and there were snow showers. In England and Wales most places escaped frost, but there were showers, with one or two snow showers and in Wales and southern England more persistent rain for a while.

Over Northern Ireland and Scotland there was some sunshine, but showers in most places. Temperatures were close to or a little below normal and as it became colder the showers turned to sleet and snow.

There was some sunshine in England and Wales too, indeed many places had a dry, fairly sunny day, though southwest England was mostly cloudy; there were showers as well. Temperatures were near or a little above normal at first but it turned colder in the afternoon.

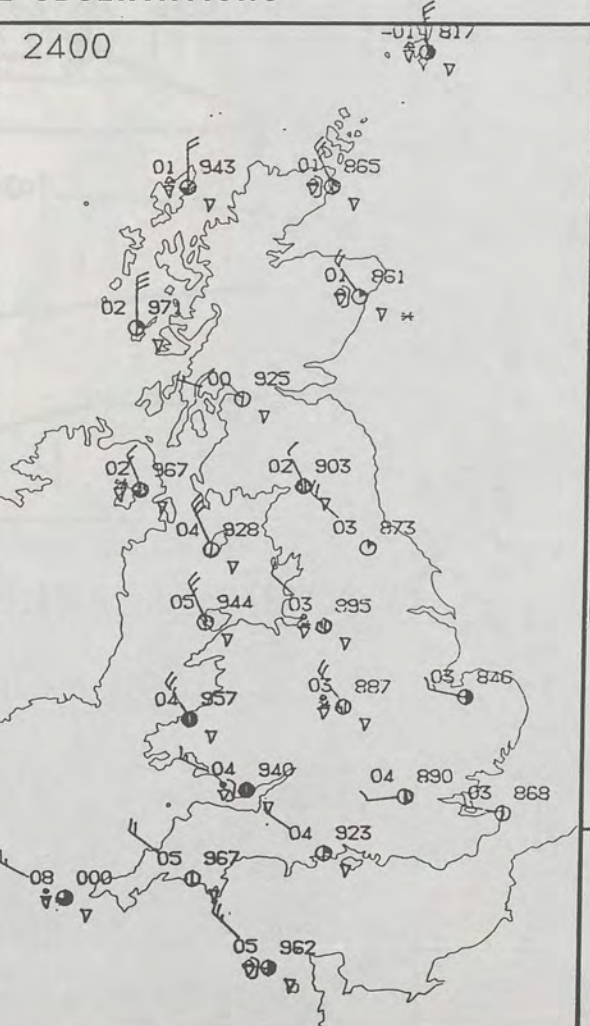

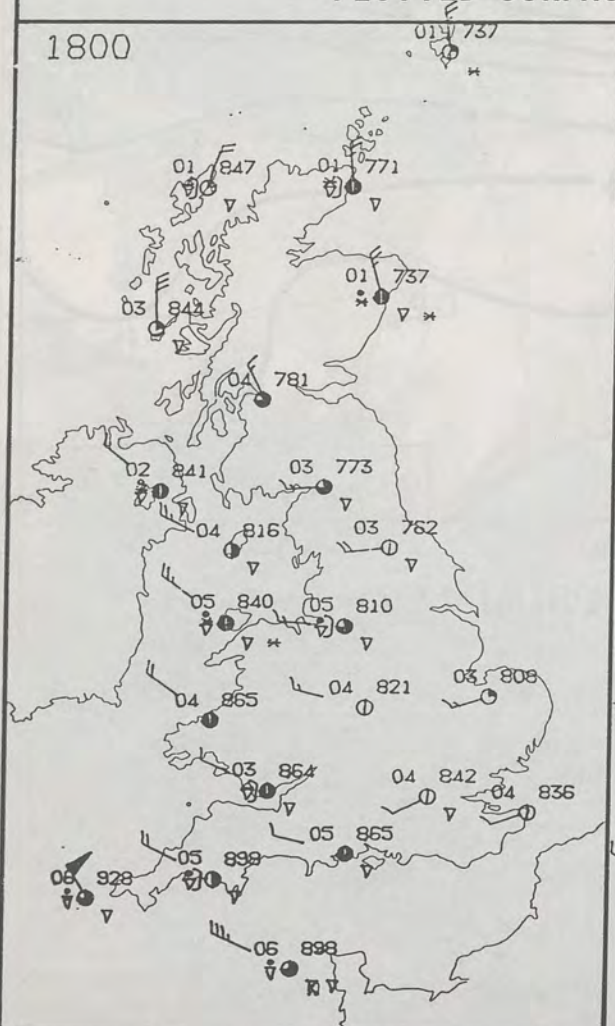

Much of Britain was windy, with gales in many places and storm force winds on hills and coasts. A gust of 74 knots was reported from St Abbs Head (Borders) later in the evening.

FRIDAY
24 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

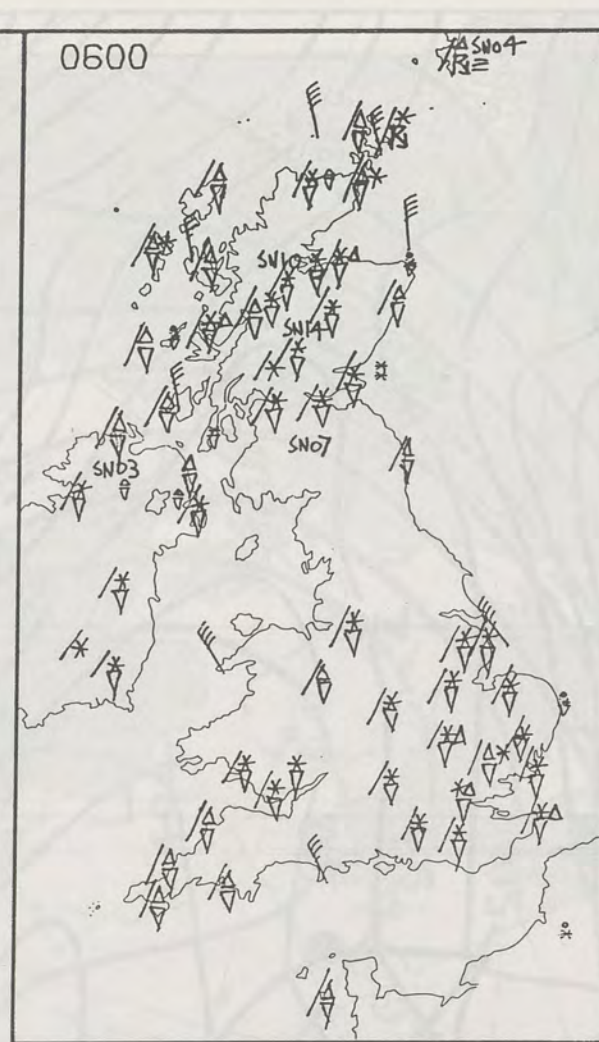

There were some showers over-night, with some falls of snow on the northern hills. There was a fairly general frost by the morning, made severe in many northern areas by the keen wind.

