WEDNESDAY
1 FEBRUARY 1984SUMMARY
OF
BRITISH WEATHER

Central eastern and northern areas of England together with much of Scotland had frost overnight, severe in some places. There were some fog patches, chiefly in southern Scotland, central and eastern England. The west of Scotland had some rain and cloudier weather which reached many other western areas of the British Isles by late morning.

After a cold start with some fog and icy roads in eastern districts, cloudy weather with rain and drizzle spread eastwards reaching most places by early afternoon. In parts of northeast England and over high ground in Scotland there was snow for a time. However clearer, showery weather reached Northern Ireland by midday, Wales and some western parts of England by dusk, and most other areas by late evening. Parts of Scotland, especially the north stayed cloudy with rain. Fresh southeasterly winds changed to westerly or northwesterly later.

The daytime was generally mild over the UK, but in parts of Scotland and northeast England it was rather cold.

A gust of 62 knots was recorded at Gwennap Head (Nr Lands End) in the mid-evening.

THURSDAY
2 FEBRUARY 1984

**SUMMARY
OF
BRITISH WEATHER**

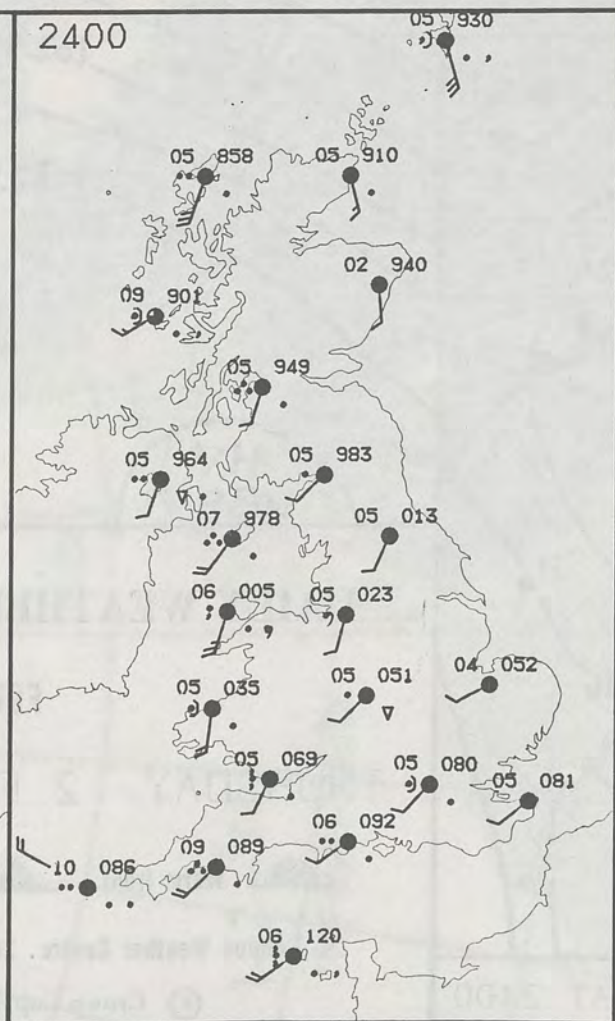

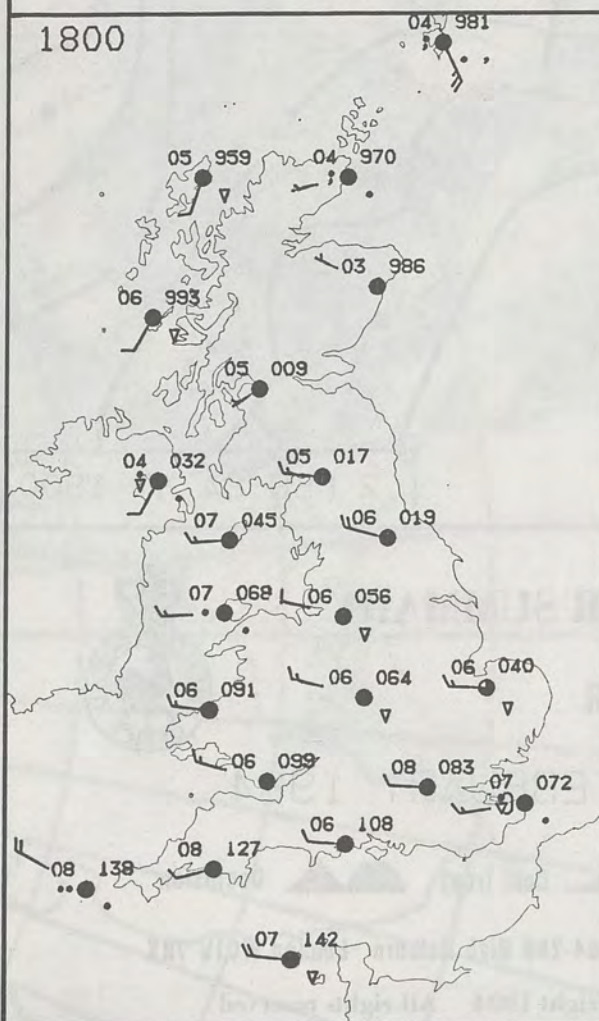

The eastern half of Britain had a mostly cloudy night with some rain but the cloud broke long enough to give a slight frost in a few places sheltered from the fresh westerly wind.

Clearer, showery weather already into the western half of Britain overnight reached most of the rest of the country by dawn, the exception being the Northern Isles where it remained cloudy with rain most of the day. The blustery showers died out during the afternoon to be replaced from the west by a further belt of rain during the evening. The South Coast of England had very few showers and a warm day with a lot of sunshine.

Temperatures were mainly mild, but parts of Scotland remained rather cold. The fresh north-westerly wind overnight decreased during the day and later backed southwesterly with the onset of the rain.

