SIGNIFICANT WEATHER

0600 GMT 01 JANUARY 2006	SIG WEATHER	1200 GMT 01 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Sunday 01 January 2006.</p> <p>Northern Ireland had a cloudy night with some light rain at times. There was some steady rain over northeast Scotland and patchy rain over other eastern and southern parts. There were some clear periods over parts of southeast England and East Anglia early in the night, but thicker cloud and some rain already over much of England and Wales spread east.</p> <p>Northern Ireland had a generally cloudy day with a little light rain at times. Cloud was variable over Scotland, with the Northern Isles, southern and western parts having sunny periods. Northeastern parts were generally cloudy with some outbreaks of rain and there were some showers over western coasts.</p> <p>England and Wales started cloudy with some outbreaks of rain chiefly in eastern England, Wales and parts of the west. By afternoon the cloud from northwest England to the Midlands and also in south Wales became more broken.</p> <p>The rain gradually eased but by late evening there were still some outbreaks from Yorkshire to Kent and over parts of Wales. Temperatures were mostly near normal. It was locally mild in western Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 02 JANUARY 2006	SIG WEATHER	1200 GMT 02 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Monday 02 January 2006.</p> <p>Across Scotland and Northern Ireland cloud cover varied through the night. Patchy mist developed with some dense fog patches, particularly through the Clyde valley. Later in the night patchy rain reached the Outer Hebrides. For Lincolnshire, East Anglia and southeast England it was a cloudy night with some light showers. A few showers also fed across Wales and southwest England. For the rest of England it was mostly dry with clear spells and patchy fog and frost.</p> <p>Eastern Scotland had some sunny spells but across the rest of Scotland and Northern Ireland it was rather cloudy day with some stubborn fog patches. The rain across the Outer Hebrides became more persistent through the afternoon and spread into western fringes of mainland Scotland and Northern Ireland. The rain continued to spread eastwards across Scotland and Northern Ireland during the evening. For England and Wales it was a rather cloudy day but some brighter spells developed and the cloud broke across East Anglia to give some long sunny periods.</p> <p>It was mild across northwest Scotland, parts of Northern Ireland and southwest England but temperatures were normal elsewhere.</p>

SIGNIFICANT WEATHER

0600 GMT 03 JANUARY 2006 SIG WEATHER	1200 GMT 03 JANUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Tuesday 03 January 2006.</p> <p>It was a mostly cloudy night across the UK. A band of rain covering much of Scotland and northwest England gradually sank southeastwards, fragmenting as it did so, and was in a line from northeast to southwest England by the end of the night. Wales and the Midlands saw light rain but central southern and southeast England together with East Anglia remained dry. Late in the night clear spells developed across Northern Ireland, central and northern Scotland.</p> <p>To the north of a line from Blackpool to York, the day was bright with spells of hazy sunshine. Most places were dry too, although there were isolated light showers across Scotland and these fell as snow over the mountains. Across the southern half of the UK it was cloudy. Most places had light rain or drizzle, it was generally misty and low cloud covered hills in fog. During the evening the rain and drizzle became confined to southernmost counties of England and across Northern Ireland, northern England and Scotland a widespread frost developed.</p> <p>Daytime temperatures were in the mild category in the south and near normal in the north.</p>

SIGNIFICANT WEATHER

0600 GMT 05 JANUARY 2006	SIG WEATHER	1200 GMT 05 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Thursday 05 January 2006.</p> <p>Overnight much of the UK was cloudy but dry. Patchy light rain, drizzle and sleet moved west across East Anglia and then northwest towards northwest England. The odd snow flurry affected parts of central southern England, but these had mostly turned to rain or sleet by dawn. During the morning there was a good deal of cloud across the UK giving outbreaks of light rain, sleet or snow in places, but accumulations, if any, were negligible. Some places were dry and bright with sunny spells at times, and the best of the sunshine was over the Channel Islands with almost 7 hours recorded at Jersey. Parts of north Wales were also fairly sunny. The afternoon saw further outbreaks of light rain, sleet or snow, and showers over eastern Scotland became more frequent. Snow showers also affected parts of Dartmoor giving slight accumulations there. Strong south to southeasterly winds affected northwest Scotland. There was little change during the evening.</p> <p>Temperatures were generally in the rather cold or cold categories.</p>
1800 GMT 05 JANUARY 2006	SIG WEATHER	0000 GMT 06 JANUARY 2006	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 8.3 Scilly: St Marys Air, Isles Of Scilly</p> <p>Lowest Maximum: 1.0 Strathallan Airfield, Perthshire (In Taysi)</p> <p>Lowest Minimum: -6.7 Aboyne No 2, Aberdeenshire</p> <p>Lowest Grass Minimum: -8.4 Strathallan Airfield, Perthshire (In Tayside)</p> <p>Most Rain: 5.4 Kirkwall, Orkney</p> <p>Most Sun: 7.1 Jersey: Airport, Jersey</p>