There was quite a lot of sunshine in most areas during the day, but further hail and snow showers fell over Scotland, Northern Ireland, Wales, southwest England and northwest facing coasts. It stayed windy, with severe gales in some exposed coastal and hilly areas, accentuating the cold, even though maximum temperatures were only a few degrees below normal in most districts.

A gust of 70 knots was reported from Ballycastle (Co. Antrim) at about 0900 GMT.

SATURDAY
25 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

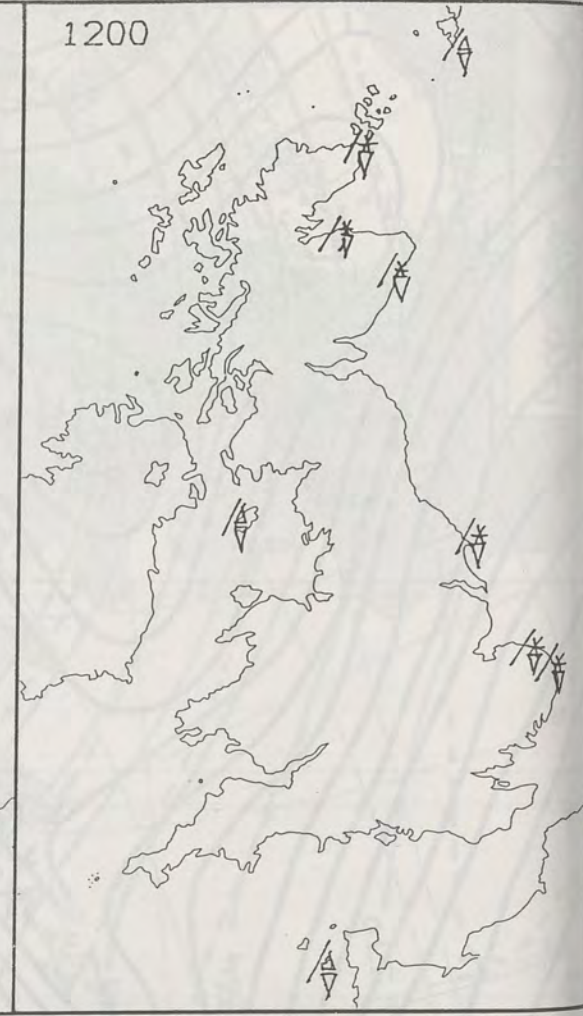

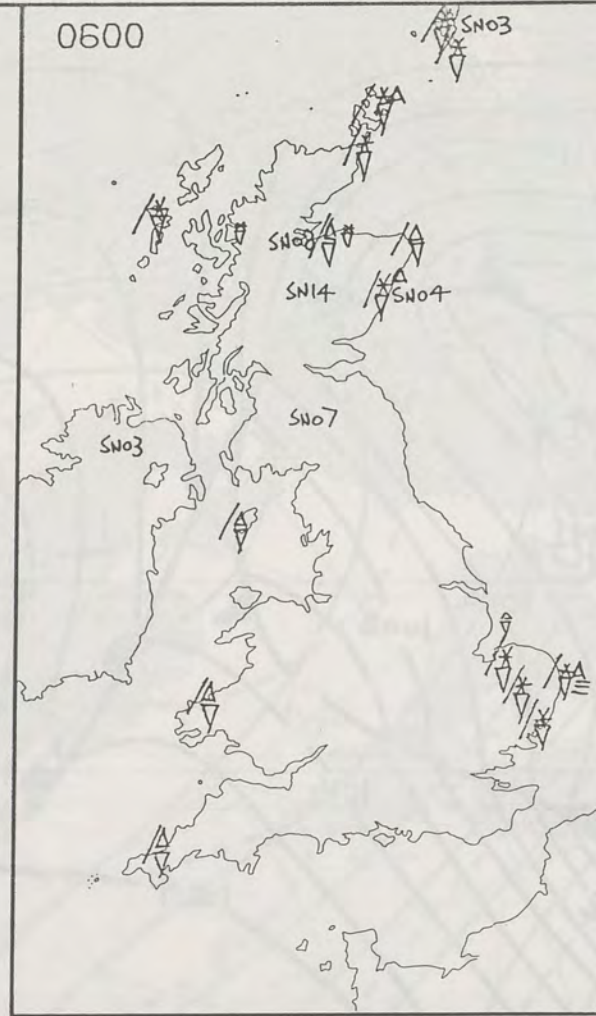

During the night East Anglia had some snow showers, most of them near the coast, and there were also a few in coastal regions of eastern Scotland. Elsewhere over Britain it was dry and clear with widespread frost, though near west facing coasts of England and Wales temperatures generally stayed just above freezing.

By day many places had almost unbroken sunshine. There were some more snow showers along the East Anglian coastline. During the late afternoon and evening cloud spread across West Wales and southwest England, giving some mostly light rain after dusk. Northern Ireland clouded over during the evening, but for the rest of England, Wales and Scotland frost returned quickly after dark.