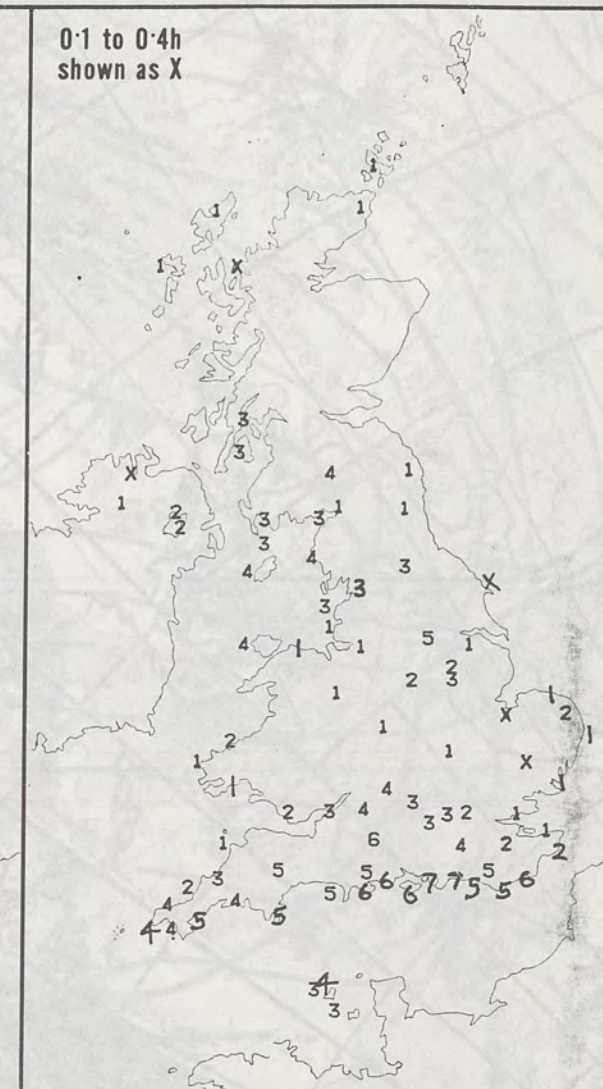

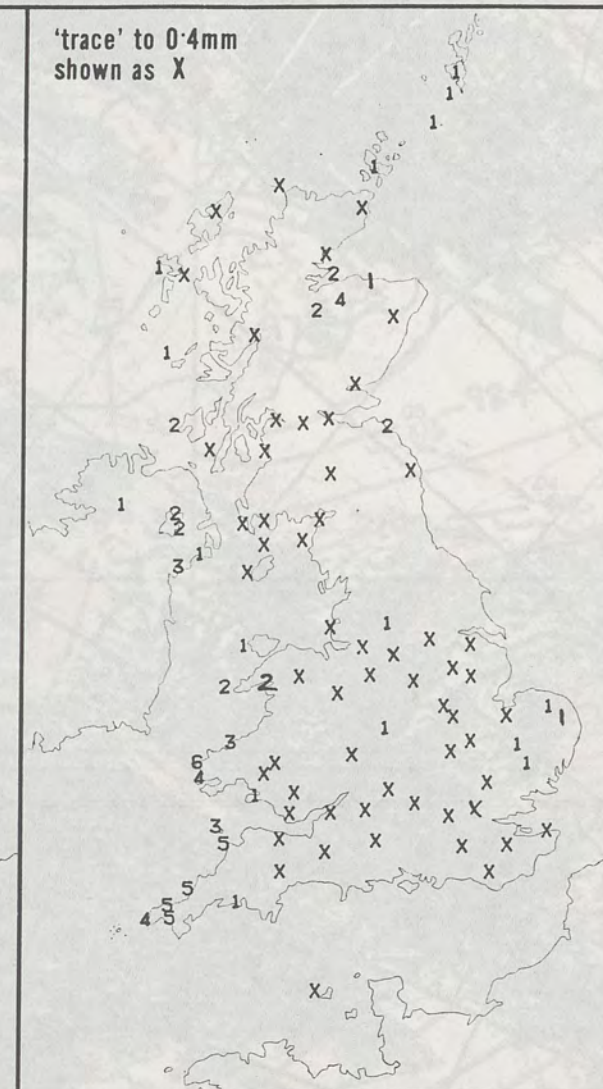

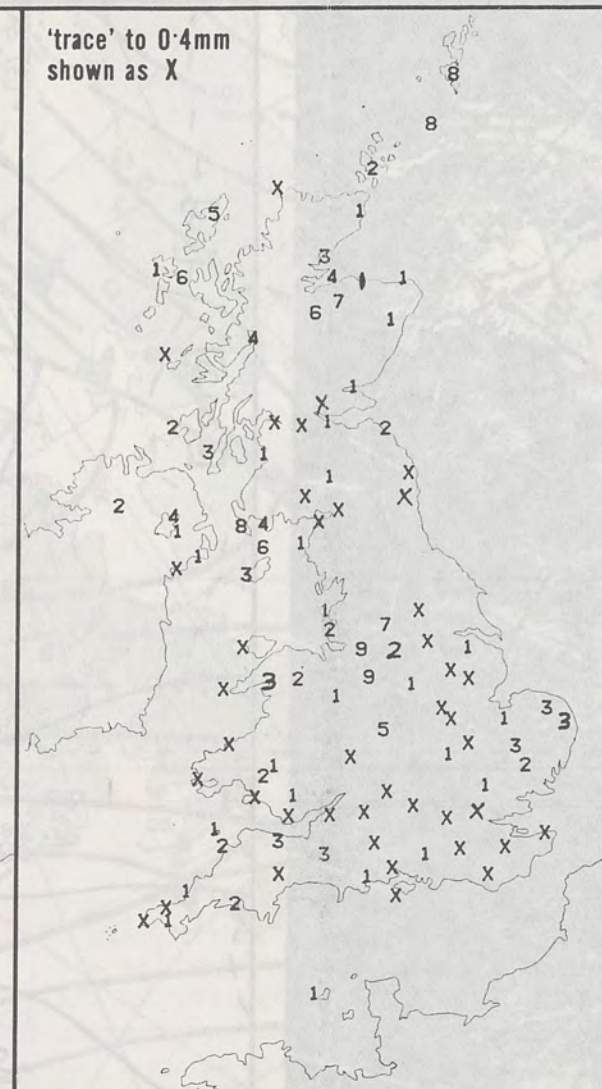

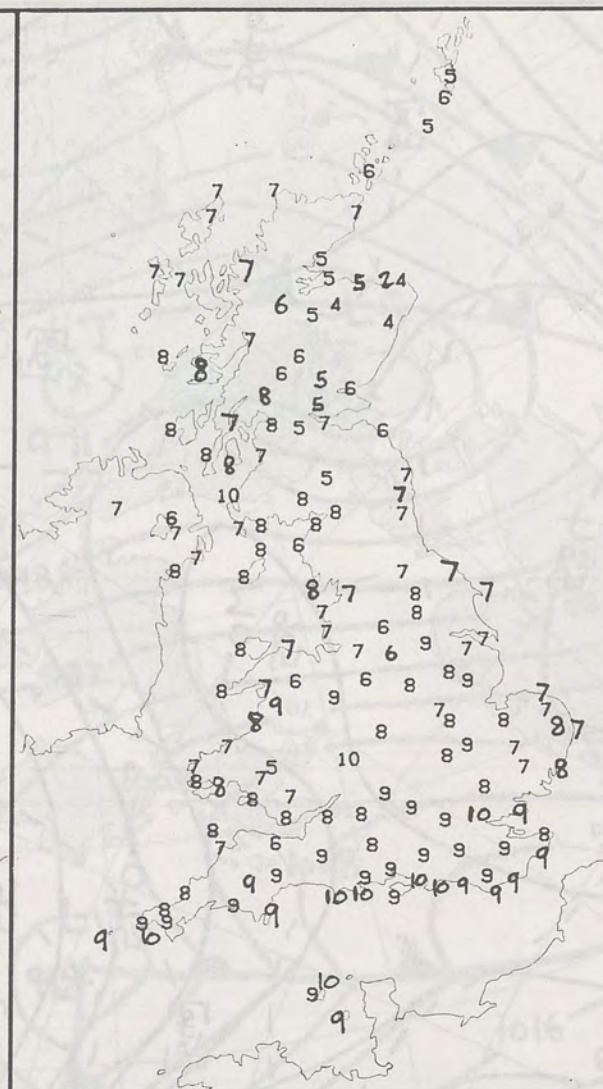

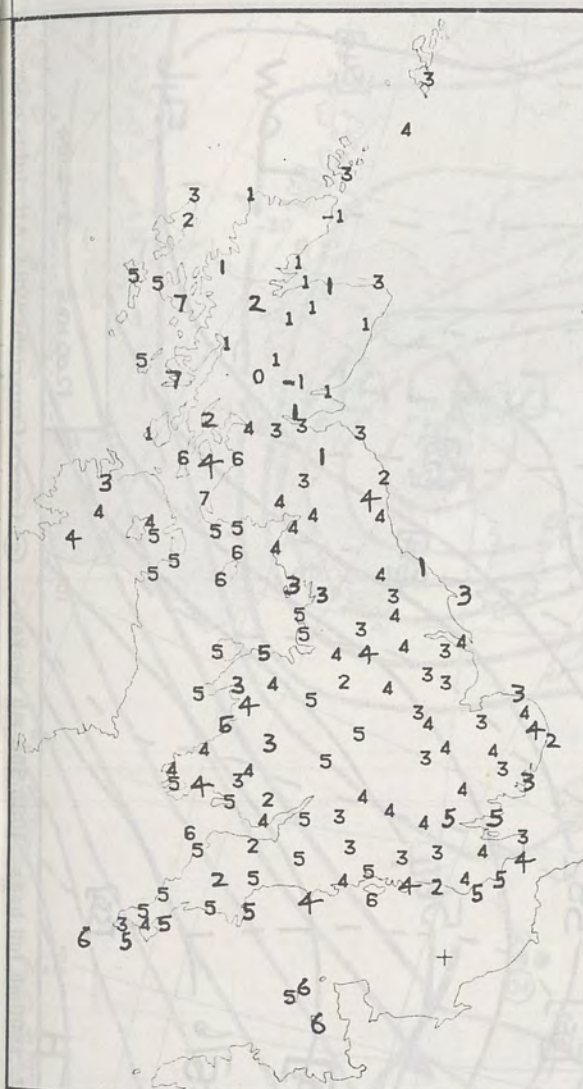

PLOTTED SURFACE OBSERVATIONS

FRIDAY
3 FEBRUARY 1984

SUMMARY OF BRITISH WEATHER

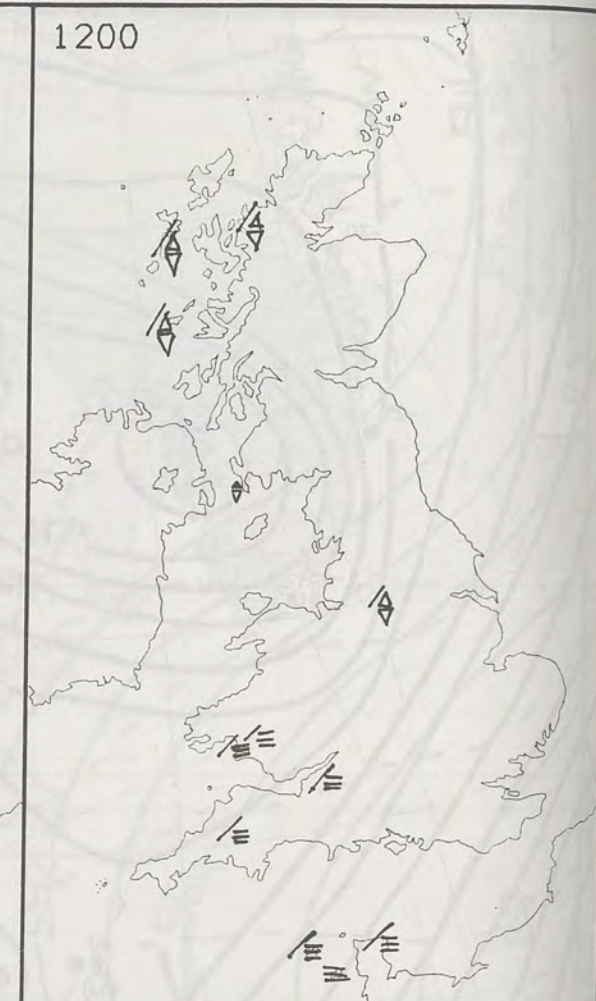

In Scotland, Northern Ireland and northern England, after overnight rain there were fairly frequent showers but with good sunny periods as well. Temperatures were close to normal. The showers died out during the afternoon.

The southern half of England and Wales were cloudy with mainly light rain during the morning and some hill and coastal fog in the southwest. The afternoon brought squally showers for an hour or two, then it became dry and sunny. The day was very mild and exceptionally mild in much of the southern half of England.

During the evening cloud and light rain reached Northern Ireland, West Wales and Cornwall.

PLOTTED SURFACE OBSERVATIONS

SATURDAY
4 FEBRUARY 1984

SUMMARY
OF
BRITISH WEATHER

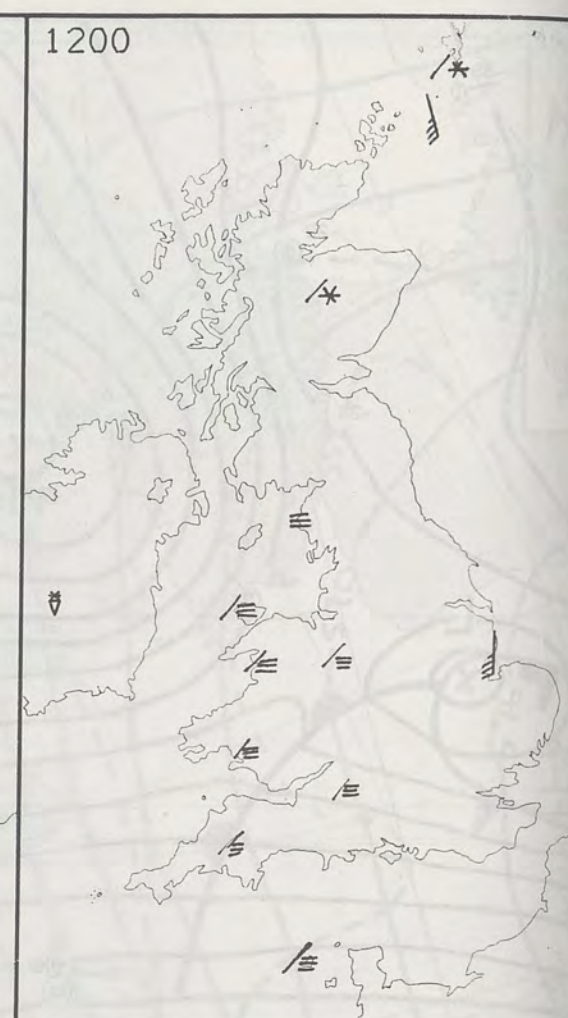

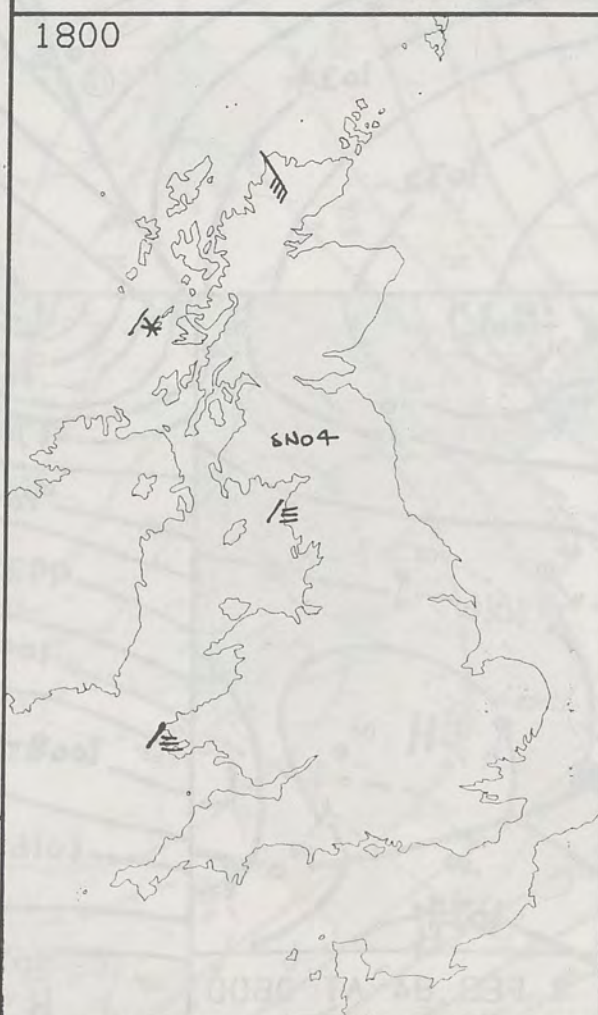

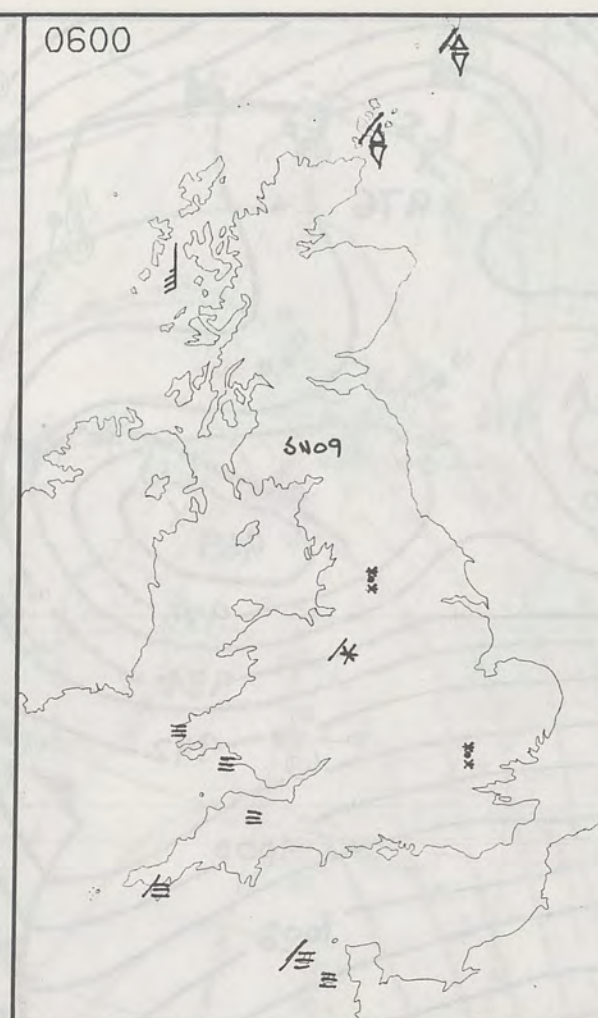

Scotland and Northern Ireland were mild and dull with rain, sometimes heavy, for much of the day. During the evening colder weather spread from the west bringing snow to high ground and sleet over low ground.

England and Wales were exceptionally mild in many areas. Early rain gave way to drizzle on west-facing coasts, and brief sunny intervals. During the evening, colder clearer weather reached northwest England and North Wales and then spread to all but southeast England by midnight. There were sleet showers over northern hills.

A gust of 78 knots was recorded at Colla firth Hill in the Shetlands during the late evening.

SUMMARY
OF
BRITISH WEATHER

Scotland and Northern Ireland had frost overnight and some snow showers. Over northern England and Wales some places were frosty, but most places stayed dry, although there were a few rain showers.

