DAILY WEATHER SUMMARY

SURFACE REPORTS

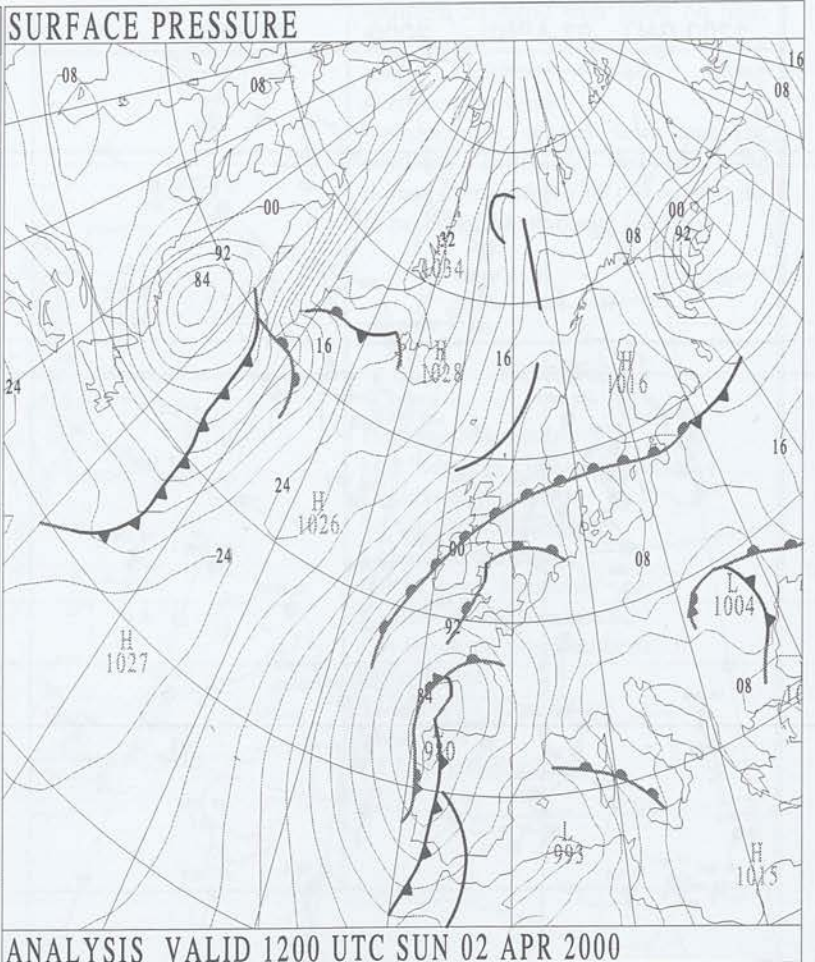

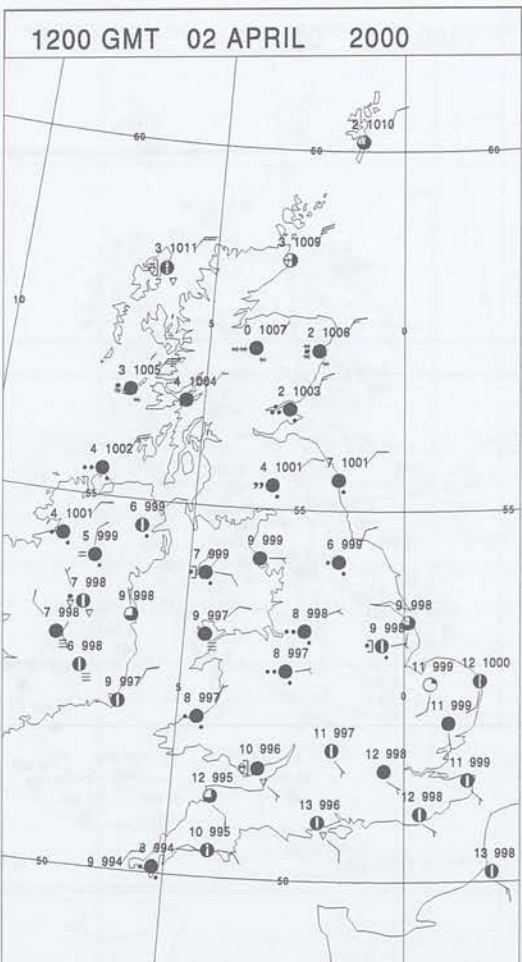

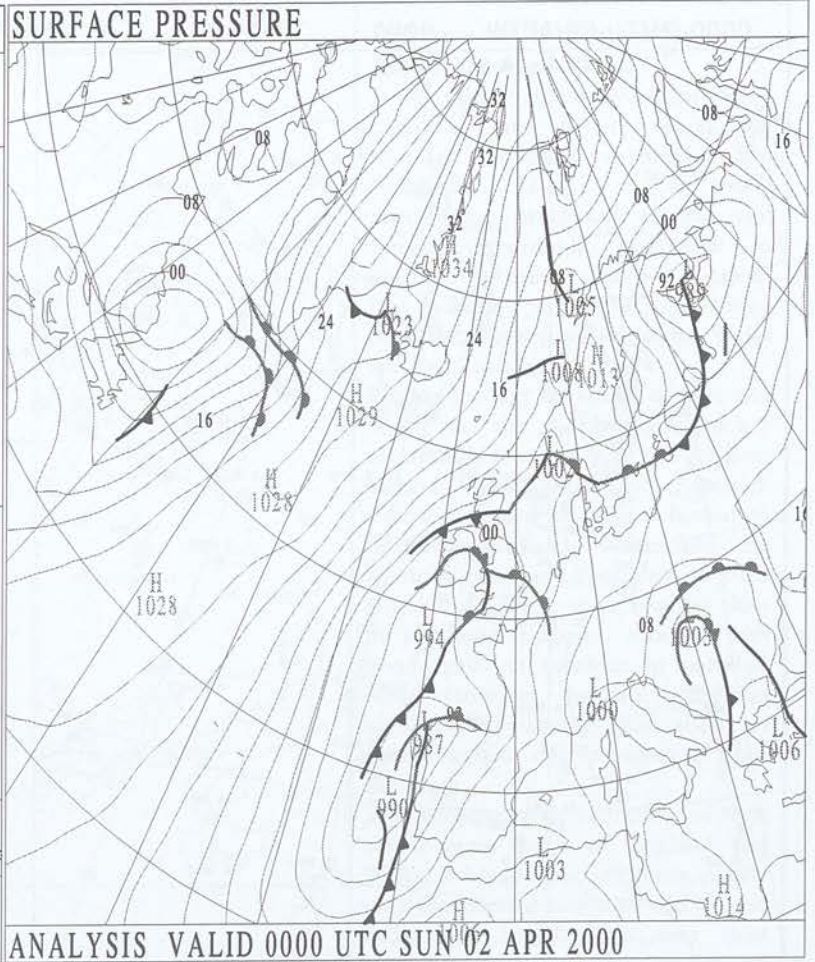

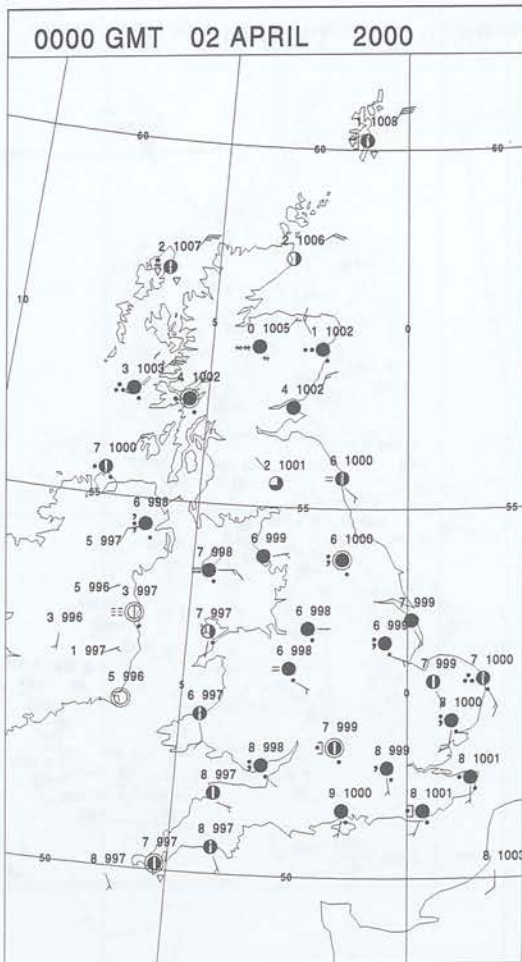

SIGNIFICANT WEATHER

0600 GMT 01 APRIL 2000	SIG WEATHER	1200 GMT 01 APRIL 2000	SIG WEATHER	<p>Summary of UK Weather for Saturday 01 April 2000.</p> <p>Central and eastern England had a dry night with clear spells and patchy mist. Remaining parts of England and Wales were cloudy with scattered showers. Scotland and Northern Ireland had rain, heavy over central and northern Scotland and turning to snow in the far north, accompanied by strong to gale force winds.</p> <p>During the day the cloud and showery rain spread north and east to much of England and Wales, becoming heavier and more persistent through the afternoon, especially across central and southern parts. Northern Ireland stayed cloudy with outbreaks of rain throughout the day. The rain over the northern half of Scotland edged slowly southwards, although border counties were still dry by evening. As the rain pushed southwards it did turn to snow over the Highlands, with wintry showers over the Northern Isles, still with strong winds.</p> <p>There were showery bursts of rain across much of England, Wales and Northern Ireland during the evening. Border counties of England and Scotland were mostly dry, though. Northern Scotland had rain, heavy in places and turning to snow over the hills.</p> <p>Temperatures were mostly near normal, although the Northern Isles were cold.</p>
1800 GMT 01 APRIL 2000	SIG WEATHER	0000 GMT 02 APRIL 2000	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 12.3 Scilly, Isles Of Scilly 12.3 Guernsey Airport, Guernsey</p> <p>Lowest Maximum: 3.2 Rackwick, Orkney</p> <p>Lowest Minimum: -2.8 Leeming, North Yorkshire</p> <p>Lowest Grass Minimum: -8.0 Leeming, North Yorkshire -8.0 Shawbury, Shropshire</p> <p>Most Rain: 31.6 Castlederg, Tyrone</p> <p>Most Sun: 10.5 Boulmer, Northumberland</p>

