0600 GMT 01 NOVEMBER 2016 SIG WEATHER	1200 GMT 01 NOVEMBER 2016 SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 01 November 2016.</b>                      Dense fog patches developed through many central and southern parts of England and Wales, with some particularly low visibilities reported in some of the densest patches.                      Meanwhile, a band of light rain across southern Scotland sunk southwards into Northern Ireland and northern England. To the north of this it turned much colder, with clearer skies leading to a touch of frost. However, the far north-east saw a few showers and a stronger wind taking hold.                      The fog was slow to clear much of the south during the morning, and much of England and Wales sat beneath a blanket of cloud and patchy rain and drizzle.                      Meanwhile, across northern England and southern Scotland there were much clearer skies, allowing lengthy sunny spells.                      However, northern Scotland saw a combination of sunshine and occasional heavy showers.                      Temperatures were much cooler than the previous day for many, but still close to the seasonal average in the south, and a touch cooler further north.</p>

0600 GMT 03 NOVEMBER 2016 SIG WEATHER	1200 GMT 03 NOVEMBER 2016 SIG WEATHER	<p><b>Summary of UK Weather for Thursday 03 November 2016.</b>                      Most places were again dry overnight, with the exception being Northern Ireland and Scotland, where a weather front brought rain, cloud, and stronger winds.                      In the south there was high level cloud and clear spells. Isolated mist and fog patches formed in southern areas. It was another chilly night across many areas, with many places falling to, or just below, freezing.                      During daylight hours, the rain in the north and west worked its way further south and east, though it became more sporadic and light as it did so. However, much of the Midlands and the south-east of England stayed dry, cool and rather cloudy.                      Meanwhile, some heavy showers in the western English Channel moved inland in Cornwall, Devon and Dorset.                      Temperatures generally stayed rather cool, with many places struggling to reach double figures Celsius.</p>

# SIGNIFICANT WEATHER

## Summary of UK Weather for Friday 04 November 2016.

Showery outbreaks of rain affected many areas overnight, especially in the north and west. However, south-east Scotland and south-east England both remained mainly dry.

The winds were fairly light for most parts, and between the showers there were clear spells. In the clear spells a few mist and fog patches formed for a time in the south.

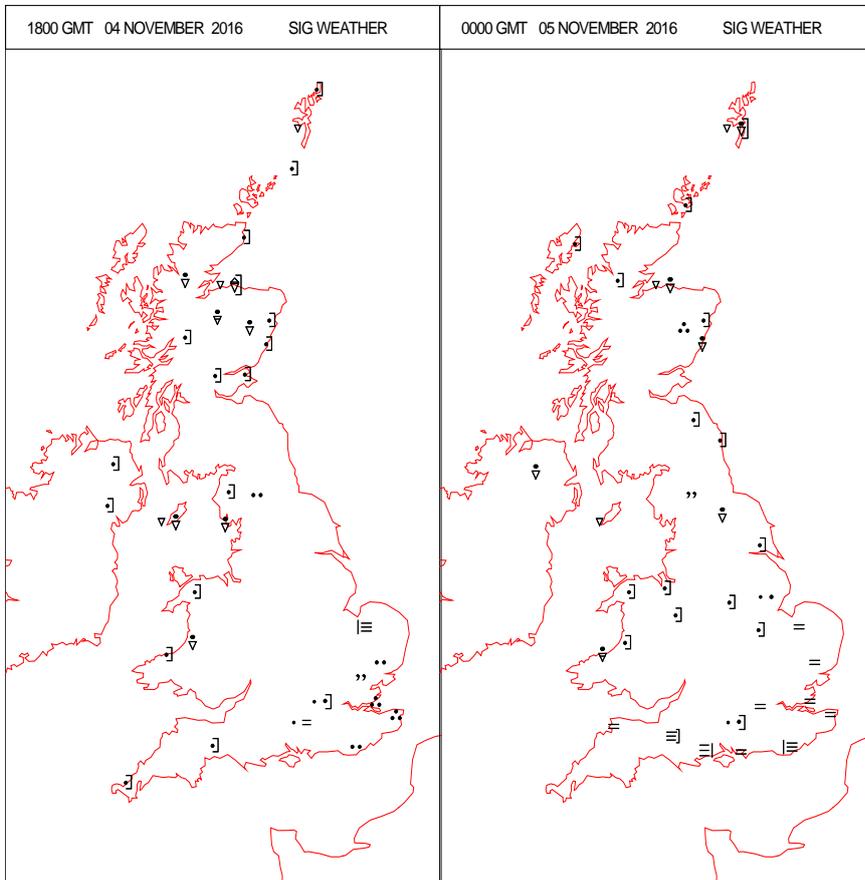

It was a cold night for many, with temperatures dipping below freezing in many places.

During the morning, there was rain in the south-west of England and eastern Scotland, as well as some showers in the north-west. A few showers over northern hills had a wintry element, with some sleet and snow over the tops of the mountains.

Central parts stayed largely dry, with plenty of sunshine.

The rain in the south-west moved to the south-east in the afternoon, where it was heavy at times.

It stayed rather cool everywhere, with temperatures just making double figures Celsius for many.