Central and southern districts of England were wet at first, but it was dry before dawn. There was some sunshine almost everywhere, and in England many places had a sunny morning. Scotland and Northern Ireland had quite a few showers, some thundery, during the day with sleet or snow showers in many places. In the evening it was wet in Northern Ireland. There were showers and isolated thunderstorms over England and Wales and during the evening more persistent rain spread eastwards to many places.

The strong west or southwest winds reached severe gale force on coasts and gusted to 78 knots in the Shetlands.

Temperatures were close to normal in most places.

PLOTTED SURFACE OBSERVATIONS

MONDAY
6 FEBRUARY 1984

SUMMARY OF BRITISH WEATHER

In Scotland there were sleet or snow showers in most places and isolated thunderstorms. The showers were most frequent in the north and west and there was drifting snow in the strong to gale force westerly wind.

In Northern Ireland and northern England after overnight rain there were scattered showers and brief sunny intervals. Some of the showers were heavy with thunder and during the afternoon rain became persistent again over much of northern England.

Over Wales, central and southern England it was cloudy with out-breaks of rain, heavy at times. Drier weather spread south across much of Wales, the Midlands and East Anglia during the evening.

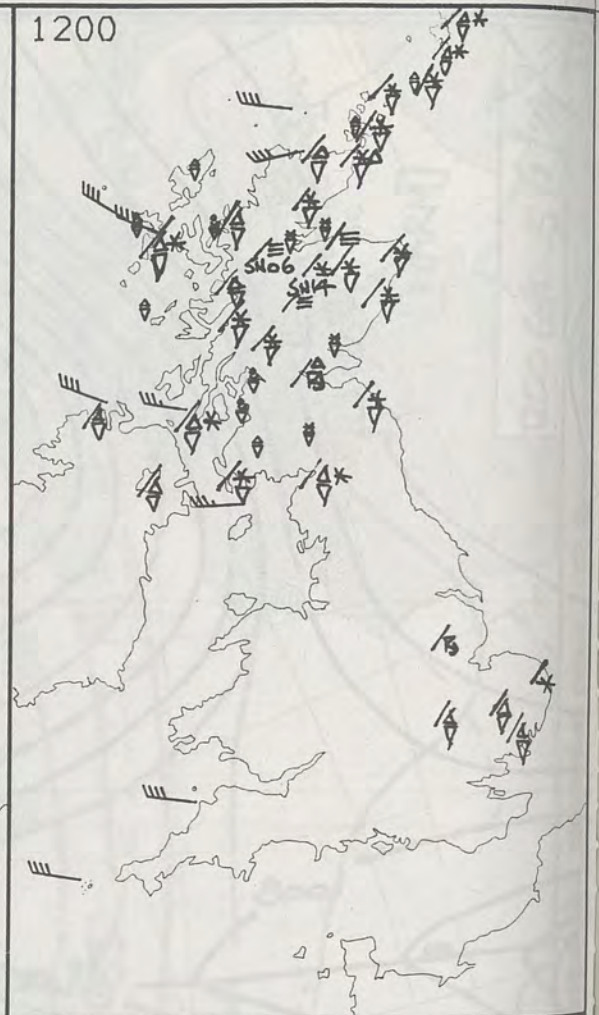

Westerly winds reached gale force in most regions.

A gust of 67 knots was recorded at Tiree (Inner Hebrides) around 0400. Many places had gusts over 60 knots and 63 knots was recorded at London Weather Centre (the highest gust in February since reliable records began in 1961 in Central London) in the evening.

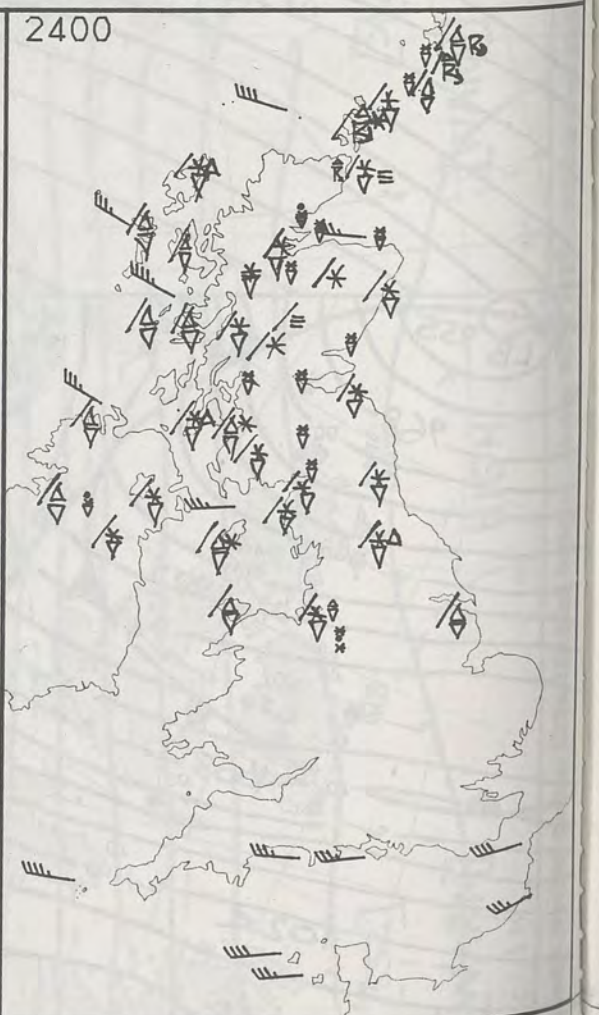

Temperatures ranged from very mild in South Wales and southern England to near normal in northern England and Northern Ireland and cold or very cold in Scotland.

TUESDAY
7 FEBRUARY 1984SUMMARY
OF
BRITISH WEATHER

Southern counties of England had a mild night, with rain in the early part of the night. Over the rest of Britain it was cold with frost in many places and some snow showers, with some thunderstorms in northern Scotland.

During the day there was some sunshine everywhere, and parts of eastern Scotland, northern and eastern England had a sunny day. There were snow showers over much of Scotland and in Northern Ireland. In Northern Ireland in the afternoon the showers turned to rain, with more persistent rain in the evening. Over England and Wales there were scattered showers. Most of them fell as rain, but there were one or two snow showers.

It was very windy, especially overnight, with gusts to 66 knots at Stansted Airport around 0400 and at St Abbs Head (Nr Berwick) later in the morning.

In most places, temperatures were within a degree or so of normal.

SUMMARY
OF
BRITISH WEATHER

Northern Scotland had a frosty night, with some hail and snow showers. Over the rest of Britain there was a spell of wet weather, with heavy rain and some thunderstorms. It became very windy, the northwesterly wind reaching gale force over much of Britain.

There were gusts to 70 knots at Crosby (Merseyside) and Portland Bill (Dorset) before dawn. The wind caused structural damage in some places and many roads were blocked by fallen trees. The wind moderated during the day.

During the day there was quite a lot of dry sunny weather and some places stayed dry all day. There were scattered showers, most of them of rain, but some sleet and snow showers, particularly in Northern Scotland.

Temperatures were close to normal over much of Britain.

THURSDAY
9 FEBRUARY 1984SUMMARY
OF
BRITISH WEATHER

It was a dry day nearly everywhere and much of the country had a sunny day. Parts of the East Anglian coast were a little cloudier, but one or two overnight showers soon died away.

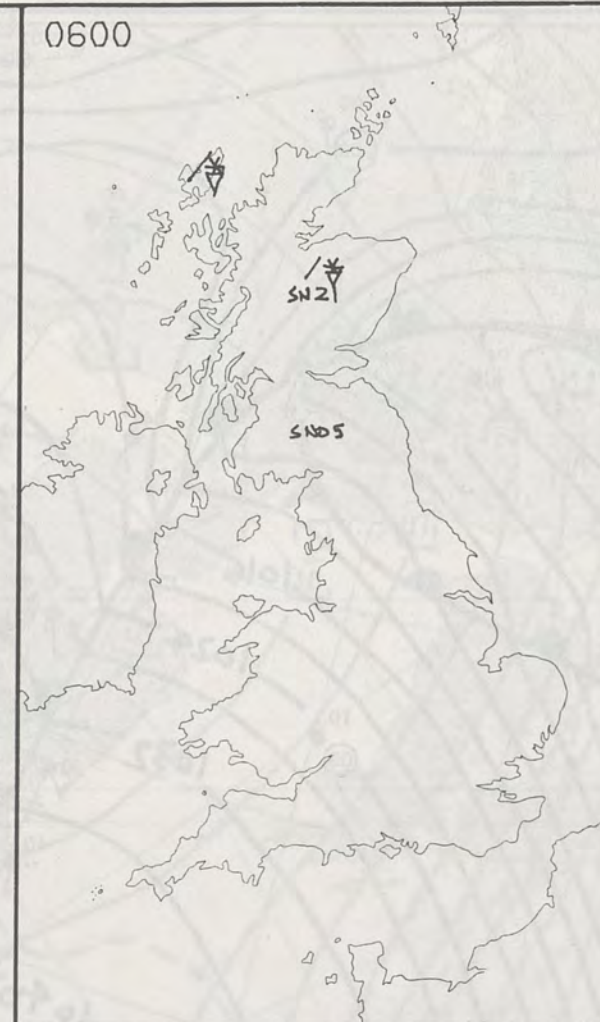

Cloudy weather spread across Scotland and Northern Ireland during the day and on into northern England, North and West Wales in the evening. There was some light rain or drizzle in the Western and Northern Isles and later in parts of the western mainland of Scotland and Northern Ireland, where it also became quite misty.

Nearly all districts were rather mild with a steady thaw in northern regions. However, the evening was frosty in the south-eastern half of England.

SUMMARY OF BRITISH WEATHER

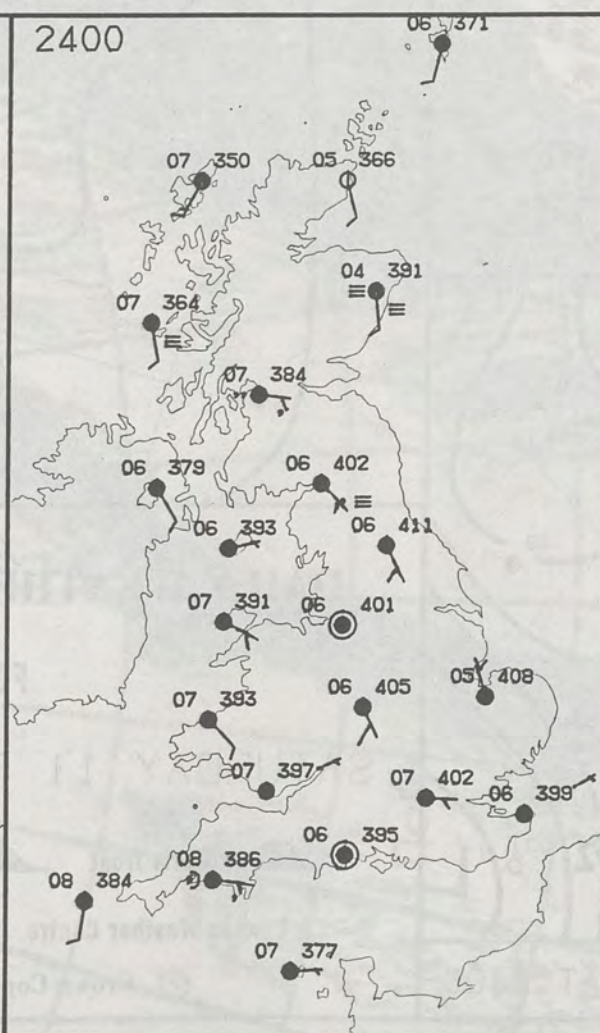

It remained cloudy and dry in many places but on western coasts and hills there was drizzle and patchy fog, especially during the night. During the day it became brighter in some western regions particularly in Northern Ireland, the Isle of Man and North Wales where there were sunny intervals. In central and eastern parts of England it became dull and rather misty in many places during the day and there were patches of light rain and drizzle. In northern Scotland there were sunny periods. It was mild everywhere and in northeast Scotland very mild.