SIGNIFICANT WEATHER

0600 GMT 06 JANUARY 2006	SIG WEATHER	1200 GMT 06 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Friday 06 January 2006.</p> <p>Overnight most parts of the UK were covered by a blanket of cloud. Occasionally wintry showers affected some areas of eastern England and northeastern Scotland, and some drifted close to Dartmoor and south Cornwall. A few spots of light rain, sleet and snow were reported elsewhere, chiefly central and southern parts of the UK.</p> <p>During the morning the wintry showers near the south coast gradually moved away to the south leaving most places rather cloudy. Showers persisted across parts of northeast Scotland and eastern England. Patchy light rain affected some areas in Northern Ireland, and some precipitation (mainly rain) also formed over northern England. A few breaks developed in the cloud giving sunny spells across parts of Kent and Essex, and later southwest England. There were further showers over northeast Scotland in the afternoon, and spots of light rain or wintry precipitation elsewhere, the latter chiefly near The Borders. There was little overall change in the evening. Temperatures were mostly in the rather cold category, even in the sunnier parts of the southeast.</p>

SIGNIFICANT WEATHER

0600 GMT 07 JANUARY 2006	SIG WEATHER	1200 GMT 07 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Saturday 07 January 2006.</p> <p>It was rather cloudy overnight, with light rain affecting southern and eastern counties of England, as well as eastern Scotland. Elsewhere it was mostly dry, and where any clear slots developed, patchy fog and frost formed. Later in the night more persistent rain and sleet fed into the south and southeast of England, with snow over the hills.</p> <p>The rain and snow in the southeast edged slowly northwest across the Midlands during the morning and then into Wales during the afternoon, giving locally heavy snowfalls over the Welsh hills. Showery rain fed across southwest England through the day, and the occasional light rain also continued to affect east facing coastal areas elsewhere. Apart from the odd bright interval, chiefly in the west, it remained generally cloudy.</p> <p>During the evening, rain and snow petered out across Wales and southwest England. The odd patch of rain affected eastern Scotland and Northern Ireland, but it was largely dry elsewhere. Local fog and frost reformed under any cloud breaks.</p> <p>Temperatures were mostly rather cold or cold, although near normal across parts of Scotland.</p>

SIGNIFICANT WEATHER

0600 GMT 08 JANUARY 2006	SIG WEATHER	1200 GMT 08 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Sunday 08 January 2006. Outbreaks of rain affected eastern parts of Scotland in the early hours, whilst most other parts were dry with some mist and fog patches, and patchy frost. There was, however, a line of showers running through the Irish Sea which fringed western coasts of the mainland, and eastern parts of Northern Ireland. By the morning some light rain was arriving on the English Channel coasts, most of England and Wales had become dry by this time, and rain in eastern Scotland was confined to Shetland. The rain in the south slowly expanded to affect other coastal counties with in addition, some sporadic outbreaks of light rain or drizzle developing over central parts of northern England.</p> <p>By midday the rain was turning to sleet and snow over the higher ground in the West Country and for most parts of England and Wales, save for the extreme west, it was a cold, grey and dismal day. Scotland and Northern Ireland were in general brighter with some sunshine. Temperatures were near average in coastal areas in the west and north but were cold otherwise.</p>