SIGNIFICANT WEATHER

0600 GMT 02 APRIL 2000	SIG WEATHER	1200 GMT 02 APRIL 2000	SIG WEATHER	<p>Summary of UK Weather for Sunday 02 April 2000.</p> <p>It was mostly cloudy overnight with a band of rain across central and northern Scotland extending into Northern Ireland. As cold northeasterly winds set in this rain turned increasingly to snow in northern Scotland. Another band of rain steadily developed, stretching from southwest England, across Wales and into Lincolnshire.</p> <p>During the day the band of rain and snow in the north sank slowly southwards to cover most of Northern Ireland and southern Scotland. Frequent wintry showers followed to northern Scotland. Meanwhile the southern rain band continued to push northwards. There were brighter skies in southeast England, though, with good spells of sunshine in parts of Kent. However, by late afternoon cloud was thickening again ahead of another area of rain spreading up from the south.</p> <p>The evening saw outbreaks of rain across many parts of England and Wales, although rain was more patchy over the extreme southeast of England and East Anglia. Rain and sleet continued over Northern Ireland and southern Scotland with snow on hills. The north of Scotland had further wintry showers and strong northeasterly winds.</p> <p>Temperatures ranged from cold in northern Scotland, through near normal across much of the country to rather warm in southeast England.</p>
1800 GMT 02 APRIL 2000	SIG WEATHER	0000 GMT 03 APRIL 2000	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 14.2 Northolt, Greater London</p> <p>Lowest Maximum: 0.5 Glenlivet, Banffshire</p> <p>Lowest Minimum: -0.8 Lerwick, Shetland</p> <p>Lowest Grass Minimum: -2.4 Boulmer, Northumberland</p> <p>Most Rain: 32.4 Moel-Y-Crio, Clwyd</p> <p>Most Sun: 7.1 Lerwick, Shetland</p>

SIGNIFICANT WEATHER

0600 GMT 03 APRIL 2000	SIG WEATHER	1200 GMT 03 APRIL 2000	SIG WEATHER	<p>Summary of UK Weather for Monday 03 April 2000.</p> <p>Monday began with a large swathe of rain across the country from the Scottish borders south to Cornwall. Along the northwestern edge of the rain there were increasing amounts of sleet and snow across the Southern Uplands and North Pennines during the early hours. A few places in the southeastern extremity of England and parts of East Anglia were dry, however at this time.</p> <p>During the morning the rain area edged slowly south away from southern Scotland and started to fall as snow over Wales and more southern parts of the Pennines. Across exposed parts of Scotland and occasionally Northern Ireland there were wintry showers, but in many other places it was dry with some sunshine, especially in the northwest of mainland Scotland.</p> <p>Apart from a few places in the extreme southeast it was a wet afternoon across England and Wales with snow penetrating to low levels at times in the Midlands and central southern England, especially in the evening. Outbreaks of rain finally became extensive in southeastern England in the evening. Temperatures were rather mild in southeast of England but were otherwise cold, locally feeling very cold.</p>

SIGNIFICANT WEATHER

0600 GMT 04 APRIL 2000	SIG WEATHER	1200 GMT 04 APRIL 2000	SIG WEATHER	<p>Summary of UK Weather for Tuesday 04 April 2000.</p> <p>Tuesday began with a broad swathe of rain, sleet and snow across central and southern parts of the British Isles. More northern parts apart from the odd wintry showers were mainly dry with clear skies in parts of Scotland and Northern Ireland. Towards morning the northern and western limit of the area of precipitation gradually edged southeast but elsewhere there was little change. Indeed, during the morning the rain became increasingly heavy and persistent east of London where hitherto it had been rather less heavy and quite patchy. Wintry showers affected north and east facing coasts of northern Britain with a few of these on the heavy side.</p> <p>At midday all rain, sleet and snow on hills affected all parts southeast of a line Lincoln to Bristol although the heaviest of the rain was by now concentrated across Kent and East Sussex. Slowly in the afternoon and evening the rain area contracted with wintry showers elsewhere.</p> <p>Temperatures were very cold in the south, coldest April day for 34 years at London for example, but mostly rather cold across northern areas.</p>

DAILY WEATHER SUMMARY

0000 GMT 07 APRIL 2000

SURFACE REPORTS

SIGNIFICANT WEATHER

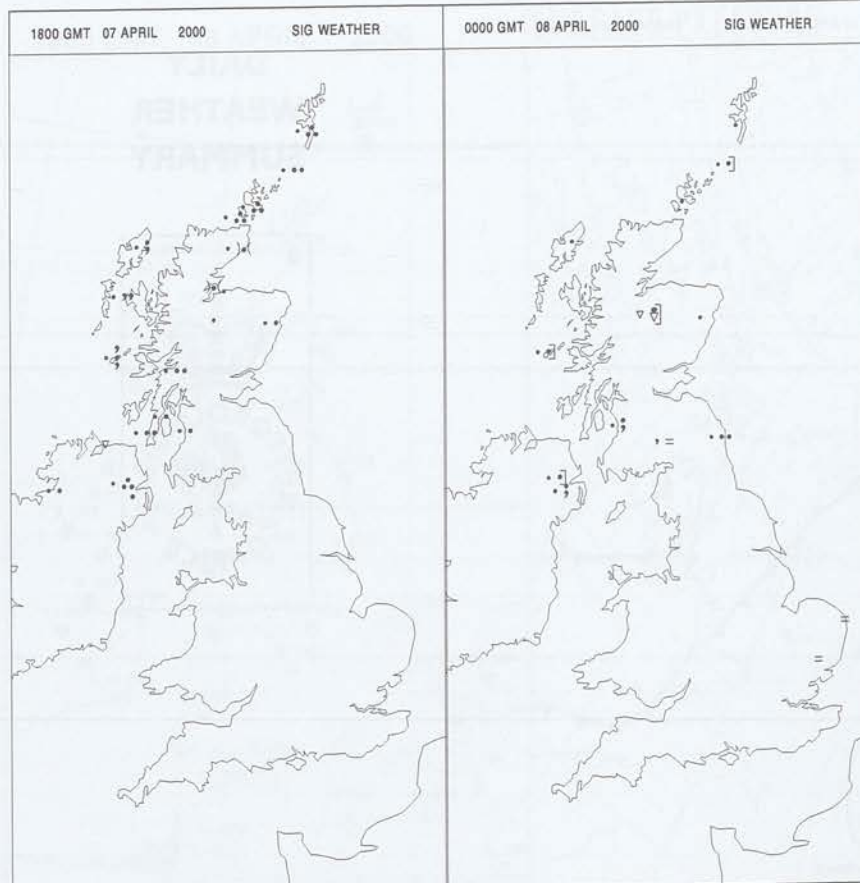

Summary of UK Weather for Friday 07 April 2000.

Most of the country had a dry night but cloud increased over Scotland and there was some rain in the Outer Hebrides by morning. There were a few mist and fog patches over England and Wales, more especially in the south.

England and Wales had a dry and sunny day, although high level cloud increased through the afternoon and evening, especially in the north.

During the morning, cloud and rain spread across all of Scotland north of the Great Glen and into the north and west of Northern Ireland. In the afternoon the rain edged further south to all of Northern Ireland and as far as the Central Lowlands. There were a few heavier spells of rain in the west, but with time the rain band became more fragmented. Through the evening drier weather moved into the north and west of Scotland, but it stayed cloudy.

Temperatures were close to average over Scotland and Northern Ireland. Over England and Wales it was mostly rather warm.

EXTREMES
Highest Maximum:

15.5 Northolt, Greater London

Lowest Maximum:

7.8 Lerwick, Shetland

7.8 Lybster, Caithness

Lowest Minimum:

-4.6 Eskdalemuir, Dumfriesshire

Lowest Grass Minimum:

-9.8 Aboyne No.2, Aberdeenshire

-9.8 Shawbury, Shropshire

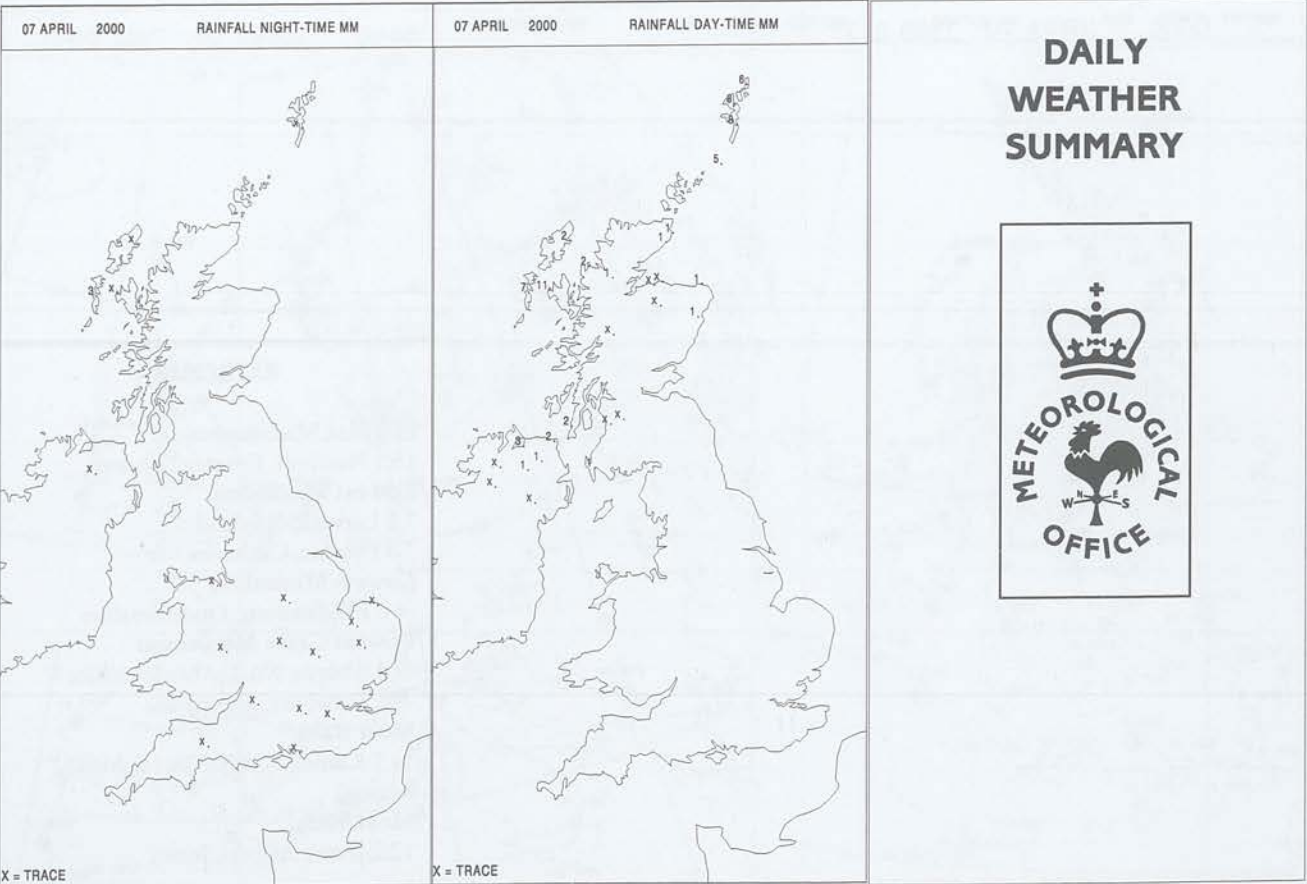

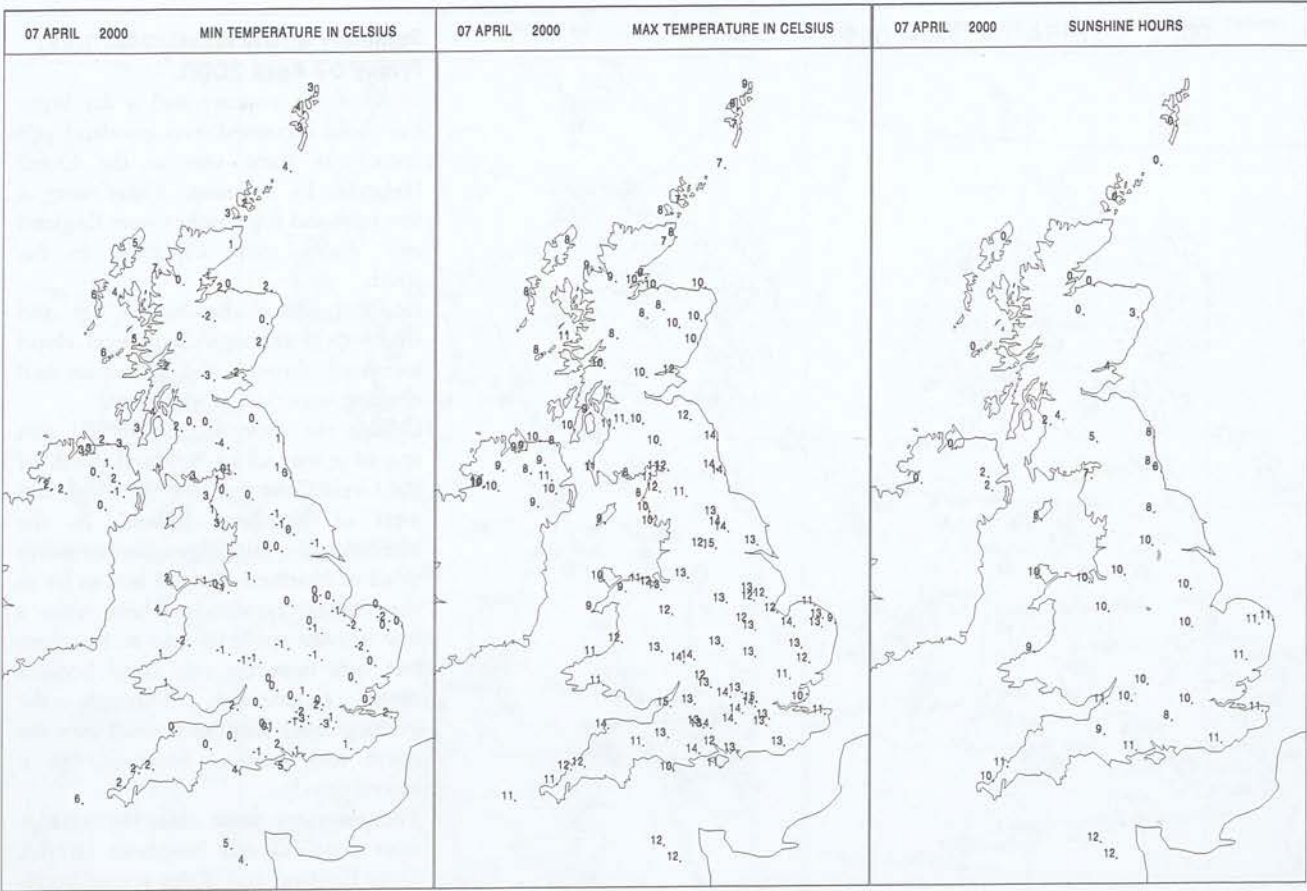

Most Rain:

14.7 Kilmory, Argyll (In Highland Region)

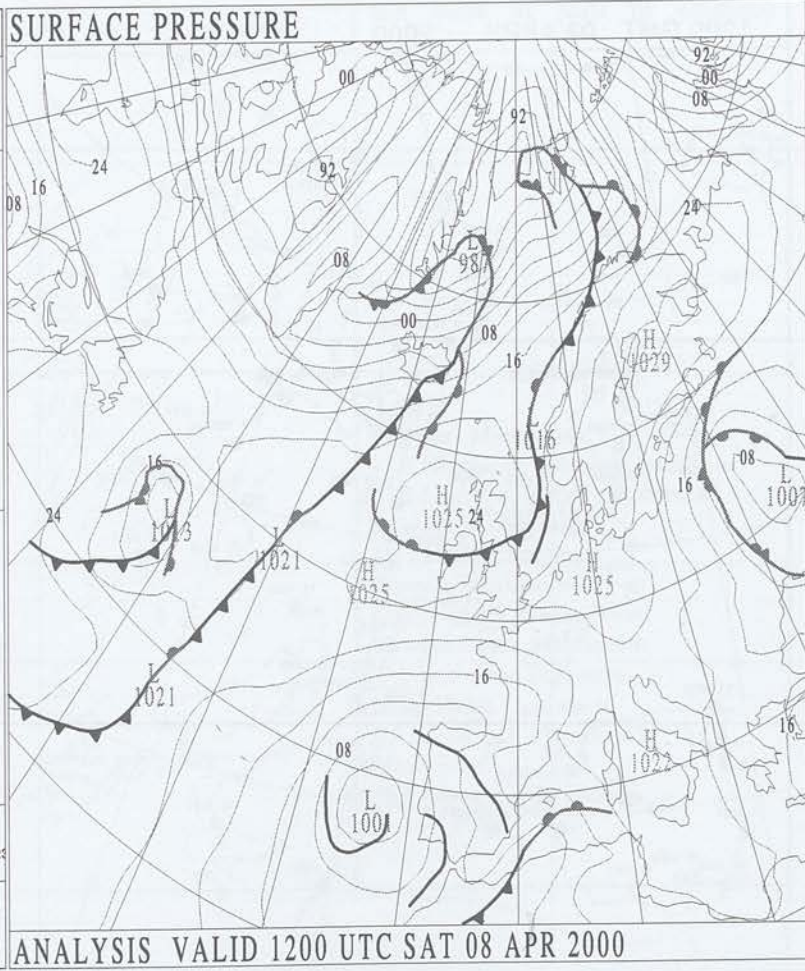

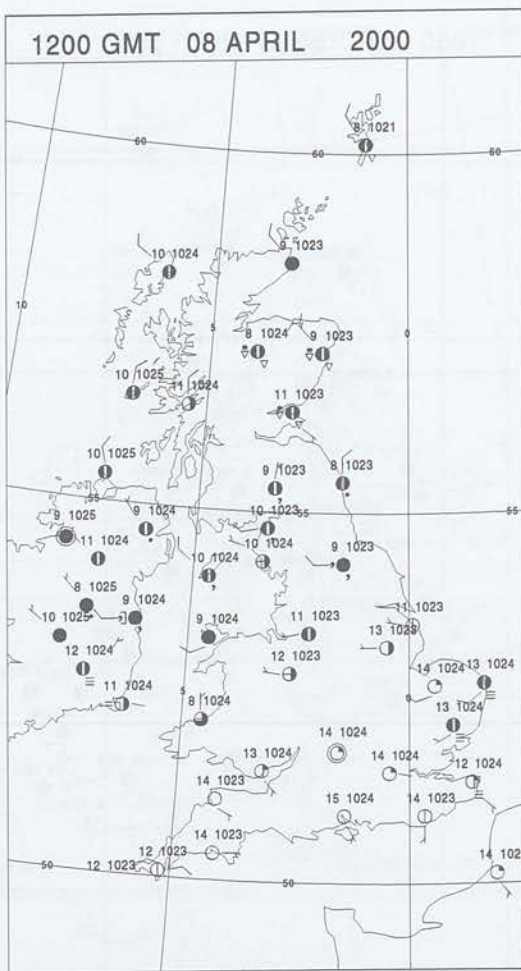

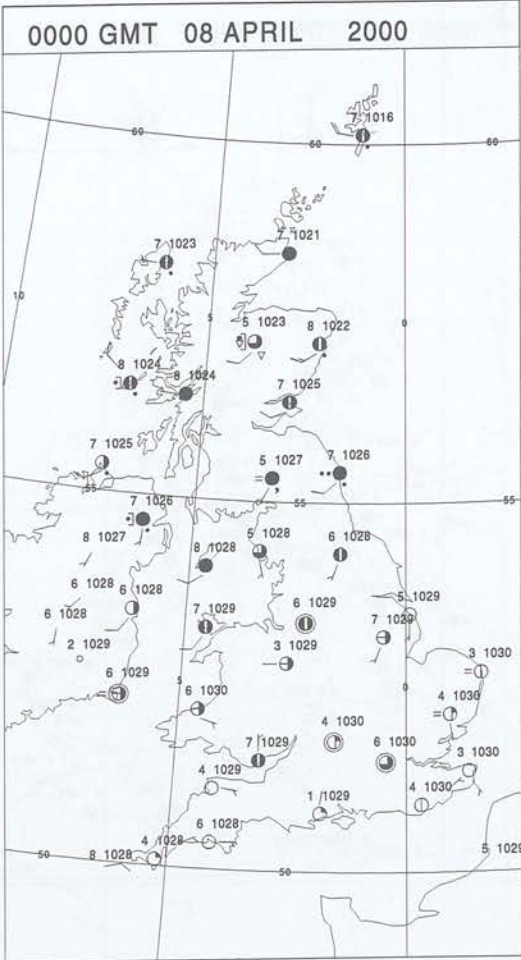

Most Sun:

12.2 Jersey Airport, Jersey

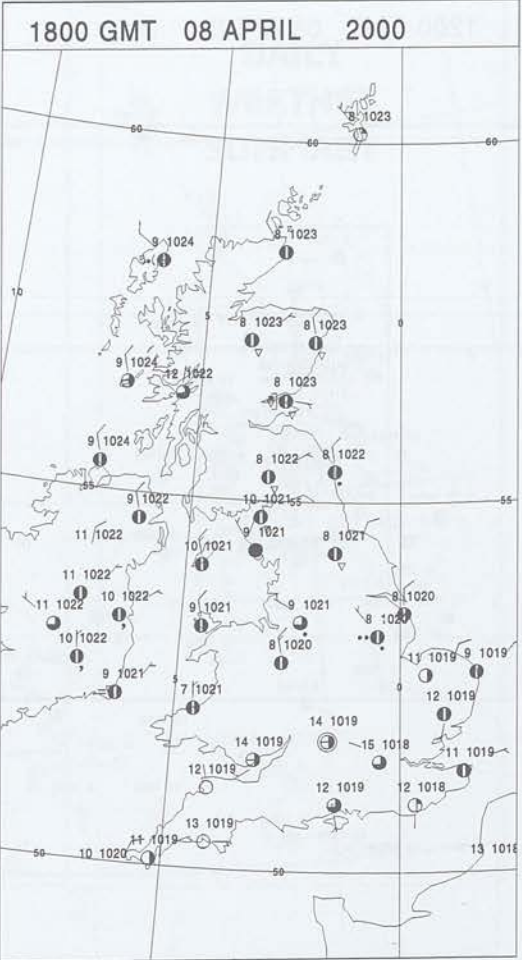

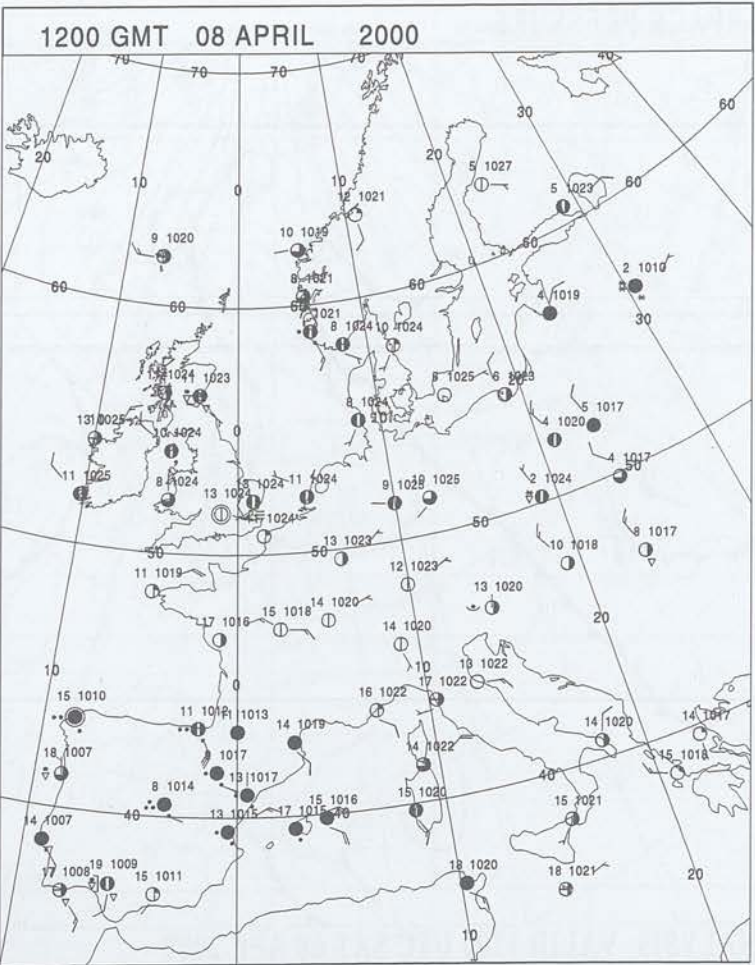

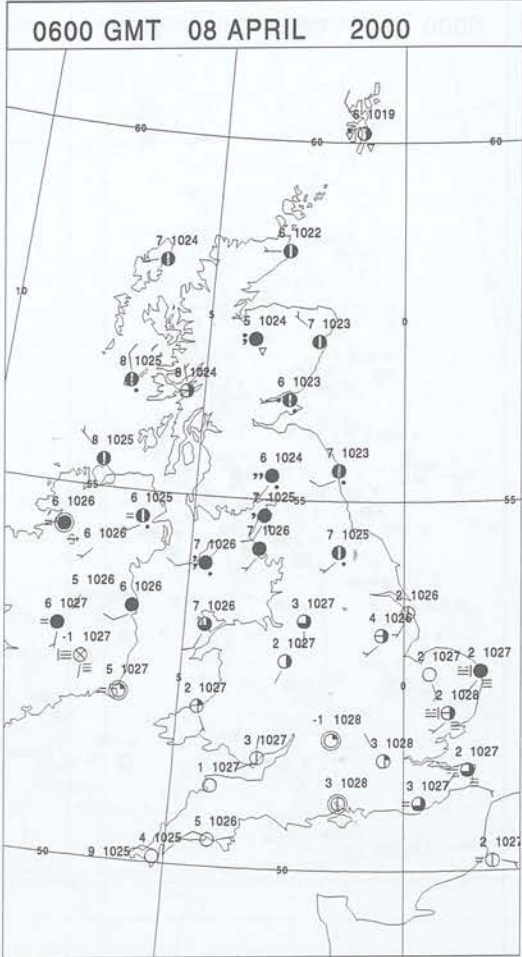

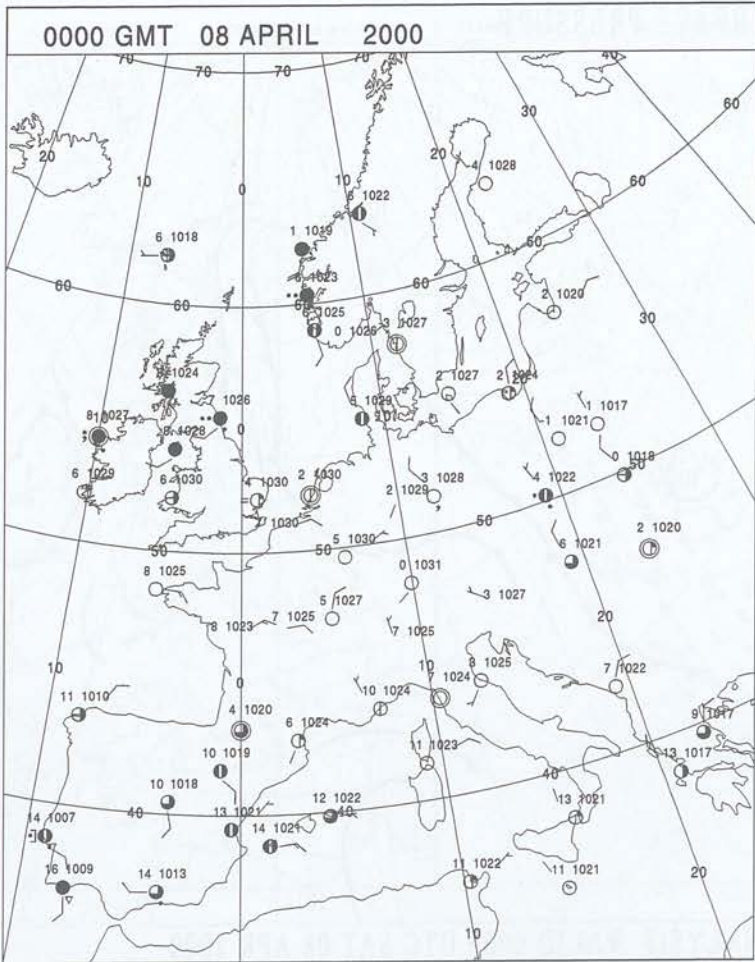

DAILY CLIMATE DATA

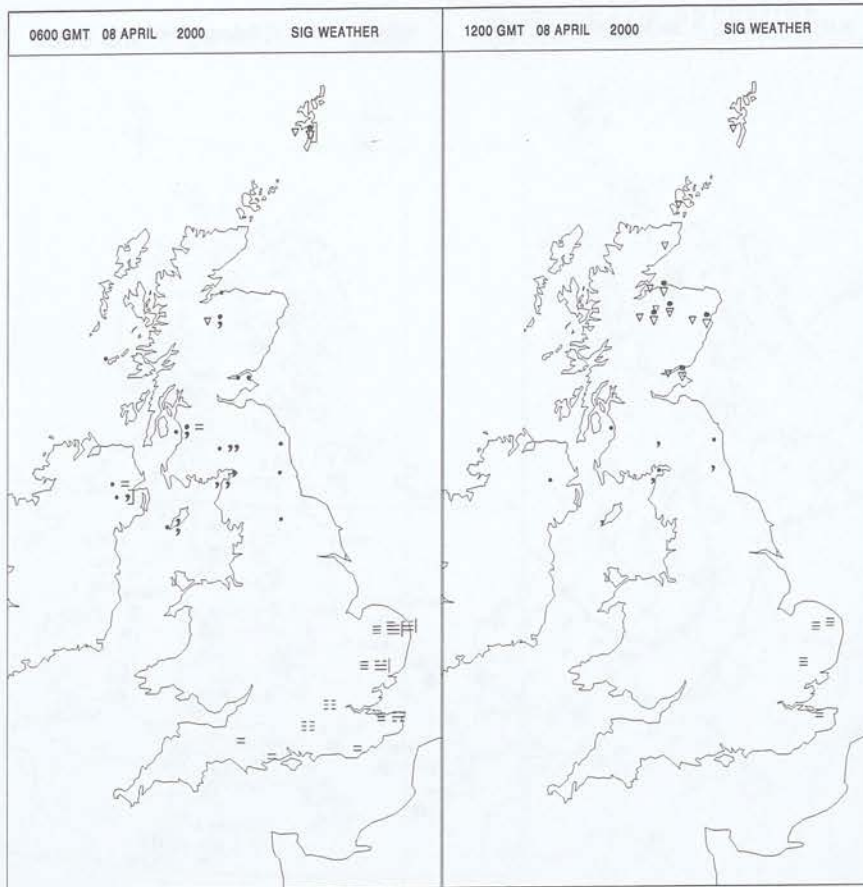

DAILY WEATHER SUMMARY

SURFACE REPORTS

SIGNIFICANT WEATHER

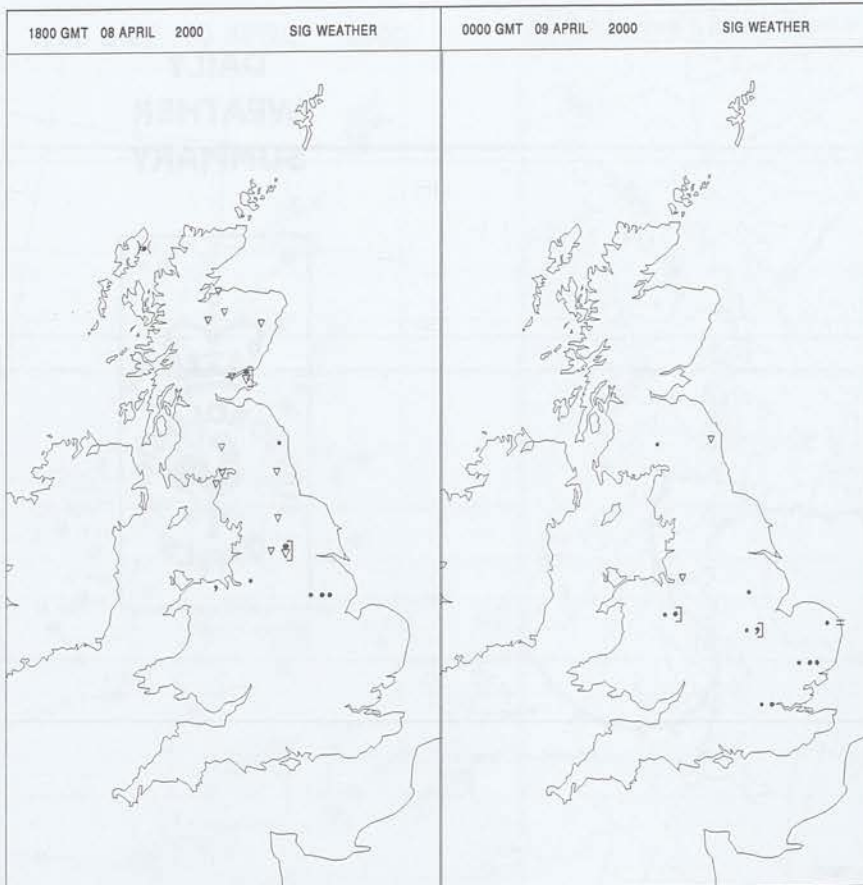

Summary of UK Weather for Saturday 08 April 2000.