PLOTTED SURFACE OBSERVATIONS

SUNDAY
12 FEBRUARY 1984

**SUMMARY
OF
BRITISH WEATHER**

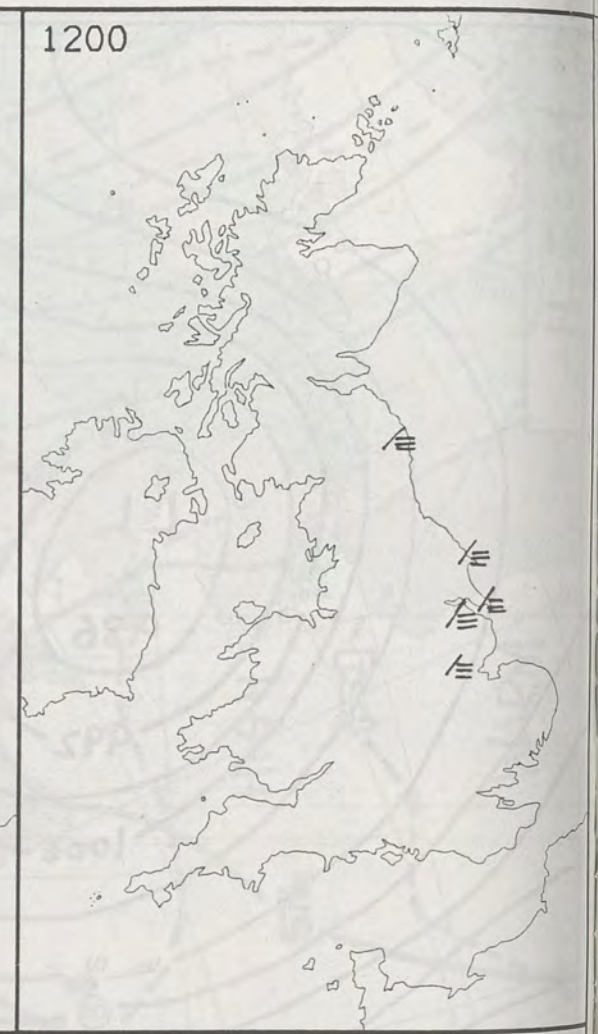

Apart from isolated patches of light rain or drizzle at first, it remained dry. Overnight it was cloudy and mild in most regions, the only exception being in northeast Scotland where cloud was well broken at times and there was a slight frost in places.

During the day cloud persisted over much of northern and western Britain but in northeast Scotland and southeastern England sunny periods developed. During the late afternoon and evening the sky became clear over most of England and Wales.

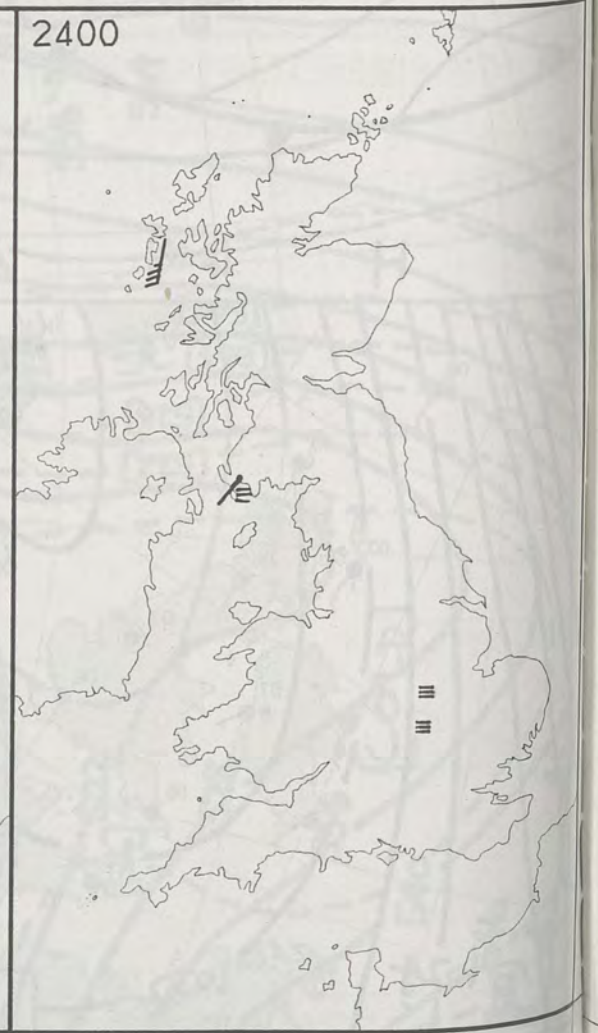

It became mild in parts of northeast Scotland, elsewhere daytime temperatures were near or just a little above normal. There was slight frost in parts of England and Wales by late evening.

SUMMARY
OF
BRITISH WEATHER

England and Wales remained dry. Many areas had a clear but frosty night and in some central parts there was quite a hard frost. Parts of the Midlands and eastern England had dense fog in places. The fog was slow to clear in some places, otherwise most districts had a dry and mainly sunny day. In some of the foggy areas it was cold with temperatures remaining below freezing. Many parts of Scotland and Northern Ireland also had a dry night, with a slight frost in parts of southeast Scotland. Western Scotland was quite windy with some rain and strong southerly winds. During the day a little rain spread into some central parts of Scotland but amounts of rain in Northern Ireland, southern and eastern Scotland were very small.

Northern and western Scotland were brighter in the afternoon with sunny intervals and one or two showers.

Temperatures were well up to normal over the UK except where fog was slow to clear.

TUESDAY
14 FEBRUARY 1984SUMMARY
OF
BRITISH WEATHER

Many areas of the United Kingdom had a moderate or severe frost. Many southern parts of England and Wales had a dry clear night. In the north and west of Scotland there were a few showers, while in southern Scotland, Northern Ireland and central and northern parts of England there was fog. The fog was dense in places.

During the day, the fog was slow to clear in some areas and in parts of the Midlands and eastern England it persisted all day with temperatures very close or even below freezing. In most other parts the fog cleared fairly quickly and most of southern and southeast England, West Wales, northwest England and western Scotland were quite sunny. Southern Scotland however remained cloudy. Northwest Scotland was again quite mild.

Temperatures were again well up to normal away from the areas with persistent fog.

A hand-drawn map of the British Isles, including Great Britain and Ireland. The map is annotated with various symbols and numbers, likely representing data points or specific locations. The symbols include circles, crosses, and lines, often accompanied by numbers. Some symbols are circled or crossed out. The numbers range from 1 to 7, with some having additional numbers or symbols next to them. The map is drawn with simple lines and includes a small cross symbol in the bottom right corner.

A map of the British Isles (Great Britain and Ireland) with 25 numbered locations marked. Each location is associated with a number and a symbol. The locations are as follows:

- 05 367: North of Great Britain, near the Shetland Islands.
- 06 329: Northwest coast of Scotland.
- 05 356: Northeast coast of Scotland.
- 04 375: Northeast coast of England.
- 05 338: West coast of Scotland.
- 03 380: Central Scotland.
- 04 369: West coast of England.
- 03 388: Central England.
- 06 378: West coast of England.
- 02 399: Central England.
- 07 380: West coast of England.
- 03 391: Central England.
- 06 380: West coast of England.
- 03 402: Central England.
- 01 395: Central England.
- 01 397: Central England.
- 01 395: Central England.
- 05 384: Central England.
- 00 394: Central England.
- 07 381: West coast of England.
- 09 374: Southwest coast of England.
- 06 371: South coast of England.

The symbols associated with the locations are:

- 05 367: A solid black circle.
- 06 329: A solid black circle.
- 05 356: A solid black circle.
- 04 375: A solid black circle.
- 05 338: A solid black circle.
- 03 380: A solid black circle.
- 04 369: A circle with a horizontal line through it.
- 03 388: A circle with a horizontal line through it.
- 06 378: A solid black circle.
- 02 399: A solid black circle.
- 07 380: A circle with a horizontal line through it.
- 03 391: A circle with a horizontal line through it.
- 06 380: A circle with a horizontal line through it.
- 03 402: A circle with a horizontal line through it.
- 01 395: A circle with a horizontal line through it.
- 01 397: A circle with a horizontal line through it.
- 01 395: A circle with a horizontal line through it.
- 05 384: A circle with a horizontal line through it.
- 00 394: A circle with a horizontal line through it.
- 07 381: A solid black circle.
- 09 374: A solid black circle.
- 06 371: A circle with a horizontal line through it.

PLOTTED SURFACE OBSERVATIONS

WEDNESDAY
15 FEBRUARY 1984

**SUMMARY
OF
BRITISH WEATHER**

Fog, dense and freezing in places, affected many parts of England and East Wales in the early hours, with a few patches over Northern Ireland and south and east Scotland. Places near the coast of England, particularly in the south and west stayed clear of fog.

There was little improvement during the day in most of the foggy areas, and hence many parts of England had a very cold day with temperatures remaining below freezing. The temperature in central London only reached 2°C (compared with 10°C on the 14th), making it the coldest day there since the severe cold of early January 1982.

The most southern and western regions of England, Northern Ireland, Scotland and northeast England had a generally dry day and some areas were quite sunny with temperatures close to normal.

0600

The map shows the British Isles with various locations marked by the I Ching hexagrams. The hexagrams are arranged in a way that suggests a specific reading or interpretation for each location.

1200

The map shows the distribution of the 'I' symbol (a vertical line with a horizontal bar) in 1200 AD. The symbol is found in various locations across the British Isles, including the Shetland Islands, Orkney Islands, and the Scottish Highlands. The symbol is also found in the English Midlands and the English South, as well as in Ireland.