SIGNIFICANT WEATHER

0600 GMT 09 JANUARY 2006	SIG WEATHER	1200 GMT 09 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Monday 09 January 2006.</p> <p>For much of the night cloud cover varied across Scotland and Northern Ireland. This allowed a widespread and locally sharp frost to develop across inland parts. These frosty conditions and clearer spells also affected parts of northern England and north Wales. Across the rest of England and Wales it was generally a cloudy night. It was also rather murky with outbreaks of drizzle, mist and hill fog. Later in the night cloud breaks developed across East Anglia and Kent.</p> <p>During the day it became windy across the Northern Isles and northern Scotland. Rain, (preceded by snow over the mountains) also pushed southeast across Scotland and Northern Ireland, eventually reaching the northern fringes of England. Western parts of Scotland bore the brunt of the rain but more showery conditions reaches these parts later. For much of England and Wales it was another rather cloudy day. However, there were some brighter breaks and East Anglia and parts of southeast England enjoyed some sunny periods.</p> <p>It was rather cold across northern England, the Midlands and east Wales. Elsewhere, generally temperatures were close to normal but it was locally mild, particularly across the Western Isles.</p>

SIGNIFICANT WEATHER

0600 GMT 10 JANUARY 2006	SIG WEATHER	1200 GMT 10 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Tuesday 10 January 2006.</p> <p>Much of the UK had a cloudy, mild night. Thickening cloud layers produced occasional rain and drizzle across Northern Ireland, Wales, northwest England and southwest Scotland. The rain extended across the north Midlands, northeast England and southwest England by daybreak. At the same time, the rain became heavy and persistent over the higher ground of north Wales and northwest England. Scattered showers developed over the west and north of Scotland but central and eastern areas had some clear spells.</p> <p>Apart from some bright spells in Kent in the morning and over Guernsey during the afternoon, most places were cloudy or overcast during the day. Outbreaks of rain moved east or northeast which became prolonged and heavy over the hills. It was windy with strong or gale force south to southwest winds. Severe gales were recorded over exposed parts of northwest Scotland during the evening. Gusts of 67 knots and 63 knots were observed at South Uist Range and Stornoway respectively (both in the Outer Hebrides).</p> <p>The afternoon temperatures were near normal across East Anglia and southeast England. It was mild or very mild elsewhere but locally exceptionally mild in Scotland.</p>

0600 GMT 13 JANUARY 2006	SIG WEATHER	1200 GMT 13 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Friday 13 January 2006.</p> <p>Rain overnight affected Northern Ireland and western and northern parts of Scotland, with some heavy spells of rain over the Highlands. Patchy light rain spread to eastern Scotland late in the night. Elsewhere it remained mainly dry but cloudy. During the morning the rain cleared Northern Ireland but continued over central and southern Scotland. Outbreaks of rain also spread into western parts of Cornwall and west Wales. Through the afternoon the area of rain remained over western parts of the UK with further outbreaks affecting Northern Ireland. The rest of England and Wales made a mainly dry and cloudy day, although a few sunny intervals occurred along the English Channel coastline. During the evening the rain spread a little further west, covering most of Wales and the West Country, with some outbreaks over northeast England.</p> <p>It was a windy day for Northern Ireland and Scotland (at Drumalbin, South Lanarkshire — a gust of 52 knots at 0900 UTC). Temperatures ranged from very mild over Northern Ireland and western Scotland, to mild for Wales and northern England, to normal for southern and eastern England.</p>

SIGNIFICANT WEATHER

0600 GMT 14 JANUARY 2006	SIG WEATHER	1200 GMT 14 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Saturday 14 January 2006.</p> <p>The night started mostly cloudy across the UK, with a band of rain running northwards through western parts of England, across Wales and into central and eastern parts of Scotland. This nudged a touch further east overnight, some heavy pulses initially across western hills of England and Wales, but becoming lighter towards morning. Towards eastern parts of England it stayed mostly dry, a few clear intervals around, but across Northern Ireland and Western Scotland skies became mostly clear with a fairly widespread frost developing. During the day the band of rain continued to move east across England, with the rain becoming more drizzly as it did so and tending to fizzle out into the evening. Northern Ireland and Western Scotland had a cold but sunny start to the day, with sunnier skies extending to much of Scotland, Western England and Wales. The Southeast of the UK stayed cloudy through the evening with some patchy drizzle, whilst to the northwest strengthening southerly winds brought cloudier skies. Clearer skies in between saw patchy frost and fog forming. Daytime highs were mostly near average.</p>

