SUNDAY
1 JULY 1990

It was mostly cool, cloudy and showery. Many parts of Scotland had more prolonged, and often heavy, rain overnight, with thunder in the Northern Isles, where there was a strong north-easterly wind as well. There were some heavy showers elsewhere during the night, especially over southern England, where it was also windy.

During the day, the trend was for the weather to become drier, although sunshine was very limited. East Anglia was quite bright during the morning, with the temperature rising to near normal, but there were some heavy, thundery showers here during the late morning and afternoon.

The more persistent rain in Scotland became confined to the far northwest, where it was a very cold, wet and windy day.

Only the extreme southwest of Britain had anything approaching a sunny day - but even here, as over most of the country, it was quite windy. Apart from East Anglia, and a few other eastern and southern districts, maximum temperatures were typically four or five degrees below the seasonal normal.

In the evening, the more persistent rain spread back southeastwards across eastern Scotland. Many other districts had a fine evening, though there were some showers in the west.

MONDAY
2 JULY 1990

SUMMARY
OF
BRITISH WEATHER

Most places had a clear, cool night with the wind dying down. There were some showers in the west and north. However, Shetland had more persistent rain and a near gale force northwesterly wind.

It was a day of sunshine and showers across the whole country. The showers were well scattered, and most did not amount to much. However, there were a few heavy showers, and one or two reports of hail and thunder in widely separated localities throughout the British Isles. Coastal areas of the south and west generally had the best of the sunshine.

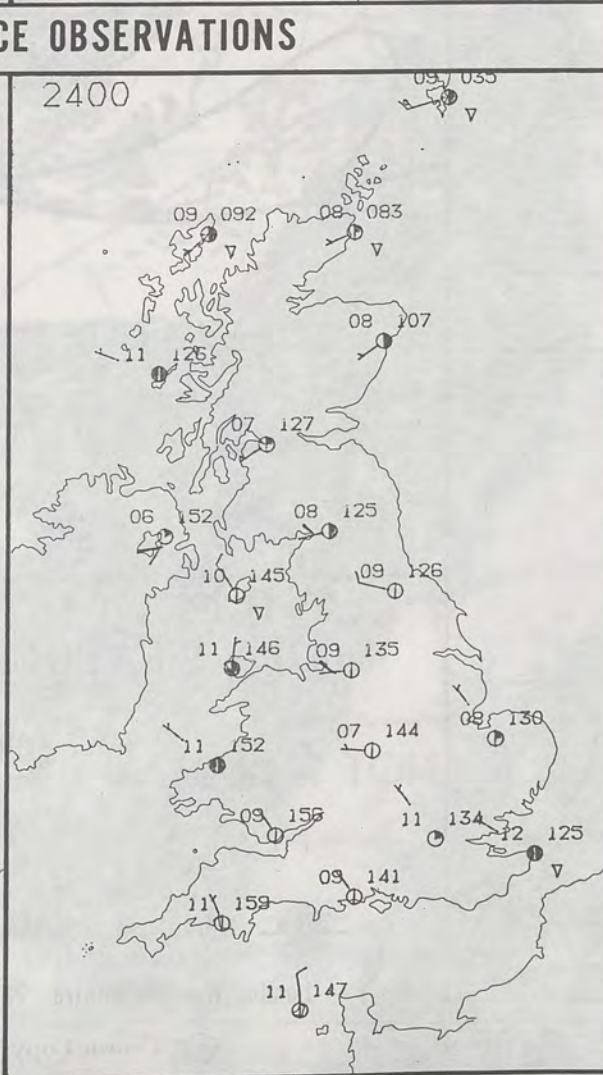

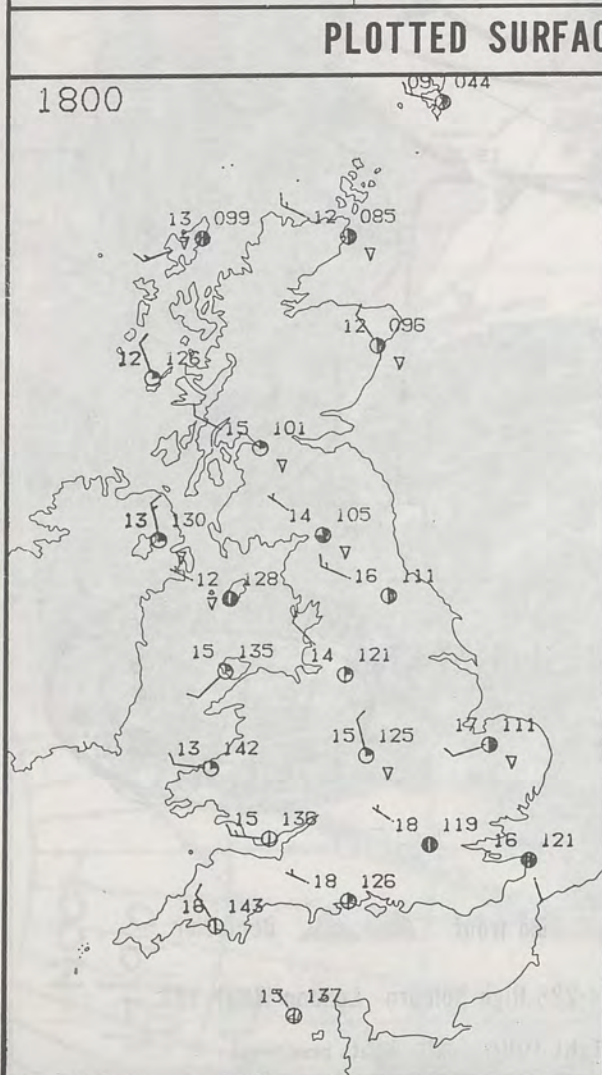

It was rather cool over most of the country. However, winds were much lighter than over the weekend, especially in the south, where indeed the temperature struggled to reach the seasonal normal in a few spots.

TUESDAY
3 JULY 1990

SUMMARY
OF
BRITISH WEATHER

Much of England and Wales were dry and mainly sunny but one or two places had a light shower.

Scotland had a day of sunny spells and scattered showers. Some eastern parts stayed dry while most of the showers were in the north and west. A spell of more continuous rain affected Lewis (Outer Hebrides) in the afternoon and the far north of mainland Scotland and Orkney in the late afternoon/early evening.

Northern Ireland had a mostly dry day with sunny spells but it became cloudy later with some showers.

After a cold night, daytime temperatures reached near normal values.

WEDNESDAY
4 JULY 1990

SUMMARY OF BRITISH WEATHER

During the night heavy rain spread across Northern Ireland and into Wales, western England and southwest Scotland by the early morning. The wet weather spread to the rest of England and to the highlands of Scotland by the end of the morning.

Clearer weather with some sunny intervals spread to most of Northern Ireland, England and Wales during the afternoon but there were further showers and some longer spells of rain over Northern Ireland and northern England in the afternoon and evening.

The southern half of Scotland was wet for most of the day, while northeastern Scotland had only a few showers and a good deal of dry but cloudy weather.

It was a cool day generally and quite windy with winds near gale force around some southern and western coasts.

THURSDAY
5 JULY 1990

SUMMARY
OF
BRITISH WEATHER

There was rain everywhere over-night and strong winds with gales on many coasts. Before morning Northern Ireland and northwest Scotland turned drier.

There was rain in many places during the day as well and Shetland was wet all day, but much of the United Kingdom brightened up with some sunshine, however there were showers in many places, some of them heavy. Southern Scotland was mainly dry and most western and southern areas of England along with Wales were dry from early afternoon.

It was a windy day with gales on many coasts and cool in many places, and in northern Scotland it was quite a cold day.

FRIDAY
6 JULY 1990

SUMMARY
OF
BRITISH WEATHER

Most places were fairly dry and clear overnight, but there were showers, especially in Scotland and Northern Ireland.

In Scotland most places had a bright day with some sunshine, but in the north there were showers and in the evening the west had persistent rain.

Northern Ireland had a mainly cloudy day with rain and drizzle at times.

Wales had a mostly dry, bright morning but the afternoon and evening were cloudy with rain and drizzle and in the south some heavy rain.

Most places in England were dry and bright with some sunshine, but early on there were a few showers in the west. During the afternoon southwest England and the Midlands turned cloudy and this cloudy weather reached southeast England and East Anglia in the evening. There was some rain and drizzle, particularly in southwest England.

Temperatures were in the rather cool category nearly everywhere.

1800

2400

SATURDAY
7 JULY 1990SUMMARY
OF
BRITISH WEATHER

Apart from northern Scotland which was mostly dry, most parts of the British Isles had some rain during the night.

Wales and western England remained cloudy for most of the day, but away from the coasts a few places became brighter for a time, but on the coast patchy rain or drizzle affected some areas for most of the day. Northern England also had some rain in the afternoon and evening, and the rain also reached parts of the North Midlands and East Anglia. Apart from some early patches of rain, the Midlands, East Anglia and southeast England became mostly dry. Although it remained rather cloudy, there were bright spells and a little sunshine.

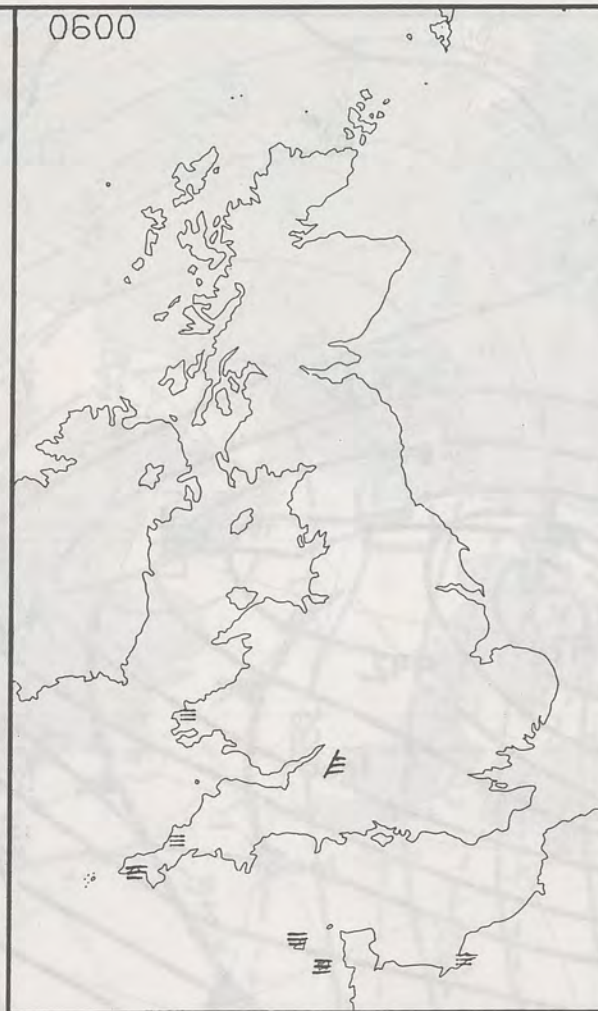

Northern Ireland and Scotland also had a rather cloudy day and after a dry start rain reached northern Scotland during the day. In Northern Ireland, southwest and northern Scotland the rain was persistent and heavy for a time.