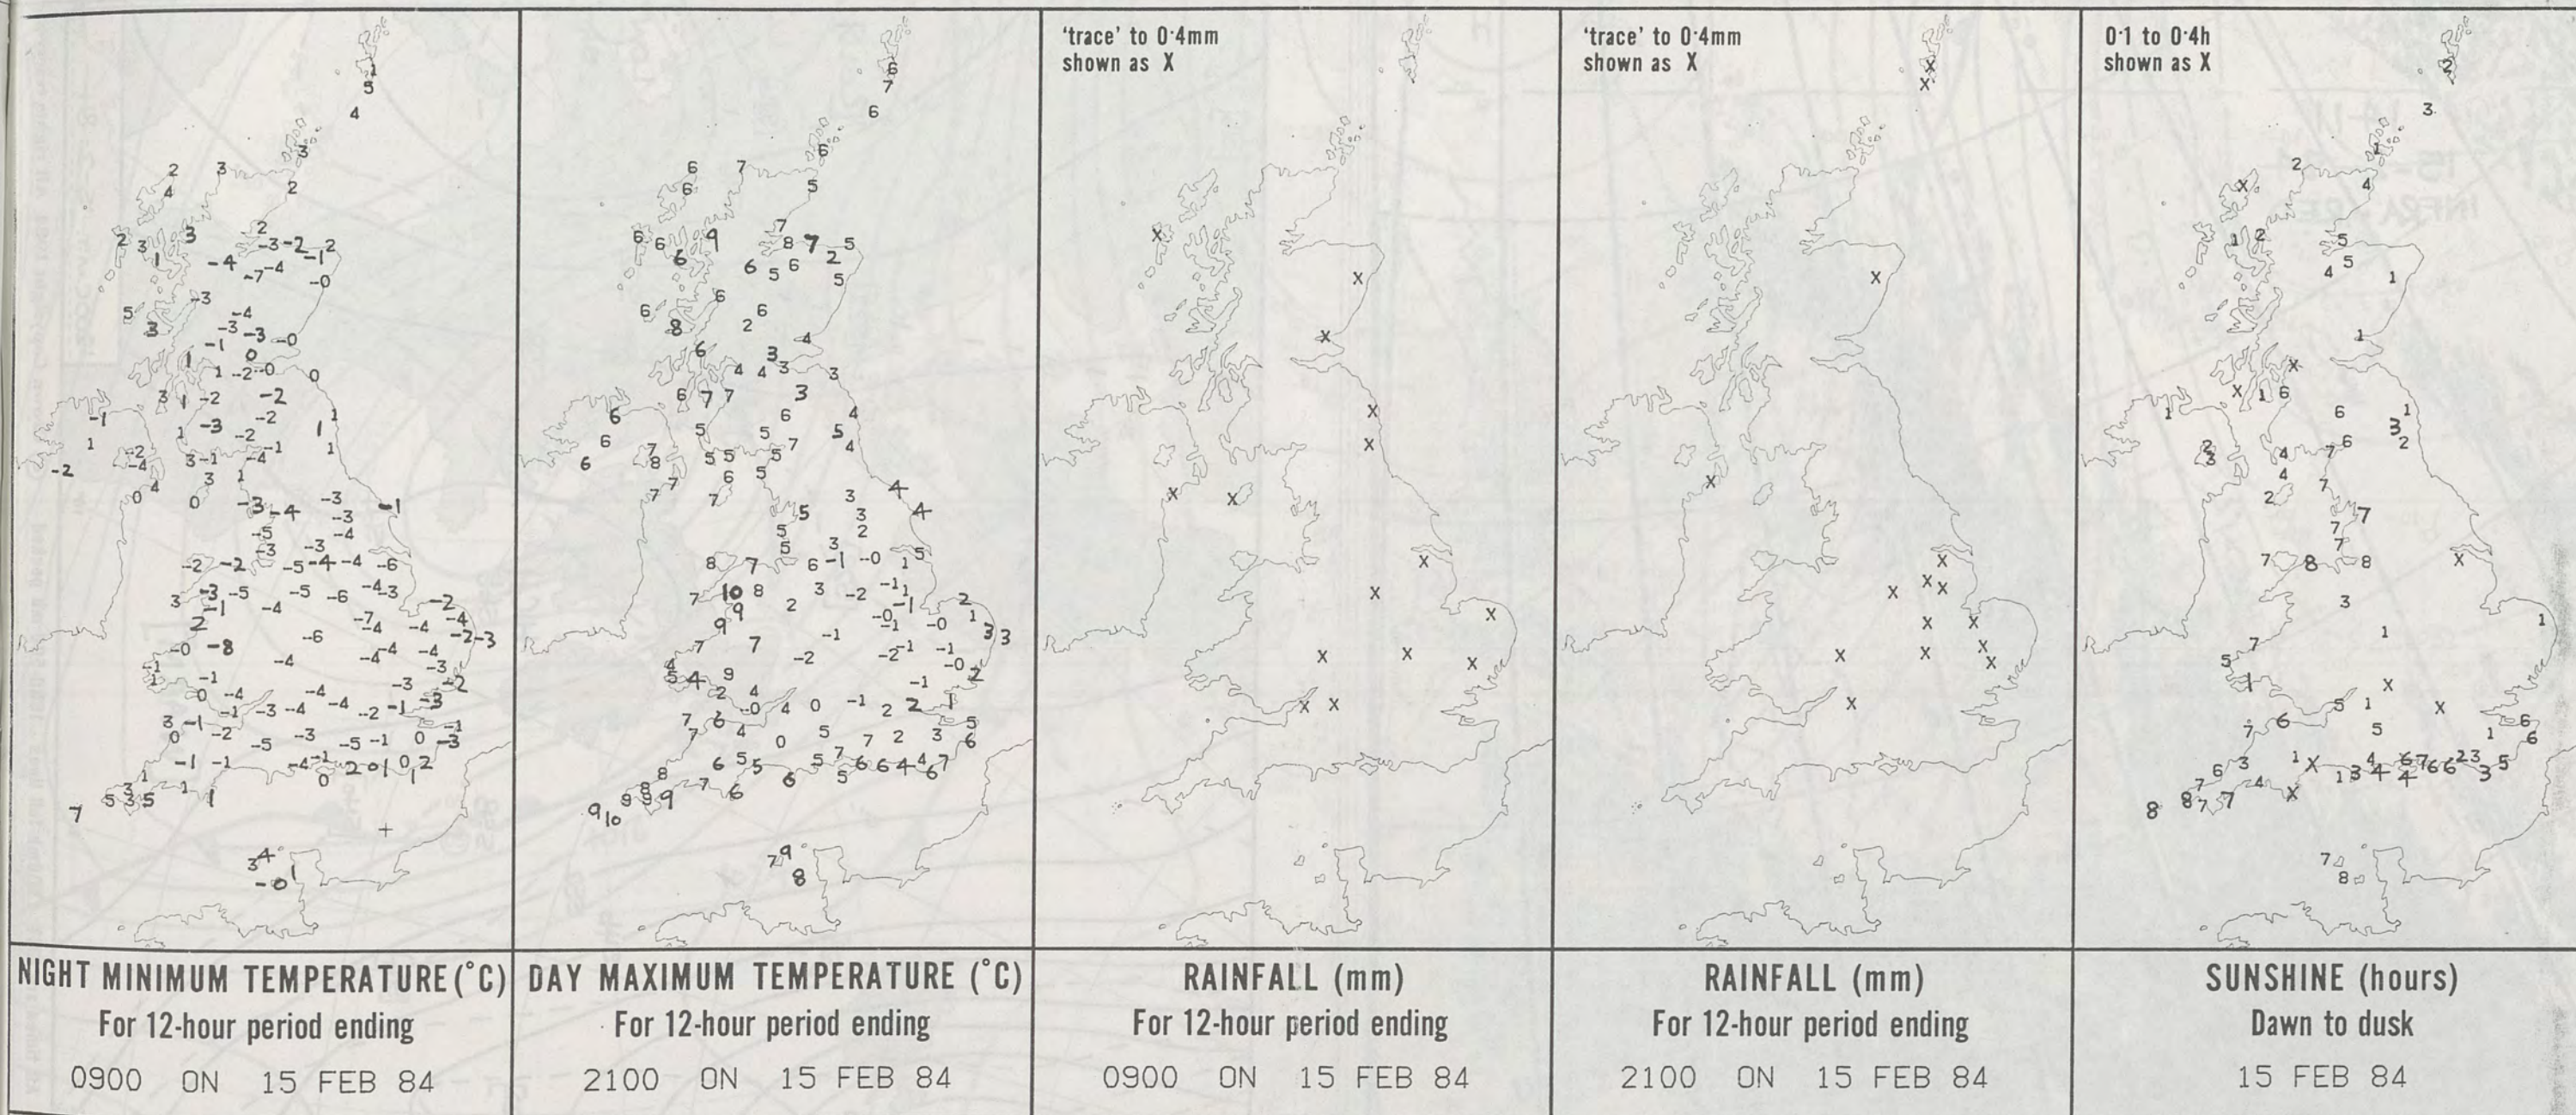

SIGNIFICANT WEATHER CHARTS

1800

This map shows the British Isles in 1800. The locations of 30 stations are marked with vertical bars. The stations are distributed across the British Isles, with a higher concentration in the central and eastern regions of Great Britain. The map includes the outlines of the British Isles, including Great Britain, Ireland, and the surrounding waters.

2400

A map of the British Isles (Great Britain and Ireland) showing the distribution of the 'E' rune. The map is marked with the 'E' symbol (three horizontal lines) at various locations. The symbols are concentrated in the central and eastern parts of England, with a few scattered in the north and south. There are also symbols in Wales and Ireland. The map is a simple outline of the landmasses with no internal geographical features.

THURSDAY
16 FEBRUARY 1984

SUMMARY
OF
BRITISH WEATHER

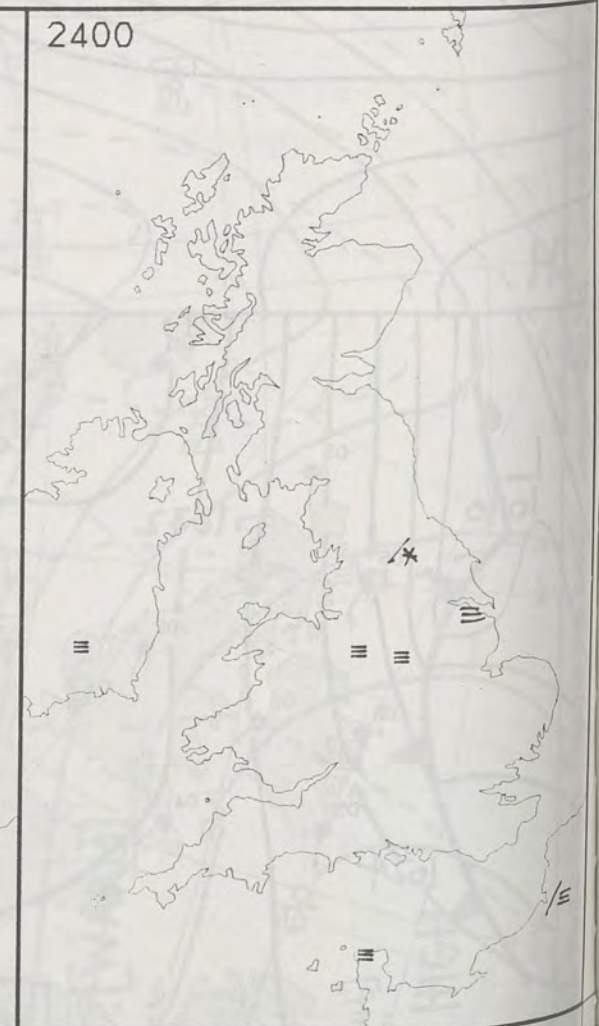

Most places were cloudy throughout, the only sunshine during the day being restricted to a few northern areas - especially the Outer Hebrides. Some rain and drizzle moved across Scotland and Northern Ireland during the day and affected parts of Wales and northern England in the evening. Generally amounts of rain were very small, but the rain was rather heavier and more persistent for a time in the Western Islands and highlands of Scotland.

PLOTTED SURFACE OBSERVATIONS

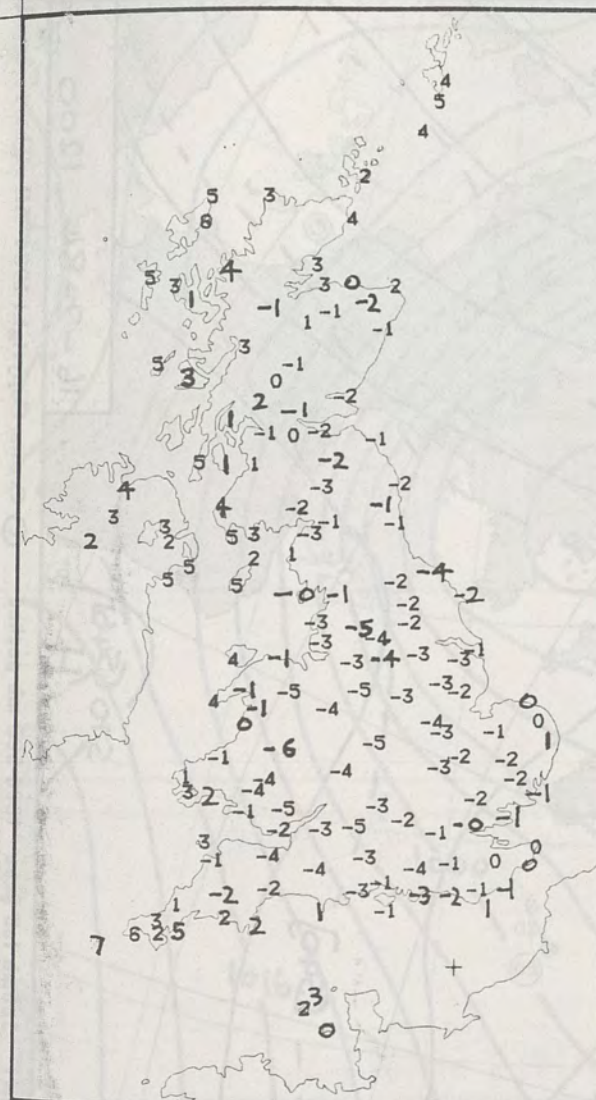

There was still some fog at first in parts of England, Wales and Scotland. Generally the fog soon lifted and only affected some hilly areas during the day. Many places, though, stayed misty. (Temperatures were around normal in most northern and western districts). Elsewhere it was a cold day - very cold over much of central England.

FRIDAY
17 FEBRUARY 1984SUMMARY
OF
BRITISH WEATHER

Overnight much of the United Kingdom was cloudy and fairly dry. A little rain fell in Scotland, Northern Ireland and parts of the north and west of England and Wales. It was a cold night in central and eastern regions of England with frost in places. It was also a misty night with a few fog patches in the south and east of England. By the morning some clearer weather had spread into northwest Scotland and any rain, which was light, was confined mainly to southern Scotland.

During the day, apart from a few spots of rain in northern and central regions, England and Wales were dry but misty. Some hazy sunshine was reported but it was still rather cold in parts of the east and southeast, but southwest England became quite mild. Elsewhere temperatures were not far from normal.

Scotland and Northern Ireland were mostly mild and stayed fairly cloudy for a good deal of the day with a little rain in places.

By mid evening over the country as a whole it was mostly dry. Clear skies over southern regions of England and Wales lead to some frost again in places and also some mist and fog patches.

SATURDAY
18 FEBRUARY 1984

SUMMARY
OF
BRITISH WEATHER

Overnight England and Wales were dry with mainly clear skies leading to the formation of fog patches. These were mainly in central and eastern England and later in the night some became quite thick and freezing as a widespread frost developed in many regions.