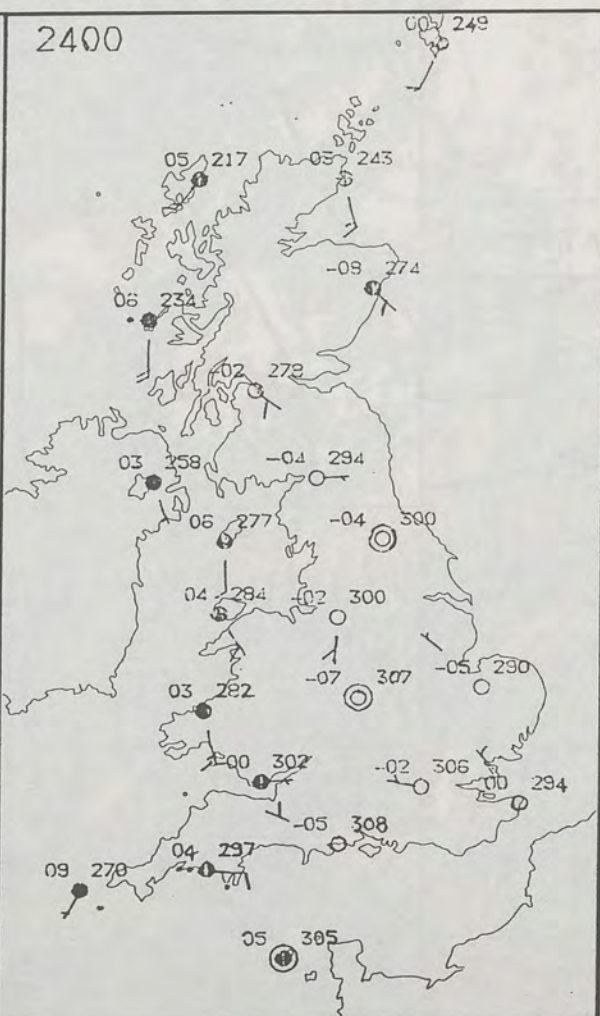

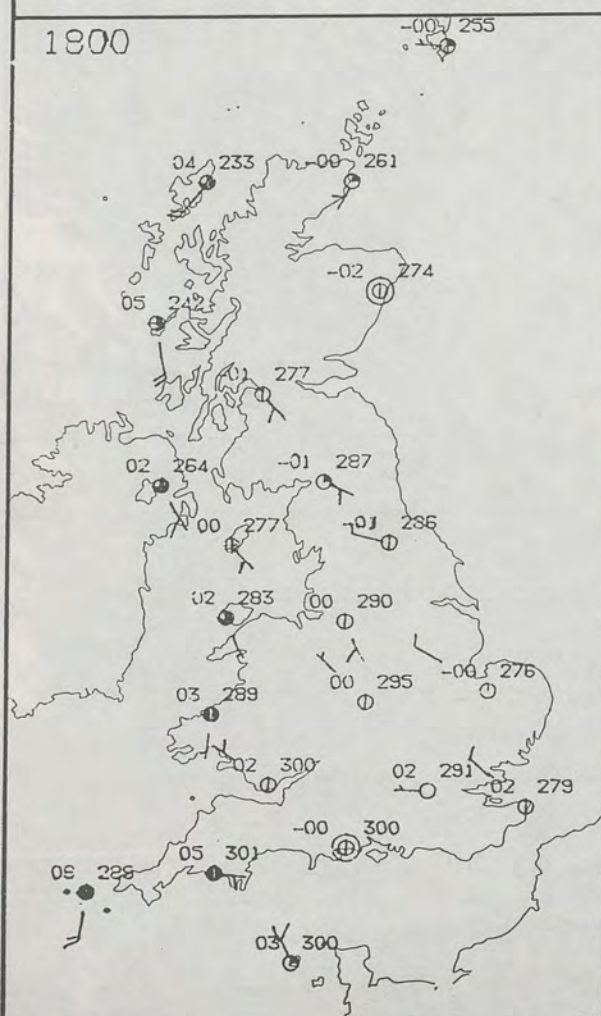

Temperatures were near normal in southwest England, West Wales and the Channel Islands, but for the rest of Britain it was a rather cold day, and in parts of central Scotland a cold day with temperatures staying below freezing in places.

SUNDAY
26 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

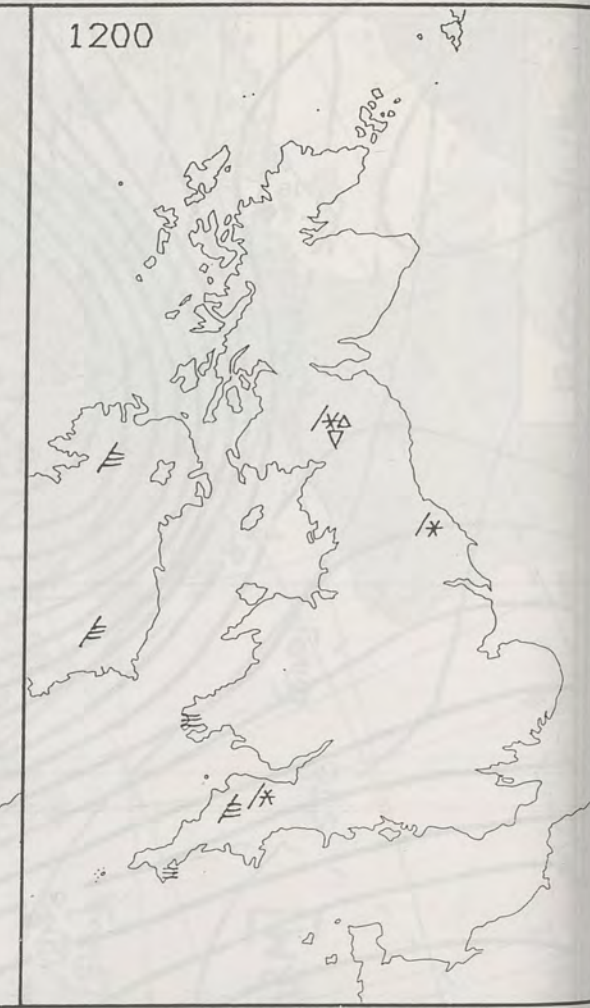

Over much of Britain there was a severe frost overnight but in Northern Ireland, western Scotland, West Wales, Cornwall and Devon it was a cloudy night with patches of drizzle or light rain and temperatures significantly above freezing.

During the day western parts of Britain and Northern Ireland remained cloudy with further light rain or drizzle and generally misty conditions on coasts and hills. The cloudy weather gradually extended to East Wales, eastern Scotland and parts of northwest England after a mainly sunny morning. In central and eastern England it was a sunny day and cloud made only slow eastward progress over central counties during the evening to give patches of light rain or snow.