Most of England and Wales had clear periods overnight although there was some high level cloud especially in the north. Some fog patches formed over East Anglia and parts of southeast England. Northern Ireland, the far north of England and most of Scotland had a cloudy night with light rain and drizzle. Broken cloud and a few wintry showers edged into the Northern Isles.

The fog across more southeastern parts of England readily cleared. Much of England and Wales had a dry and largely sunny day. Northern parts had more cloud and some outbreaks of rain, especially in the afternoon. Some light rain spread into Lincolnshire, East Anglia and as far as London in the evening.

Northern Ireland had some rain at first and a generally cloudy day. The rain over southern Scotland cleared by midday and many places had bright spells. There were some showers in the east.

Temperatures were close to average in the Northern Isles and along the coast of eastern Scotland and northeast England. It was rather warm generally and warm in parts of southeast England.

EXTREMES

Highest Maximum:

17.3 Heathrow, Greater London
17.3 Northolt, Greater London

SIGNIFICANT WEATHER

0600 GMT 10 APRIL 2000	SIG WEATHER	1200 GMT 10 APRIL 2000	SIG WEATHER	Summary of UK Weather for Monday 10 April 2000. The night was cloudy across Scotland and Northern Ireland, with patchy light rain over the Western and Northern Isles, and mist along the east coast of Scotland around daybreak. Elsewhere the night was largely clear with widespread ground frost. By the end of the night mist and fog also became widespread across the Scottish border counties, Northern England, east Wales, the Midlands and parts of East Anglia, but this cleared readily during the first half of the morning. Scotland and Northern Ireland remained cloudy and cloud penetrated southwards into the Midlands and Wales during the day. Although patchy at first, rain turned more persistent across Northern Ireland and the borders of Scotland and England by late afternoon, whilst it had turned showery in the northwest of the United Kingdom. The rest of the British Isles enjoyed sunny and dry weather. In the evening a little more cloud was seen across southern Britain but there were still good clear periods. The rain meanwhile stalled over northernmost England, and showers continued further north, where some turned wintry.

DAILY WEATHER SUMMARY

SURFACE REPORTS

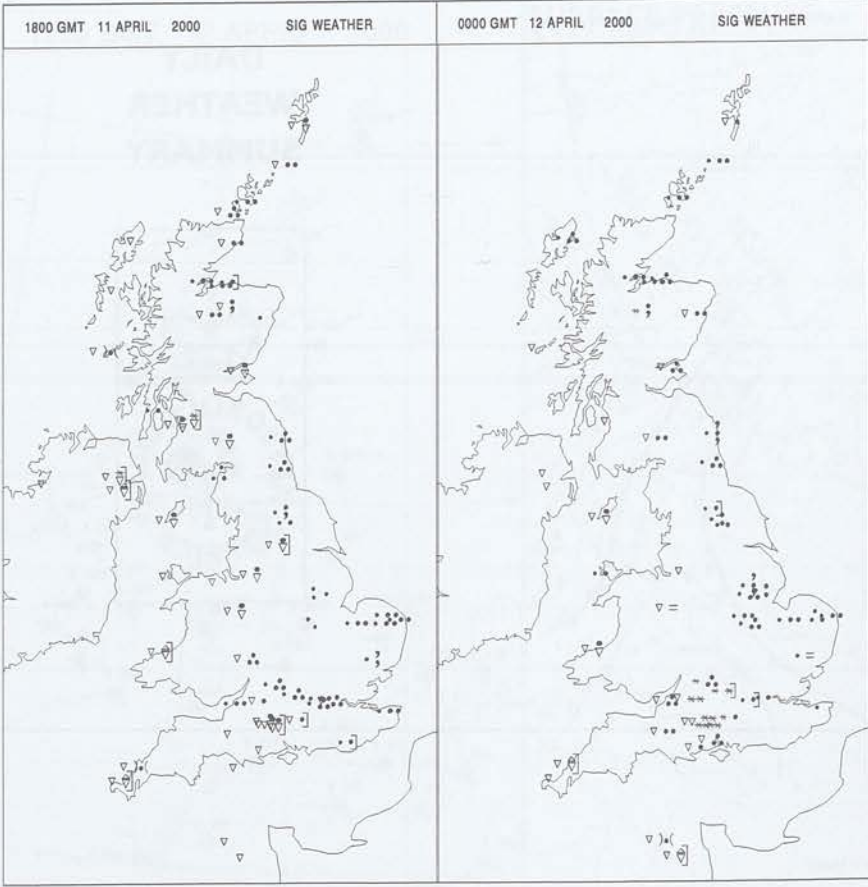

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 11 April 2000.