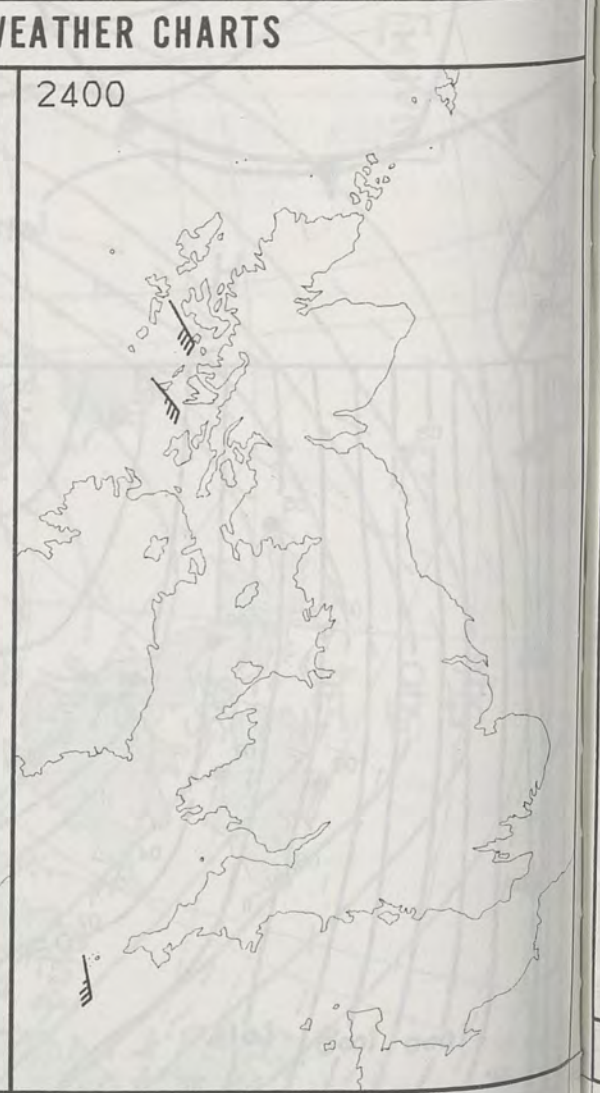

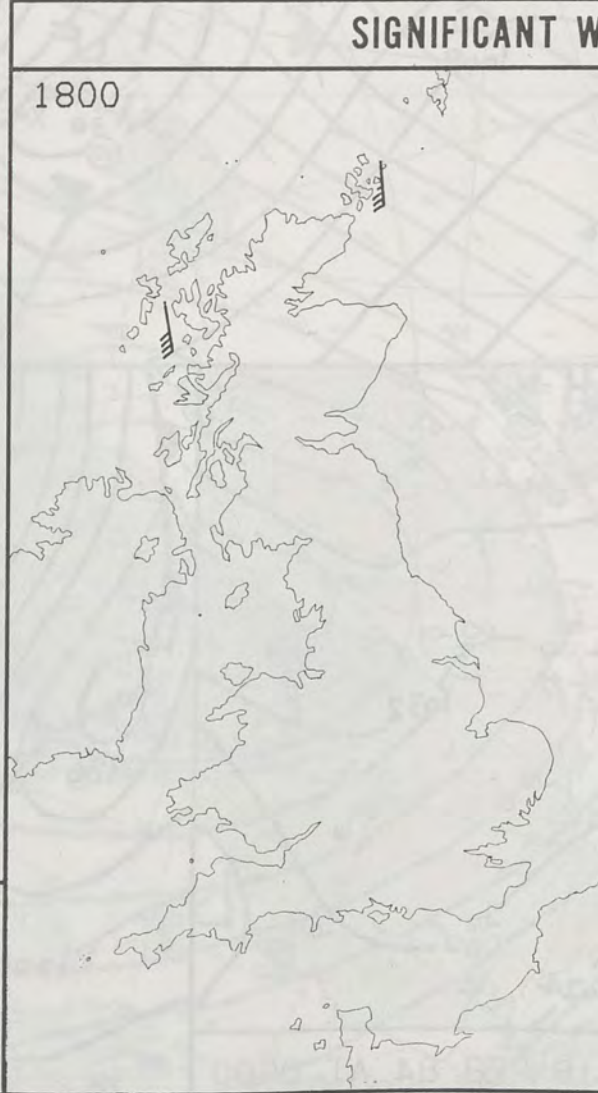

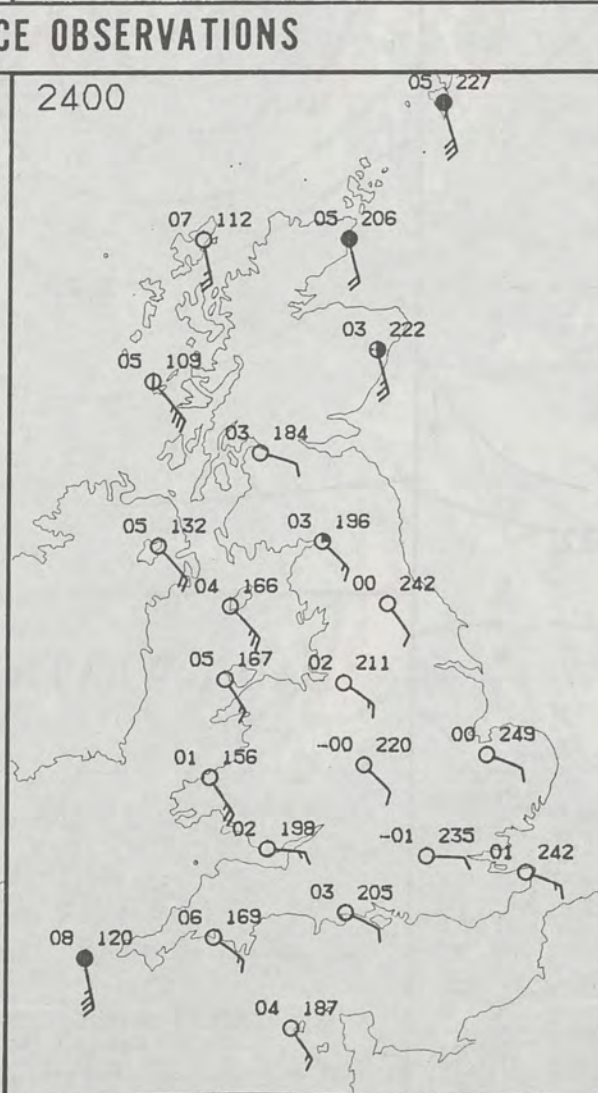

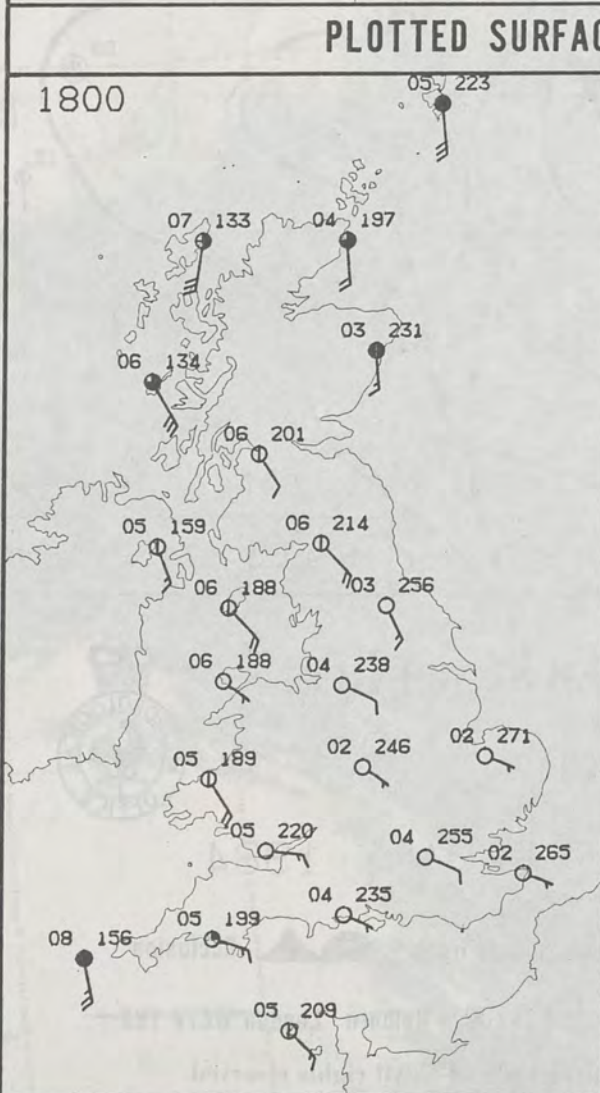

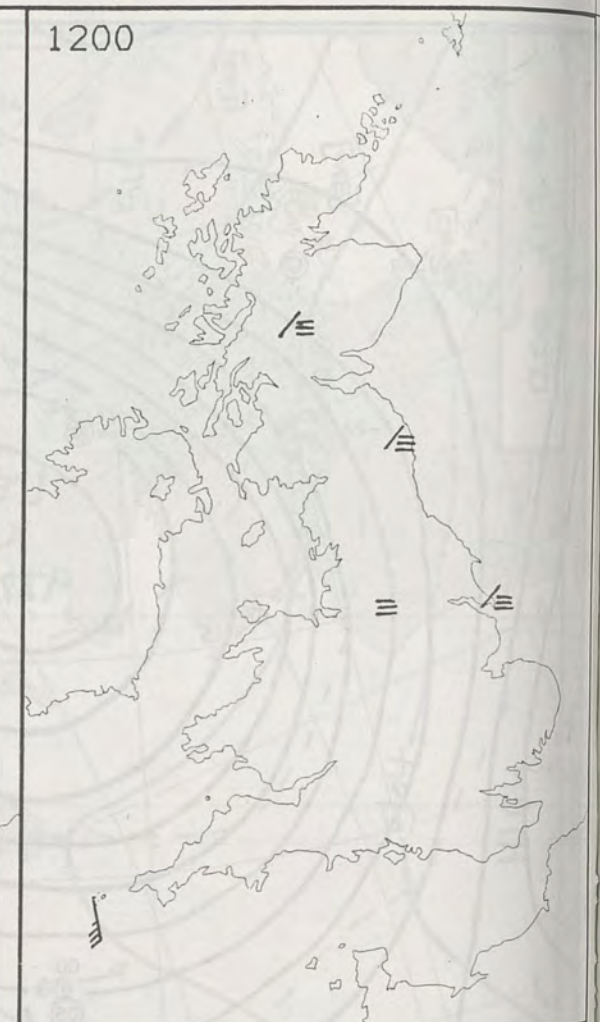

Scotland and Northern Ireland were rather cloudy but largely dry, with just a little rain in a few places.

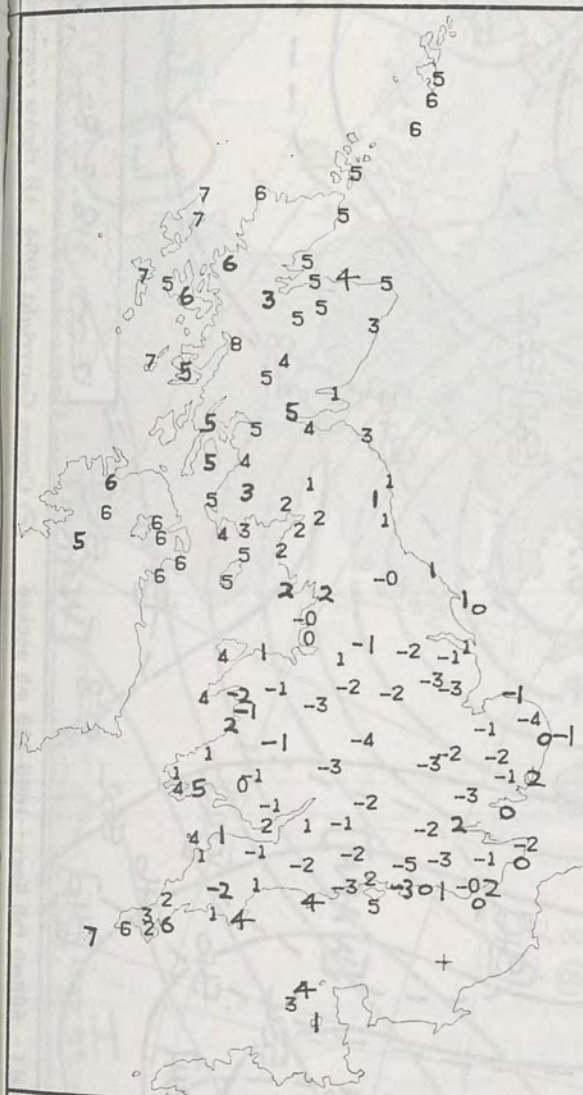

During the day, England and Wales had a good deal of sunny weather after the fog had cleared fairly quickly during the morning. Scotland and Northern Ireland were dry and rather cloudy at first but sunny spells developed with quite a lot of sunshine by afternoon, particularly in central and eastern regions of Scotland.

In the north and west of Britain it was on the mild side for mid-February but it was still rather cold over the rest of Britain. In the north and west it was very windy at times.

SUNDAY
19 FEBRUARY 1984

SUMMARY OF BRITISH WEATHER

Most places had a dry and frosty night, but by morning it was raining in parts of Cornwall, Dyfed and Northern Ireland.

During the day the rain spread very slowly eastwards, reaching the Channel Islands, much of southwest England, Wales, Northern Ireland and the Western Isles of Scotland. In many places the rain turned to sleet or snow with quite heavy snow for a time in Northern Ireland, Wales and the moors of southwest England.

Over much of England and Scotland, however, it was a sunny day, although some places near the east coasts of both England and Scotland and the Northern Isles were cloudy.

It was a cold day nearly everywhere.