Over Scotland, Northern Ireland, Wales and western England temperatures were near average but central and eastern England had a warm, and in some places where the sun broke through, a very warm day.

SUNDAY
8 JULY 1990

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had a bright day with showers. The showers were most frequent in western and northern Scotland, but parts of eastern Scotland had some lengthy spells of sunshine.

England and Wales had a cloudy start with light rain or drizzle in parts of the north and west. In northern England the cloud broke quickly to give a bright day but later more cloud spread across the north. Over Wales and southwest England the cloud broke during the morning and the drizzle and much of the hill and coastal fog cleared. In the Midlands, East Anglia and south-east England it was a similar story with many places having a sunny afternoon.

Scotland and Northern Ireland, northern England and North and West Wales had temperatures close to average. Elsewhere it was a warm, or in the case of the Midlands, East Anglia and south-east England, a very warm day. In the northwest it was rather windy.

THURSDAY
12 JULY 1990

SUMMARY
OF
BRITISH WEATHER

Pressure remained relatively high across the British Isles.

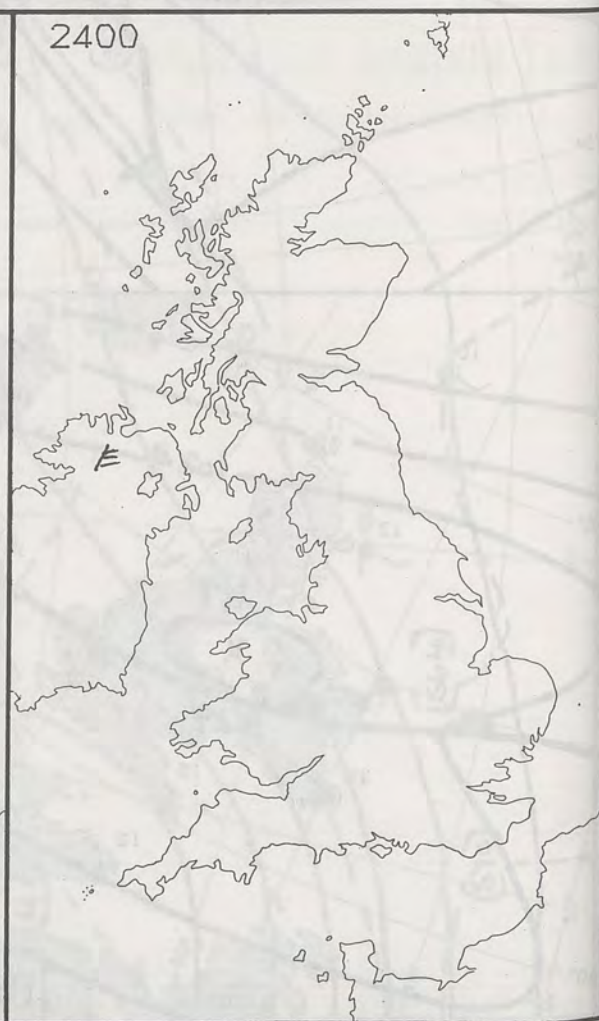

A weak warm front gave Scotland and Northern Ireland a cloudy day with a little rain - this chiefly in the west and south - whilst the east managed a little sunshine. Southern Scotland had quite a cool day - but elsewhere temperatures were near normal.

Apart from the Lake District and the Borders region, most of England and Wales had plenty of sunshine, whilst south coast resorts from Kent to Cornwall had almost unbroken sunshine.