## EXTREMES

### Highest Maximum:

12.8 Hayling Island, Hampshire

### Lowest Maximum:

5.4 Balmoral, Aberdeenshire

### Lowest Minimum:

-2.7 Kinbrace Hatchery, Sutherland

### Lowest Grass Minimum:

-6.5 Balmoral, Aberdeenshire

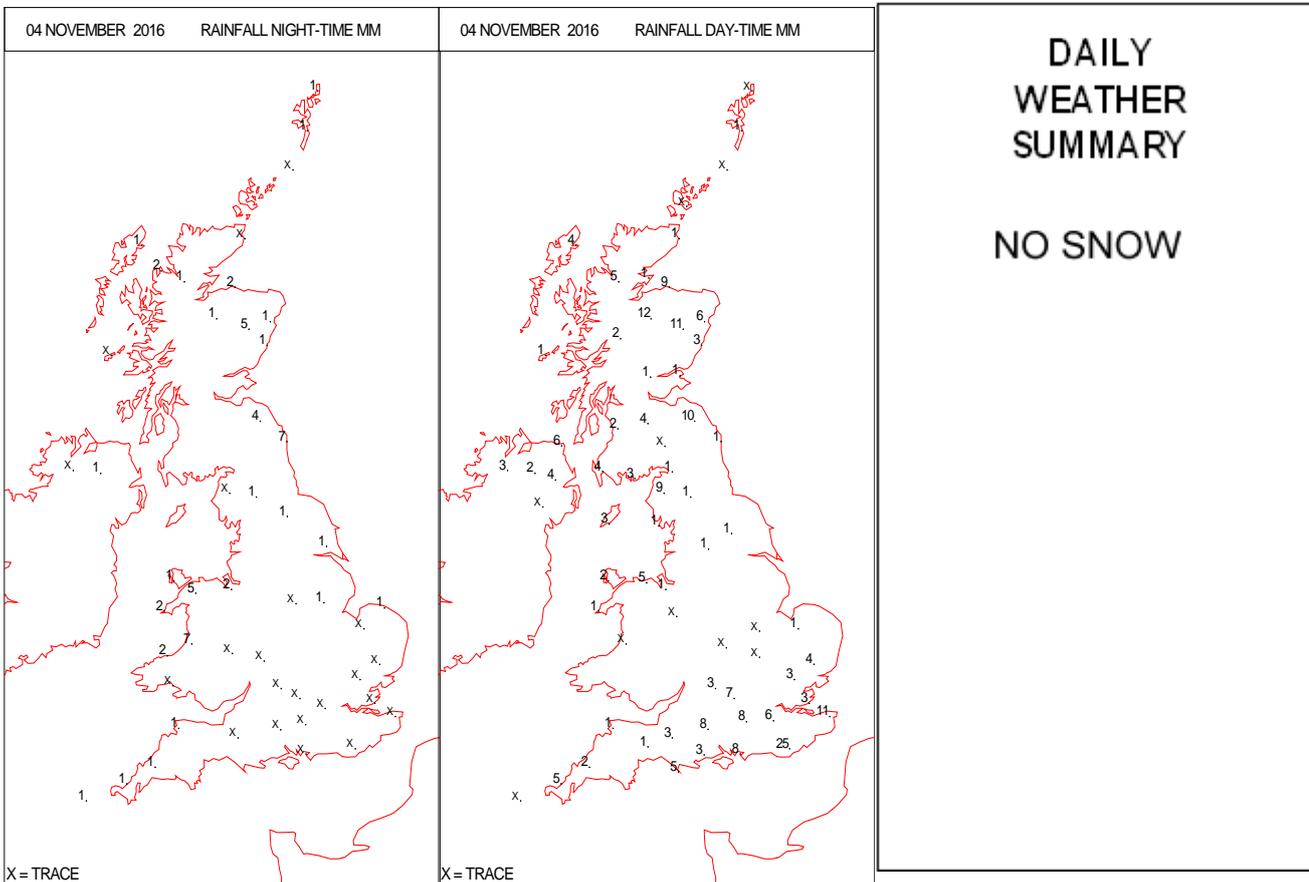

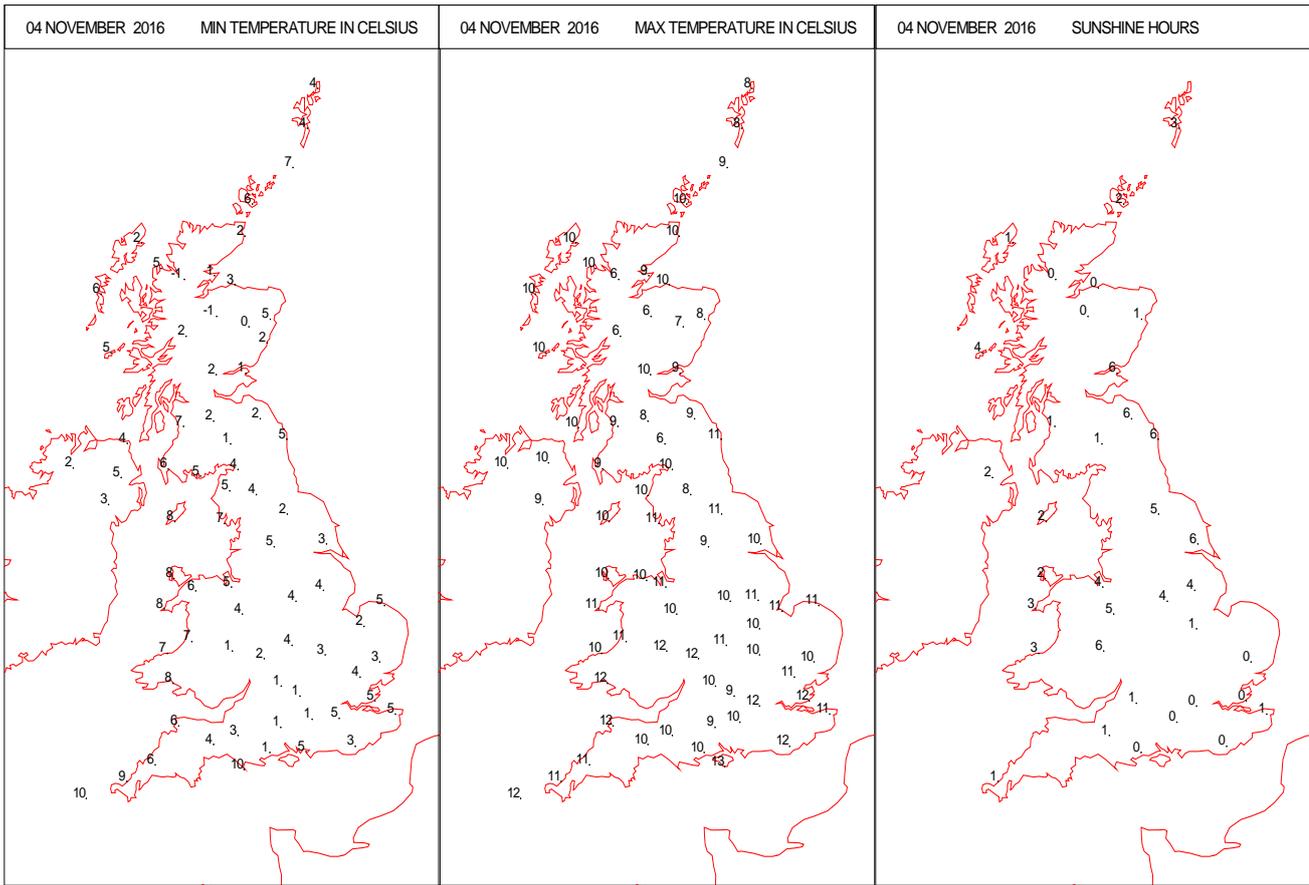

### Most Rain:

43.2 Denge Beach, Kent

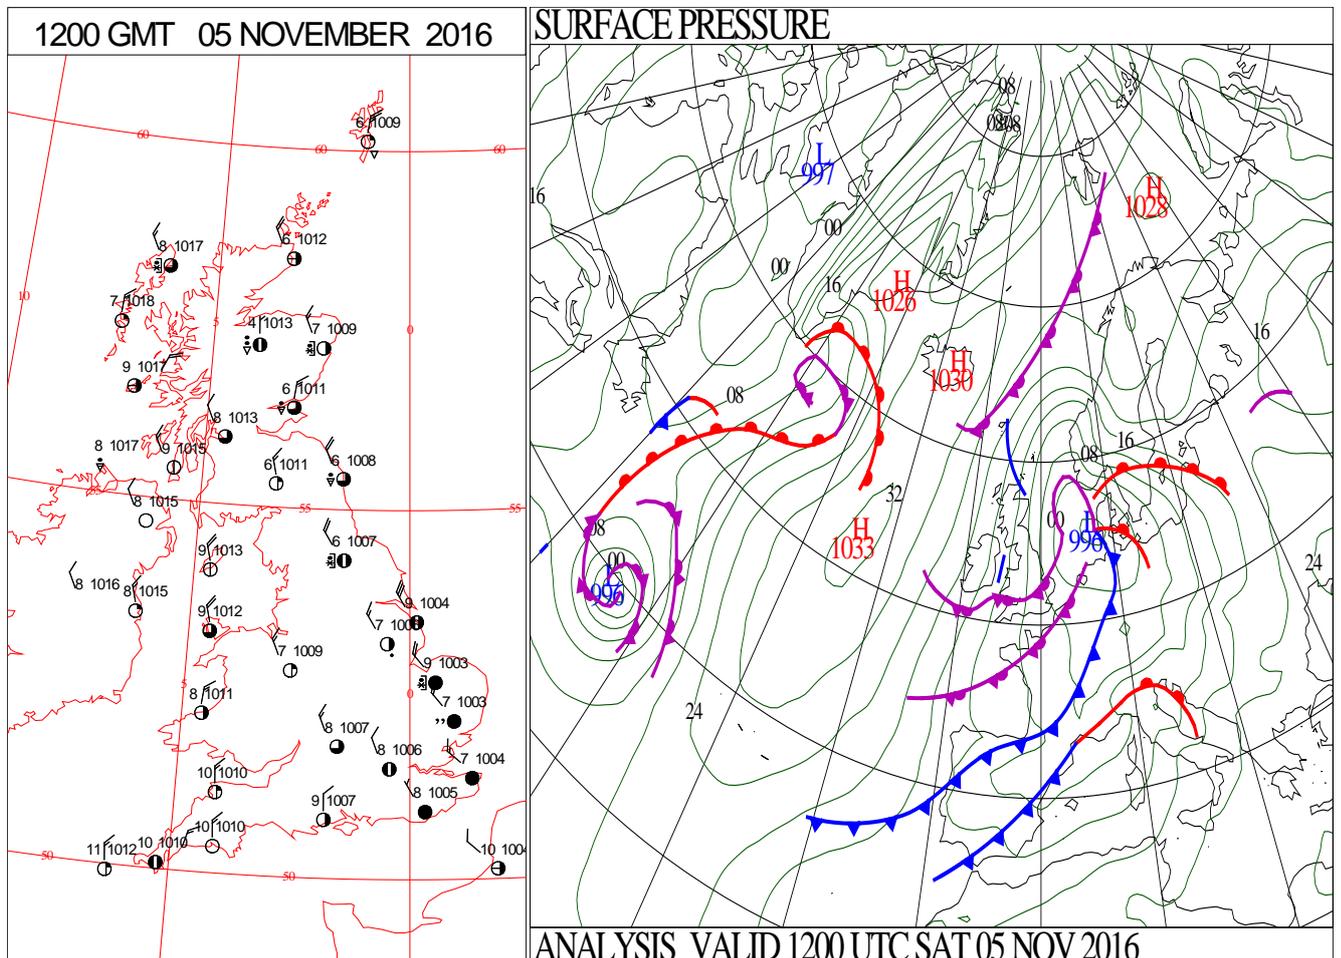

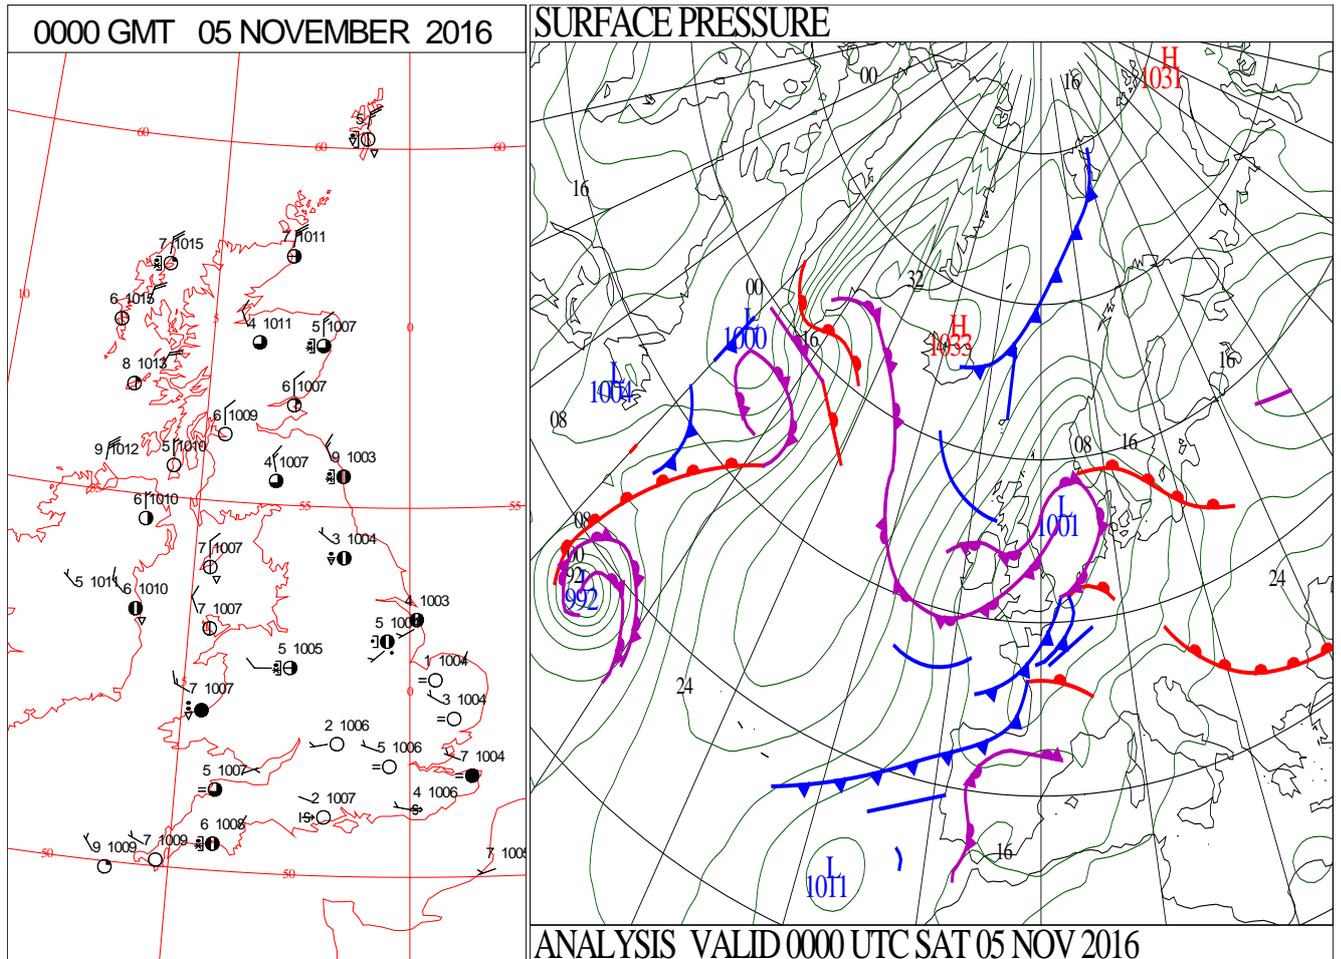

### Most Sun:

6.4 Mylnefield, Angus

0600 GMT 05 NOVEMBER 2016 SIG WEATHER	1200 GMT 05 NOVEMBER 2016 SIG WEATHER	<p><b>Summary of UK Weather for Saturday 05 November 2016.</b>                      The rain in the south-east quickly cleared overnight. Scattered showers continued to affect northern, western and particularly eastern coastal areas, some turning wintry over the higher ground of Scotland and northern England.                      Elsewhere, it was mainly dry with plenty of clear spells.                      Winds were strong in the north-east, with local coastal gales for eastern Scotland.                      It was a cold night, with temperatures falling close to, or just below freezing for many places.                      Through the day the showers continued along eastern coasts with some hail and sleet, and there were gale force gusts too. There were also some showers for Northern Ireland and the west coast of Wales, and Cornwall too.                      