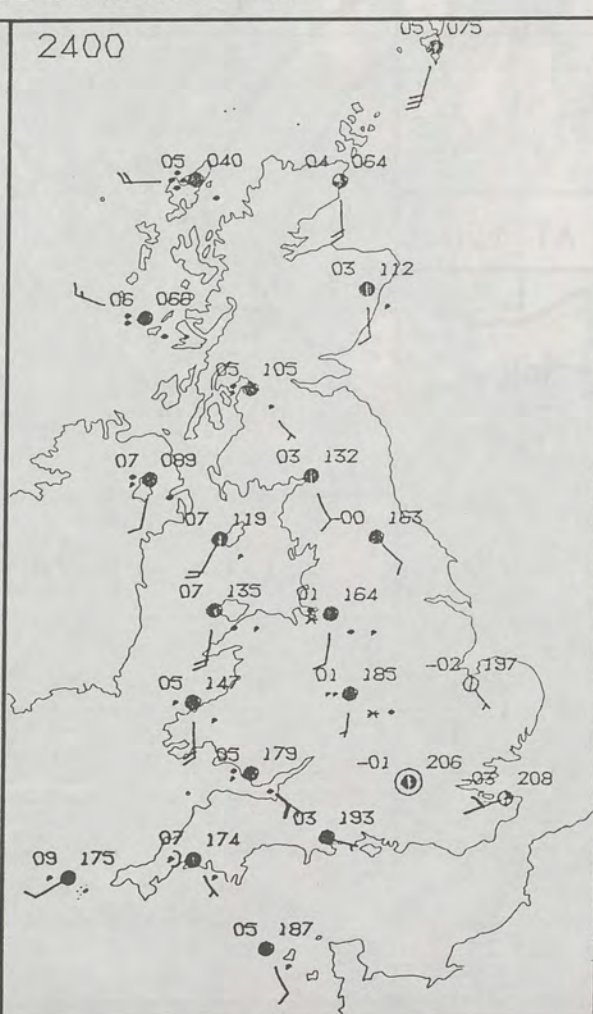

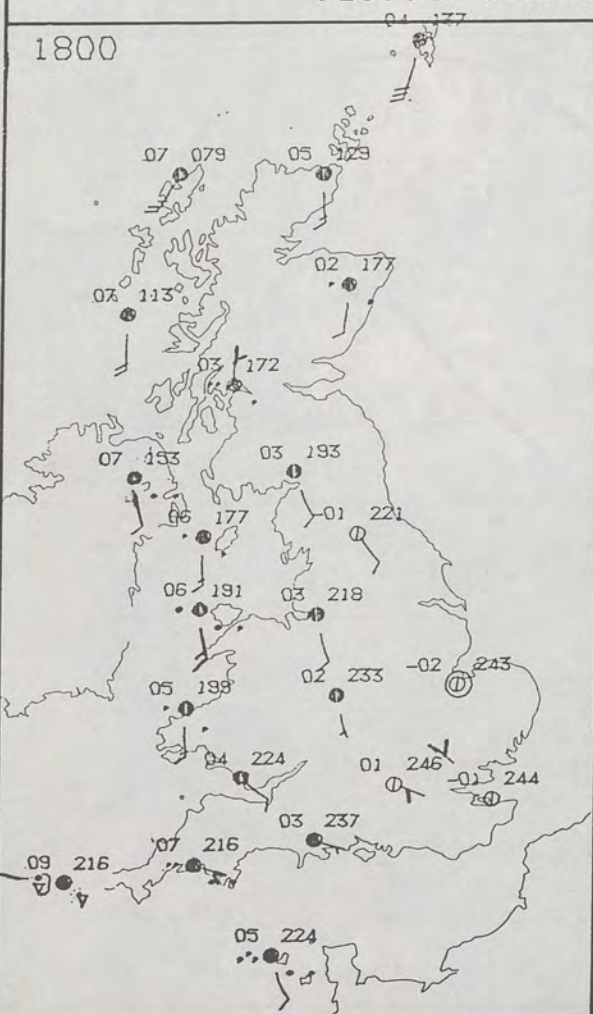

Temperatures ranged from near or a little above normal in the west to rather cold in central and eastern Britain. Frost returned to east and southeast England after dusk.

SUMMARY
OF
BRITISH WEATHER

In east and southeast England there was a hard frost early in the night, then temperatures rose very slowly as cloud increased bringing patches of light drizzle or sleet. The morning was mainly dry. During the afternoon heavier rain spread from the west and turned to sleet or snow for a time in many places with some accumulations, especially to the south and east of London. Dry weather gradually extended from the northwest during the evening.

Over the rest of Britain it was a cloudy night with rain or drizzle at times. In Northern Ireland and western Britain rain became heavier and more persistent, turning to sleet in places, and snow on hills. This belt of rain, sleet and snow moved east during the morning, followed by brighter weather and scattered wintry showers. In Northern Ireland and western parts of Britain there was a good deal of sunshine.

It was generally a rather cold day over Britain.

TUESDAY
28 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

A mixture of rain, hail, sleet or snow showers affected western Britain overnight. The remainder of the United Kingdom had a dry but frosty night.

During the day, showers became rather more frequent in western areas, with hilly districts catching several inches of snow. Eastern Scotland and eastern England had a dry and sunny morning, though cloud did spread across to all of Scotland and northern England during the afternoon. There were further frequent rain, sleet or snow showers in most western and northern areas, and the odd heavy shower with hail turning up in southern England too. During the evening, some heavy showers, with thunder, and longer periods of rain and sleet occurred in some southwestern parts of England and in South Wales. There was further snowfall over Upland areas. Scattered showers continued elsewhere.

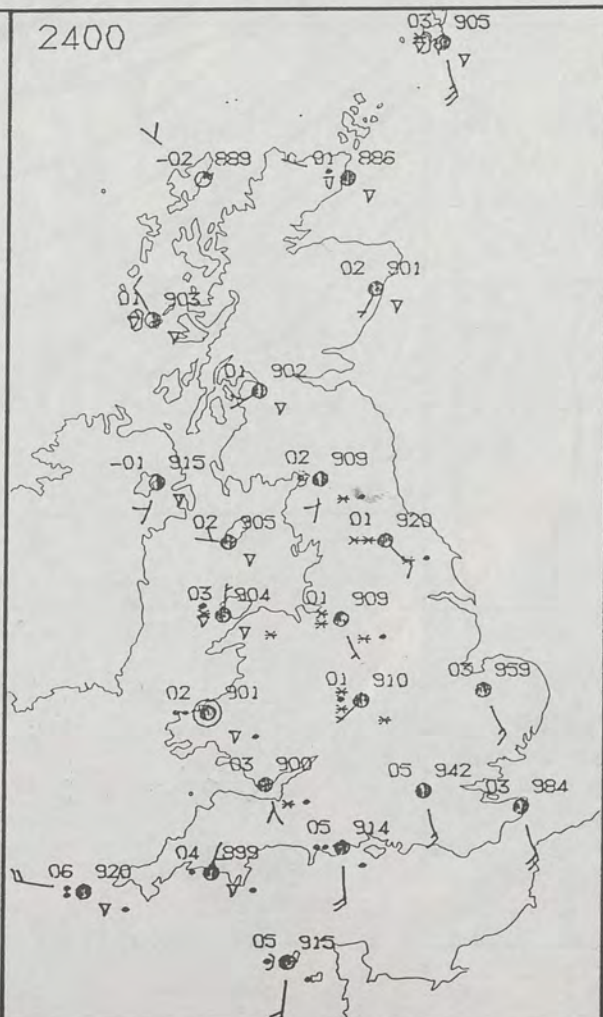

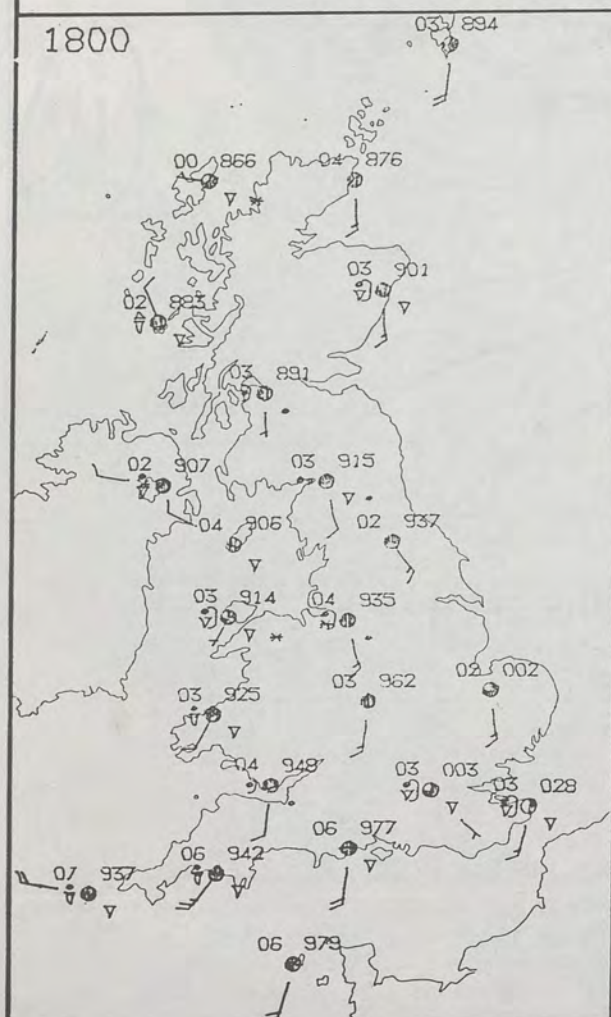

Daytime temperatures were mostly in the rather cold category, though nearer normal in the south of England.