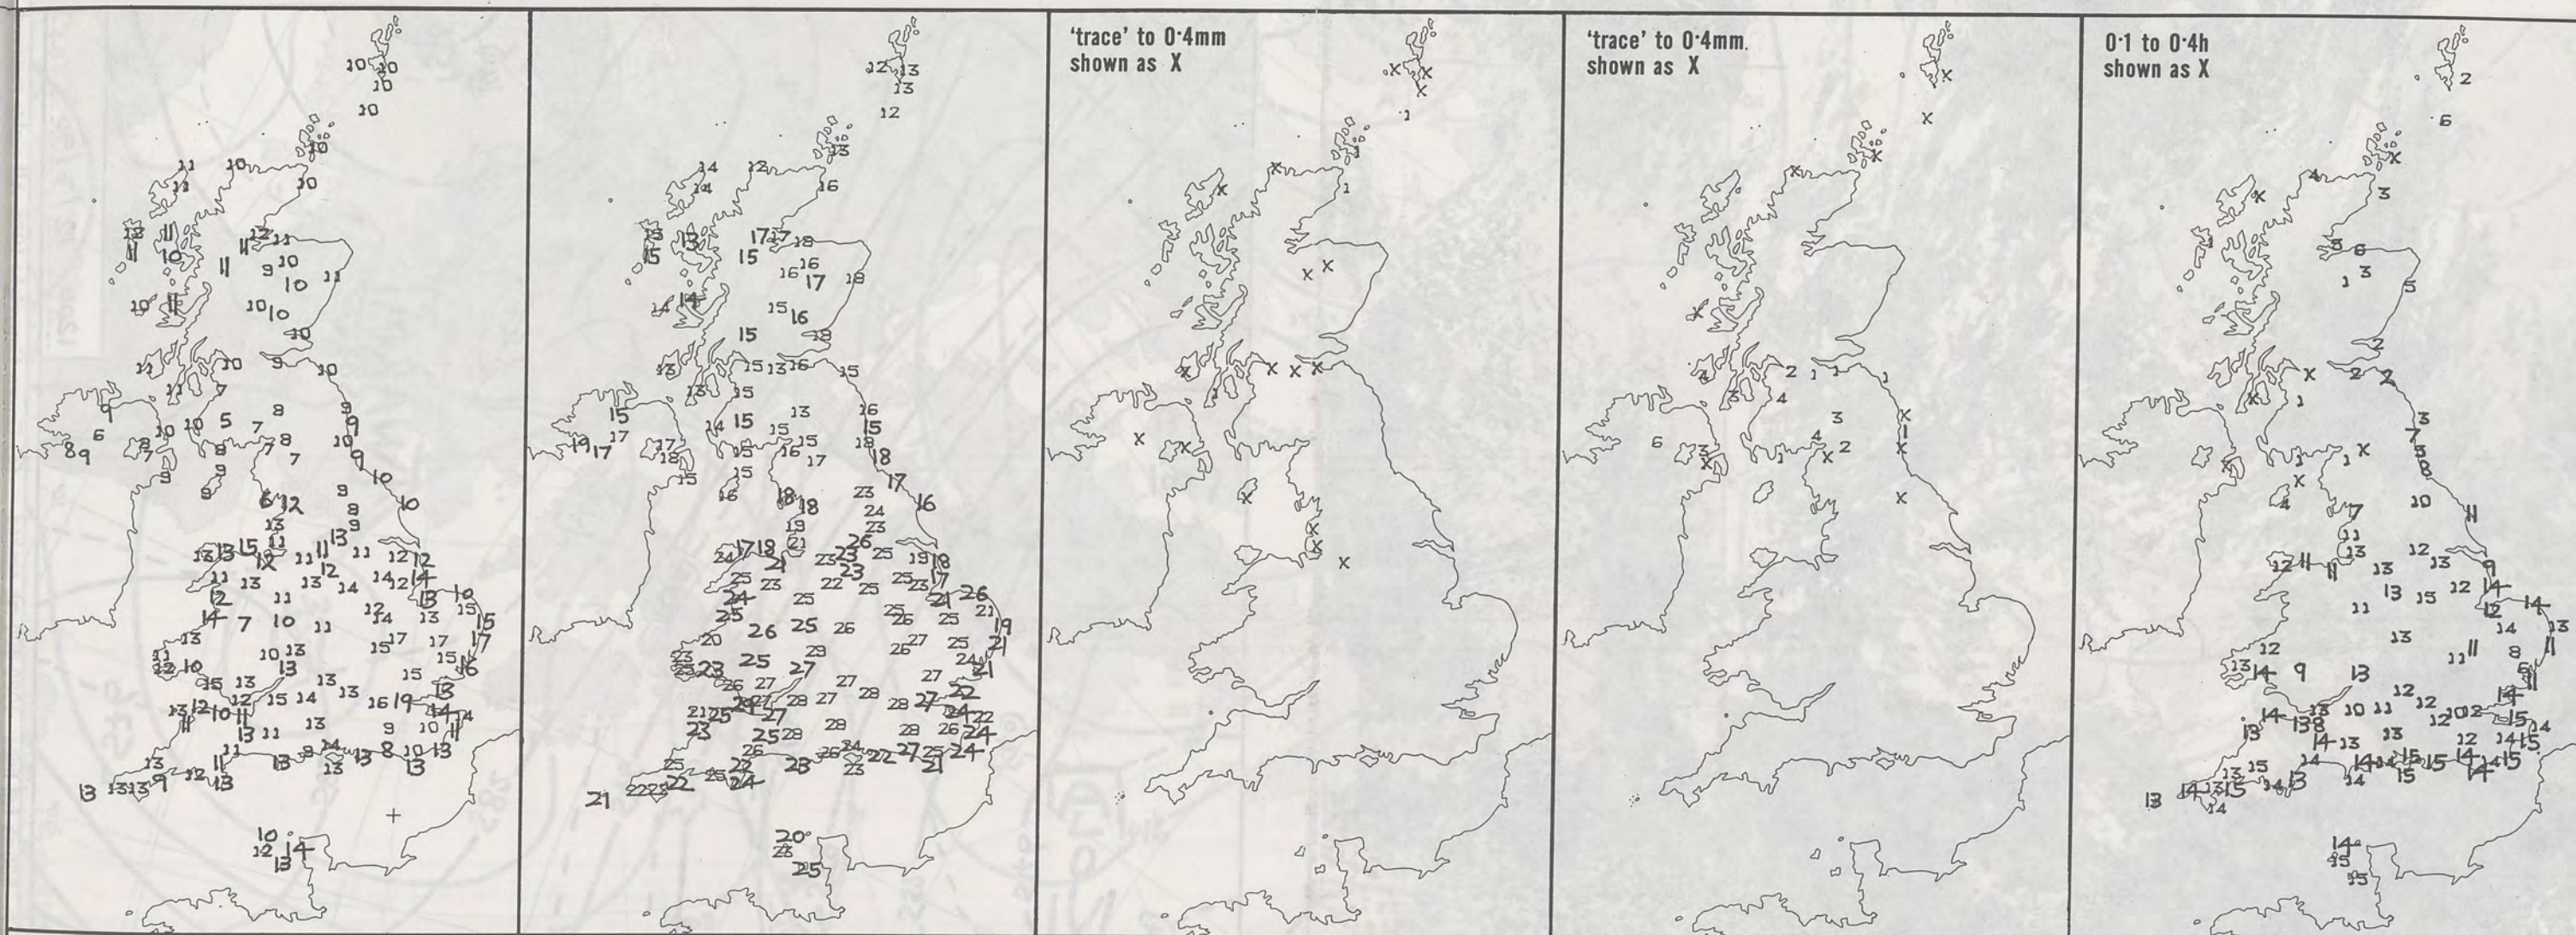

Onshore breezes kept coastal areas of eastern England rather cool, but most of England and Wales saw temperatures much above the mid-July figure, with many places becoming hot inland in southern England and South Wales.

FRIDAY
13 JULY 1990

SUMMARY
OF
BRITISH WEATHER

High pressure centred over the North Sea brought a fine, bright day to most of the country - although a weak frontal system gave northeastern England and southern Scotland a generally cloudy day with drizzle in a few places. These areas had quite a cool day. The rest of Scotland was bright and quite sunny, and dry apart from a few showers over Shetland.

Northern Ireland had quite a cloudy day - but afternoon sunshine lifted the temperature a little above normal.

Away from the east coast, the bulk of England and Wales had a dry, sunny day - almost unbroken sunshine for many areas in the south - the sunniest of all being the south coast.

A steady breeze kept coasts of East Anglia and southeast England relatively cool - but elsewhere temperatures were above average, and much above across South Wales, the West Midlands and the West Country, where it became hot in many places.

SUMMARY
OF
BRITISH WEATHER

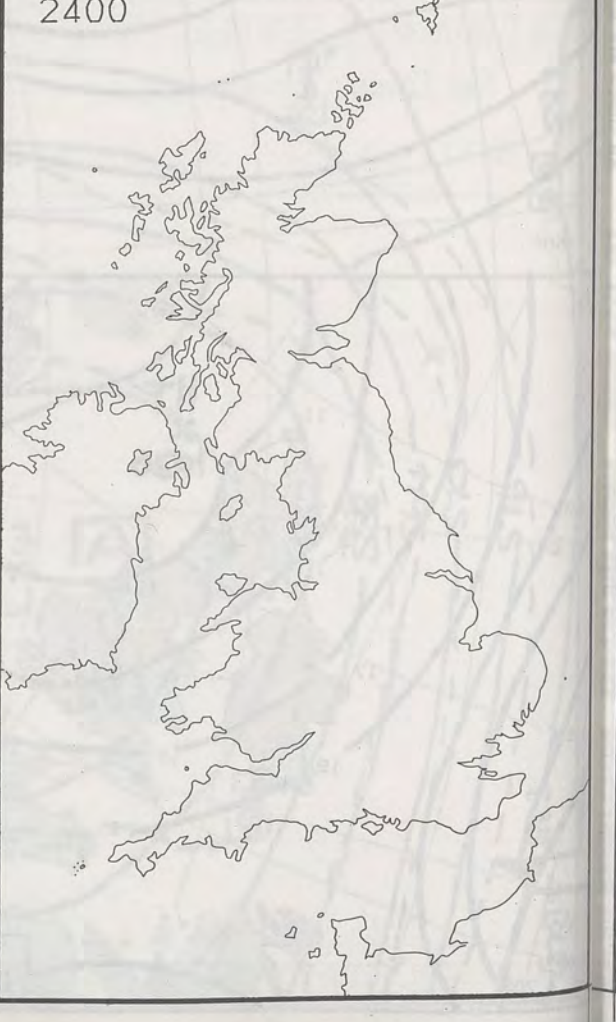

Parts of northeast England and southeast Scotland had a cloudy start to the day, before brightening up later in the morning. Otherwise most places had virtually unbroken sunshine right through the day. Apart from one or two spots of rain in eastern Scotland right at the start of the morning it was a dry day across all of the British Isles. A cool easterly breeze kept temperatures in eastern counties of England and Scotland close to normal. Otherwise most places had a warm day and in parts of southwest England and Wales it was hot.