SIGNIFICANT WEATHER

0600 GMT 17 JANUARY 2006 SIG WEATHER	1200 GMT 17 JANUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Tuesday 17 January 2006.</p> <p>Initially rain affected southern Scotland and much of southern and eastern England. During the night the rain across Scotland slipped southwards. At the same time a rash of showers developed and pushed southeast across northern Scotland. Across England the rain cleared leaving a legacy of low cloud and drizzle across Cornwall and a few pockets of rain elsewhere but generally the cloud began to break from the northwest. Across Wales and Northern Ireland cloud varied and, save for the odd shower, most parts had a dry night.</p> <p>Showers continued to plague the northern half of Scotland through the day with a few spreading to Northern Ireland and southwest Scotland. Across the Northern Isles and mountains the showers fell as hail, sleet and snow. Later in the day cloud and patchy drizzle spread eastwards across Northern Ireland. For much of England and Wales it was a dry day with brighter skies extending southeast but a few showers did affect western fringes.</p> <p>Temperatures ranged from rather cold across the Northern Isles and north of Scotland to mild across the Welsh marches and parts of southern England.</p>

DAILY CLIMATE DATA

The map displays the distribution of 19 bird species across the British Isles. Each species is identified by a number and a symbol: a solid circle, an open triangle, or an open square. The symbols are placed on the map to indicate the geographical range of each species. The map includes latitude and longitude lines, with latitude marked at 50, 55, and 60 degrees North, and longitude marked at 0, 10, 20, and 30 degrees West. A scale bar at the bottom indicates distances in kilometers (0, 100, 200 km) and miles (0, 100 miles).

The species and their symbols are as follows:

- 1 1001 (open triangle)
- 2 1001 (solid circle)
- 3 1003 (solid circle)
- 4 1003 (open triangle)
- 4 1004 (open triangle)
- 5 1006 (open triangle)
- 6 1005 (open triangle)
- 6 1006 (open triangle)
- 6 1006 (solid circle)
- 6 1008 (open triangle)
- 6 1010 (open triangle)
- 6 1012 (open triangle)
- 6 1013 (open triangle)
- 7 1008 (solid circle)
- 7 1010 (solid circle)
- 7 1012 (solid circle)
- 7 1012 (open triangle)
- 8 1004 (solid circle)
- 8 1006 (solid circle)
- 8 1008 (solid circle)
- 9 1015 (solid circle)
- 9 1015 (open triangle)
- 9 1015 (open triangle)
- 10 1006 (solid circle)
- 10 1011 (solid circle)
- 10 1012 (solid circle)
- 10 1013 (solid circle)
- 10 1016 (solid circle)