METEOROLOGICAL OFFICE

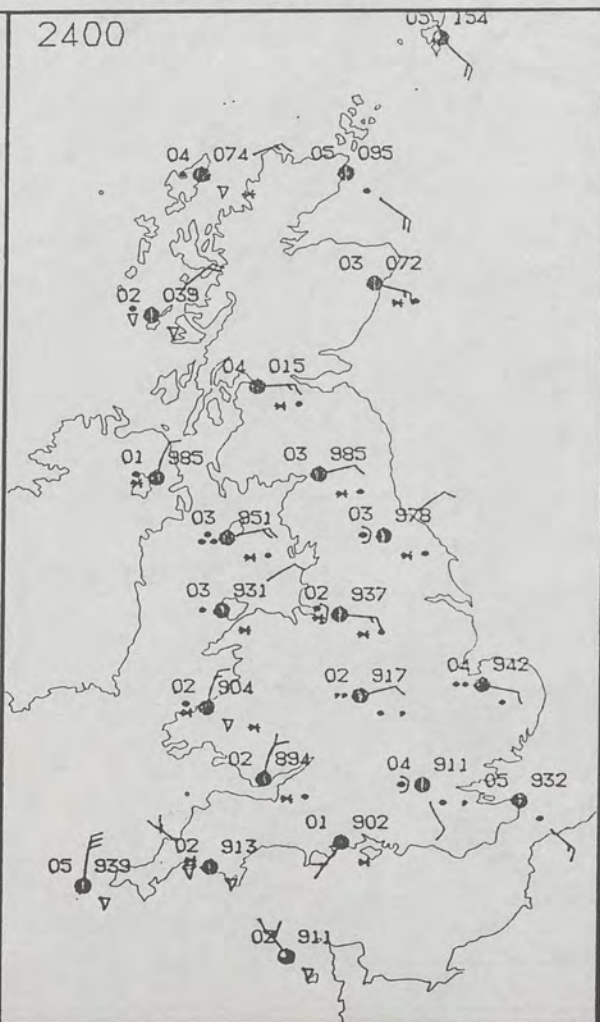

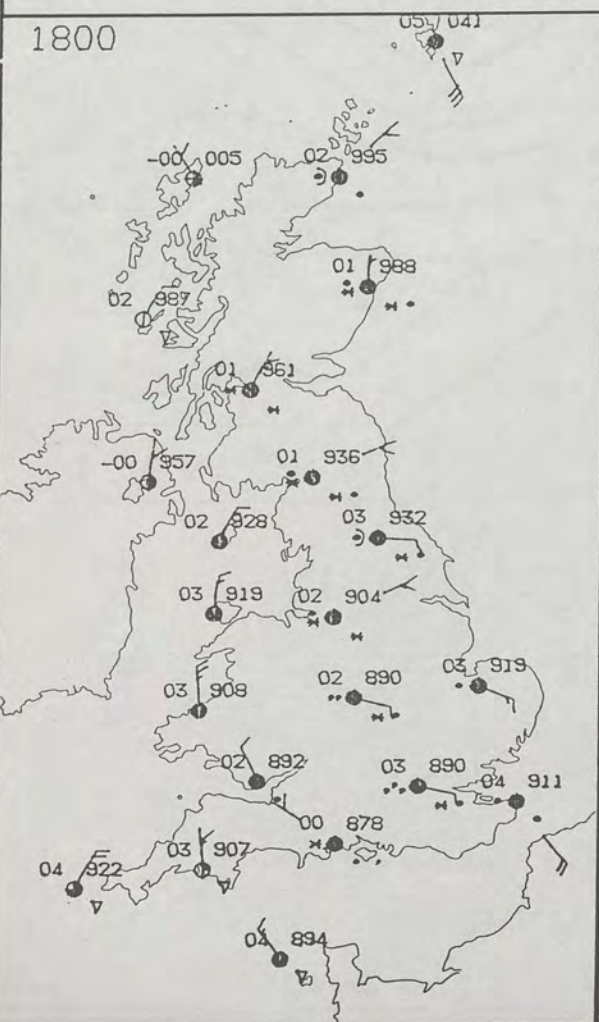

WEDNESDAY
29 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

England and Wales were mostly cloudy throughout, very dull in eastern and central parts, with rain, sleet and snow much of the time. Some heavy rainfall was reported overnight in southern England, and some appreciable snow fell in northern England, the Midlands, parts of Wales and central southern England. The far west of Wales, Devon and Cornwall and parts of East Anglia had a little sunshine, but also a few showers of rain, sleet, snow and hail with some reports of thunder from Cornwall in the evening.