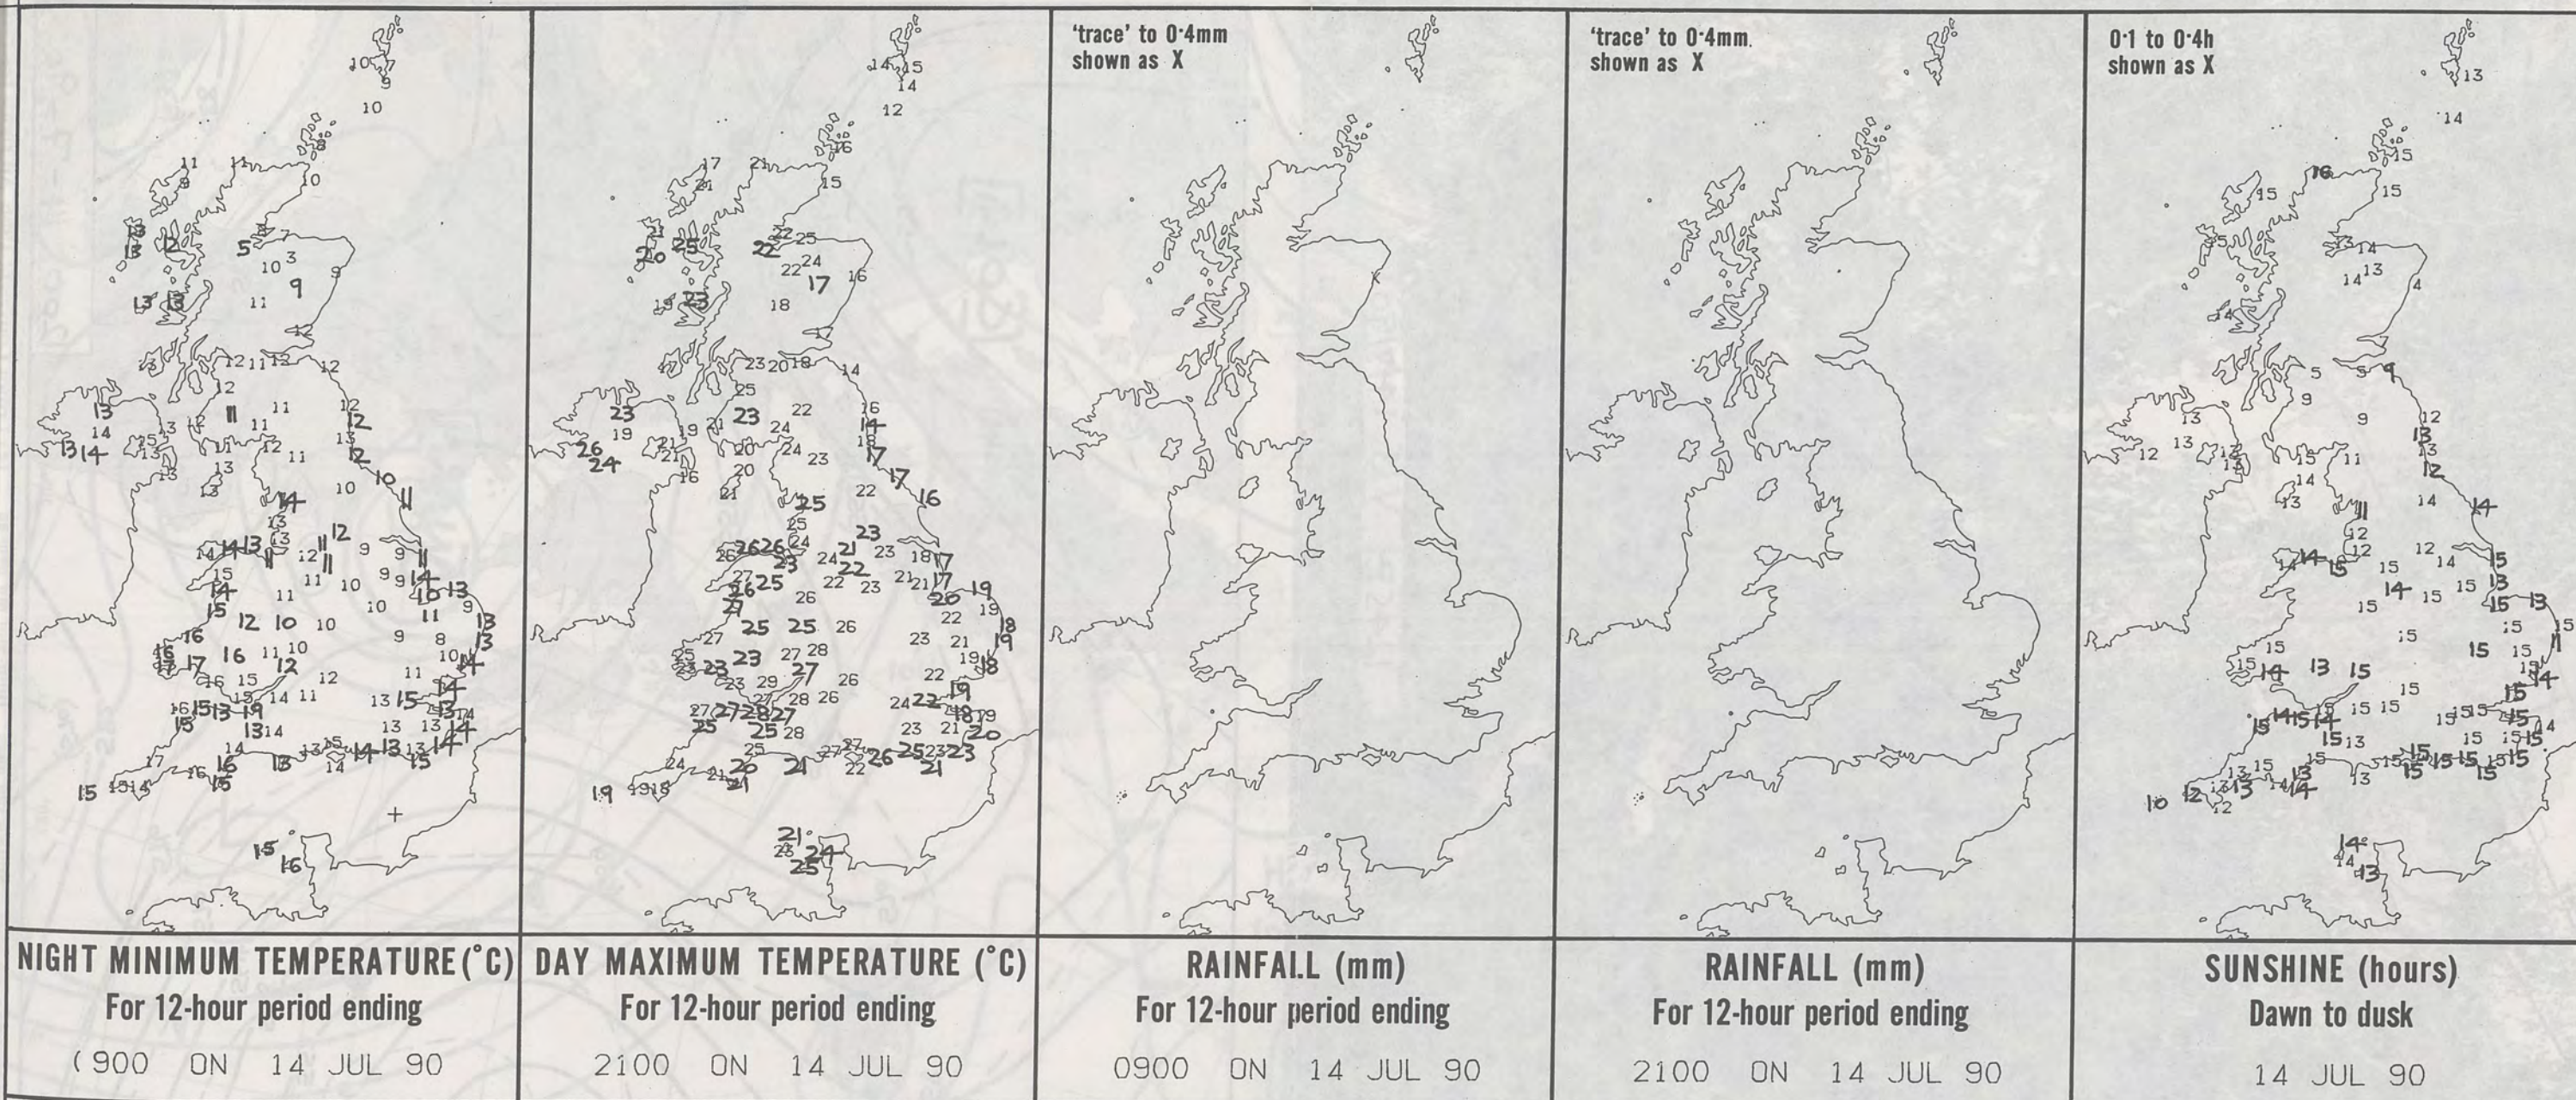

PLOTTED SURFACE OBSERVATIONS

SUNDAY
15 JULY 1990

SUMMARY
OF
BRITISH WEATHER

Most areas had a dry night but in the west cloud increased with a little rain into Northern Ireland and the Western Isles by morning.

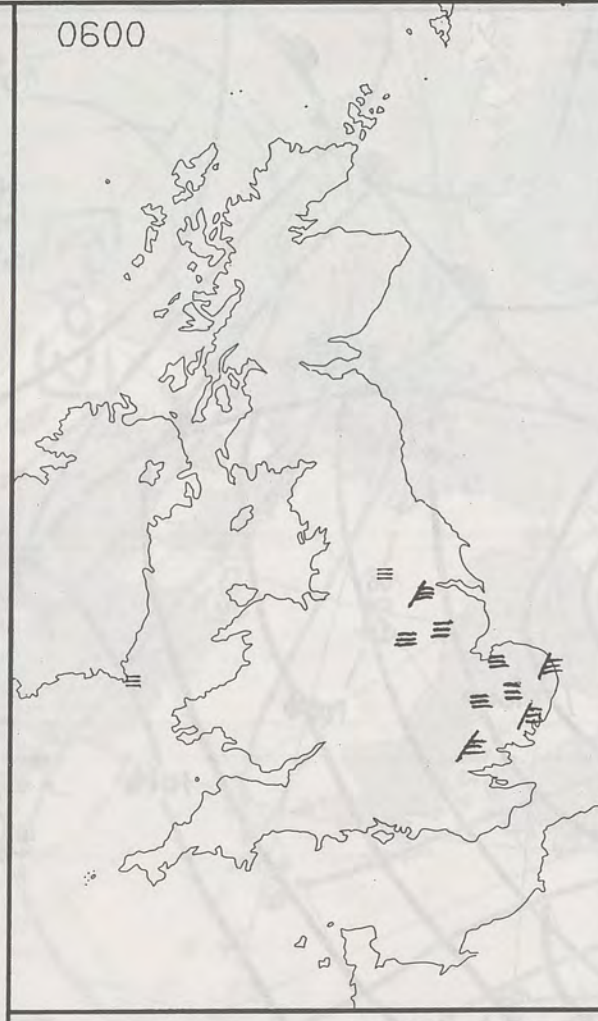

Northern Ireland and western Scotland had a cloudy day with rain at times but in the evening brighter weather moved from the west. Apart from these north-western areas, the rest of Britain had a dry morning but cloud increased from the west. In the late afternoon outbreaks of thundery rain moved into northwest England and Wales and then proceeded to move east during the evening across the North Midlands and also into northeast England and eastern Scotland.

Southern England and East Anglia after a mostly sunny morning turned a little more cloudy in the afternoon but it stayed dry just about everywhere.

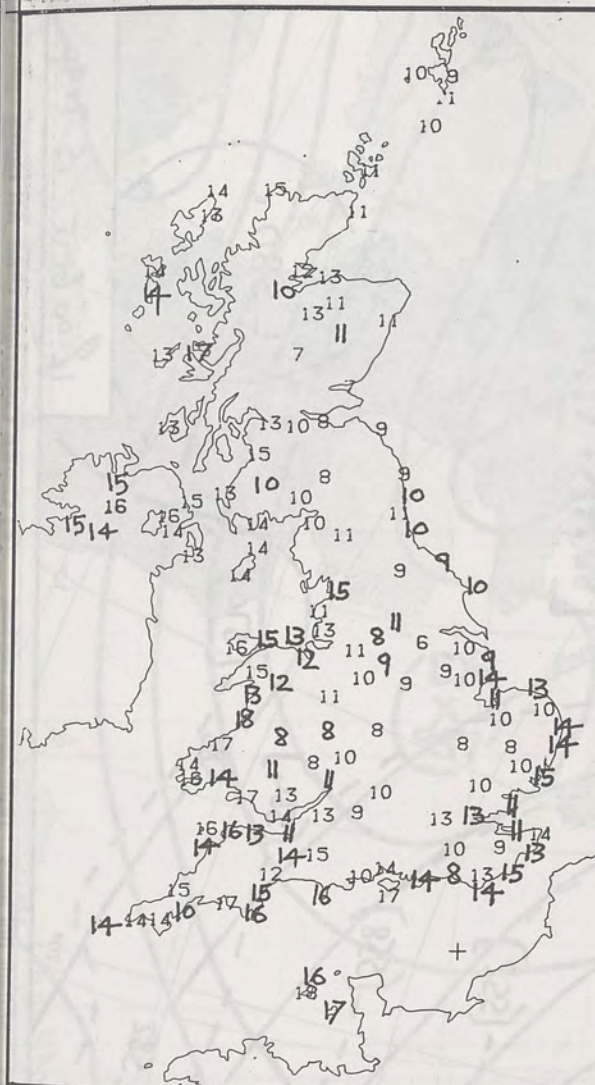

Temperatures in the far north of England, Northern Ireland and Scotland were near average but for most of England and Wales it turned out to be a mostly hot and humid afternoon.

MONDAY
16 JULY 1990

SUMMARY OF BRITISH WEATHER

Very warm and still air over the southeast at first was displaced by cooler air and a northerly wind, which spread to most places by the morning, preceded by a few thundery outbreaks over Norfolk. Much of the British Isles had a fairly cloudy night, and it was wet over the Northern Isles. Skies were clearer in parts of the west, but there were also some fog patches here, especially near coasts.

The daylight hours, and the evening, were dry practically everywhere, and most places were warm or very warm with good sunny spells. However, there were some rather large areas of cloud, especially over central England and Wales. Some Irish Sea coastal areas had a dull, chilly day, with rather persistent fog along parts of the west coast of Wales.

TUESDAY
17 JULY 1990SUMMARY
OF
BRITISH WEATHER

Fog or low cloud affected quite a few districts overnight, clearing fairly readily from most places in the morning.