SURFACE REPORTS

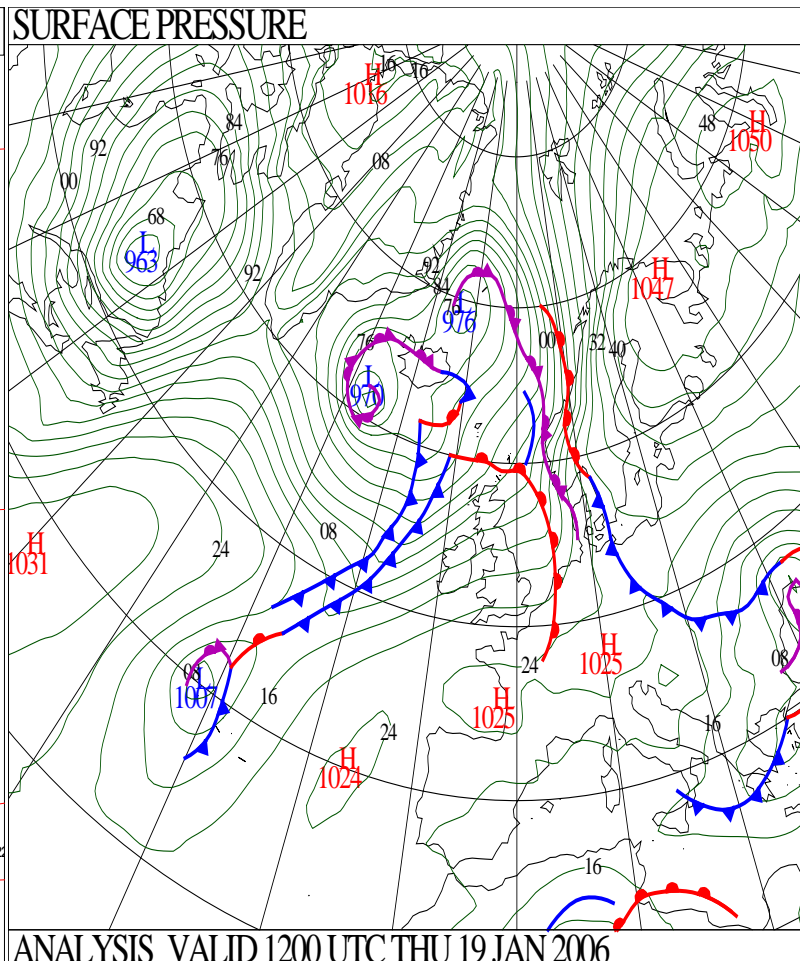

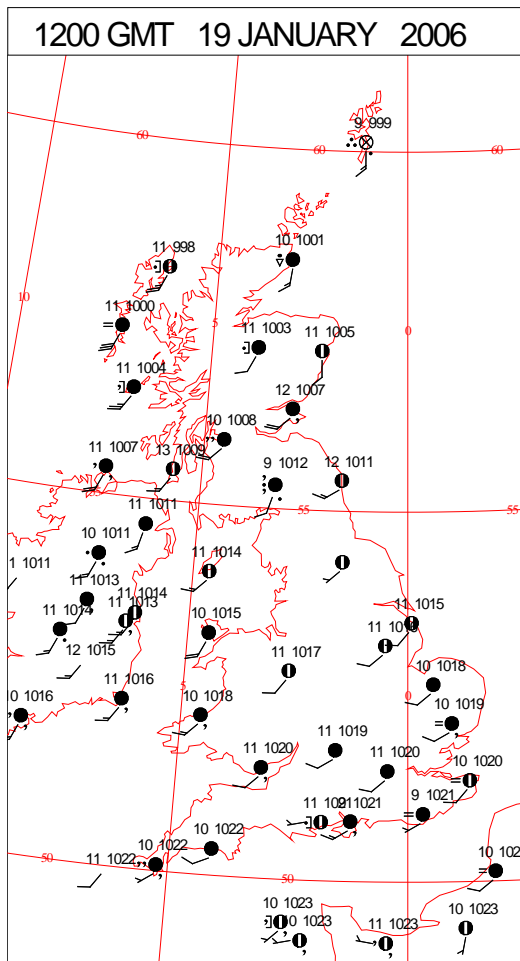

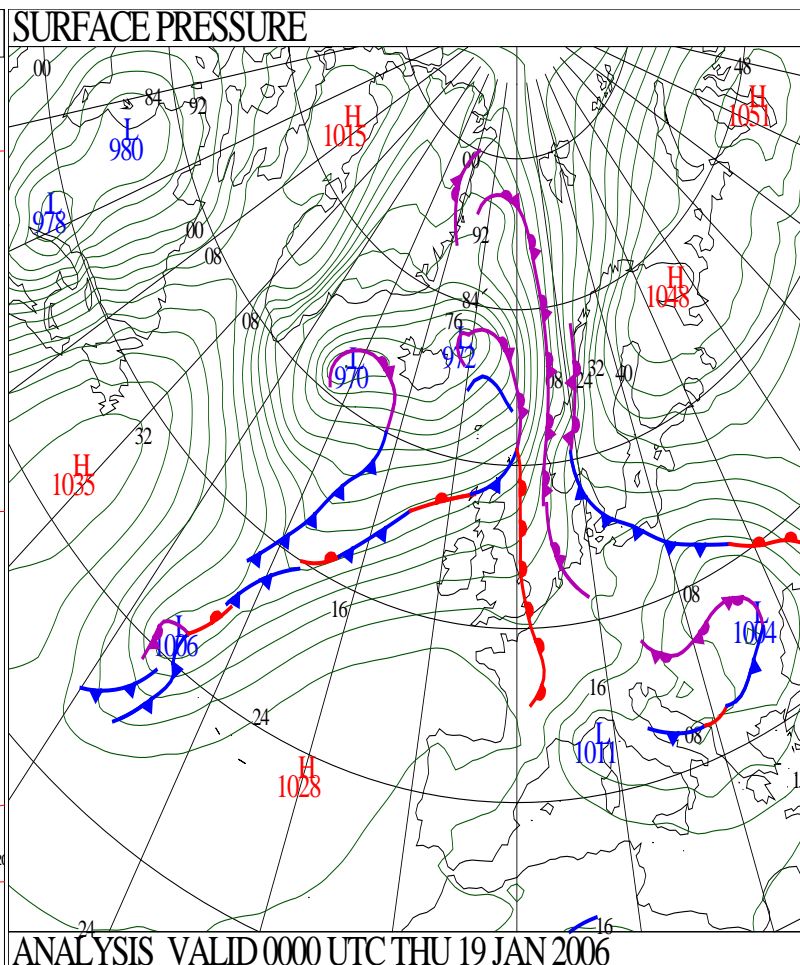

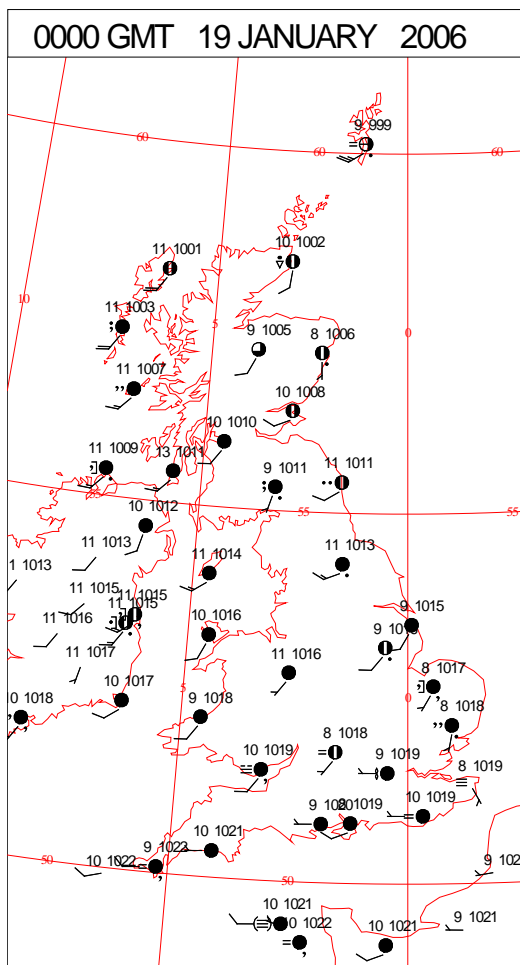

SIGNIFICANT WEATHER

0600 GMT 18 JANUARY 2006	SIG WEATHER	1200 GMT 18 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Wednesday 18 January 2006.</p> <p>All but the Northern Isles began Wednesday cloudy with some sporadic outbreaks of light rain or drizzle and increasingly misty conditions across the hills. The Northern Isles, and more particularly Shetland, had clear spells and some wintry showers. The morning saw a few breaks developing in the cloud, chiefly in places to the lee of high ground. For the majority of the British Isles it remained cloudy, and gradually the rain in the northwest became increasingly organised.</p> <p>By the early afternoon the rain had become persistent over western mainland Scotland, the Inner Hebrides and Co. Antrim. This rain then subsequently extended south and east by dusk to affect the Lake District and Northumbria and parts of eastern Scotland. Elsewhere in the south and east the cloud thinned sufficiently for a hour or two of sunshine but it remained rather cloudy in the main.</p> <p>The evening saw further pulses of heavy rain over the high ground in western Scotland and also across Shetland.</p> <p>Temperatures were mostly very mild but were near normal to mild on the east coast.</p>