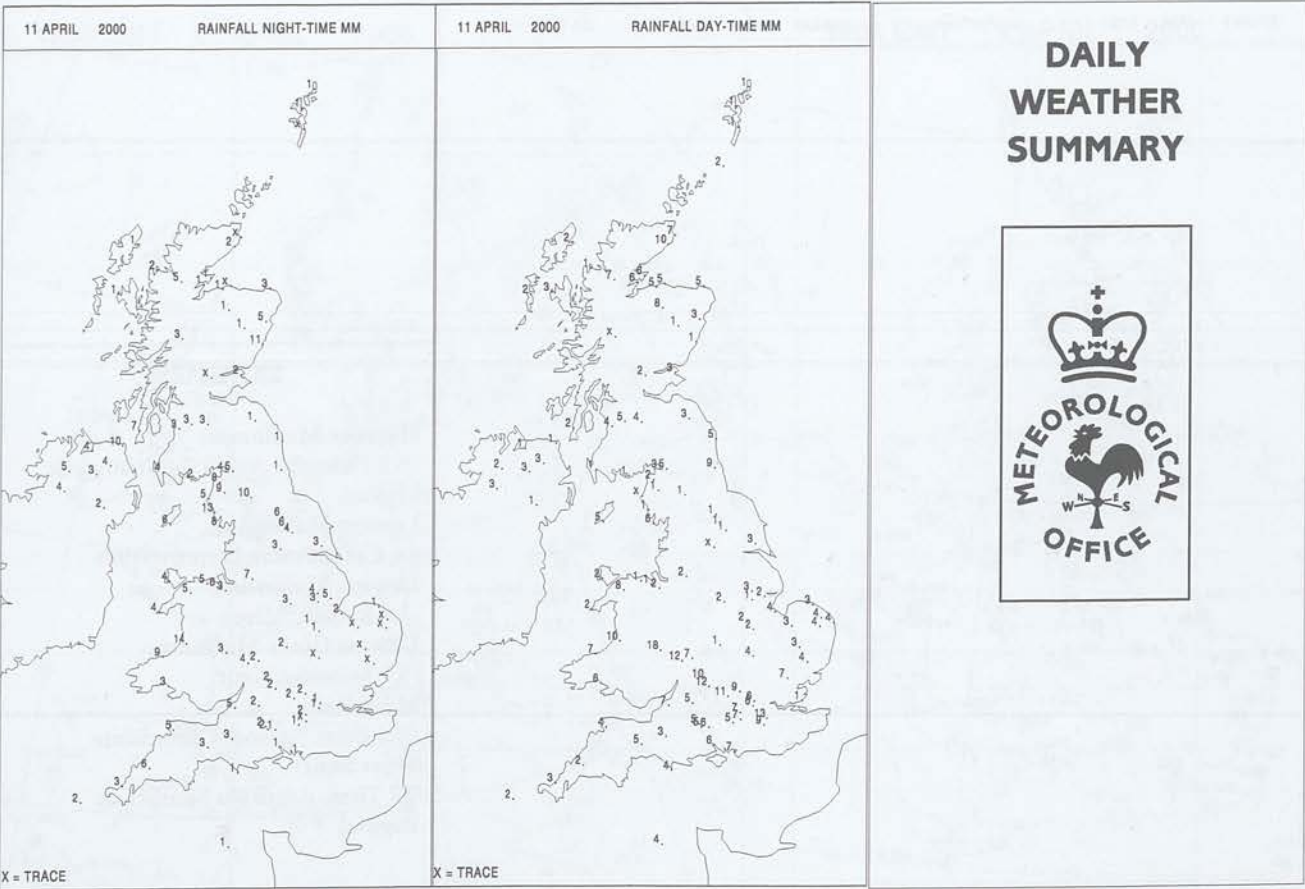

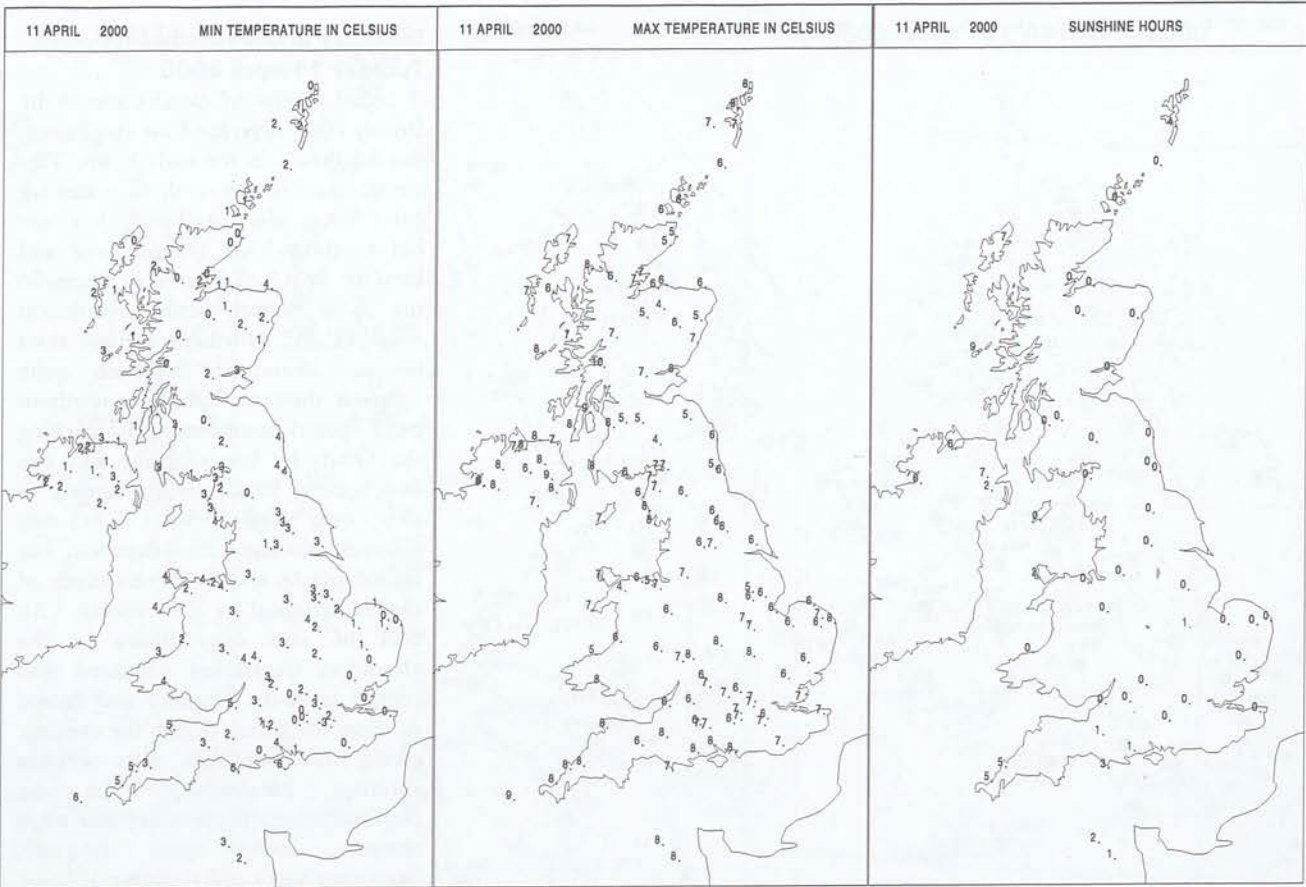

A broad swathe of cloud covered the British Isles, save for East Anglia and the Southeast, in the early hours. This cloud extended across these remaining parts soon after daybreak, but not before short lived ground frost and local air frost had formed in places. In the same period, across Northwest Scotland and Northern Ireland skies became clearer, in between quite frequent showers. Rain over northern parts spread southeastwards reaching the Straits by late morning and this rain became locally heavy, turning to sleet over high ground. The rain persisted through the afternoon, but turned patchy and light over much of eastern England in the evening. An area of rain over Wales in the afternoon transferred southeast into central southern England and turned to snow for a time during the evening, giving moderate falls over western counties. Meanwhile Wales the Southwest became showery and these showers were quite frequent, becoming heavy and thundery at times, and increasingly wintry. Temperatures were rather cold everywhere.

DAILY WEATHER SUMMARY

SURFACE REPORTS

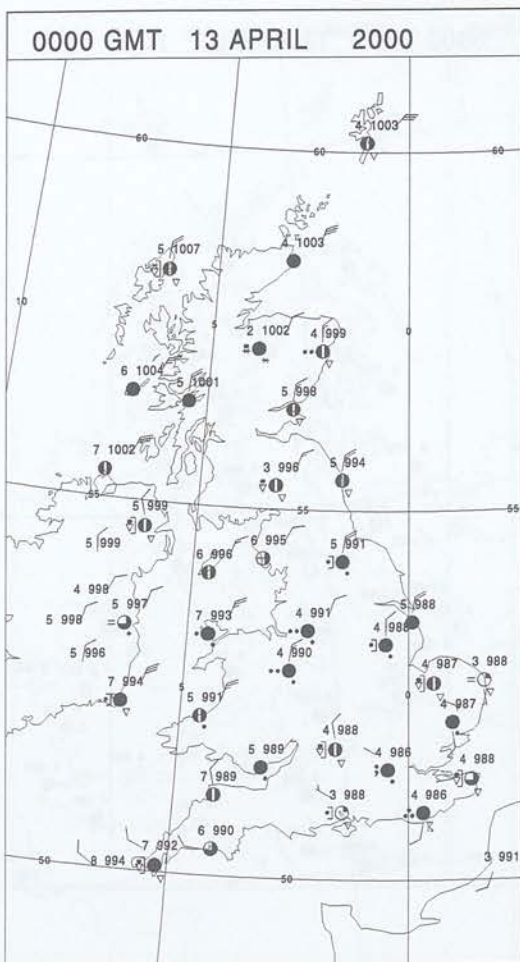

SIGNIFICANT WEATHER

Summary of UK Weather for Saturday 15 April 2000.

Rain edged north across southern counties of England last night and there were reports of rain in the Outer Hebrides. Hail and snow showers were observed in Argyll and Bute. The rain in the south turned to sleet and snow, mainly over the Cotswolds, Mendips and counties in central southern England. Elsewhere it was dry.

The sleet/snow turned to rain during the morning and rain affected the Midlands, East Anglia and south Wales. It also persisted in the Hebrides, but elsewhere it was mainly dry and bright. At midday snow showers were observed in Dumfries and Galloway. Showers also cropped up over the Pennines. During the afternoon showers were reported in western Scotland and the rain in the south persisted, although by mid afternoon it had extended into Yorkshire. By dusk there were snow showers in Orkney, East Ayrshire and Kent and freezing rain in North Yorkshire. Many western areas were dry by this time, but rain continued to affect the east.

Temperatures were below average generally, and it was very cold in wetter parts of the south.

0600 GMT 18 APRIL 2000	SIG WEATHER	1200 GMT 18 APRIL 2000	SIG WEATHER	<p>Summary of UK Weather for Tuesday 18 April 2000.</p> <p>It was a cloudy night across Scotland and northern England with outbreaks of rain. Northern Ireland had a dry night with some cloud breaks. Wales and the rest of England had showers, some of which were heavy and thundery at first over southern England, but these died away in the early hours. Later in the night persistent rain reached the West Country and some southern coastal counties of England.</p> <p>This rain spread across many southern and western counties during the morning, whilst thundery showers affected parts of East Anglia & Lincolnshire. During the afternoon the heavy rain continued northwards across Wales and the rest of England. It was a mostly dry day for Northern Ireland and southwest Scotland, whilst across the rest of Scotland the overnight rain gave way to showers. During the evening showers died away across Scotland but rain continued to affect England and Wales.</p> <p>It was a rather cold day over the far north of Scotland, but generally temperatures were close to normal.</p>

0600 GMT 19 APRIL 2000	SIG WEATHER	1200 GMT 19 APRIL 2000	SIG WEATHER	<p>Summary of UK Weather for Wednesday 19 April 2000.</p> <p>There were outbreaks of rain across northern, central and eastern England at first. However, through the night the rain gradually cleared northeastwards, with the more broken cloud already across Wales and the West Country following. Scotland and Northern Ireland had a largely dry night with good clear spells, although later in the night the rain moving north from England, brushed across parts of southeast Scotland.</p> <p>The rain across southeast Scotland drifted northwards during the morning, clipping eastern Scotland on its way to Shetland. Elsewhere it was largely dry and bright, with some good sunny spells, particularly in the east. However through the day cloud increased from the west, bringing the first signs of rain to Cornwall around midday. The rain made steady progress north and east during the afternoon, across Wales, the West Country Northern Ireland and into western Scotland, with sporadic outbreaks of rain reaching many other parts during the evening.</p> <p>Temperatures were close to normal across the Northern Isles and around exposed coastal fringes. Elsewhere it was rather warm, and locally warm across parts of East Anglia and southeast England.</p>