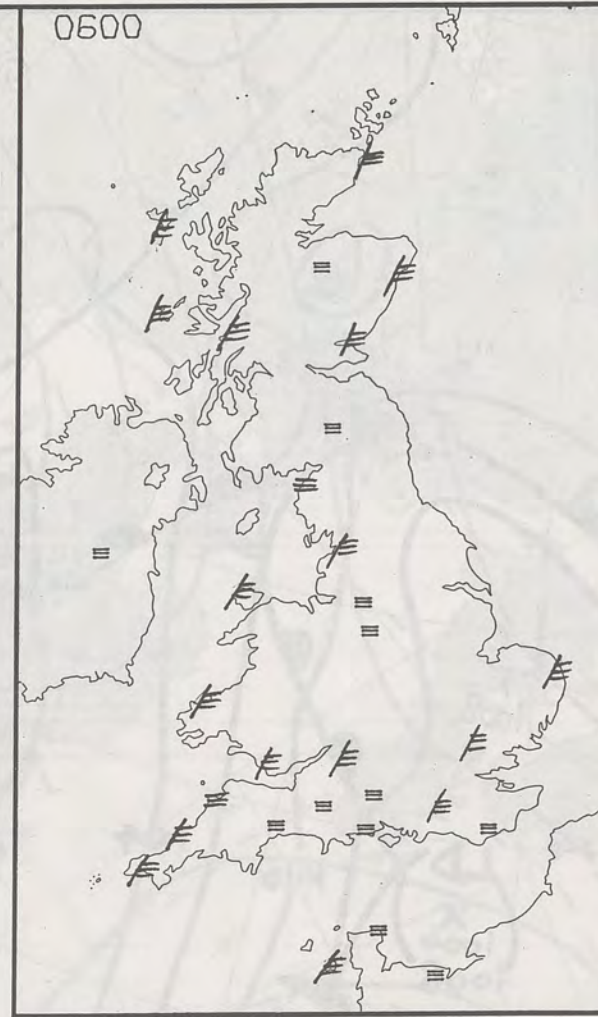

Most of the country had a dry and quite sunny day. However, isolated fog patches affected a few parts of the south and west coast and Shetland for short spells during the day. There were also some rather significant amounts of cloud over eastern and central England, and Northern Ireland and western Scotland became increasingly cloudy. Nearly everywhere had a dry day, but there was a spot or two of rain in the Hebrides and an isolated mostly light shower over southeast England in the afternoon and early evening. These showers appear to have been associated with sea breeze convergence zones, which cause marked upward movement of the warm air over the land. At Stansted, the temperature fell from 25°C at 5 pm to 20°C at 6 pm as a 15 mph wind set in from the southeast.

Apart from some coasts, most places had a very warm day.

PLOTTED SURFACE OBSERVATIONS

WEDNESDAY
18 JULY 1990

SUMMARY
OF
BRITISH WEATHER

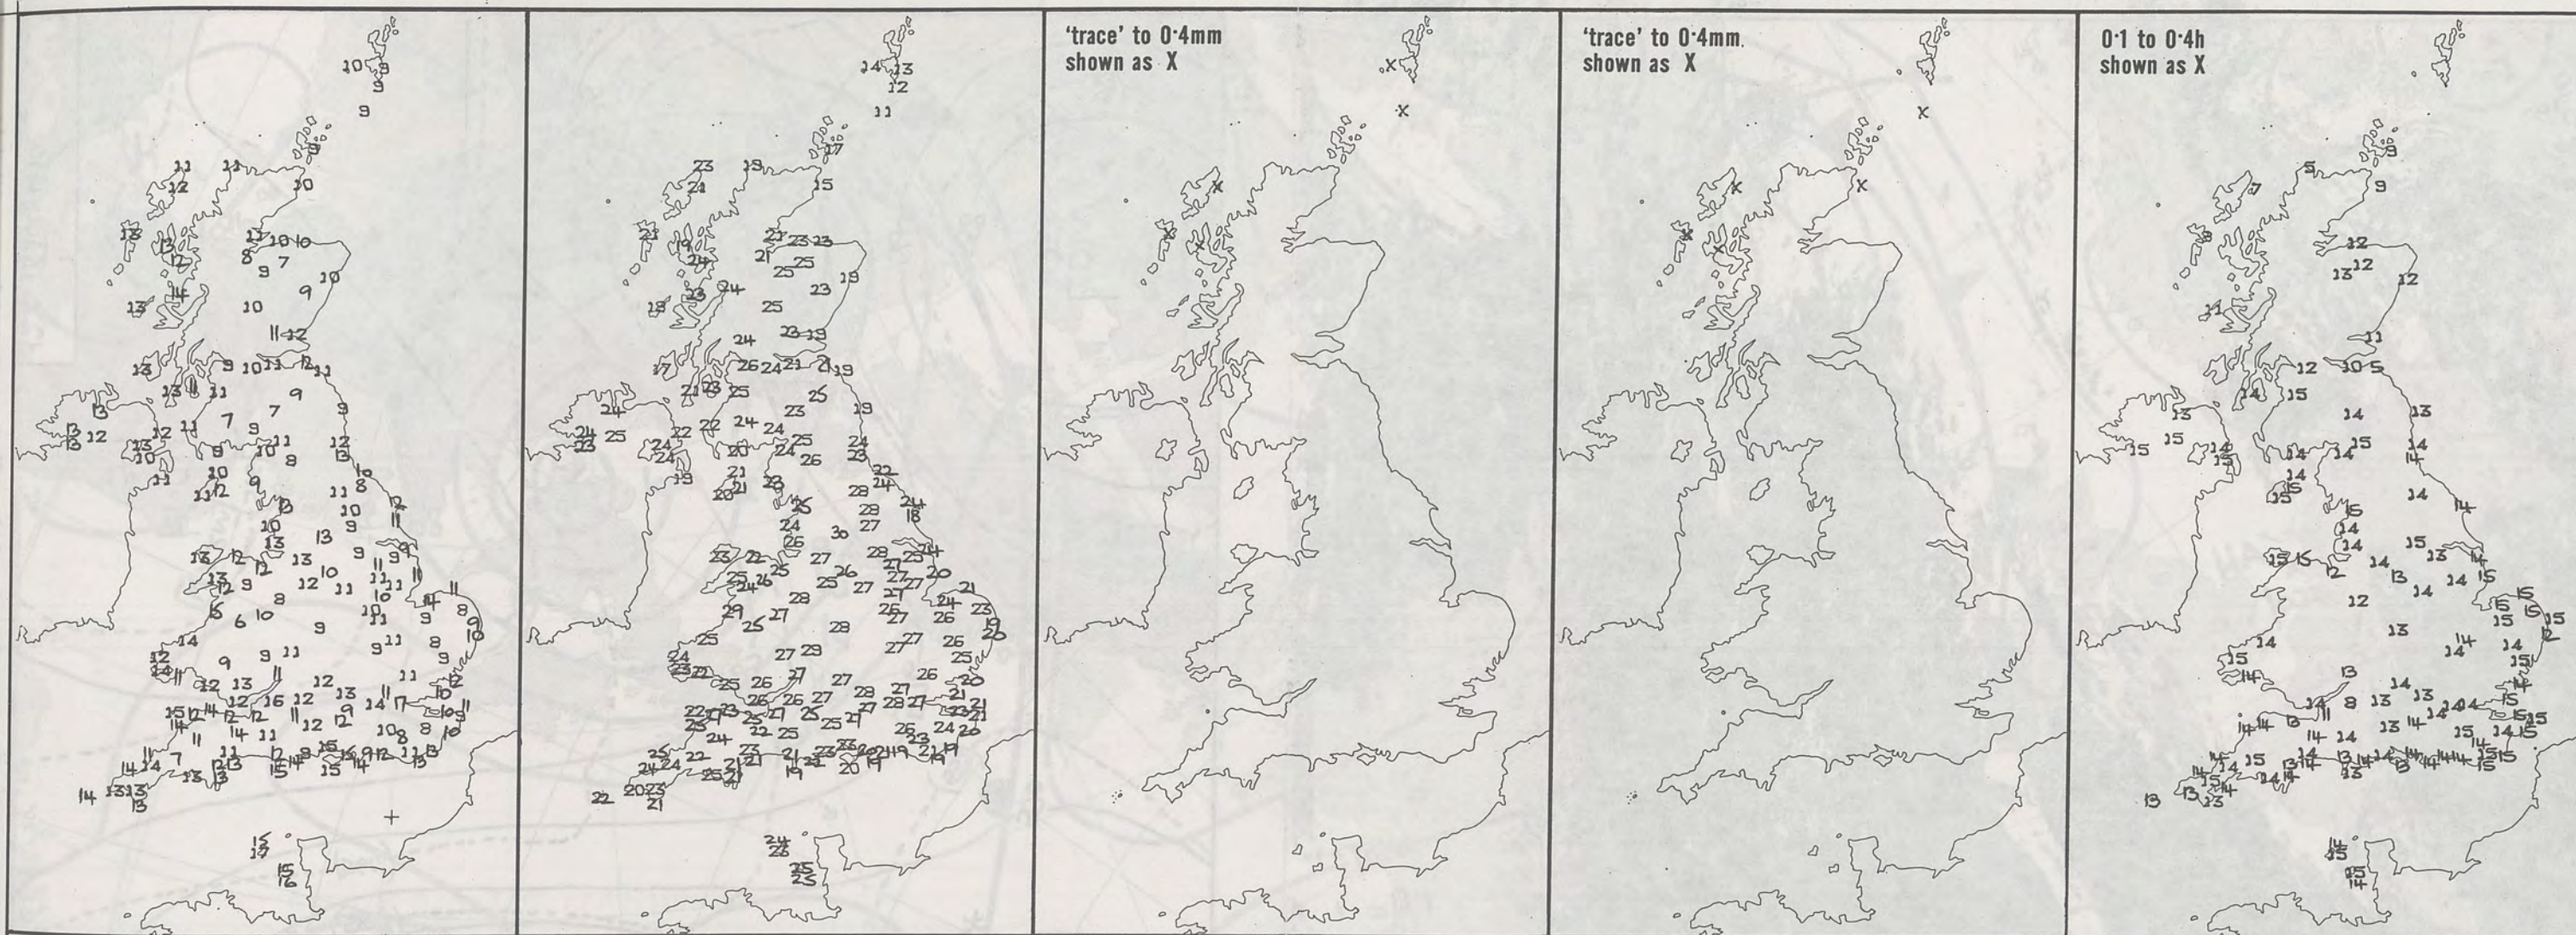

Apart from a cloudy start in parts of eastern Scotland and persistent low cloud and sea fog across the Northern Isles, most of the British Isles had a dry and sunny day. The far north and west of Scotland became cloudy by the evening with patchy rain into the Western Isles. Most places had a very warm or hot day but the Northern Isles were rather cool under low cloud.