For many though it was a fine and dry day, with plenty of long sunny spells.                      It did feel cold in the wind though, and temperatures struggled to reach mid single figures Celsius for most.</p>

0600 GMT 10 NOVEMBER 2016 SIG WEATHER	1200 GMT 10 NOVEMBER 2016 SIG WEATHER	<p><b>Summary of UK Weather for Thursday 10 November 2016.</b>                      There were a few showers across western parts of the U.K. through the early hours, but aside from this the rest of the country was dry with clear skies. This caused temperatures to drop away quickly, and some frost and ice patches formed across the north-east, especially where some snow cover remained on higher ground. The morning therefore got off to a cold start, however many areas were bright and sunny. A scattering of showers developed through the day, which turned heavy for some, notably in the north Midlands, and some of these heavier downpours also produced hail. A few of the showers across Scotland turned wintry over the tops of the mountains. Winds were considerably lighter than yesterday, although it was still fairly breezy around the coasts. Temperatures were milder than yesterday across north-east England, however most places remained cool, with values a little below the average. The far south-west though saw temperatures reach around average for the time of the year.</p>

0600 GMT 14 NOVEMBER 2016 SIG WEATHER	1200 GMT 14 NOVEMBER 2016 SIG WEATHER	<p><b>Summary of UK Weather for Monday 14 November 2016.</b>                      It was a rather cloudy night across most of the U.K., although there were still some clearer spells too. Winds were generally moderate, but were fresh to strong across Scotland.                      There were patchy outbreaks of rain for many parts, with a more organised band reaching the south-east of England by morning.                      There was an early dip in temperatures before milder air gradually spread southwards.                      During the day it stayed cloudy across the whole country, with patchy outbreaks of rain, mainly on the western side of hills.                      It became very mild for the time of year, notably in eastern Scotland, where a pronounced Foen effect caused a maximum temperature 6 or 7 degrees Celsius above the expected norm.                      A band of more organised rain then moved into Northern Ireland and western Scotland during the evening, with some heavier bursts at times across the Scottish mountains. Extensive hill fog also edged across many western areas from late afternoon.</p>