PLOTTED SURFACE OBSERVATIONS

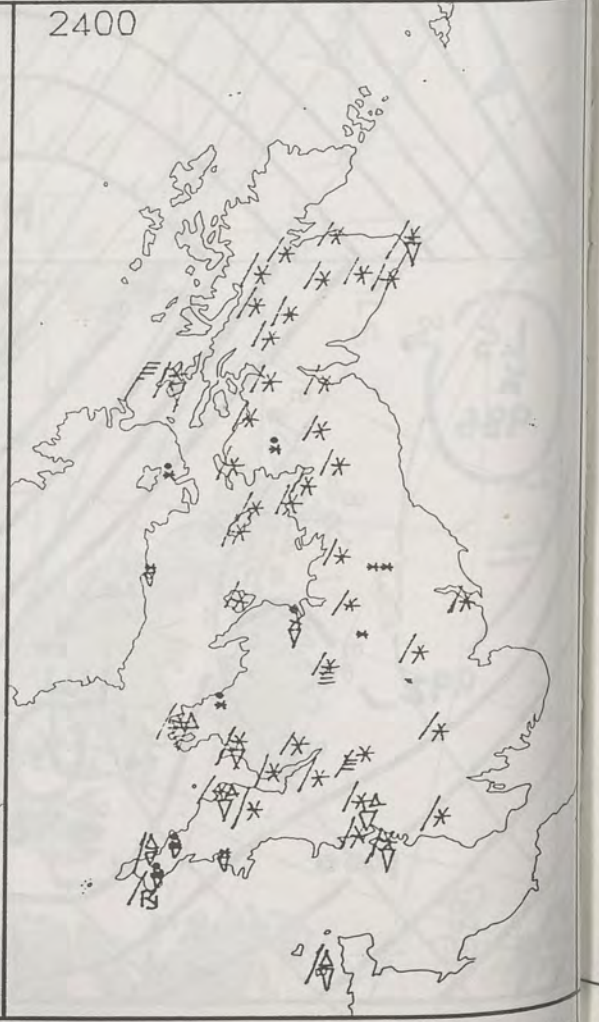

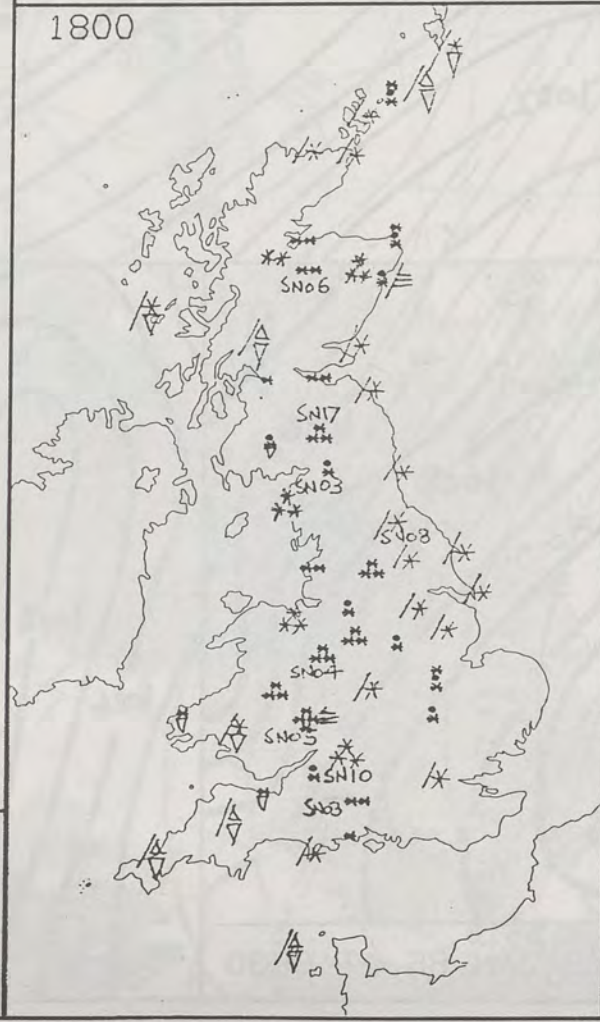

After a clear and frosty night in Northern Ireland, the day was sunny, with just a few showers around and frost returning during the evening.

Eastern parts of Scotland had a cloudy day with snow becoming steadily more persistent and by evening, it was snowing over many eastern and southern parts of Scotland. Western Scotland had a bright day with a few showers.