PLOTTED SURFACE OBSERVATIONS

SATURDAY
21 JULY 1990

**SUMMARY
OF
BRITISH WEATHER**

A weak cold front moved southwards and brought cloudy, cooler conditions to some eastern districts.

Parts of eastern Scotland, northeast and eastern England were rather dull, more particularly the northeast and these eastern districts were cool.

The rest of England and Wales had a very sunny day especially coastal areas in the south and southwest and many places had almost unbroken sunshine.

Sea breezes kept temperatures closer to normal.

Apart from eastern districts, most of Scotland enjoyed a sunny day as did Northern Ireland.

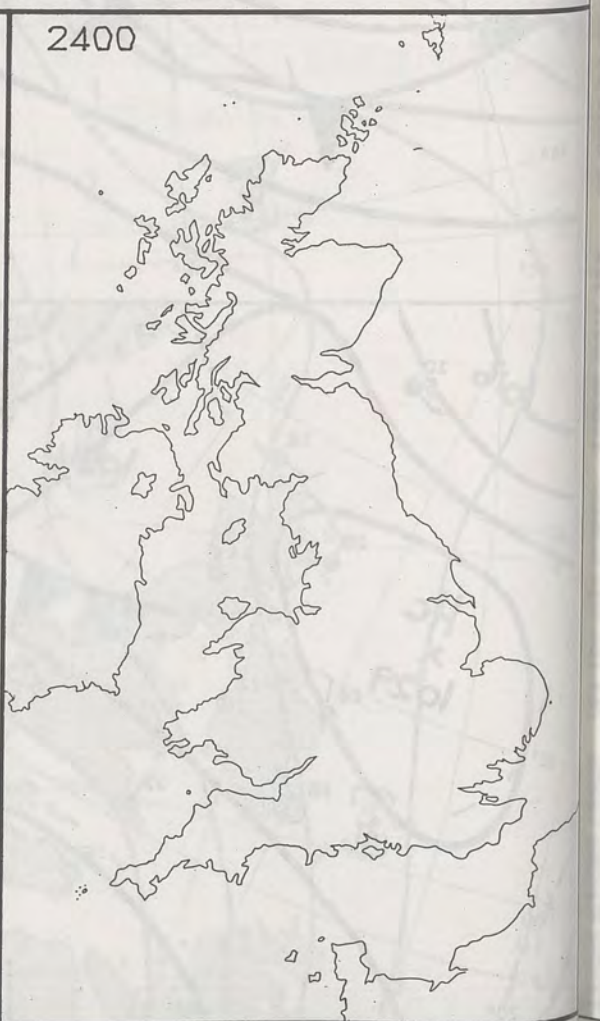

It was quite warm across Northern Ireland and much of Scotland, especially southwest Scotland, although the far north was cooler with a few light showers.

SUNDAY
22 JULY 1990

SUMMARY
OF
BRITISH WEATHER

It was a fairly dry night everywhere and most places had clear skies, but over much of Scotland, northern England, the North Midlands and East Anglia the weather turned cloudy.

Most places had a mild night and in southern England and South Wales it was warm.

During the day southern England, the South Midlands, Wales and Northern Ireland were sunny.

There was sunshine over much of Scotland too, with some places having a sunny day, but parts of the northeast kept a lot of cloud.

Most places in northern England, the North Midlands and East Anglia had a cloudy day, although there was some bright weather here and there and parts of East Anglia turned sunny in the afternoon.

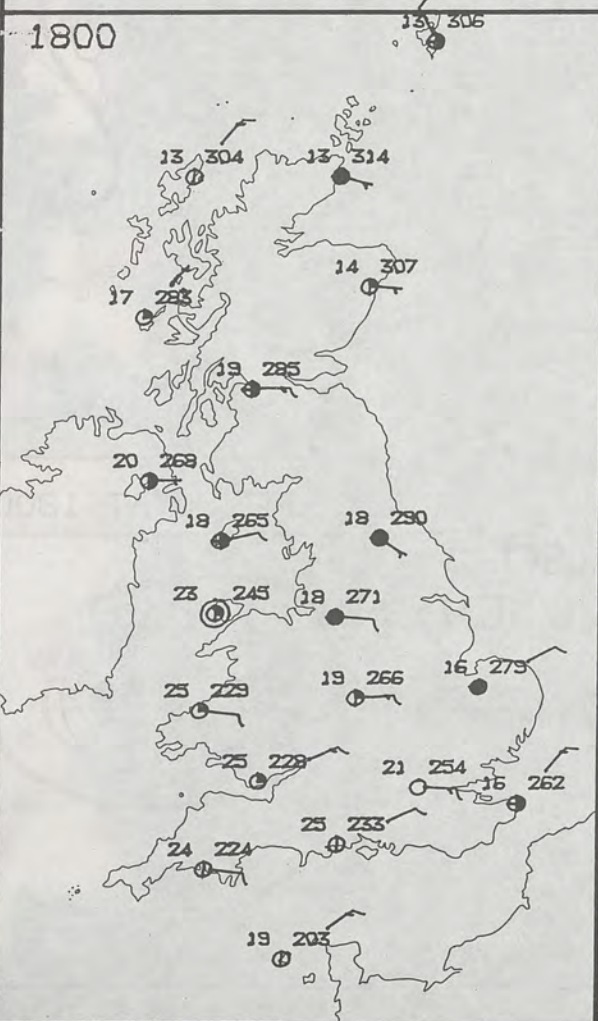

Temperatures have been above normal nearly everywhere and indeed in parts of the south of England and South Wales it was very warm, although not as hot as recent days.

23 JULY 1990

SUMMARY
OF
BRITISH WEATHER

The night was mainly dry. Most of eastern Scotland, central and northern England and East Anglia were generally cloudy.

The day was generally dry but the cloudy weather during the night became patchy in the extreme east of Scotland, central and northern England and most of East Anglia. This cloud cleared most places from mid afternoon. Although rather cloudy in some areas at first many places had a reasonable amount of sunshine.

Temperatures were near normal in the cloudier eastern areas but warm or very warm in western Scotland, most of Wales and southern England.

TUESDAY
24 JULY 1990SUMMARY
OF
BRITISH WEATHER

England and Wales had a dry 24 hours. Skies were largely clear by night and it was mainly sunny by day.

Northern Ireland and most of Scotland had a dry 24 hours with clear skies overnight, followed by a sunny day and clear spells in the evening. The Northern Isles were mostly cloudy though, with the odd spot of light drizzle, and this cloud spread into the far northeast of mainland Scotland at times.

Some coastal areas, notably in the east, had temperatures close to the average but generally it was very warm with temperatures typically between 2 and 6 degrees above average.

WEDNESDAY
25 JULY 1990SUMMARY
OF
BRITISH WEATHER

Over England and Wales most places were clear overnight, but there was patchy fog in a few places.

Northern Ireland was dry but turned more cloudy towards morning. Much of Scotland turned cloudy overnight and on Shetland there was a little drizzle, but in Scotland too some places had patchy fog. In parts of eastern Scotland and eastern England it was a cold night.

Over much of the United Kingdom it was a dry, sunny day but in Cornwall a few places had afternoon showers and on Shetland there was a little drizzle. Orkney and Shetland, which had a cloudy morning, brightened up in the afternoon.

Most places were very warm, but southern and eastern coasts were cooler.

THURSDAY
26 JULY 1990

SUMMARY
OF
BRITISH WEATHER

Most of the UK had a dry, clear night but patchy cloud affected Scotland and eastern parts of England.

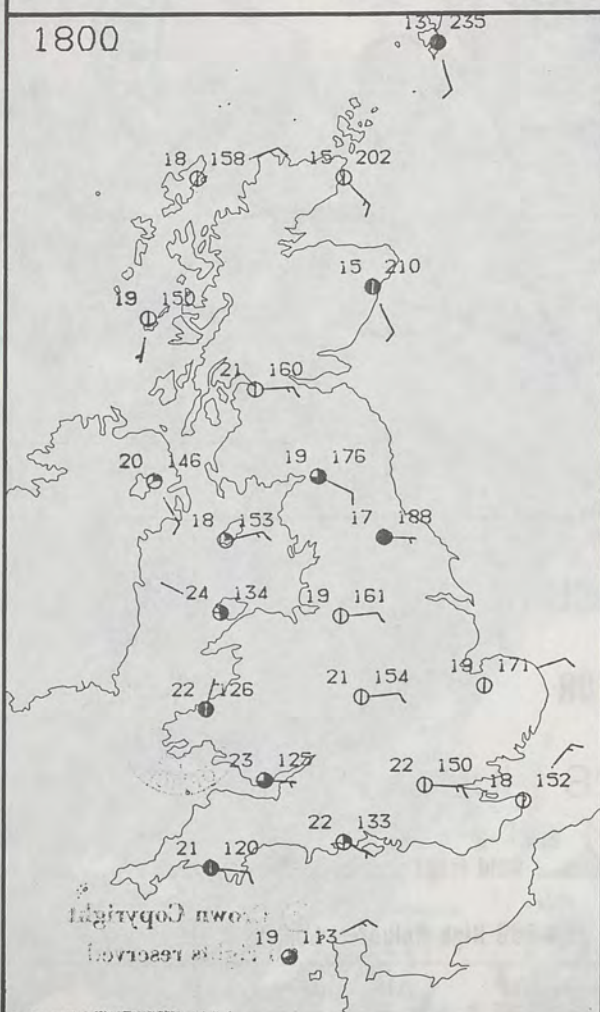

Many regions then had a dry and mainly sunny day. The cloud over Scotland and eastern parts of England broke up during the day but was quite persistent over parts of northeast England and the Northern Isles.

In the late evening thicker cloud brought a few showers to south-west England and South Wales.