1800 GMT 18 JANUARY 2006	SIG WEATHER	0000 GMT 19 JANUARY 2006	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 13.9 Great Malvern, Hereford & Worcester</p> <p>Lowest Maximum: 8.9 Wattisham, Suffolk 8.9 Coltishall, Norfolk 8.9 Walney Island, Cumbria</p> <p>Lowest Minimum: -2.3 Baltasound No 2, Shetland</p> <p>Lowest Grass Minimum: -5.6 Lerwick, Shetland</p> <p>Most Rain: 31.0 Aultbea No 2, Ross & Cromarty</p> <p>Most Sun: 2.2 Brize Norton, Oxfordshire</p>

SIGNIFICANT WEATHER

0600 GMT 19 JANUARY 2006	SIG WEATHER	1200 GMT 19 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Thursday 19 January 2006.</p> <p>Most parts of the United Kingdom were cloudy through the early hours with outbreaks of light rain in northeastern England and some more persistent rain fringing western Scotland. Towards the morning extensive low cloud spread across southern parts leading to mist and hill fog together with some patchy drizzle. Odd breaks in the cloud did allow temperatures to fall low enough for an isolated fog patch.</p> <p>Through the morning the southwest winds strengthened in northwestern districts and some cloud breaks developed to the lee of high ground, especially in northeast Scotland and northeast England. In general southern areas remained cloudy with a little patchy drizzle and local hill fog.</p> <p>It had become dry for a time in the late morning in western Scotland but through the afternoon the rain returned and became persistent and heavy early evening. Elsewhere across the country the status quo was maintained.</p> <p>Temperatures were especially mild in some parts of eastern Scotland and for many it was a mild day, however, where the low cloud was persistent in the south temperatures were near normal.</p>