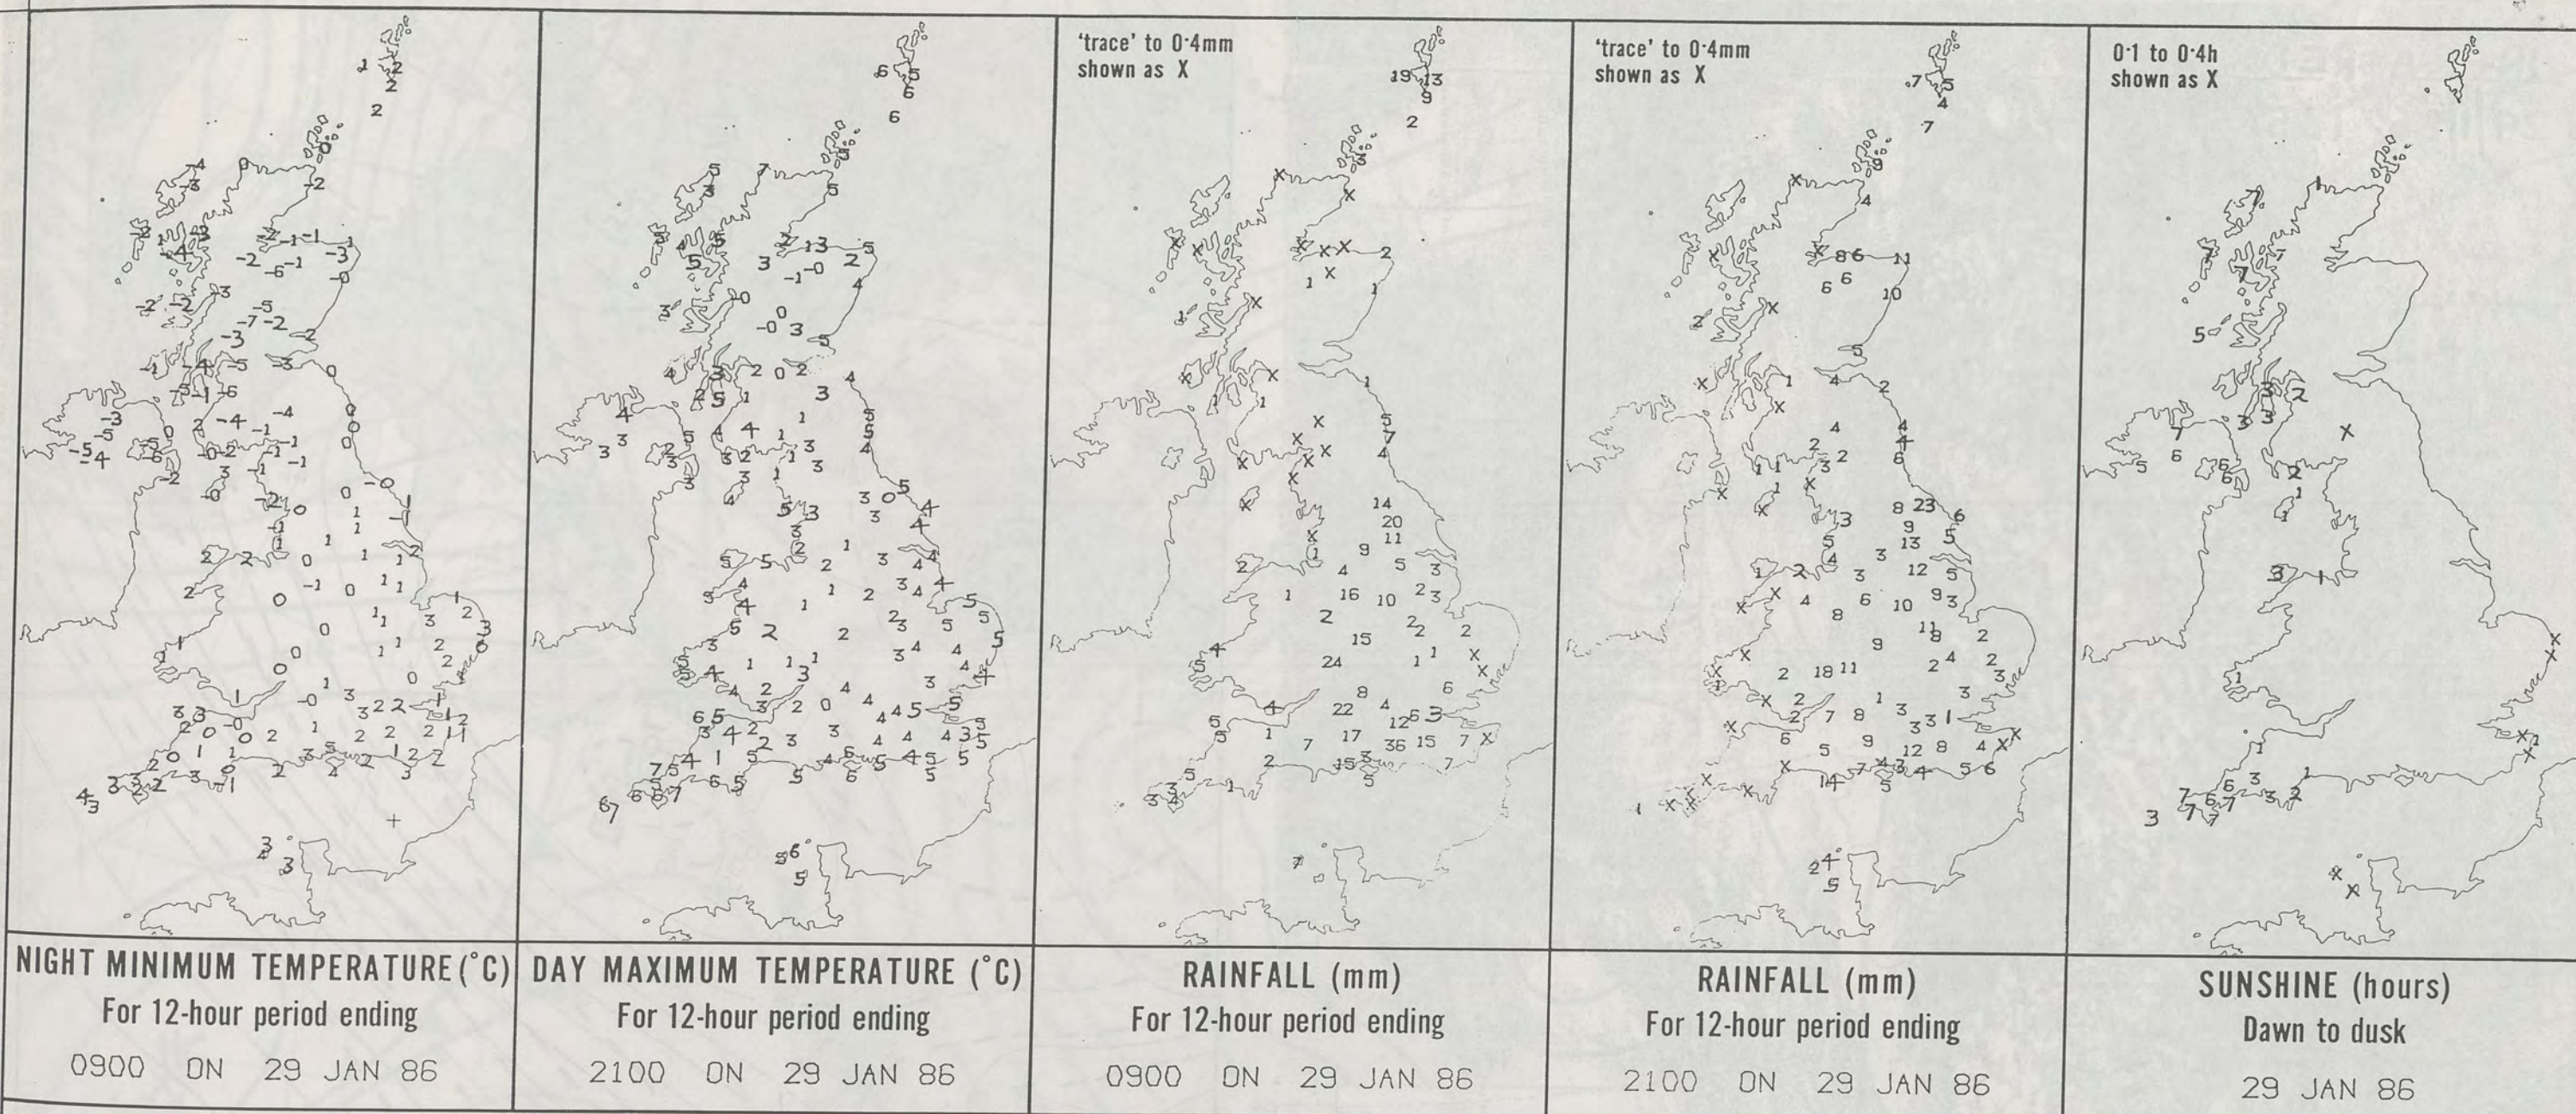

It was rather cold or cold almost everywhere.

THURSDAY
30 JANUARY 1986

SUMMARY
OF
BRITISH WEATHER

It was cloudy overnight and in most places there was rain, sleet or snow. It was quite a cold night with frost in places.

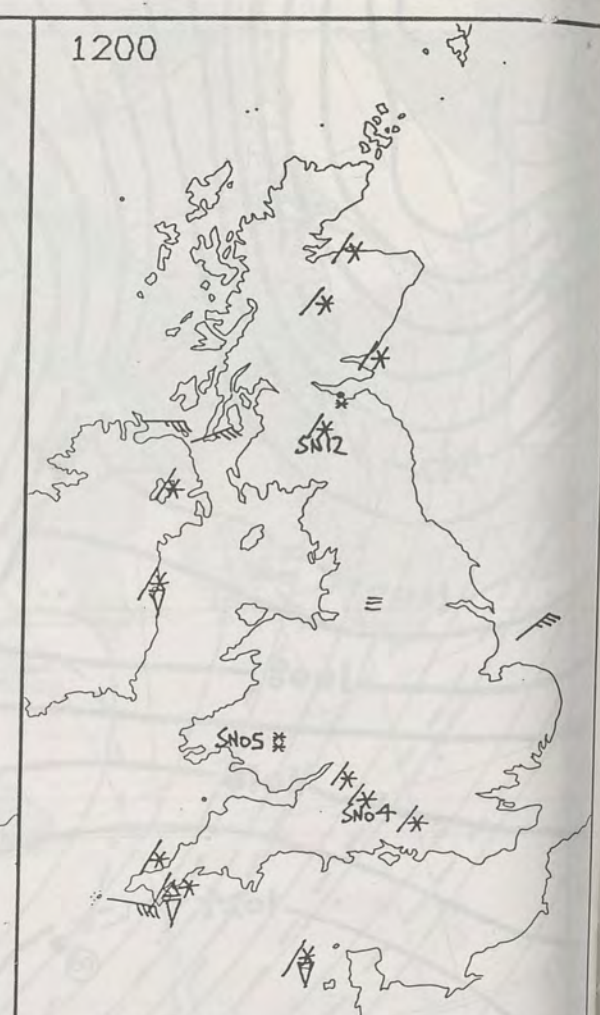

During the day the weather stayed cloudy over much of Britain although parts of the southwest of England and Wales along with the extreme north and west of Scotland had some sunshine.