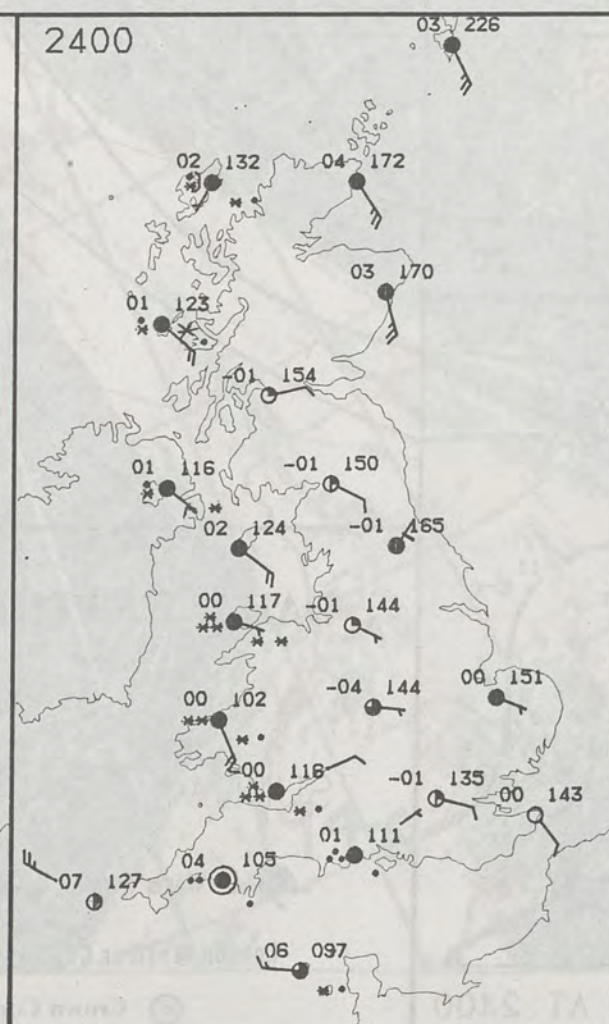

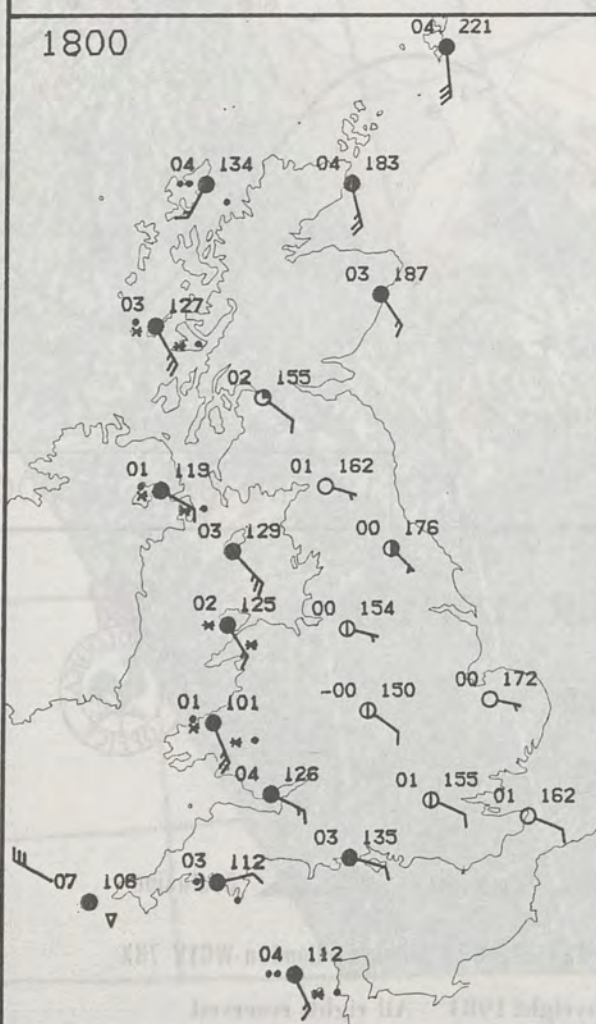

The southeasterly wind reached gale or severe gale force in the west and north.

PLOTTED SURFACE OBSERVATIONS

MONDAY
20 FEBRUARY 1984

SUMMARY OF BRITISH WEATHER

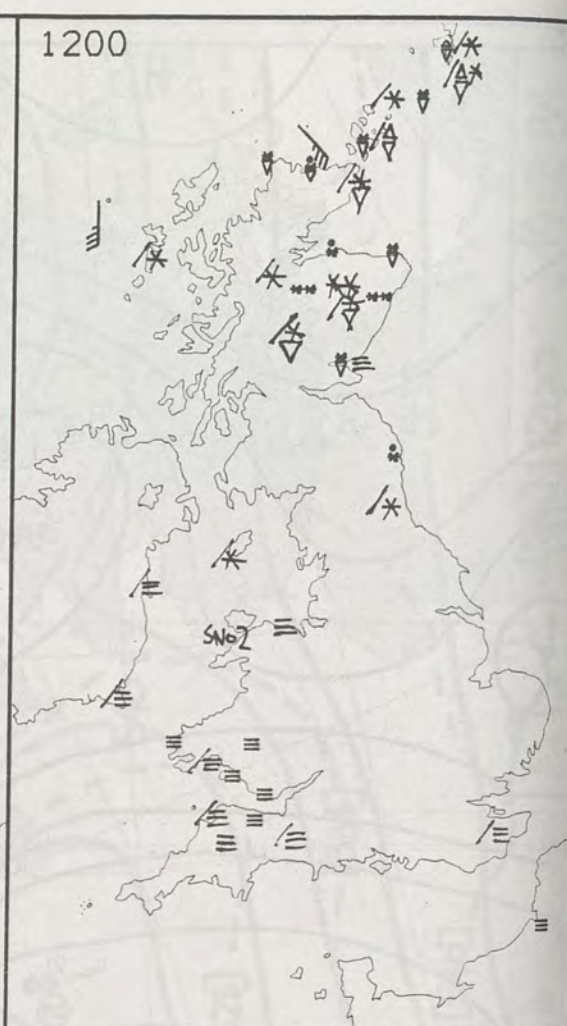

There was snow overnight in Northern Ireland, Wales and southwest England. Much of England and Scotland had a frost. In eastern Scotland and the Western and Northern Isles there were some outbreaks of snow. During the day there were a few snow showers in northern and eastern Scotland, but most places in Scotland were dry during daylight hours. There was some heavy snow in parts of southern Scotland in the evening.

Northern Ireland and much of England and Wales had a dry morning and eastern England stayed dry during the afternoon with some sunshine, but rain reached Cornwall and Dyfed around midday and then spread on northwards and eastwards during the afternoon and evening. The rain turned to sleet or snow in many places, with heavy snow in northern England for a while in the evening.

Most of the UK away from the southwest and extreme south had a cold day. It became windy in the west and north with a gust to 66 knots at Malin Head in the evening.

TUESDAY
21 FEBRUARY 1984SUMMARY
OF
BRITISH WEATHER

A mixture of rain, sleet and snow continued to move northward across northern Britain during the night with milder showery weather following.

Over most of England, Wales and Northern Ireland there were clear periods overnight, but showers too, especially in the west and south. In the far north of England there was sleet and snow at first, the snow mainly on hills, but there was a temporary covering on low ground. During the day there was a good deal of dry, fairly sunny weather in eastern England, elsewhere there were frequent showers.

In Scotland sleet and snow moved north overnight, it turned to rain on low ground and died out in most places in the morning but in the northeast and Northern Isles there was rain or sleet at times throughout the day. Northwest Scotland stayed mainly dry. In southern Scotland many places had a mainly dry morning but there were showers or longer outbreaks of rain later.

Temperatures were near or a little above normal.

The wind reached gale force in the north and west with a gust to 60 knots at Round Island in the Isles of Scilly around 9 am.

PLOTTED SURFACE OBSERVATIONS

WEDNESDAY
22 FEBRUARY 1984

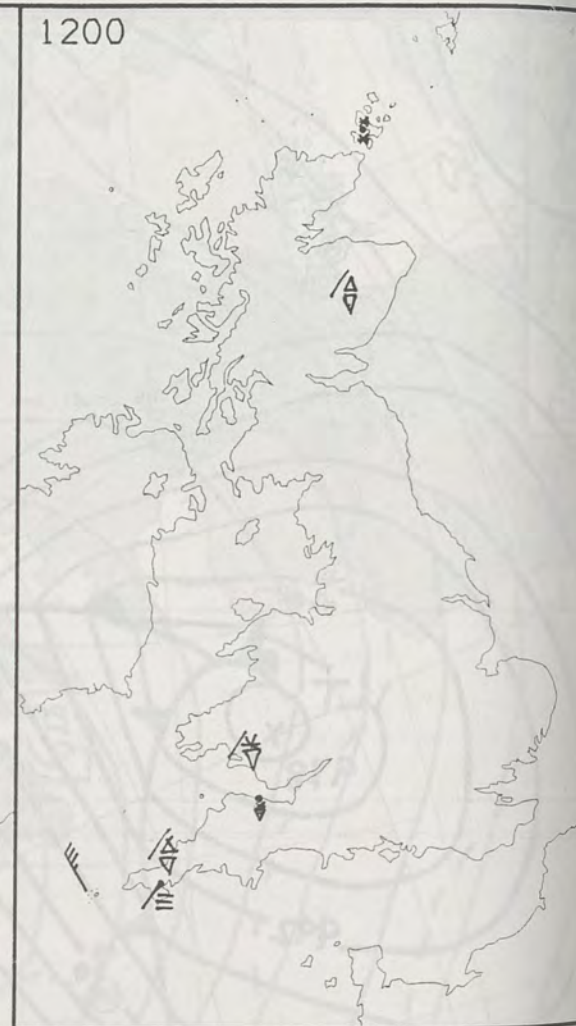

SUMMARY OF BRITISH WEATHER

Most regions remained cloudy with showers or longer outbreaks of rain. The rain was most persistent in central and southeast England. In the Channel Islands there were several hail showers and isolated thunderstorms. In the extreme east of England showers were light and isolated, parts of East Anglia and Lincolnshire and East Yorkshire had a dry, fairly bright day. In southwest England there were sunny periods between the showers. In western Scotland it was a mainly dry day with sunny periods.

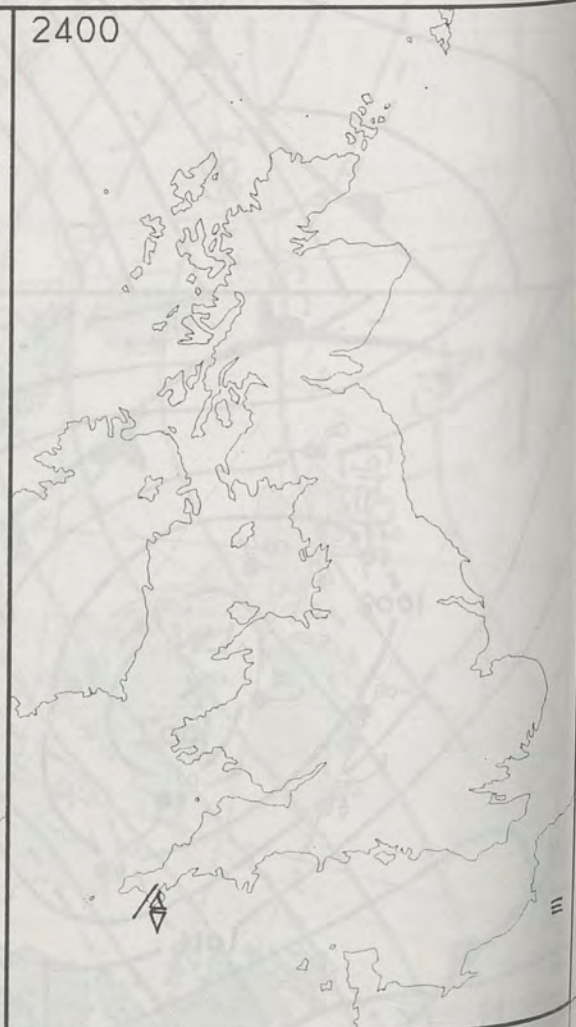

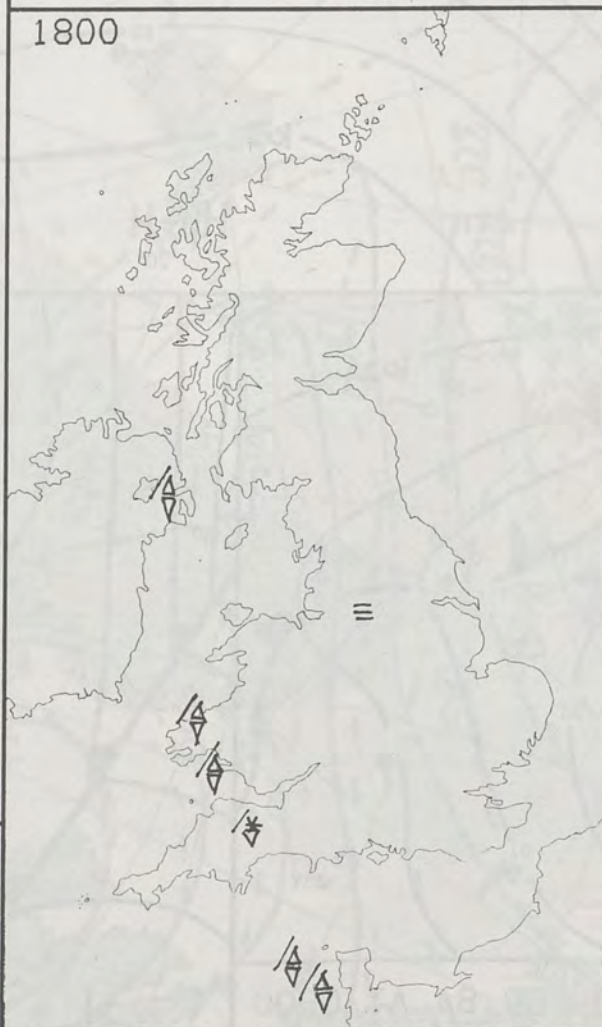

Temperatures were near normal in most regions but in southeast England it was rather cold.