SIGNIFICANT WEATHER

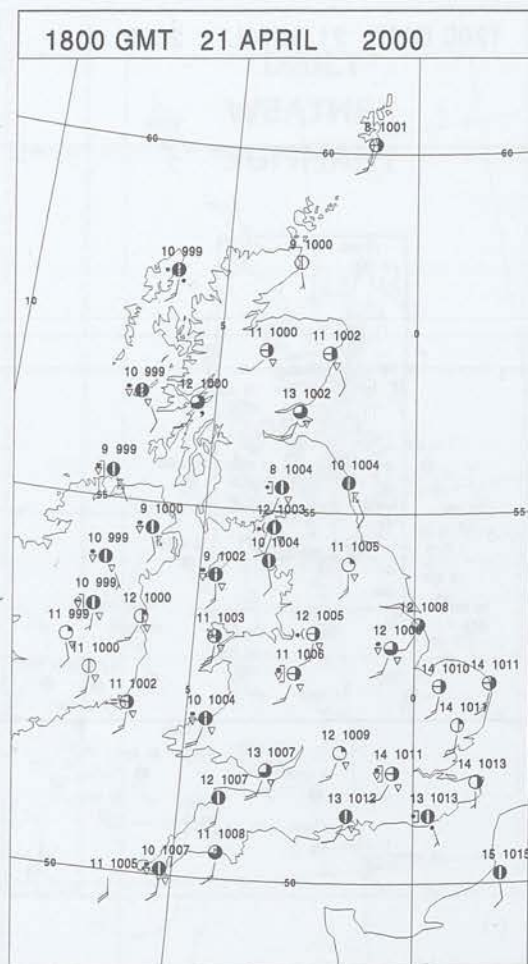

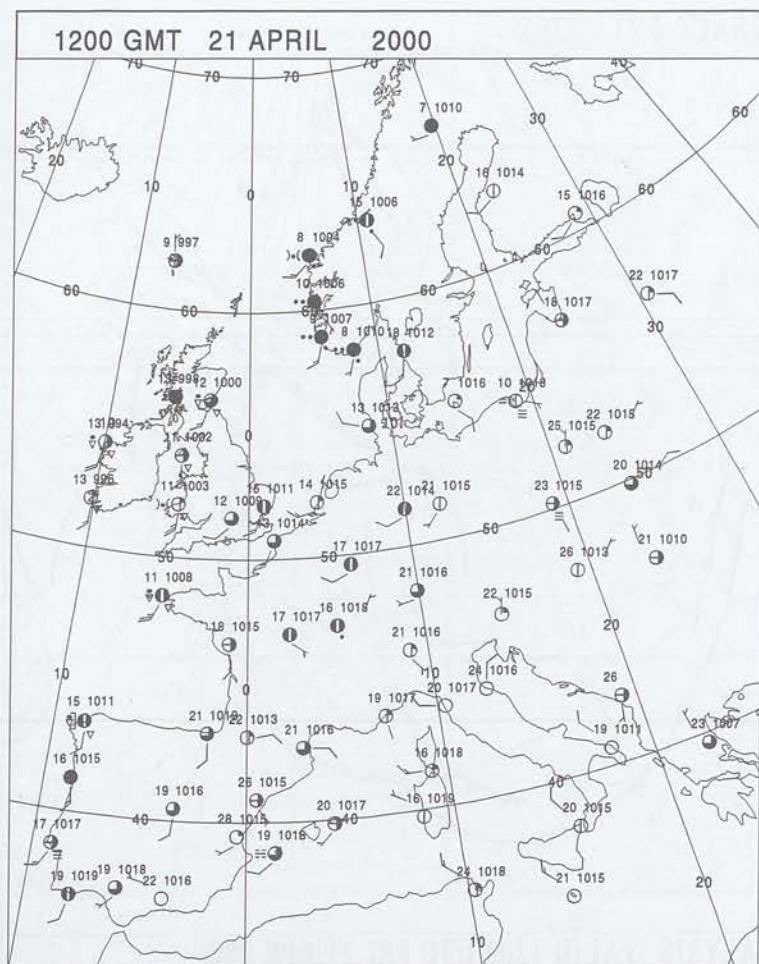

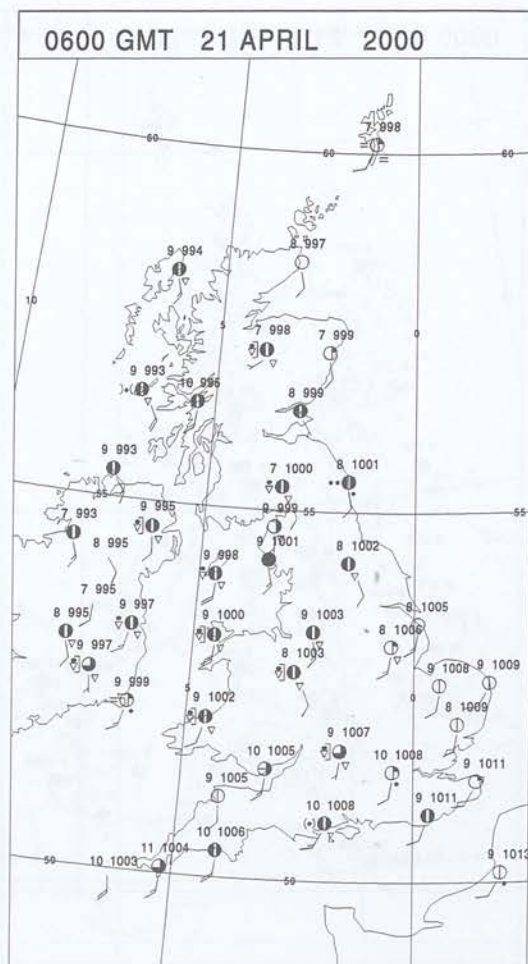

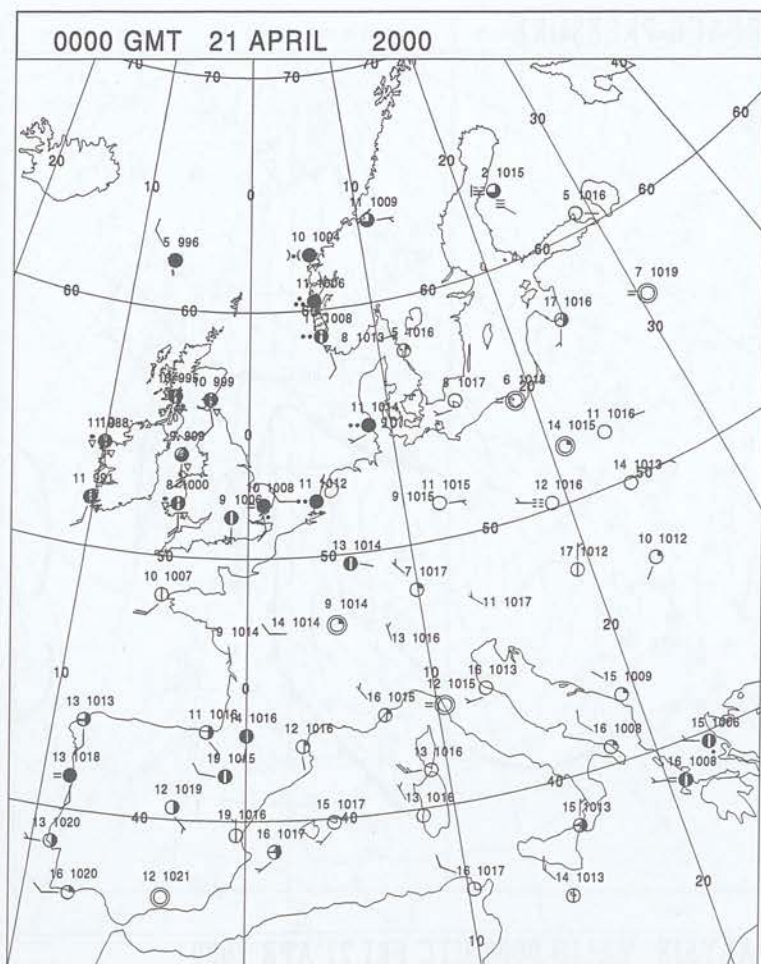

0600 GMT 20 APRIL 2000	SIG WEATHER	1200 GMT 20 APRIL 2000	SIG WEATHER	<p>Summary of UK Weather for Thursday 20 April 2000.</p> <p>Northern Ireland had rain early in the night and Scotland had some mainly light rain at times. Much of England and Wales had some rain and drizzle, with the heaviest and most persistent rain over the south.</p> <p>Northern Ireland had a bright day but there were some showers. The rain over Scotland became confined to the north, with extensive low cloud and some fog in the Northern Isles at times. Elsewhere over Scotland it was bright, although there were showers too.</p> <p>Southeast and central southern England had a cloudy day with rain at times, some heavy, and this rain extended as far southwest as the Channel Islands in the morning, where there some sea fog. In the afternoon and evening the rain edged back across parts of East Anglia and then cleared most places by midnight. Elsewhere there were some showers, with a few organised bands in the afternoon and evening in the west and isolated thunder in Wales.</p> <p>Many areas were warm or rather warm but southern parts of England had temperatures close to average.</p>