1800 GMT 19 JANUARY 2006	SIG WEATHER	0000 GMT 20 JANUARY 2006	SIG WEATHER	<p>EXTREMES</p> <p>Highest Maximum: 13.9 Kinloss, Moray (In Grampian Region)</p> <p>Lowest Maximum: 8.7 Dunkeswell Aerodrome, Devon</p> <p>Lowest Minimum: 1.1 Aboyne No 2, Aberdeenshire</p> <p>Lowest Grass Minimum: 2.7 Benson, Oxfordshire</p> <p>Most Rain: 35.0 Aultbea No 2, Ross & Cromarty</p> <p>Most Sun: 0.1 Jersey: Airport, Jersey</p>

SIGNIFICANT WEATHER

0600 GMT 20 JANUARY 2006 SIG WEATHER	1200 GMT 20 JANUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Friday 20 January 2006.</p> <p>Rain over most of Northern Ireland and western Scotland at midnight moved southeast to clear all of Scotland and Northern Ireland before dawn. It was followed by frequent showers over western Scotland and more scattered showers over Northern Ireland and eastern Scotland. The rain continued southeast to be lying from the Humber to the Isles of Scilly by 0600 UTC, with a few scattered outbreaks ahead of it. In the west there were some heavier pulses of rain on the front and gusty winds and Capel Curig recorded a gust of 61 knots at 0100.</p> <p>Northern Ireland had a showery morning and then a drier afternoon. Western Scotland had frequent showers and over the southwest they merged for a while. Eastern areas had fewest showers while in The Highlands there was some snow. By evening the showers were mostly confined to the north.</p> <p>The rain cleared southeast England before midday. Most of England and Wales became sunny but there were some showers, chiefly over western coasts and northwest England, but these largely faded in the evening.</p> <p>Temperatures were mostly close to average.</p>