23 FEBRUARY 1984

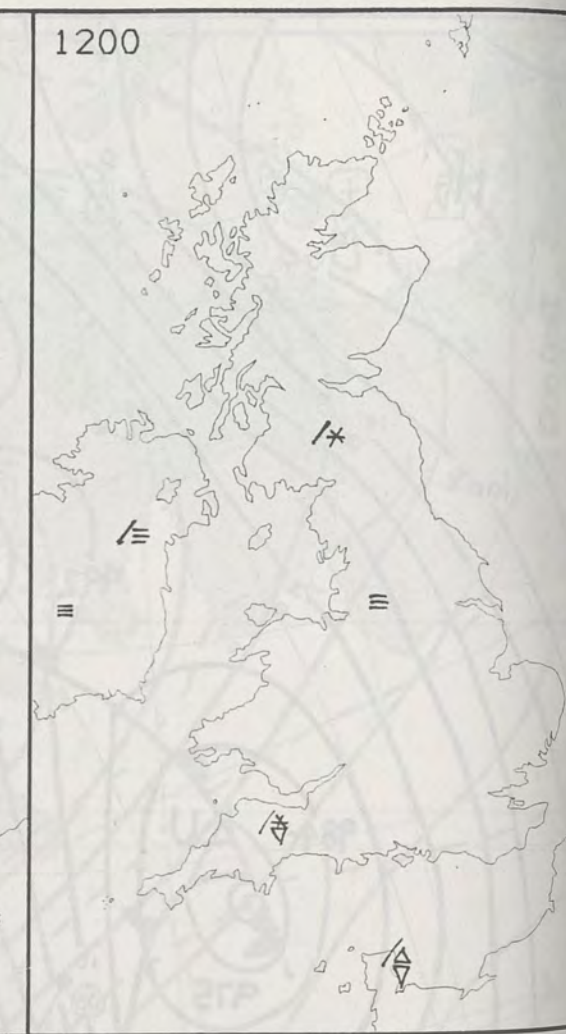

SUMMARY
OF
BRITISH WEATHER

Overnight many areas were cloudy and there was a little rain and drizzle in some central and eastern areas of England. Most northern and western parts of the British Isles however were mainly dry with clear intervals and in parts of western Scotland and the central Highlands there was a slight frost. Many districts had another cloudy day and in central and eastern areas of England with the northeasterly winds it was a cold day. Remaining areas of the UK had temperatures near or rather below normal. Many places were mostly dry but in central and eastern England there was again a little rain and drizzle. Some western areas had the brightest weather and parts of the southwest had sunny spells. Later on though cloudier weather spread into the northwest and there was some rain in western Scotland during the evening.

FRIDAY
24 FEBRUARY 1984SUMMARY
OF
BRITISH WEATHER

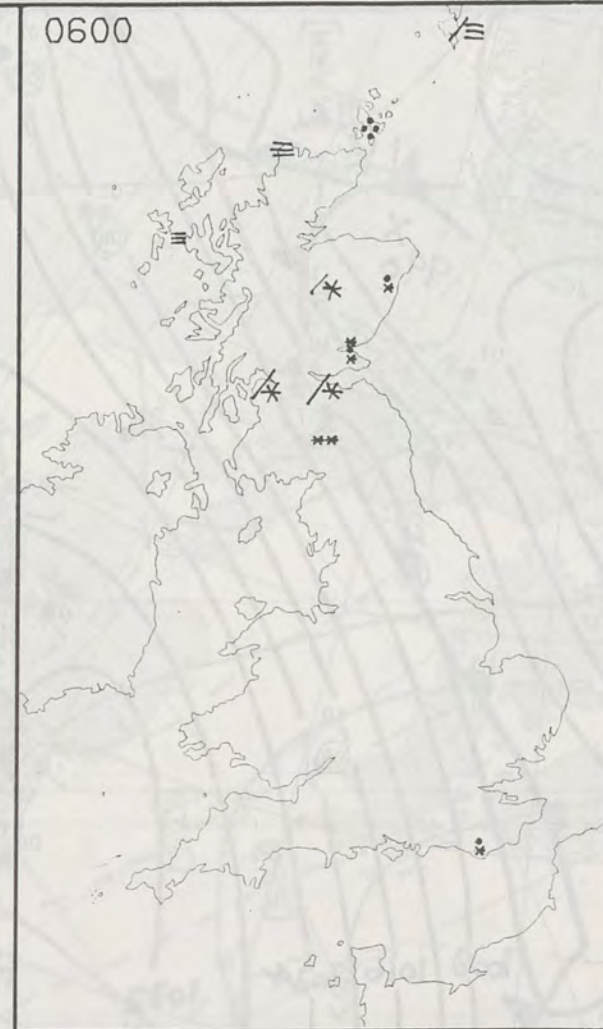

Apart from a few light rain or sleet showers, chiefly on southeastern coasts, most places in England and Wales had a dry night. There was a slight frost in some inland districts. Most of Northern Ireland and Scotland however had some rain, heavy at times in parts of the north and west. Some eastern regions of Scotland had sleet for a time with snow on the mountains.

During the day the southern half of England and Wales remained mostly dry but mainly cloudy although there were some bright or sunny intervals near southwestern coasts. Eastern counties of England were again cold, remaining areas of England and Wales were rather cold. North Wales and northern England after a mostly dry morning, had some rain and drizzle in places later. Scotland and Northern Ireland remained cloudy and misty in places with rain and drizzle however temperatures were near normal. Western parts did become drier by evening.

MONDAY
27 FEBRUARY 1984

SUMMARY
OF
BRITISH WEATHER

Overnight England and Wales were cloudy and misty with outbreaks of light rain and drizzle in many places. It was a cold night with breezy northeasterly winds over east and southeast England.

During the night Scotland and Northern Ireland stayed largely dry and mainly cloudy, but there was a little drizzle in the north of Scotland. A slight frost was reported in parts of central and southern Scotland later in the night where some breaks in the cloud occurred.

During the day, much of England and Wales stayed cold, cloudy and misty with some drizzle, this was mainly in central and eastern England. However, some parts of West Wales, northwest and southwest England had some sunny spells, particularly places sheltered from the northeasterly winds.

Most of Scotland had a fairly cloudy day but mainly dry, although it was quite sunny in parts of southwest Scotland. Northern Ireland was dry in most districts with long sunny spells.

1200

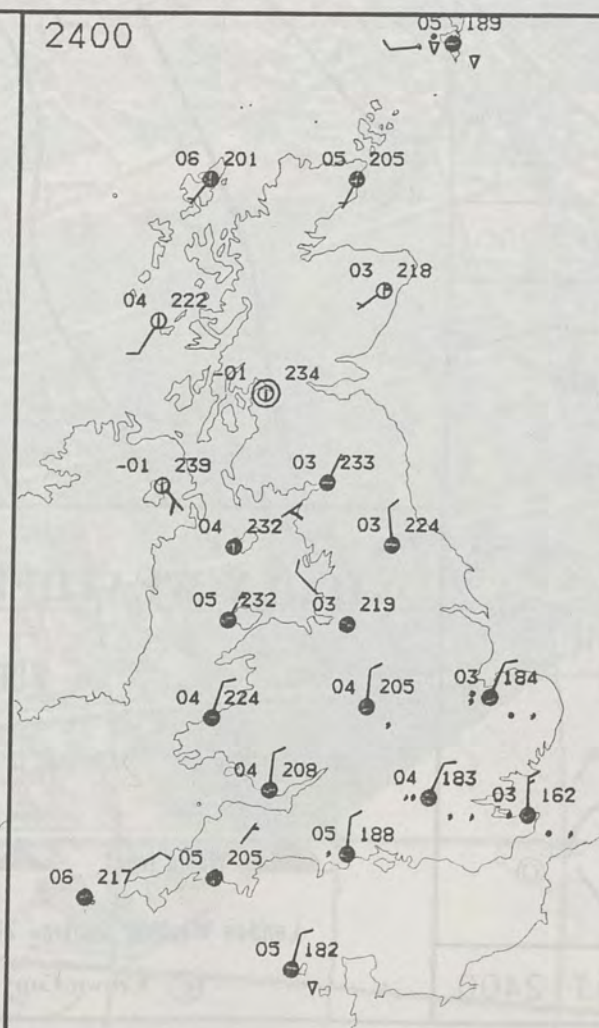

PLOTTED SURFACE OBSERVATIONS

1800

2400

During the day the drizzle and misty weather in central and eastern England gradually cleared away from most places by late evening. A little drizzle remained in southeast and central southern counties in the late evening. Some sunshine developed in the north and northwest of England and Wales.

Scotland and Northern Ireland started out fairly dry and bright but later in the day cloud thickened in the north and northwest with outbreaks of rain in places.

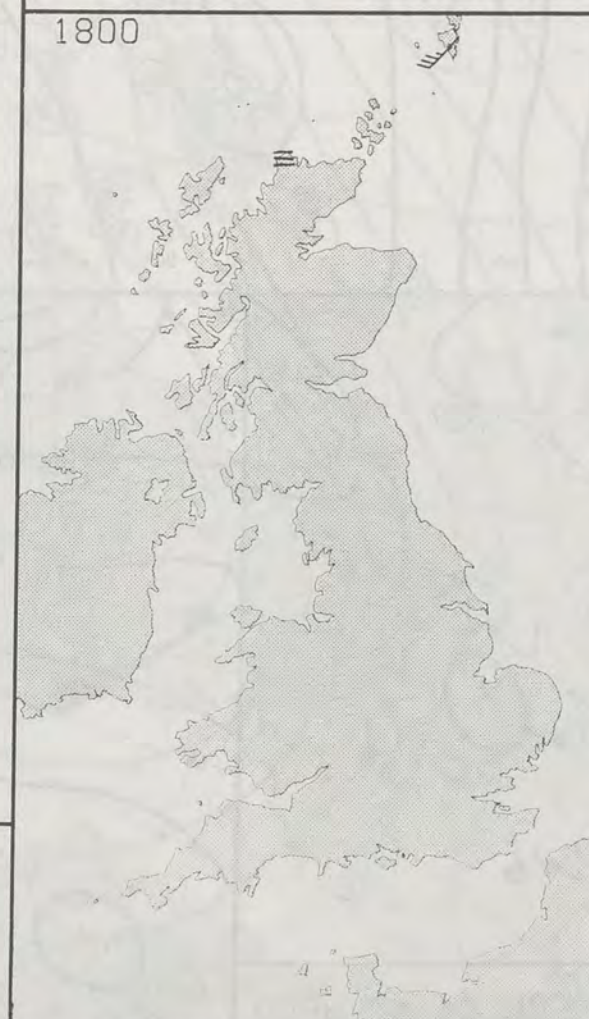

England and Wales away from the extreme southwest had a cold day, elsewhere in Northern Ireland and Scotland temperatures were near normal, even mild in Grampian and around the Moray Firth.

WEDNESDAY
29 FEBRUARY 1984SUMMARY
OF
BRITISH WEATHER

Scotland was generally cloudy with a period of rain before dawn, a few scattered light showers during the day and a further period of rain during the evening. In Shetland rain starting at midday turned to snow during the evening.

In Northern Ireland and northern England, early rain and drizzle died out by mid-morning, the day becoming dry with some sunshine.

All of the northern areas of Britain, with the exception of Shetland, were mild - in some areas, very mild.

Wales, central and southern areas of England were cloudy generally with short sunny intervals in sheltered districts but some occasional drizzle and hill fog patches chiefly in the west.

It was mostly rather cold in southern areas of Britain.