DAILY WEATHER SUMMARY

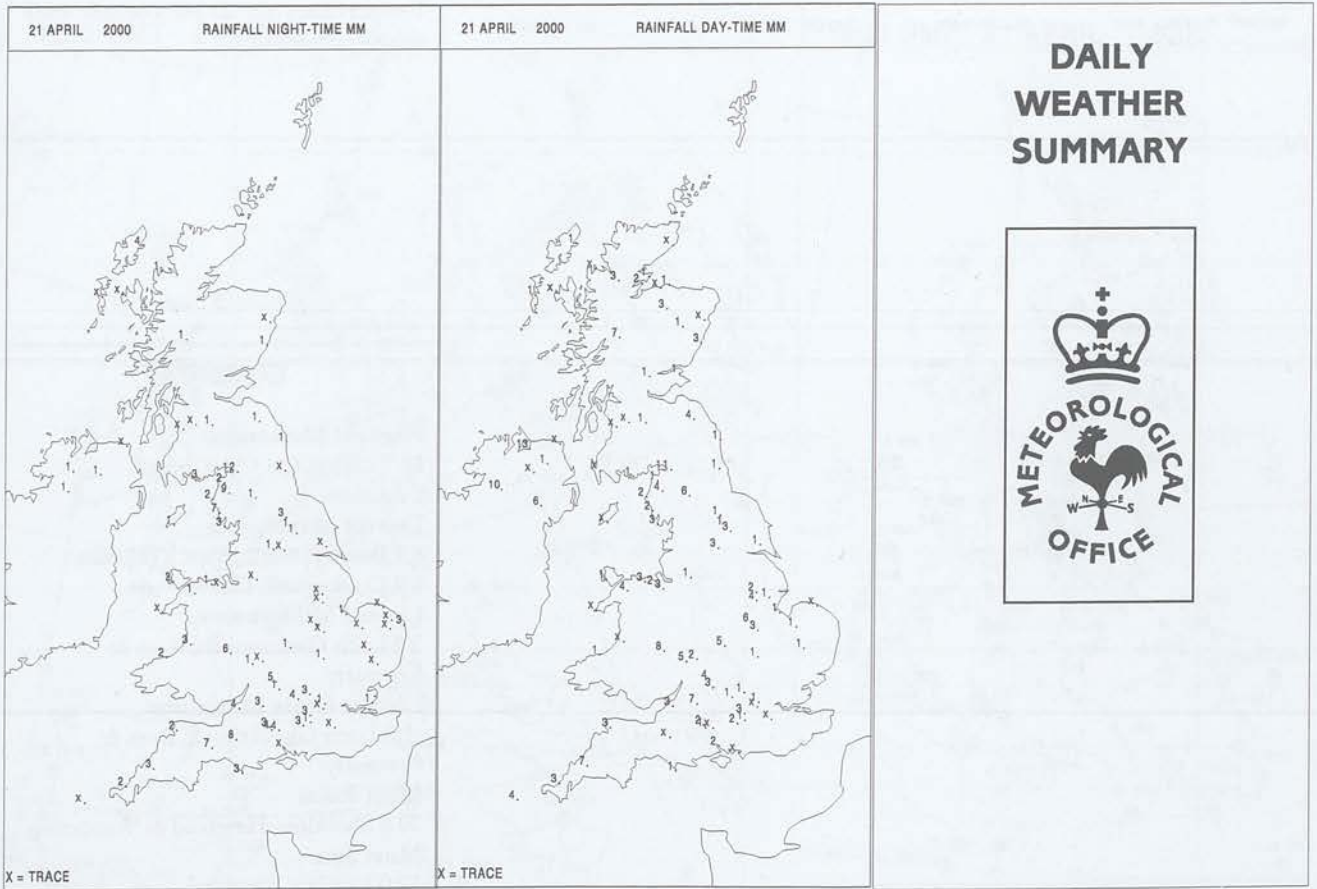

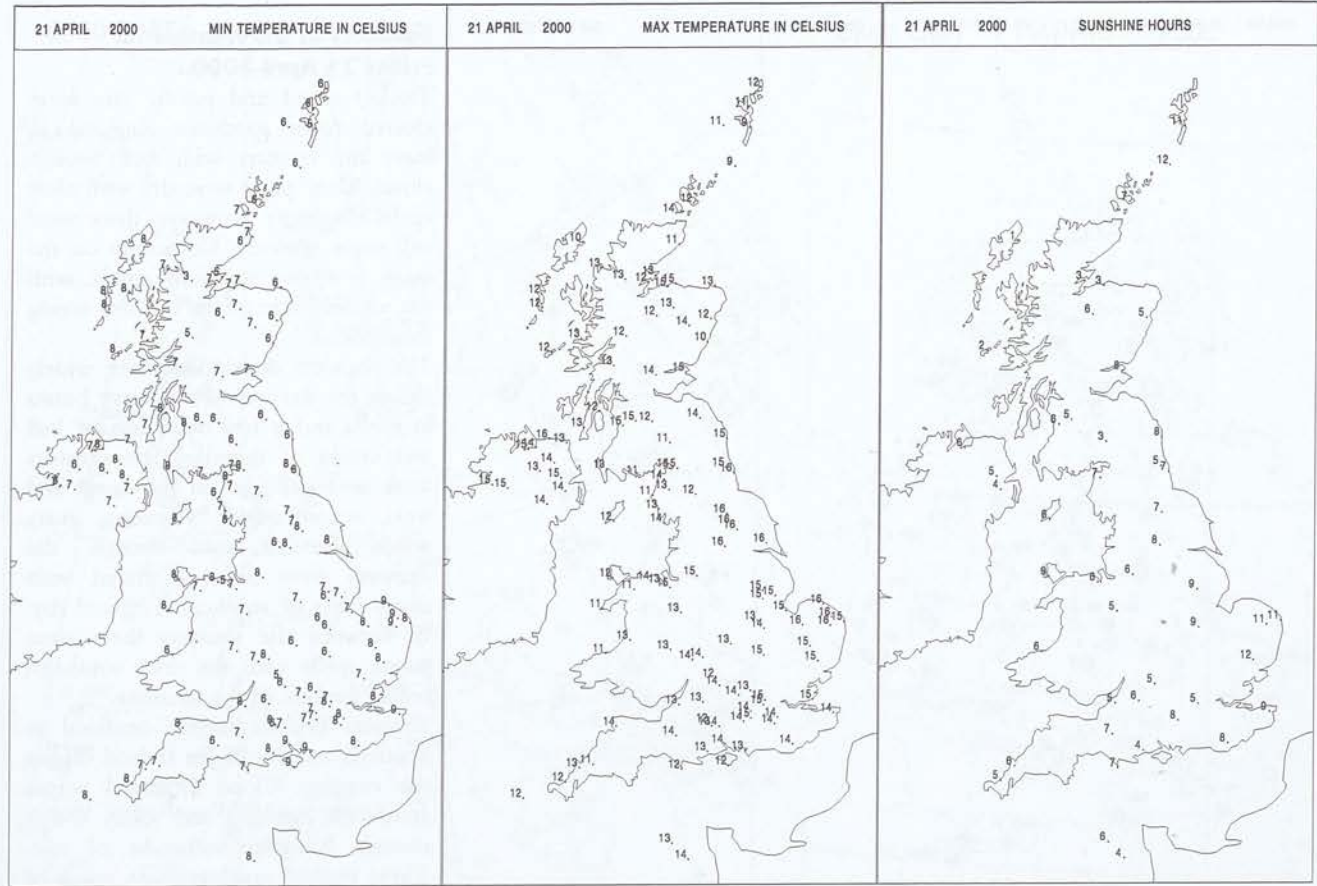

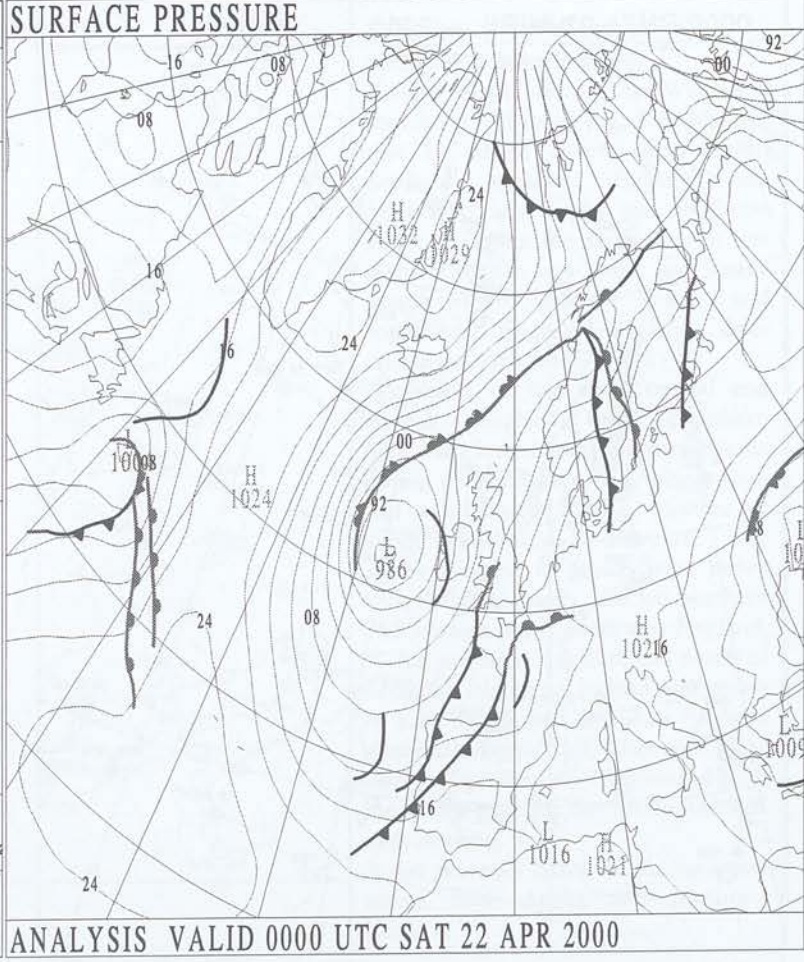

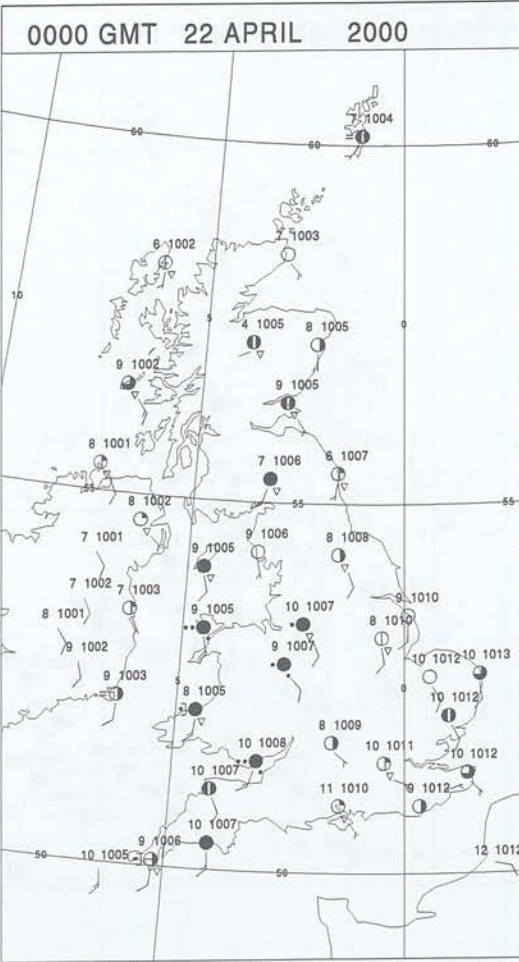

SIGNIFICANT WEATHER

0600 GMT 21 APRIL 2000	SIG WEATHER	1200 GMT 21 APRIL 2000	SIG WEATHER	Summary of UK Weather for Friday 21 April 2000. Thicker cloud and patchy rain soon cleared from southeast England to leave the country with well broken cloud. Many parts were dry with clear spells overnight. However, there were still some showers, blowing in on the fresh to strong southerly winds, with the western side of the country seeing the most. The showers developed more widely during the day with some heavy bursts at times and a few outbreaks of hail and cracks of thunder. The showers were most frequent in the north and west, accompanied by strong, gusty winds. Further east, though, the showers were more scattered with many parts of southeast England dry. In between the showers there were sunny spells with the drier southeast seeing the best of the sunshine: Showers became largely confined to Scotland and Northern Ireland during the evening. Cloud increased across southwest England and south Wales, though, bringing outbreaks of rain. These pushed northwards to much of Wales by midnight. Remaining parts of England were largely dry with clear spells. Temperatures across the country were mostly rather warm.

SIGNIFICANT WEATHER

0600 GMT 24 APRIL 2000	SIG WEATHER	1200 GMT 24 APRIL 2000	SIG WEATHER	Summary of UK Weather for Monday 24 April 2000 Showers affected southern and Northern Ireland through the night, but more general rain fell over northern parts of Scotland. Showers also occurred across Wales and western counties of England. Patchy fog affected the east coast of Scotland at times overnight, as well as some inland parts of eastern England. North of the Great Glen it was a cold and wet day with a fresh to strong northeasterly. Fair Isle and Stornaway both reported sleet at times during the day and the maximum temperatures at Lerwick was only 4 degrees. Southern Scotland and Northern Ireland had a showery day, heavy at times, although the showers over Northern Ireland tended to become more scattered during the afternoon. Scattered showers occurred across England and Wales during the morning, but these became more widespread across northern England during the afternoon with thunderstorms reported from several locations. Rain reached Cornwall by midday and spread slowly north-eastwards during the afternoon to cover much of Wales and the West Midlands by early evening. During the evening rain continued over north Scotland with scattered showers in the south. Northern Ireland became dry with some clearer intervals, and the rain across England and Wales continued to spread slowly northwards. Temperatures were on the warm side across much of the UK, but Cornwall and west Wales were near normal and northern Scotland, including Orkney, Shetland and the Hebrides were rather cold.

SIGNIFICANT WEATHER

0600 GMT 26 APRIL 2000	SIG WEATHER	1200 GMT 26 APRIL 2000	SIG WEATHER	<p>Summary of UK Weather for Wednesday 26 April 2000.</p> <p>A slow moving frontal system over northern Britain ensured that for Northern Ireland, and for Scotland, excepting the Western and Northern Isles and the Northwest Highlands, the whole day remained overcast with rain. This rain was heaviest across Northeast Scotland, where the largest daily rainfall totals were recorded. Further north and west, a cold northeasterly flow produced blustery showers, which turned wintry at times, but in between reasonable spells of sunshine developed producing a daily sunshine maxima in the Shetlands.</p> <p>Further south the day started with outbreaks of rain or showers everywhere south of a line from the Wash to Cardigan Bay. Mist and fog affected much of Northeast England, lasting into mid-morning when the rain had spread northwards. By midday rain had given way to showers across southern England, with some of these heavy in the west. This showery weather spread northwards to affect the whole of England and Wales by dusk, bringing the odd thunderstorm. Eastern parts stayed driest.</p> <p>Across Scotland and Northern Ireland it was a cold day, but temperatures were near normal elsewhere.</p>