0600 GMT 15 NOVEMBER 2016 SIG WEATHER	1200 GMT 15 NOVEMBER 2016 SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 15 November 2016.</b>                      It was a cloudy night for many parts, with extensive low cloud and hill fog for many southern and western areas. The cloud was also thick enough to produce some patchy rain and drizzle at times.                      A weak cold front did slowly and erratically edge southwards through the night, to lie across northern Wales and England by morning. Clearer and cooler conditions followed the cold front across Scotland and Northern Ireland.                      It was a mild night for many, especially in the south, with temperatures holding up above freezing for all.                      It was generally cloudy for much of the U.K. through the day, with the cold front continuing to bring patchy rain and drizzle to the southern half of the country, and sinking very slowly southwards as the day went on.                      Further north, conditions were much drier and brighter, with increased sunny spells, although there were showers in the far north.                      Temperatures were very mild again, with brief brighter spells in the south.</p>

The showers were wintry over higher ground.                      Eastern parts stayed drier, although some showers did feed through to the eastern half of the country.                      It was a rather cold night overall, with ice patches forming in places.                      It was then a day of sunny spells and scattered showers. The showers were most frequent in the north and west, where they were often wintry, with hail and thunder at times.                      The driest and brightest conditions were in the east and south-east, where there were some long sunny spells. There was a fresh west to north-west breeze, especially around western coasts, and it was a rather chilly day for most areas.</p>

0600 GMT 19 NOVEMBER 2016 SIG WEATHER	1200 GMT 19 NOVEMBER 2016 SIG WEATHER	<p><b>Summary of UK Weather for Saturday 19 November 2016.</b>                      A cold westerly flow continued to feed in showers across northern and western parts of the U.K. overnight, with the showers turning wintry over northern hills. The showers were heavy at times, particularly in south-west England, with hail and thunder in places.                      Meanwhile, much of eastern Scotland, central and south-east England stayed dry with clear skies overnight, leading to a widespread frost. Icy patches formed on any untreated surfaces, particularly after any showers, and where snow accumulated over higher ground across northern parts of the country.                      There were some lengthy sunny spells across central parts through the morning, however the cloud built there during the afternoon.                      Further north wintry showers continued, with snow over the hills, hail and some thunder and lightning. There were some sunny spells in the north-east though.                      Through the afternoon Storm Angus made its way into the south-west, with outbreaks of heavy rain and strong winds.                      It was another chilly day for most.</p>

0600 GMT 20 NOVEMBER 2016 SIG WEATHER	1200 GMT 20 NOVEMBER 2016 SIG WEATHER	<b>Summary of UK Weather for Sunday 20 November 2016.</b>
		<p>Storm Angus tracked eastwards across southern England overnight, bringing some very wet and windy weather. The rain was torrential in places, with thundery downpours, particularly across parts of south-west England, with a total of 54mm falling in a 12 hour period in Exeter, causing minor impacts with surface water flooding. The rain turned to snow across parts of south Wales, particularly around Gwent.</p> <p>There were gales or severe gales through the English Channel and along southern coasts of England, with a maximum gust of 70 knots at Langdon Bay.</p> <p>Meanwhile, much of Scotland and Northern Ireland stayed dry, clear and cold with a widespread frost, and some dense freezing fog patches formed in parts of Northern Ireland.</p>
		<p>Storm Angus continued to move eastwards along the English Channel, bringing further gusts of 60 knots.</p>
		<p>The rain and wind eased by mid-morning though, allowing things to calm down, although it remained rather cloudy.</p> <p>The best of the sunshine was further west and north, where it was cold.</p> <p><b>EXTREMES</b></p> <p><b>Highest Maximum:</b> 13.3 Swanage, Dorset</p> <p><b>Lowest Maximum:</b> -2.4 Balmoral, Aberdeenshire</p> <p><b>Lowest Minimum:</b> -9.8 Loch Glascarnoch, Ross-Shire</p> <p><b>Lowest Grass Minimum:</b> -13.0 Balmoral, Aberdeenshire</p> <p><b>Most Rain:</b> 47.1 Brixham, Devon</p> <p><b>Most Sun:</b> 6.1 Kirkwall, Orkney</p>

0600 GMT 21 NOVEMBER 2016 SIG WEATHER	1200 GMT 21 NOVEMBER 2016 SIG WEATHER	<p><b>Summary of UK Weather for Monday 21 November 2016.</b>                      During the early hours heavy rain slowly moved across southern and central parts of England and Wales, readily turning to snow across the higher ground of Wales, as the rain bumped into the colder air.                      Further north there were plenty of clear spells, allowing a widespread and sharp frost to form across Scotland and Northern Ireland. A scattering of showers affected coastal fringes of Scotland, but most stayed dry.                      Towards dawn the main rain band continued northwards into northern England and north Wales, whilst across southern parts of Devon the rain turned heavy and thundery. This heavy rain continued to push northwards, although most of Scotland and Northern Ireland remained dry with some sunny spells.                      The winds increased through the Irish Sea, and some heavy showers followed on behind the rain band into southern parts during the afternoon. Flooding occurred quite widely across south-west England and parts of Wales, with disruption to travel.                      Temperatures were well below average in the sunny north, but in the south some places saw temperatures slightly above average in the late brightness.</p>