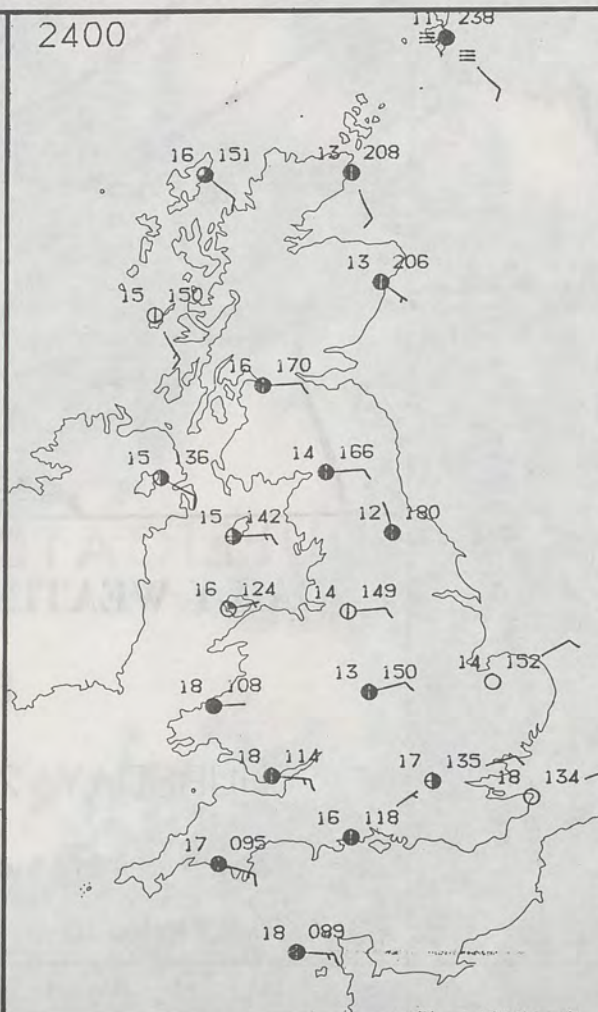

It was another warm day in most parts, but North Sea coasts had temperatures near average.

FRIDAY
27 JULY 1990

SUMMARY OF BRITISH WEATHER

Much of England and Wales had a dry night but cloud and outbreaks of rain reached southwest England and South Wales by the morning. The cloud spread steadily north-eastwards across England and North Wales during the day, giving showers in many places and some heavier bursts of rain in the west. Brighter weather with sunny spells returned to the southwest and much of Wales in the afternoon.

Northern Ireland had a mostly cloudy day with some outbreaks of rain.

The highlands and the northwest of Scotland had a fairly sunny day but elsewhere it was rather cloudy with patchy rain spreading north in the late afternoon and evening.

It was a rather warm day generally but northeastern coasts and Northern Ireland had temperatures near average.

The figure consists of four weather maps of the British Isles, arranged in a 2x2 grid, showing the progression of a weather system on 28 July 1990. Each map includes isobars, fronts, and temperature readings at various stations.

- Top Left Map (0600):** Shows a low pressure system (L) centered over the North Sea with a pressure of 992. A cold front (indicated by a line with triangles) extends from the low towards the British Isles. High pressure (H) is located to the west and south. Temperature readings range from 10 to 24.
- Top Right Map (1200):** The low pressure system has moved further east and strengthened to 998. The cold front has advanced significantly. High pressure is now to the north and west. Temperature readings range from 15 to 31.
- Bottom Left Map (1800):** The low pressure system is now centered over the British Isles with a pressure of 1008. The cold front is over the western coast. High pressure is to the north. Temperature readings range from 13 to 20.
- Bottom Right Map (2400):** The low pressure system has moved further east, now over the North Sea, with a pressure of 1016. The cold front is over the eastern coast. High pressure is to the north and west. Temperature readings range from 15 to 23.

SATURDAY 28 JULY 1990

SUMMARY OF BRITISH WEATHER

Most places in England and Wales were clear overnight, but East Anglia had a little rain early on and in West Wales there were a few coastal showers.

Northern Ireland was cloudy with a little rain and most places in Scotland had rain, some heavy, although central and southern districts became drier.

Shetland was dull for much of the day with rain and drizzle but the rest of Scotland had some sunshine. Most places stayed dry but there were a few showers and on Orkney an afternoon thunderstorm.

Northern Ireland had a bright day but a few evening showers.

In England and Wales most places were dry with some sunshine but there were showers in West Wales, the Midlands, East Anglia and southeast England, with some thunderstorms in the Midlands.

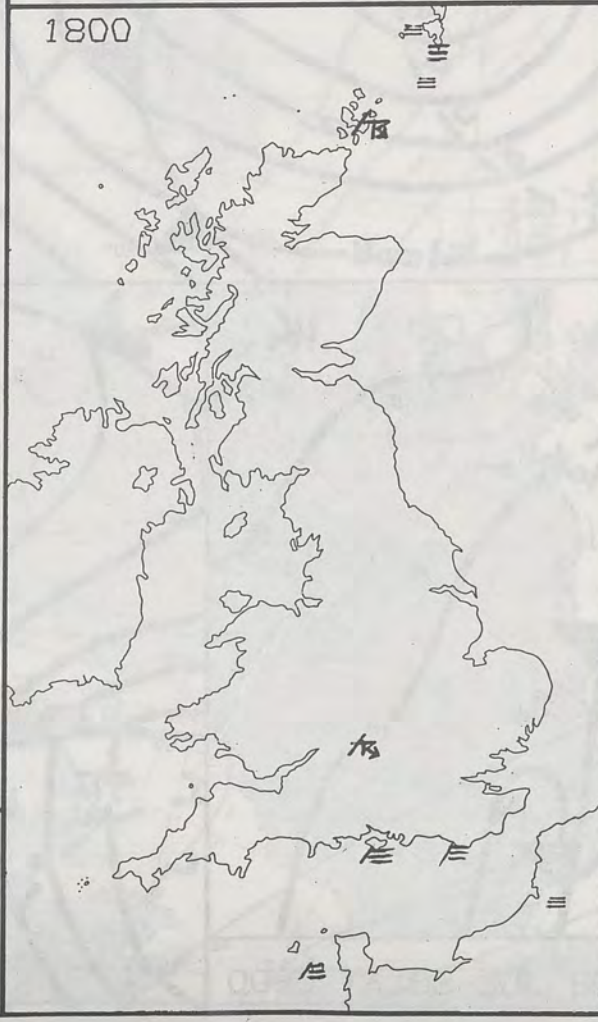

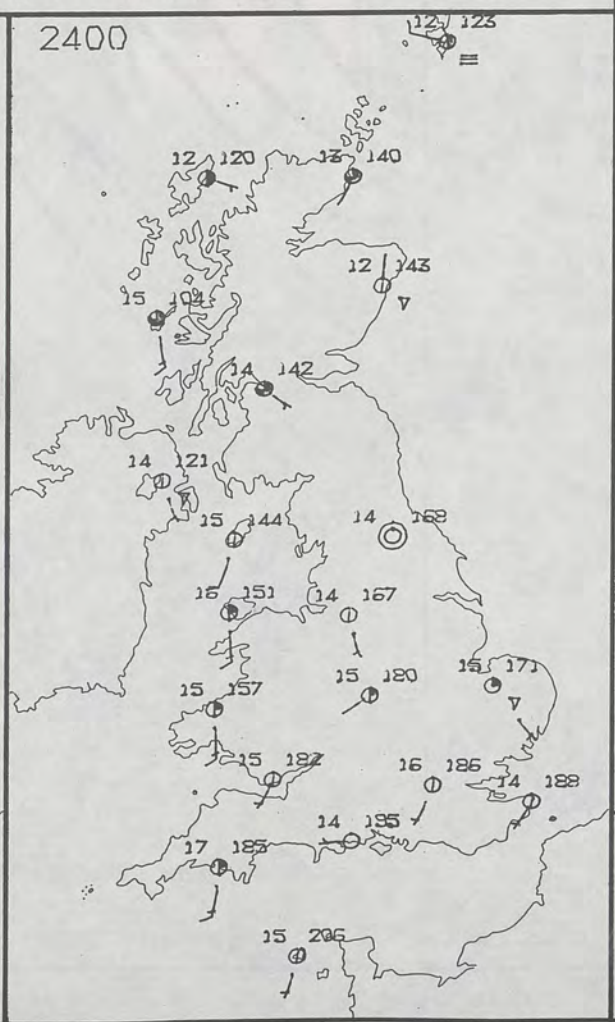

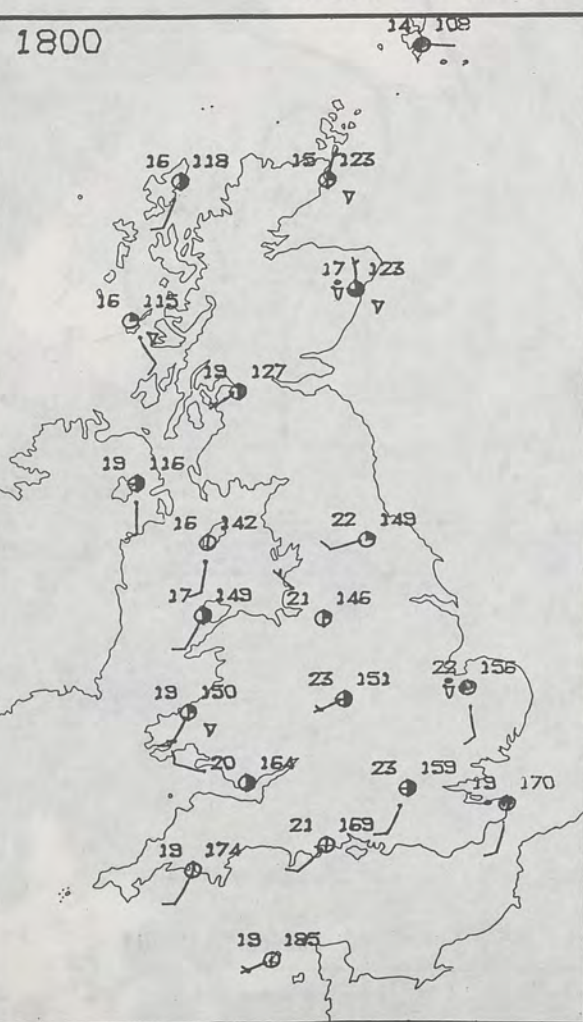

Much of the United Kingdom had a warm day.