There was more rain and sleet for a time, but in the afternoon the weather turned drier although in the evening there was still some light rain and drizzle here and there with a little sleet in one or two places.

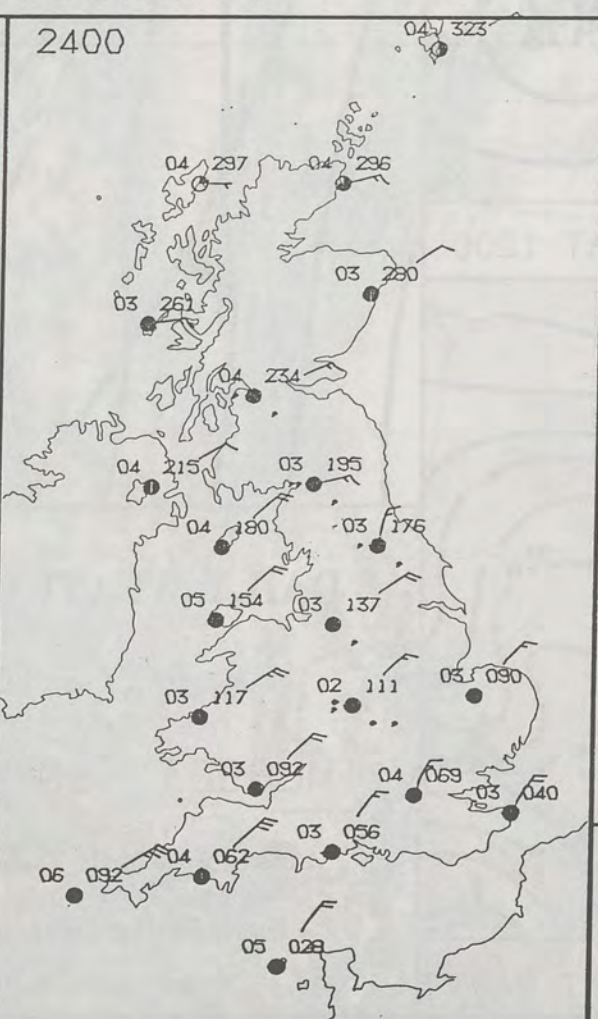

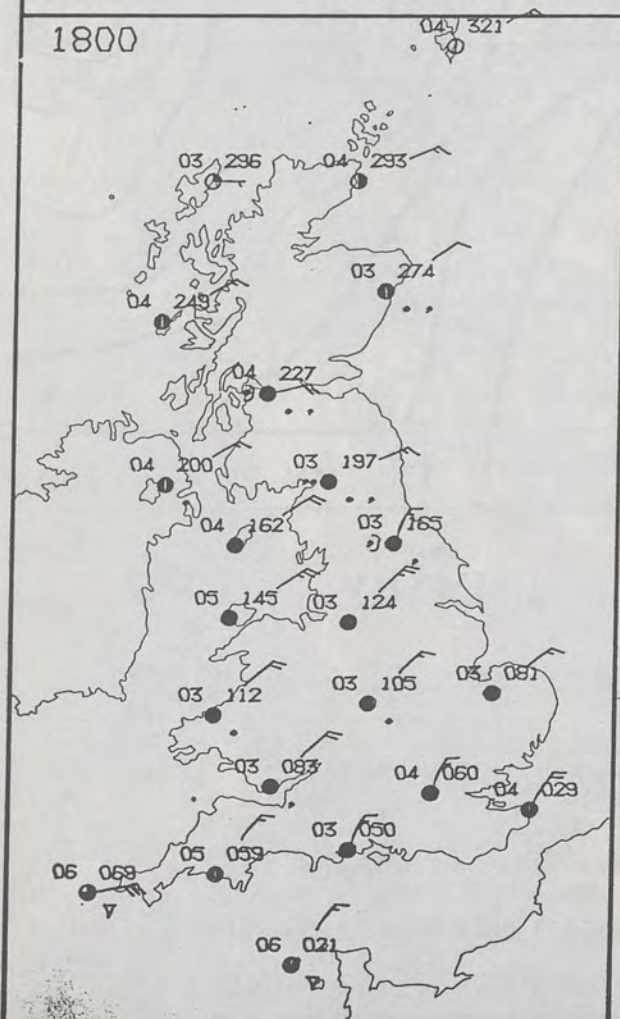

It was rather cold in most places with a strong northeasterly wind which reached gale force on coasts. A gust of 61 knots was reported from St. Abbs Head (Borders) in the early evening.

FRIDAY 31 JANUARY 1986

SUMMARY OF BRITISH WEATHER

Much of Britain was cloudy over-
night and most places had some
light rain and drizzle, with a
little sleet over northern hills.
It was a cold, windy night but in
most places temperatures stayed
above freezing.

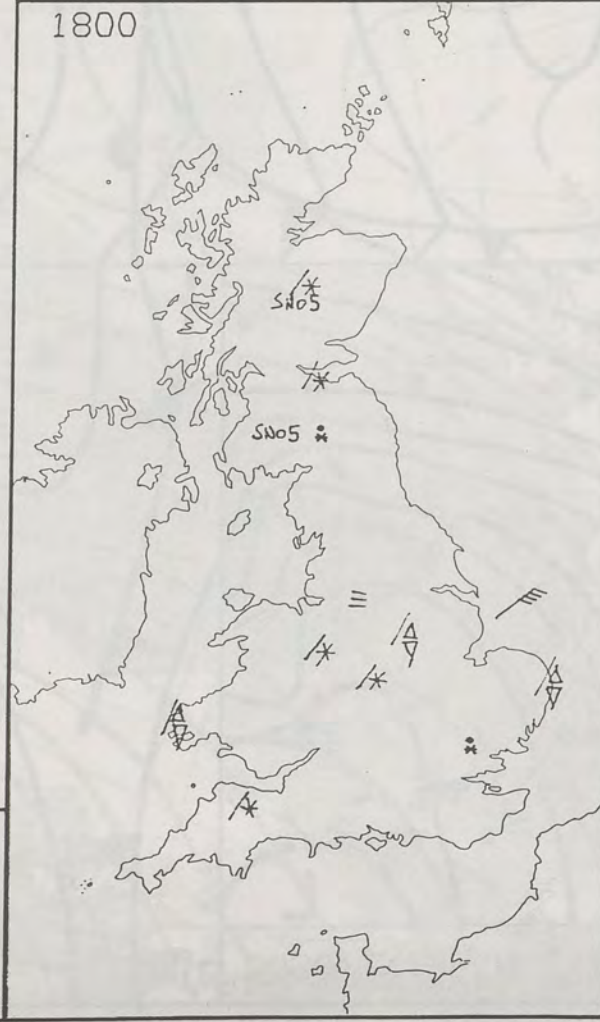

During the day most places were
dull and there was rain and
drizzle nearly everywhere, with a
little sleet here and there.
However, the extreme north and
northwest of Scotland had a dry,
bright day with a little sun-
shine.