SIGNIFICANT WEATHER

0600 GMT 21 JANUARY 2006	SIG WEATHER	1200 GMT 21 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Saturday 21 January 2006. For most parts it was a dry night with just patchy cloud and largely clear skies. Northern Ireland and parts of Scotland saw a general increase in cloud through the night, and across the north of Scotland this proved thick enough to give a few light spots of rain. Elsewhere under the clear skies it turned fairly chilly with some patchy frost in places. There was some cloud for a time across Central Wales into the Midlands but this drifted south during the morning, gradually breaking up, and for most of England and Wales it was a dry and sunny day. Cloud was variable over Northern Ireland, but with some bright or sunny spells. There were some bright spells across Scotland too, or hazy sunshine, but overall skies were rather cloudy and this continued to give a few light pockets of rain across northern and western parts. After dark most parts remained dry with clear periods and patchy frost returning. Winds were mostly west to northwesterly, fresh to strong at times across the north. Highs were mostly just above average.</p>

SIGNIFICANT WEATHER

0600 GMT 22 JANUARY 2006	SIG WEATHER	1200 GMT 22 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Sunday 22 January 2006.</p> <p>It was a clear and frosty night across much of England and Wales. Under the clear skies fog patches formed and these became dense and freezing in some low-lying areas. Across East Anglia and Kent cloud drifted in from the North Sea and lifted the frost in places. It was less cold and mostly frost-free across Scotland, Northern Ireland and the far north of England under largely cloudy skies. Some patchy rain spread into the far northwest of the country by the end of the night.</p> <p>It remained cloudy across Scotland and Northern Ireland during the day. Outbreaks of rain became heavy and persistent across northwest Scotland and Lusa (Isle of Skye) was the wettest place in the country with 21.7 mm of rain. England and Wales had a generally brighter day. There was almost unbroken sunshine along the south coast and Weymouth recorded 6.7 hours of sunshine. However, it remained foggy and cold in a few places and the temperature at Credenhill (Herefordshire) only reached 2 °C (36 °F).</p> <p>Temperatures were mostly a little below normal across England and Wales but above normal across Scotland and Northern Ireland.</p>

SIGNIFICANT WEATHER

0600 GMT 24 JANUARY 2006	SIG WEATHER	1200 GMT 24 JANUARY 2006	SIG WEATHER	<p>Summary of UK Weather for Tuesday 24 January 2006.</p> <p>For much of Scotland and Northern Ireland it was a cloudy night, with outbreaks of rain plaguing the Northern Isles and north of Scotland. With the exception of high cloud, skies were largely clear across East Anglia and Southeast England with these clearer skies extending slowly north and west into northeast England, the Midlands and central southern England. The clearing skies allowed a sharp frost to develop but also some isolated mist and freezing fog patches. Across Wales and the rest of England, skies remained rather cloudy with frost pockets more isolated. For much of Scotland and Northern Ireland it was a rather cloudy day but the patchy rain across Scotland petered out and clearer skies reach the Northern Isles during the afternoon. The cloud also broke across Wales and western parts of England leaving most of England and Wales fine and fairly sunny, particularly so in the south and east. However a frost quickly developed across England and Wales after sunset.</p> <p>It was close to normal or mild across Scotland and Northern Ireland but for much of England and Wales it was rather cold.</p>

SIGNIFICANT WEATHER

0600 GMT 31 JANUARY 2006 SIG WEATHER	1200 GMT 31 JANUARY 2006 SIG WEATHER	<p>Summary of UK Weather for Tuesday 31 January 2006.</p> <p>For the Northern Isles and Scotland, north of the central belt, skies were largely clear through the night allowing a sharp frost to develop. For the rest of Scotland and Northern Ireland it was a rather cloudy night with hill fog developing. Initially there were clear spells across Wales and the West Country but for the rest of England it was a rather cloudy night and some of the breaks in the west also filled in.</p> <p>For the Northern Isles and northern half of Scotland it was a fairly sunny day. Some sunny spells also developed across southeast Scotland. However, for Northern Ireland and the rest of Scotland it was a rather grey and cloudy day and particularly dull across the hills of Dumfries and Galloway.</p> <p>For much of England and Wales it was also rather cloudy. However, parts of Pembrokeshire enjoyed fairly sunny skies and the cloud also thinned elsewhere to give some bright or sunny spells.</p> <p>Temperatures were normal and locally mild across the far north but generally it rather cold and it was cold across Northern Ireland and southern Scotland.</p>