PLOTTED SURFACE OBSERVATIONS

**SUNDAY
29 JULY 1990**

**SUMMARY
OF
BRITISH WEATHER**

Much of England and Scotland had clear skies overnight but during the night rain reached southwest England, South and West Wales, Northern Ireland and southwest Scotland.

Most places had some sunshine early on and parts of southeast England and northeast Scotland were sunny into the afternoon, but most places became cloudy.

In Scotland most places had some rain and in the west and north heavy rain and a few thunderstorms.

Northern Ireland had rain too, some heavy, but the evening was brighter.

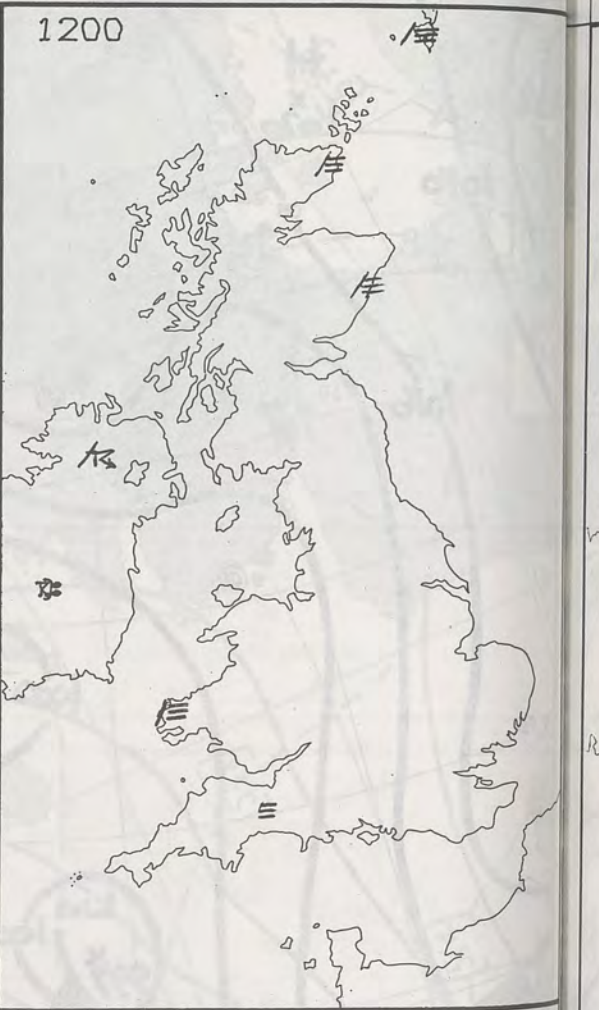

Wales was cloudy. In the morning and afternoon there was rain and drizzle, mainly on coasts and hills, but in the evening most places had rain, some heavy.

Most places in England were dry, although there was a little rain here and there, but heavier and more persistent rain reached the southwest during the evening.

It was warm nearly everywhere and very warm in parts of eastern England.

2400

MONDAY
30 JULY 1990

SUMMARY
OF
BRITISH WEATHER

The night was warm, with a lot of cloud in most places. There were some showers over Scotland and Northern Ireland, but an area of more general rain moved northeast across Wales, southwest England, the Midlands and western parts of East Anglia. The rain was heavy in places, especially in a band from Cornwall to the Wash just after dawn; thunder was reported from Plymouth.

The rain area quickly weakened in the morning with just some mostly light showery outbreaks of rain for the rest of the day over southern Britain - and a few further mostly light showers also over Scotland and Northern Ireland. Most places had large amounts of cloud, but there was some sunshine nearly everywhere.

It was generally a warm day, and a hot one in parts of east, and especially southeast England.

TUESDAY
31 JULY 1990

SUMMARY
OF
BRITISH WEATHER

There were a few patches of rain over Scotland overnight, with some heavier rain over the Isle of Lewis. Most of the British Isles, though, had a dry night; a few fog patches formed for a time at the end of the night, especially over southern England.

During the day, northwest Scotland had fairly cloudy skies and a little more rain, otherwise it was fine everywhere. Most places had plenty of sunshine, though there were some rather large areas of cloud. Isolated patches of fog in the English Channel occasionally drifted on to the most exposed coasts - chiefly the Isle of Wight and Guernsey.

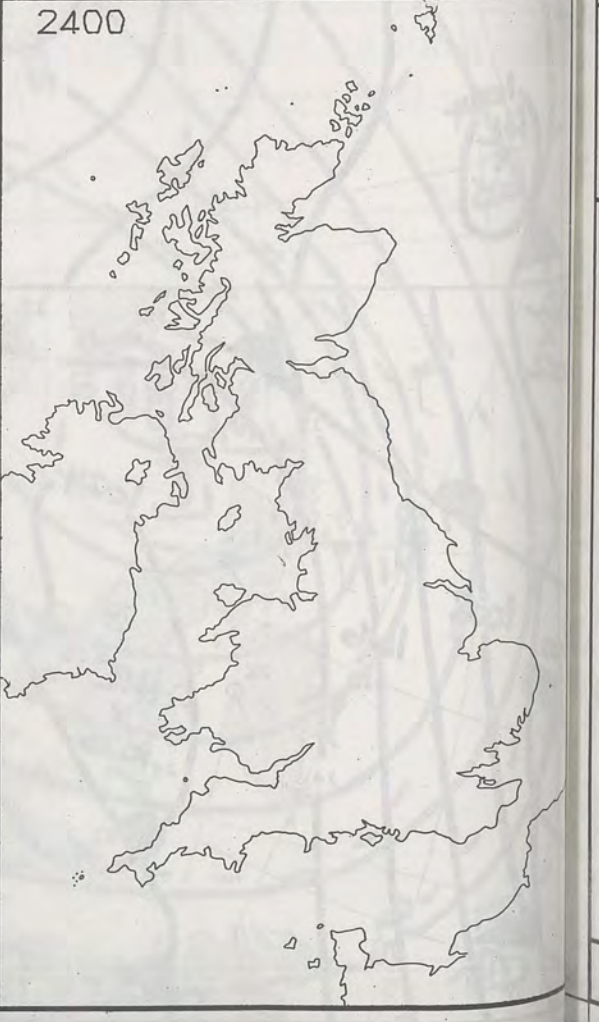

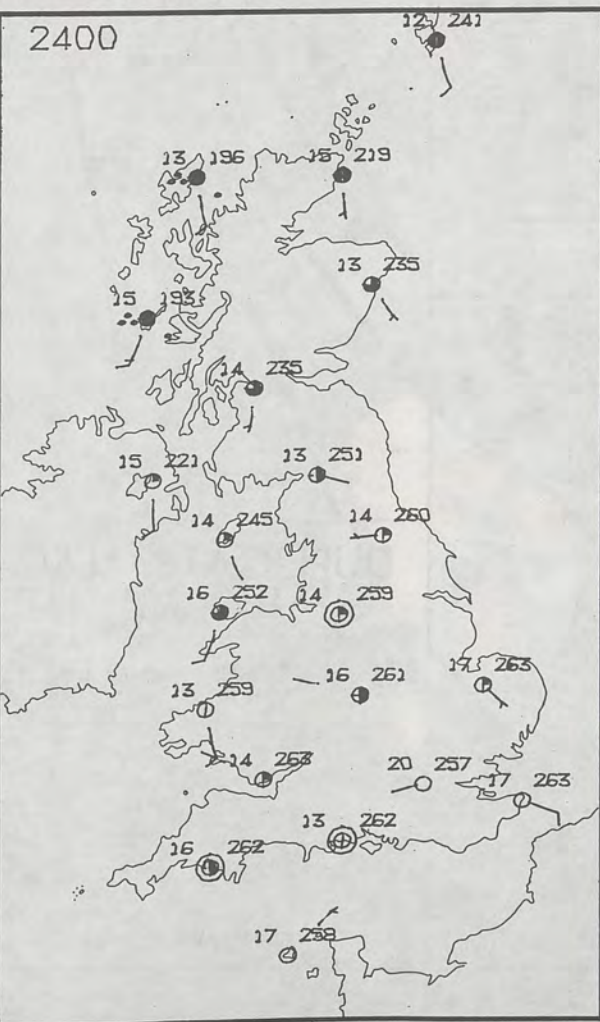

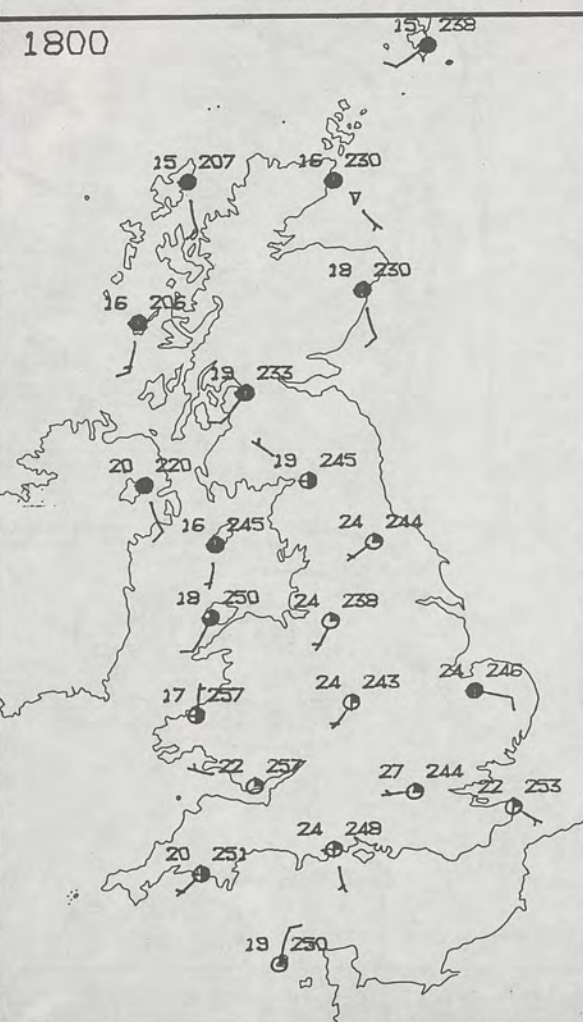

It was quite a hot day over most of the country, especially in the east and south.