# SURFACE REPORTS

# SIGNIFICANT WEATHER

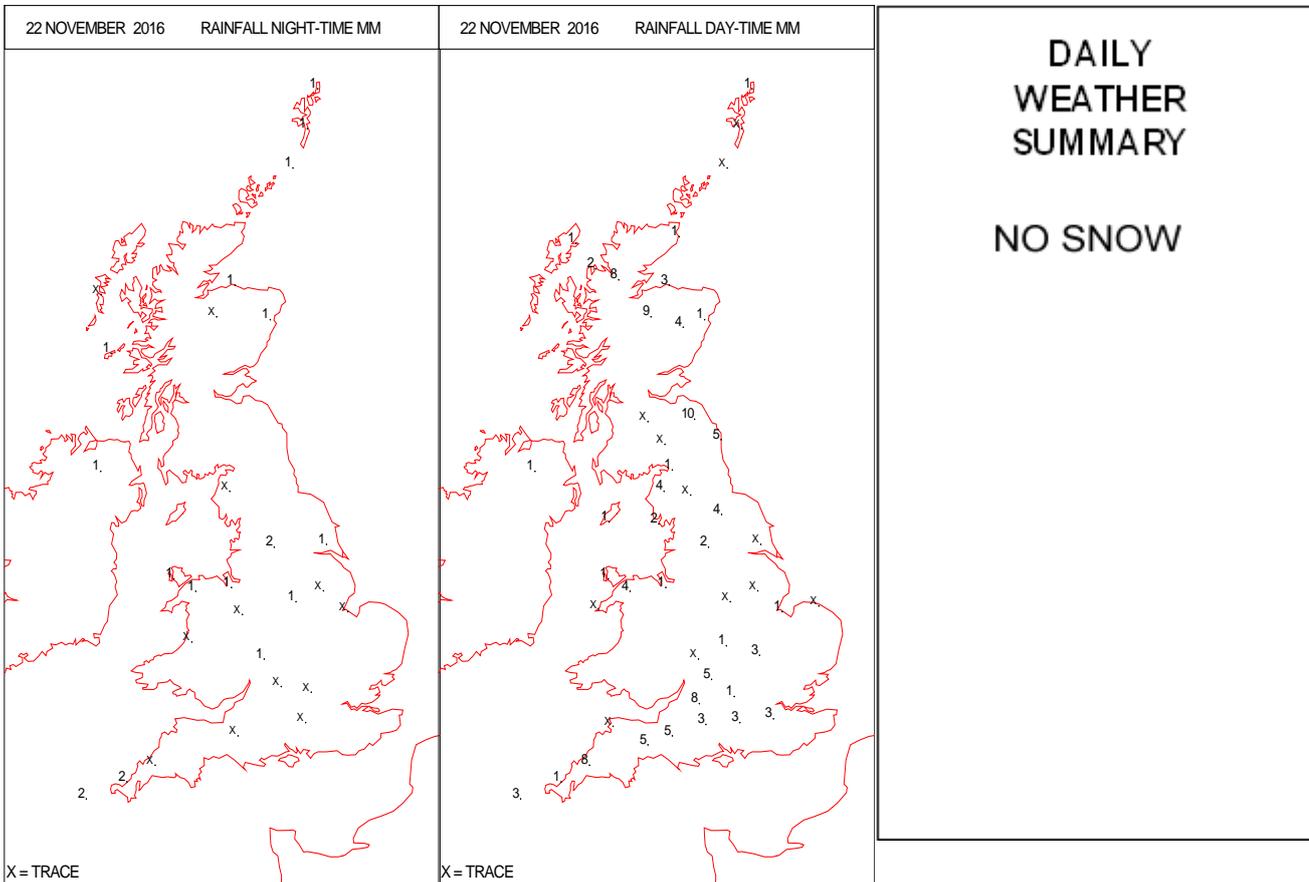

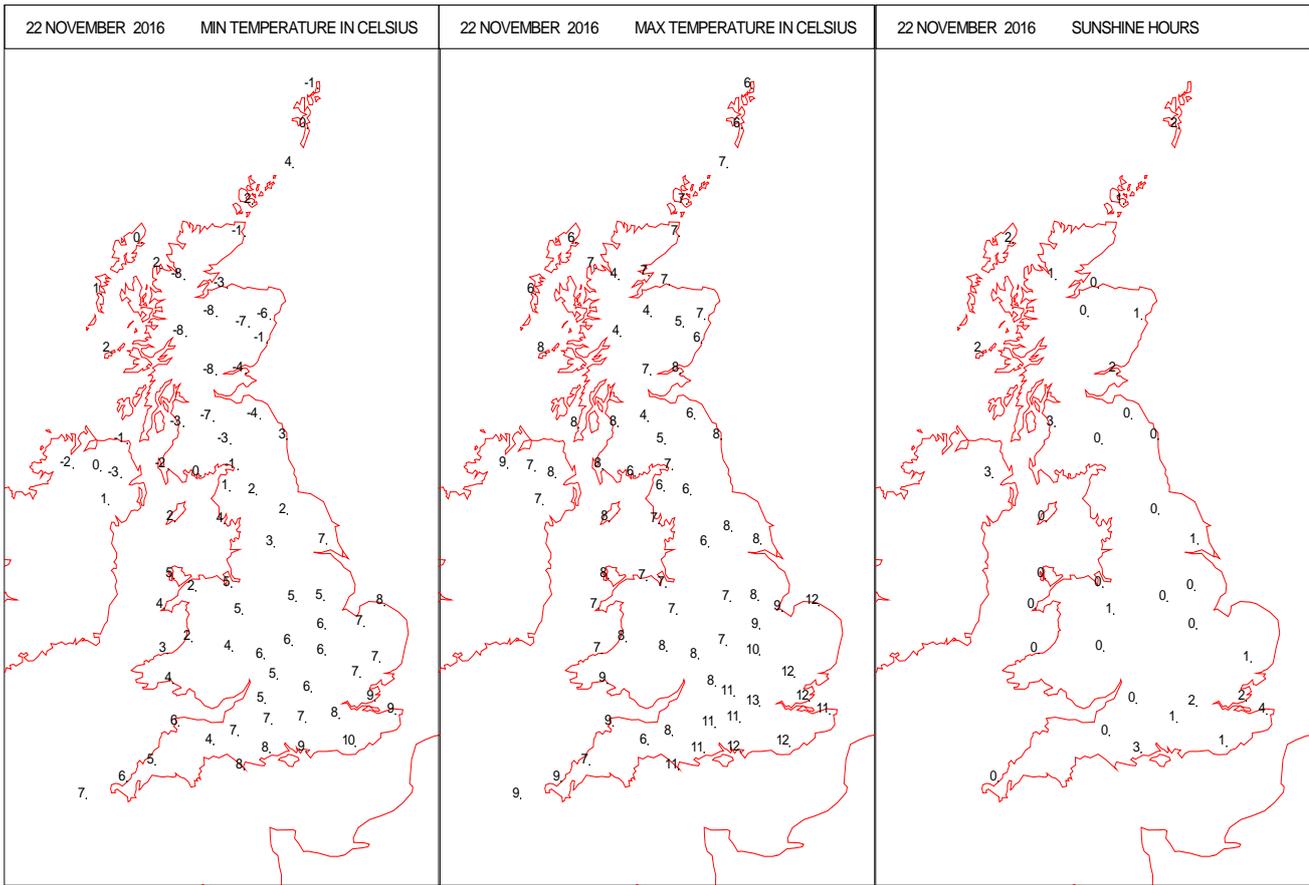

**Summary of UK Weather for Tuesday 22 November 2016.**  
 Heavy rain continued to fall across many areas through the early hours, with the focus of the more persistent rain shifting to northern England, where flash flooding was reported, especially in the Manchester area.  
 Strong to gale force winds also affected the north-east, as well as Irish Sea coasts and parts of south-east England.  
 Further south showers continued for some, and it remained fairly cloudy, whilst across northern and western Scotland and Northern Ireland it was much drier with clear skies, allowing some frost to form by dawn.  
 The heaviest rain steadily cleared north-eastwards into the North Sea through the afternoon, however further patchy outbreaks of mainly light rain persisted over many central and southern parts of England and Wales. A band of showers also affected west Wales and south-west England, with some locally heavy bursts.

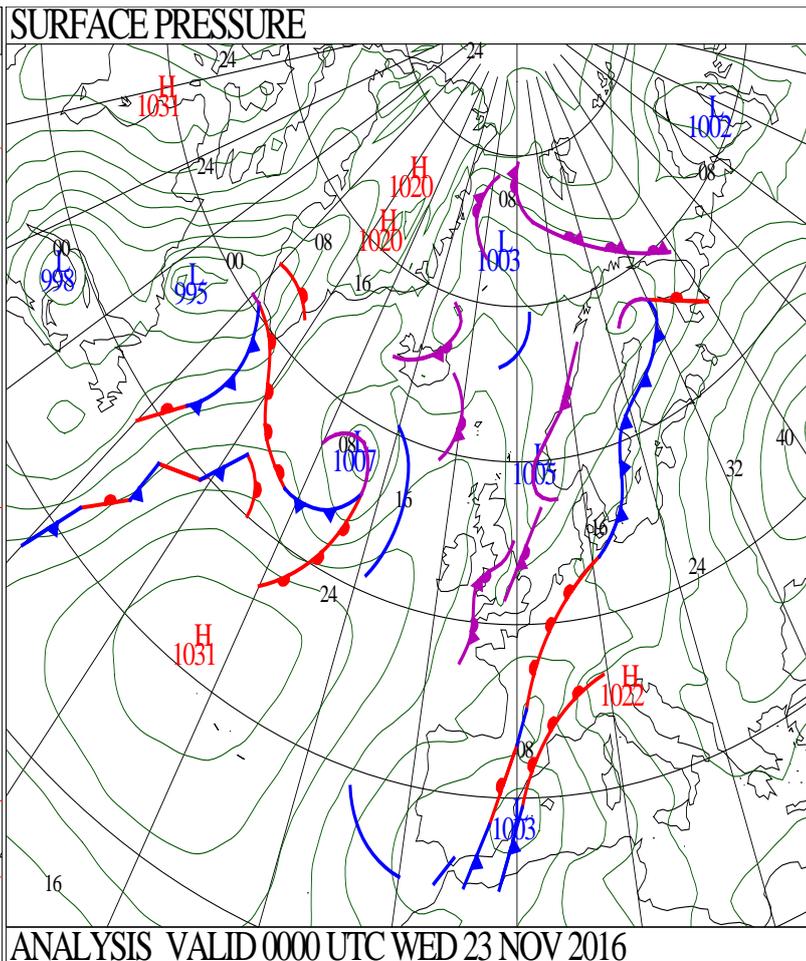

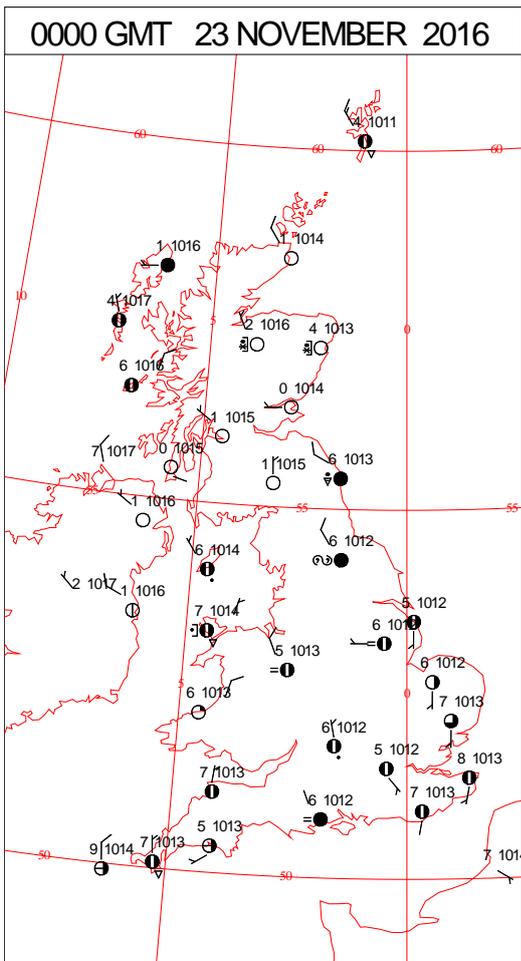

Once again Northern Ireland and most of Scotland had a largely dry day with sunny spells, and just a few showers around some coasts.  
 Winds gradually eased through the day, but it stayed cool, with temperatures widely below average, away from the south-east of England.

- EXTREMES**
- Highest Maximum:**

0600 GMT 23 NOVEMBER 2016 SIG WEATHER	1200 GMT 23 NOVEMBER 2016 SIG WEATHER	<p><b>Summary of UK Weather for Wednesday 23 November 2016.</b>                      It was much quieter weather-wise through the early hours across the U.K., with something of a north/south divide developing as high pressure built in across the north.                      The north saw largely clear skies, leading to a very cold night with a widespread harsh frost.                      Further south it stayed cloudy, with a few outbreaks of rain and drizzle, and some patchy fog formed where skies did clear a little. Temperatures were not as cold there, although a few spots did still see values getting close to freezing.                      During the daylight hours, the north stayed dry, sunny and rather cold. Lying snow could be clearly seen on the visible satellite images of the northern hills.                      The south was cloudier, but stayed mostly dry. The wind strengthened again later along English Channel coasts, with some more rain there in the evening.                      The mildest spots were under the cloud in the south. Temperatures were generally near average in the south, but a few spots in Scotland remained near or below freezing all day.</p>

0600 GMT 29 NOVEMBER 2016 SIG WEATHER	1200 GMT 29 NOVEMBER 2016 SIG WEATHER	<p><b>Summary of UK Weather for Tuesday 29 November 2016.</b>                      Cloud spilled in from the north-west across Northern Ireland and Scotland through the early hours, with some rain reaching the far north-west by dawn.                      Across England and Wales it was largely clear, which meant temperatures fell well below average for the time of year, bringing a widespread frost and some freezing fog too.                      The freezing fog lifted through the morning, and there was plenty of unbroken sunshine for most places through the day.                      A weather front brought cloudy skies to Northern Ireland and Scotland though, with outbreaks of light rain to northern and western Scotland. Some patchy cloud moved into northern England too.                      Temperatures were around average for the time of year across Northern Ireland and Scotland, but for England and Wales it was colder than average.</p>

# SURFACE REPORTS

# SIGNIFICANT WEATHER

## Summary of UK Weather for Wednesday 30 November 2016.

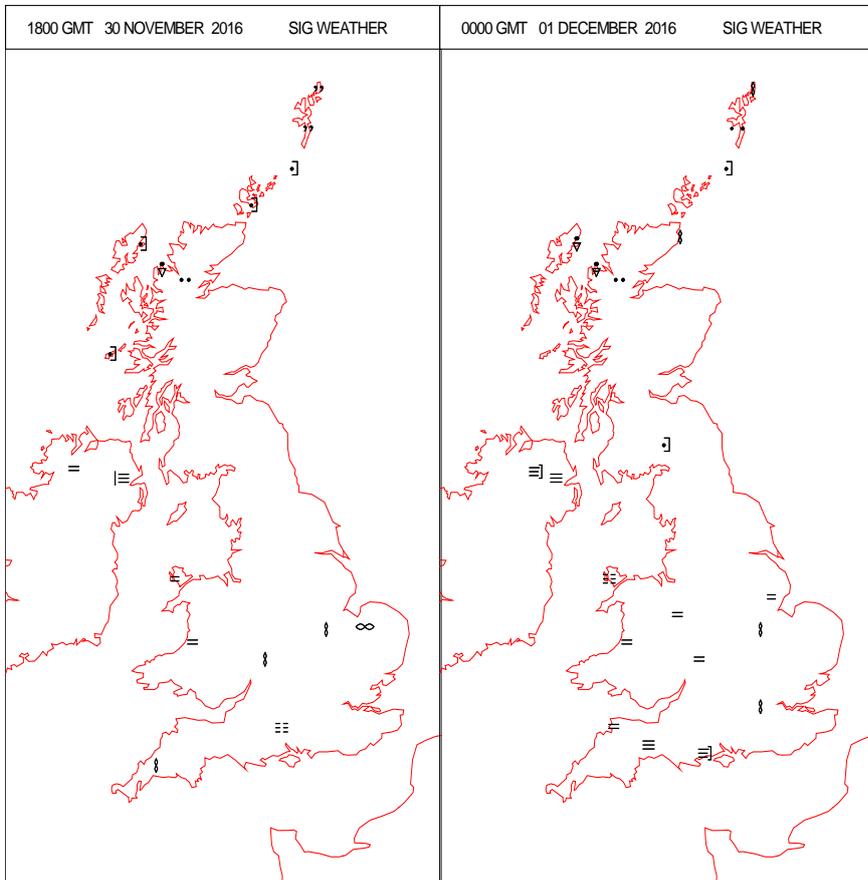

Through the early hours, a band of cloud and rain affected parts of northern Scotland. Elsewhere, across northern England and Northern Ireland, skies were rather cloudy with a few clear spells.

Across the rest of England and Wales there were clear skies and light winds. This caused temperatures to drop quickly and a widespread frost to form, with a few mist and fog patches also developing. Temperatures dropped widely below freezing, and it was the coldest recorded November night since 2010 across both England and Wales.

Through the day there was a lot of dry and sunny weather, particularly for England and Wales. However, cloud gradually spread southwards through the day, affecting Scotland, Northern Ireland, northern England and then later, northern parts of the Midlands.

After a cold night in the south, it was a chilly day, but temperatures in the north were near average for the time of year.

Under clear skies through the early evening, temperatures in the south began to plummet once more, with frost quickly reforming.

## EXTREMES

### Highest Maximum:

12.1 Treknow, Cornwall

### Lowest Maximum:

3.1 Bala, Clwyd

3.1 Llysdinam, Dyfed

### Lowest Minimum:

-9.0 Benson, Oxfordshire

### Lowest Grass Minimum:

-13.5 Wallingford, Oxfordshire

### Most Rain:

9.2 Weisdale Mill, Shetland

### Most Sun:

7.8 East Malling, Kent
